BIOGRAPHY.

VOLUME VI.

*The asterisk * prefixed to the name indicates that the subject of the memoir is still living.*

THIRTY TYRANTS (of Athens). In the year B.C. 404, when, after the Peloponnesian war, Athens had fallen into the hands of Sparta, through the treacherous designs of the oligarchical party, the Spartans themselves did not interfere in any direct way with the political constitution of Athens (Diodorus, xiv. 4), but their negociations with Theramenes and others of the same party had convinced them that even without their interference the democracy would soon be abolished. In this expectation they were not disappointed, as this was really the object of the oligarchical party. But as this party did not sufficiently trust its own power, Lysander, who had already sailed to Samos, was invited to attend the Assembly at Athens, in which the question of reforming the constitution was to be considered. The presence of Lysander and other Spartan generals with their armies, and the threats that were uttered, silenced all opposition on the side of the popular party, and on the proposition of Theramenes a decree was passed that thirty men should be elected to draw up a new constitution. (Xenophon, 'Hellen.,' ii. 3, 2.) Lysias ('in Eratosth.,' p. 126, ed. Steph.) gives a more satisfactory account of the proceedings on that memorable day than Xenophon. These thirty individuals were invested with the sovereign power of the republic. Theramenes himself nominated ten, the Athenian ephors ten others, and the election of the remaining ten was left to the people. The names of the Thirty are preserved in Xenophon ('Hellen.,' ii. 3, 2). Their government, a real reign of terror, which fortunately did not last more than one year, was called in Athenian history the year of anarchy, or the reign of the Thirty Tyrants. From the moment that they had thus acquired an apparently legal power, they filled the vacancies in the senate and the magistracies with their own friends and creatures. The new code of laws which they were to draw up was never made, that they might not put any restraints upon themselves, and might always be at liberty to act as they pleased. A similar board, consisting of ten men, perhaps appointed by Lysander himself, was intrusted with the government of Piræeus. The object of the tyrants was to reduce Athens to the condition of an unimportant town, and to make the people forget the greatness to which it had been raised by Themistocles and Pericles. The splendid arsenal of Athens was sold and pulled down, and several of the fortresses of Attica were destroyed.

To establish their tyranny the Thirty found it necessary to get rid of a number of persons obnoxious to them. The first that were put to death were the sycophants, who during the time of the democracy had contributed most towards its overthrow by their shameful practices; and the senate, as well as every well-meaning citizen, was glad to see the republic delivered of such a pestilence. The senate acted in these trials as the supreme court of justice, and the Thirty presided in it. All the votes of the senators however were given openly, that the tyrants might be able to see which way each senator voted. This mode of proceeding, though it was at first only directed against individuals equally obnoxious to all parties, became alarming when all the distinguished men, who had been imprisoned before the day on which the new constitution was established, in order that they might not frustrate the plans of the oligarchs by their opposition, were in like manner sentenced to death. The apprehensions of the people were but too well founded, and Critias, the most cruel among the Thirty, gave sufficient indications that the Tyrants did not mean to go on with the same moderation. That they might always have at hand an armed force to support them, they sent an embassy to Sparta to ask for a garrison to occupy the Acropolis. This was granted, and came under the command of Callibius as harmostes. His arrival rendered the Thirty secure. They courted the Spartan harmostes in the most obsequious manner, and he in return placed his troops at their disposal for whatever purpose they might wish to employ them in establishing their dominion more firmly. The assistance to the senate in the trials for political offences began to be dispensed with, and the number of the unhappy victims increased at a fearful rate. Not only persons who opposed or showed any dissatisfaction with the rule of the Tyrants, but all who by their merits had gained favour with the people, were regarded as dangerous persons, who, if they could choose, would prefer a popular government, and were condemned to death in a very summary manner. The reign of the Thirty now began to display all its horrors, and no one could feel safe. To be possessed of wealth, especially in the case of aliens, was sufficient to bring a man to ruin, for the tyrants, independent of all political considerations, began to murder for no other purpose than that of enriching themselves by the confiscation of the property of their victims. The remonstrances of Theramenes against this reckless system of bloodshed were not followed by any other consequences than that the Thirty selected 3000 Athenians who were to enjoy a kind of franchise, and who could not be put to death without a trial before the senate. The rest of the citizens were compelled to give up their arms, and were treated as outlaws. By this expedient the Thirty hoped to strengthen themselves, and to become more independent of the Spartan garrison. The opposition of Theramenes to this arrangement involved his own destruction. [THERAMENES.] The horrors which were now perpetrated became every day more numerous and fearful, and numbers of Athenians fled from their native country to seek refuge at Argos, Megara, Thebes, and other places, where they met with an hospitable and kind reception. The tyrants soon began to be uneasy at the crowds of exiles who thus gathered round the frontiers of Attica, and applied to Sparta to interfere. The Spartans issued a proclamation empowering the Thirty to arrest the exiles in any part of Greece, and forbidding any Greek state to interfere on their behalf. This command was entirely disregarded by the Greeks, especially the Thebans, who even declared that the Athenian fugitives should be received and protected in all the towns of Bœotia. Thebes, whose mode of action was not dictated by a generous and humane feeling towards the unhappy Athenians, but rather arose from jealousy of Sparta, thus became the rallying point for a great number of exiles, among whom Thrasybulus was the most enterprising. In what manner the rule of the Thirty Tyrants was at last overthrown, and the democratical constitution was restored at Athens, is related in the article THRASYBULUS.

(Xenophon, *Hellen.*, ii. 3; Diodorus, xiv. 3, &c.; Thirlwall; Grote.)

THIRTY TYRANTS (under the Roman Empire). This name has been given to a set of usurpers who sprung up in various parts of the Roman empire in the reigns of Valerian (A.D. 253-60) and Gallienus (261-68). The appellation of the Thirty Tyrants, in imitation of the Thirty Tyrants of Athens, is highly improper, and bears no analogy to the Thirty of Athens. They rose in different parts, assuming the title of emperor, in irregular succession, and were put down one after another. Their number moreover does not amount to thirty, unless women and children, who were honoured with the imperial title, are included. Trebellius Pollio, who, in his work on the 'Triginta Tyranni,' describes the adventures of each of them, has taken great pains to make out that their number was thirty: there were however

Digitized by Google

only nineteen real usurpers—Cyriades, Macrianus, Ballista, Odenathus, and Zenobia, in the eastern provinces; Postumus, Lollianus, Victorinus and his mother Victoria, Marius, and Tetricus, in Gaul, Britain, and the western provinces in general; Ingennus, Regillianus, and Bureolus, in Illyricum and the countries about the Danube; Saturninus, in Pontus; Trebellianus, in Isauria; Piso, in Thessaly; Valens, in Achaia; Æmilianus, in Egypt: and Celsus, in Africa. The majority of these usurpers were persons of low birth, without any talent or virtue, and scarcely any one of them died a natural death. The best among them were Piso and Odenathus, and the latter, who maintained himself at Palmyra, received the title of Augustus from the Roman senate, and was enabled to bequeath his empire to his widow, the celebrated Zenobia. (Trebellius Pollio, *Triginta Tyranni*; Gibbon, *Hist. of the Decline and Fall*, chap. x.; Manso, *Leben Constantin's des Grossen*, p. 433, &c.)

• THLUCK, FRIEDRICH-AUGUST-GOTTTREU, one of the most distinguished of modern German theologians, was born at Breslau, on the 30th of March 1799. It was at first intended that he should follow his father's business of a goldsmith, but an early developed inclination for science led to his being placed in the university of his native town, whence he removed in a short time to that of Berlin. At Berlin, under the orientalist Von Diez, he diligently studied the eastern languages, and, partly from association with a circle of religious friends, and partly from the influence of Neander, he devoted himself to theological studies, of which the first fruit was 'Wahre Weihe des Zweifels,' which has been translated into English by Ryland, and into French, Danish, Swedish, and Dutch, and of which the seventh German edition, in 1851, changes the title to 'Die Lehre vom Sünder und vom Versöhner' (The Doctrine of the Sinner and of the Mediator). In 1824 he was made professor extraordinary of theology in Berlin University. In 1825 he travelled at the expense of the Prussian government to England and Holland, and on his return in 1826 was made professor of theology in the University of Halle. Within a twelvemonth, his health failing, he was forced to quit Halle, and received the appointment of chaplain to the embassy at Rome, where he entirely recovered, and in 1829 returned to his professional duties at Halle. He has ever since been indefatigably occupied by his lectures, by his personal intercourse with the students, and by his writings; and as a preacher in promoting a warm and truly devotional Christianity united with a tempered and wise philosophy. His writings have been very numerous, and are considered of great value, not only by his own countrymen, but by English authors. Among them are—'Praktischen Commentar zu den Psalmen,' and 'Uebersetzung und Auslegung der Psalmen' (Translation and Exposition of the Psalms); 'Commentar zum Briefe an die Hebräer;' 'Commentar zum Römerbrief;' 'Philosophisch-Theologische Auslegung der Bergpredicht' (Exposition of the Sermon on the Mount); 'Glaubwürdigkeit der evangelische Geschichte' (Authenticity of the Evangelical History), a work written in opposition to the 'Leben Jesu;' of Strauss; 'Vermischte digten über die Hauptstücke des Christlichen Glaubens und Lebens' (Sermons on the Chief Phases of the Christian Faith and Life), 'Stunden der Andecht' (Hours of Devotion); and 'Literarischen Anzeiger für Christliche Theologie und Wissenschaft überhaupt' (Literary Guide for Christian Theology and Science in General), which is the most clearly stated his theological views. Several of the preceding works have been translated into English. His labours in the Oriental tongues have also enabled him to produce 'Sauftamus, sive theosophia Persarum pantheistica,' in 1821; the 'Blüthesammlung aus der Morgenländischen Mystiker' (Collection of Flowers from the Eastern Mystics), 1825; and 'Speculative Trinitätslehre des spätern Orients' (Speculative Doctrines of a Trinity of the later Orientals), in 1826. He has also contributed to theological history in his 'Vermischten Schriften, grösstentheils apologetischen Inhalts,' 1839; 'Der Geist der Lutheranischen Theologen Wittenbergs im 17 Jahrhunderts,' 1852; and 'Das akademische Leben des 17 Jahrhunderts,' 1853-54, the last forming at the same time the first division of a 'Vorgeschichte der Rationalismus.'

THOM, JAMES, who acquired considerable temporary celebrity as a sculptor, was born in Ayrshire in 1799. He was brought up as a stone-mason, and taught himself the art of sculpture. Some small figures which he carved illustrative of the poetry of Burns secured him a local fame, and in 1826 he attempted to try his skill on a colossal life-size. He accordingly produced in sandstone statues of Tam O'Shanter and Souter Johnnie, which had a surprising run of popularity. After being successfully exhibited in Scotland they were brought to London, where they proved equally attractive, and the self-taught sculptor found himself for a time 'a lion.' He was commissioned to carve more than one repetition of these figures, and small plaster models of them were produced in great numbers. There is undoubtedly a good deal of humour and spirit in the figures, but they are rude and inartistical in conception and execution, and their excessive popularity was of evil influence upon the sculptor himself. His afterwards executed a statue of 'Old Mortality' and several other works; but he appeared to be falling into comparative obscurity when, about 1836, the misconduct of an agent whom he had employed to manage an itinerant exhibition of his 'Tam O'Shanter' and 'Old Mortality' in the United States, led Thom to proceed to America. Eventually he determined to remain in New York, where he found considerable professional employment. He also devoted some time to architecture; took a farm, on which he erected a house from his own designs, and became a tolerably prosperous man; but he seems to have gradually abandoned the use of his chisel. He died at New York on the 24th of April 1850. The original figures of Tam O'Shanter and Souter Johnnie are placed in a building attached to the Burns monument on the banks of the Doon; there are copies of them in England, and at Mr. Colt's, Paterson, New Jersey. His group of 'Old Mortality' stands at the chief entrance of the Laurel Hill Cemetery, near Philadelphia.

THOM, WILLIAM, the weaver-poet of Inverury, was born at Aberdeen in 1799. At an early age he became, with many the elements of education, he was bound for four years apprentice to a weaver, and during this time, as he narrates himself, "picked up a little reading and writing," trying at the same time to acquire Latin, but being "defeated for want of time." At the end of his apprenticeship he was engaged at another factory, where he worked for seventeen years, learned to play the German flute, and to know "every Scotch song that is worth singing." He married about 1829, had a family, and after some other removals settled for a time at Newtyle, near Cupar-Angus in Forfarshire. It was there when the great commercial failures in America occurred, one consequence of which was the cessation of employment for the poor hand-loom weavers. With a wife and four children, without work, in a neighbourhood where nearly all were as poor as himself, and in a country where the poor laws were not yet developed, the sufferings of the family were extreme. And in a cold spring day of 1837 they resolved to set off to walk to Aberdeen, in hopes that there he might procure employment. Of this journey he has given a vivid and pathetic narrative. One child died on the way. To obtain the means of progressing he had recourse to his flute, which sometimes brought him a penny. He said it was made the first attempt at song-making in an address to his flute. This he had printed, and by presenting a copy of it at the genteeler houses procured sufficient to enable the family to reach Aberdeen. He obtained work, first in the town, and then at Inverury. In November 1840 his wife, whose health had been weakened by her late sufferings, died in childbed. His new affliction again drove him to poetry, realising Shelley's assertion, that poets "learn in suffering what they teach in song." He sent one of his compositions, 'The Blind Boy's Prunks,' to the 'Aberdeen Herald,' which was received with much commendation. It attracted the notice of Mr. Gordon, of Knockespoch, a gentleman in the neighborhood, who relieved and patronised him. He had other poems by him, which were produced and admired, and he was brought to London, feasted at a public dinner, and received that sort of patronage which had so injurious an influence on Burns. It seems, a patronage that only enhances the bitterness of the fate to which its objects are almost inevitably consigned. Thom returned to Inverury, resolving, he said, not to be too much elated by the applause he had received, but it is difficult to suppress such exhilaration if wild it leads. He published in 1841 at Aberdeen, a small volume of poems, 'Rhymes and Recollections of a Hand-loom Weaver,' which had but a moderate success. His poetical powers were not great: the chief merit of his verses consists in the exact reproduction of feelings he had himself experienced, with a considerable degree of correctness of taste remarkable in one of so extremely limited an education. He married a second wife, was often subjected to the extremest need, and at last died in great poverty in March 1850. His widow died in the 1854, following, and a subscription was raised of about 250*l.* for his destitute children.

THOMAS, Θωμᾶς, ΤΗΜΜ (in Greek *Didymus*: John, xi. 16; xx. 24), one of the twelve apostles of Christ. (Matt. x. 3.) The Hebrew and Greek names both signify a twin. St. Thomas is presumed to have been a Galilean; but no particulars of his birth-place or birth to the apostleship are given, and the first notice of him individually is in John xi. 40. Christ having expressed an intention of returning to Judæa, in order to raise his friend Lazarus from the dead, Thomas encouraged the other apostles to attend him, although he regarded death as the certain consequence of this step. The consciousness of character thus indicated was not long after very differently displayed. Thomas happened to be absent when Christ, after his resurrection, first appeared to the apostles; and when made acquainted with the fact, he expressed an incredulity which could only be satisfied by the personal evidence of inserting his finger in the hole which the spear and nails had made in the body of his crucified master. Eight days after, when Christ again appeared, Thomas was present; and the reaction in his mind was very strongly expressed by him, when he was pointedly called upon by Jesus to stretch forth his hand and take the desired proof. (John xxi. 24-29.) Thomas is not again mentioned in the New Testament. Doubtless he laboured, like the other apostles, in the propagation of the Christian doctrines: and ecclesiastical traditions make him one of the apostles of the Gentiles. It is alleged that he travelled eastward, and laboured among the various nations which then composed the Parthian empire. (Euseb., iii. 1; Rufin., x. 9; 'Recogult.,' ix. 29.) There is a singular concurrence of Oriental and Western testimony (which may be seen in Assemanni and Baronius), to the effect that St. Thomas extended his labours farther eastward, and then southward, until he reached the coast of India and Malabar, where, having exercised his apostolic labours with success,

Digitized by Google

he passed on to the coast of Coromandel; and having made great conversions to the faith in those parts, he proceeded over to some coast on the east, called China (which may possibly have been the country now called Cochin-China), and afterwards returned to Coromandel, where, having suffered martyrdom, he was buried in the mount since called St. Thomas's Mount.

In the quarters indicated there are Christian churches which bear the name of St. Thomas, and claim him for their founder. If they derive their existence as a church uninterrupted from the apostolic age, this fact may be taken as a corroboration of the above traditions. But if the effects which resulted among them from the labours of Mar Thoma and other Nestorian missionaries, at the commencement of the sixteenth century, were really an original conversion, or at least a reconversion, and not, as is often supposed, the revival of a fallen but not extinct church—then this claim is to be regarded only as an echo of the tradition which has always prevailed in the Syrian churches, and which must be estimated by its intrinsic probability and value.

(Besides Assemanni and Buronius, see Tillemont, i. 397, sq.; Cave's *Antiq. Apostolica*; Winer's *Biblisches Realwörterbuch*, art. *Thomas*; Buchanan's *Christian Researches*; Yeate's *Indian Church History*; and Principal Mill's *Letter to the Society for the Propagation of the Gospel* (July 29, 1822), inserted in *Christian Remembrancer* for Nov., 1823.)

THOMAS À KEMPIS. [Kamis.]

THOMAS AQUI'NAS. [Aquinas.]

THOMAS, ANTOINE LÉONARD, was born at Clermont in Auvergne, on the 1st of October 1732. His father, it has been generally believed, died while Thomas was an infant, leaving a widow with three sons and a daughter. The eldest son, Joseph Thomas, who embraced the clerical profession, died in 1741: he composed a dramatic piece, entitled 'Le Plaisir,' which was acted with success in 1740. The second, Jean Thomas, died in 1755, professor in the college of Beauvais: he published several Latin verses, and introduced into his college an improved method of teaching Latin. It appears therefore that the taste for literature was common to the whole family.

Antoine Léonard was educated at home till he had completed his ninth year, and was then sent to prosecute his studies at Paris, where his brothers preceded him. In a letter which he addressed, in 1767, to Madlle. Moreau, he mentions that his second brother had taken great pains with his education. They were an attached family: Antoine retained all his early affection for his mother till her death in 1782; and his sister, the only member of the family who survived him, lived with him till his death.

Antoine Léonard Thomas distinguished himself at the university. In 1747 he carried off two of the prizes distributed in his class in the college of Dupleasis: in 1748 he studied rhetoric in the college of Lisieux, and obtained four prizes: from October 1749 to August 1751, he studied philosophy with equal distinction, at first in the College of Lisieux, subsequently in that of Beauvais. When he finished his university career, his friends wished him to study for the bar, and he did so far comply with their desire as to attend law classes and the office of a solicitor. This continued till the death of his second brother, 1755, at which time he had retired, apparently on account of his health, which was always infirm, to his native district. A short time after he accepted of a professorship of rhetoric in the College of Beauvais. He continued to discharge the duties of his appointment till 1761, when, finding them injurious to his health, he resigned, and was appointed private secretary to the Duc de Praslin.

Thomas commenced his career as author in 1756 by publishing 'Réflexions Philosophiques et Littéraires sur le Poème de la Religion Naturelle.' This was throwing down the gauntlet to the whole school of Voltaire: the patriarch himself took no notice of the publication, and Grimm spoke of it as the work of 'a silly lad just escaped from the school of the Jesuits.' In the same year Thomas addressed an ode, full of hyperbolical compliments, to Seebelles, controller-general of finance: the flattery was successful; it obtained from the minister an addition to the revenues of the college. In 1757 Thomas composed, on the occasion of the great earthquake at Lisbon, a 'Mémoire sur les Causes des Tremblemens de Terre,' which was crowned by the Academy of Rouen. In 1759 he published 'Jumarville,' a poem in four cantos, on the death of a French officer, killed, as the French allege, under circumstances of great atrocity, in the war between the French and English, in the backwoods of America. Fréron praised this poem in the 'Année Littéraire,' a tribute of thanks to the young author who had ventured to attack Voltaire. These early works of Thomas are remarkable only for their turgid style, commonplace ideas, and for the eagerness of the author to avail himself of the popular topic of the day.

About this time the French Academy, with a view to render the prize-essays of its members more popular, began to propose the éloges of great men as the subjects. Thomas entered the lists three successive years, and was successful every time. His 'Eloge de Maurice, Comte de Saxe,' was crowned in 1759; his 'Eloge de Henri François d'Aguesseau,' in 1760; and his 'Eloge de Réné du Guay-Trouin,' in 1761. In 1760 he also competed for the prize of poetry: his 'Epître au Peuple' was declared next in merit to the poem of Marmontel, to which the medal was assigned. In these compositions a marked improvement can be traced. There is no greater originality of thought then in his first productions—nothing of genius in them; but more metter, more of artistical finish, and less of boyish inflation of style. The connection with the Duc de Praslin was less advantageous to Thomas than it promised to be at the outset. The duke procured for him the sinecure appointment of secretary-interpreter to the Swiss cantons. But a vacancy occurring soon after in the Academy, this minister, who had a personal quarrel with Marmontel, sought to obtain it for his secretary. Thomas had the magnanimity to refuse the appointment, urging the superior claims of Marmontel. This act of honesty lost him the favour of the Duc de Praslin, and closed the career of office which was opening to him. The admission to the Academy was not however long deferred. He delivered his inaugural address to that body on the 22nd of January 1767.

Between 1761 and 1767 he composed—'Eloge de Sully,' crowned in 1763; 'Eloge de Descartes,' crowned in 1765; in 1766, 'Eloge de Louis, Dauphin de France,' composed and published at the request of the Comte d'Angiviller; and his inaugural discourse. In October 1767, his opera of 'Amphion' was brought out, but without success. These works are all characterised by a progressive improvement in execution. They differ also from his juvenile productions in an attempt to adopt the sparkling and antithetical style of the Encyclopedists, and in the complete approbation of their bold satirical tone in respect to politics, although much of the author's juvenile respect for religion remained with him to the last. As a natural consequence of the change, Grimm had by this time begun to praise Thomas, and Fréron had cooled in his admiration of him: Voltaire had written a complimentary letter on the 'Eloge de Descartes,' but had on the other hand remarked to his friends that they ought now to substitute the word *gallithomas* for *galimathias*: Diderot continued implacable. It was rumoured that the court, enraged at the free strain of the 'Epître au Peuple,' and the sarcasms launched against itself and the feudal system in the 'Eloge du Dauphin,' threatened the liberty of Thomas.

The principal publications of Thomas, from the time of his admission into the Academy till his death, are—'Eloge de Marc Aurèle,' read to the Academy in 1770, and published in 1775. His reply, as director of the Academy, to the inaugural discourse of the archbishop of Toulouse, also in 1770. 'Essai sur le Caractère, les Mœurs, et l'Esprit des Femmes, dans tous les Siècles,' 1772. 'Essai sur les Eloges, ou l'Histoire de la Littérature et de l'Eloquence appliquées à ce genre d'Ouvrage,' published in 1773, in an edition of his collected works. He commenced a poem on the Czar Peter I.; but only four books and part of a fifth were completed at the time of his death. The increased technical skill of the author continues to show itself in these latter works; but the increased boldness of his attacks serves also to shew the natural meagreness and feebleness of his genius. He was utterly devoid of impassioned imagination. His 'Eloge de Marc Aurèle' is an attempt to personify a Stoic of the age of that emperor: the character is deficient in interest and dramatic truth. His essay on the character and manners of women is a collection of passages which would have swelled his didactic essay on 'éloges' to too great a bulk. It was said at the time that this panegyrical essay on the sex pleased them less than the vituperations of Rousseau. No wonder the treatise of Thomas is cold and uninspassioned; it was formed to suit the ravings of Roussean are the scoldings of a jealous man who has been anxious but unable to please. The treatise on 'éloges' is a worthy consummation of the author's labours in that empty and artificial branch of literature which has all the falsehood of misery without the interest which attaches to the eloquence of the bar or senate from its power of producing great practical effects. The partially completed poem of 'The Czar' is sensible and the versification smooth, but the four books are four separate poems, in the manner (though not so good) of Goldsmith's 'Traveller.' They never could have been made parts of an epic.

Thomas died on the 17th of September 1785. His health, always delicate, had been undermined by incessant study. Thomas was a mere echo of the society by which he was surrounded. He took his colouring in youth from his preceptors, most of whom were ecclesiastics; in after-life, from the sceptical literary conversation of the saloons of Paris. His éloges are his most characteristic works, a kind of composition too innocuous to have value as history, too cold and artificial to have any claim to the real business of life to impress as oratory. He stands however high among his class of writers. The high finish and some of the brilliancy of the French school cannot be denied him; though for this he was indebted quite as much to the company he kept as to natural talent, or even his unquestionable painstaking.

(*Œuvres* de M. Thomas, Paris, 1792; *Œuvres Posthumes* de M. Thomas, Paris, An x. (1802); 'Sketch of Thomas,' by Saint Surin, in the *Biographie Universelle*.)

THOMASIN, or TOMASIN, surnamed Tirkelære, Clik, or Zerkler, a German poet of the 13th century. He was a native of the Italian province of Friuli, now the Austrian province of Udine, and was born about 1186. Being thus an Italian by birth, he wrote in his earlier days an Italian work, probably a didactic poem, 'On Courteous Manners,' which is no longer extant. In the course of 1216, when he had just reached his thirtieth year, he wrote in the space of ten months a great didactic poem in German, which from his native

Digitized by Google

country he called 'The Italian Guest' (Der Welsche Gast) and which consists of ten books. This poem, of which there exist many excellent manuscripts, is one of the most splendid productions of German literature during the 13th century, and, although the author is a foreigner, the work breathes throughout a pure German spirit, and displays all the depth and intensity of German thought and feeling. In the beginning of his poem Thomasin admits that he is not a perfect master of the language which he used; but still the peculiarities are so few and slight, that it requires a profound knowledge of the old German language to discover the foreigner. Eschenburg therefore supposes that the author's statement respecting his native country is a mere fiction. But this supposition, as well as another, that the 'Italian Guest' is merely a German translation of the Italian work 'On Courteous Manners,' is without foundation, and contradicted by numerous passages of the former work. The object of this poem is to show in what virtue, piety, and good conduct consist, and why man should strive after them. It shows that a remarkable progress had taken place in the mind of Thomasin during the interval between the composition of the Italian and that of the German work. In the former, as he himself states, he had proceeded from the idea that courteous conduct and nobility of birth were always combined with a noble mind, or, in other words, that the changeable rules respecting good manners were of greater value than the eternal law of morality which is implanted in every man's heart. This prejudice is altogether given up in his German poem, where he declares that a man is foolish who thinks himself great because he is of noble birth and possesses courteous manners, and that it is only a man's heart and real character that make him worth anything. Virtue with him is now a fundamental principle, and not a mere expedient. He describes virtues and vices, and their respective consequences, with a truly Socratic spirit and dignity. Thomasin was well acquainted with the history of antiquity, and it is among the ancients that he found his best models of really virtuous men. The whole poem is a sublime and altogether practical system of morality: it is a philosophy in the garb of poetry and occasionally adorned by figurative language. But here he does not write in the spirit of any particular school; his object is in general to instruct man on matters concerning his physical and spiritual welfare.

This masterpiece of early German poetry and philosophy has never yet been published entire. Fragments of it are printed in Eschenburg's 'Denkmäler Altdeutscher Dichtkunst,' p. 121, &c.; compare Gervinus, 'Geschichte der Poetischen National Literatur der Deutschen,' vol. i. p. 456, &c.

THOMASIUS, CHRISTIAN. The real name of this author is Thomas, and in the works which he published in his mother tongue he always calls himself Christian Thomas. He was born at Leipzig, on the 12th of January 1655, and was the son of Jacob Thomasius (1622-1684), a distinguished professor of philosophy, and some time rector of the celebrated Thomasschule at Leipzig, under whose auspices Leibnitz was educated. The education of Christian Thomasius was conducted by his father, whose knowledge of philosophy and its history gave his mind at an early age a decided turn. Christian had scarcely attained his fourteenth year when he was found sufficiently prepared to enter the university. In his sixteenth year he obtained the degree of Bachelor of Arts, and the year after that of Master of Arts. The chief subjects of his studies were philosophy and law, more especially the law of nature, which he regarded as the basis of all other laws. The instruction of his father and his own experience at the university had convinced him that the methods of teaching then followed were pedantic and deficient, and he determined to remedy these defects as much as was in his power. In 1675 he went to Frankfurt-on-the-Oder, where he began a course of lectures on law, but they do not appear to have been well received by his colleagues, and in 1679, after having obtained the degree of Doctor of Laws, he left Frankfurt, and made a literary journey to Holland. On returning to Leipzig he commenced the practice of the law. But this occupation did not offer sufficient scope for him, and he again became an academical teacher, in which capacity he brought about the most beneficial reforms. The law of nature, which had until then been almost entirely neglected in the universities, continued to be the principal subject of his studies. The older professors, who found themselves disturbed in their routine of teaching by the unusual boldness of the young man, began to clamour against him. So long as his father lived, violent outbreaks were prevented, partly because he restrained his son's eagerness for reforms, and partly because the other professors esteemed him too much to hurt his feelings by open attacks upon his son. When however his father died, in 1684, the bitterness and boldness with which young Thomasius attacked antiquated prejudices of all kinds together with their champions, involved him in numerous disputes. The enmity was not only provoked by the matter and the manner of his teaching, but also by several publications which tended to destroy established opinions. One of them, on polygamy, especially gave great offence; and he asserted that polygamy was at least not contrary to any law of nature.

Up to this time it had been the general custom in all German universities to deliver lectures in Latin, and to make all public announcements of them in the same language. In the year 1687 Thomasius published his programme in German, and announced that he would deliver a course of lectures in German, and on a subject which appeared altogether foreign to a university—viz. on the manner in which the Germans should follow the example of the French ('Discours, welcher Gestalt man denen Frantzosen im gemeinen Leben und Wandel nachahmen soll,' 4to, published at Leipzig, 1687.) This daring innovation was regarded by his colleagues as a perfect heresy, though, after the example was once set, it was gradually followed by other professors, until it became the universal practice in all German universities to lecture in German. It was a necessary consequence of this that books of a scientific character now began to be written in German. Notwithstanding both these and Thomasius' attacks on which Thomasius had thus exposed himself, he continued to combat prejudice, pedantry, and whatever he regarded as error. He was unsparing in his censure, which was usually combined with wit and satire, and even his former teachers did not escape. In the year after, 1688, he established a German Monthly Review, under the title 'Freimüthige, jedoch vernunfft- und gesetzmässige Gedanken über allerhand, fürneuchlich aber neue Bücher,' which he conducted from 1688 till 1690, and which gave him immense influence in all parts of Germany, and the means of chastising his enemies. His enemies in their turn tried every means to avenge themselves; and although Thomasius at first succeeded in averting the danger that was gathering around him, yet the disputes became daily more vehement and serious, especially with two divines, Pfeifer and Carpzovius, who charged him with atheism. The theological faculty of Leipzig was likewise gathered over to their side. Dr. Masius, court preacher to the king of Denmark, who had been rather severely dealt with by Thomasius in his Journal, and who made a reply, to which Thomasius answered in a very energetic manner, persuaded the king of Denmark to have all the published parts of Thomasius's Journal burnt in the market-place of Copenhagen by the hangman, 1689. Such proceedings in a foreign country were treated by Thomasius with contempt; but the storm was gathering over his head. In the same year he became involved in disputes with the Pietists, and also came forward to justify marriages between two persons of different religions, which struck at the interest of Wittenberg to such a degree, that the chief consistory was induced by various charges which were made against him to issue an order for the apprehension of Thomasius. He escaped the danger and fled to Halle, where he met with a kind reception at the protection of Frederick III., the great elector of Brandenburg (afterwards King Frederick I.) who not only permitted him to settle at Halle, but also to lecture in the Ritterakademie (academy for young noblemen) of that place. He began his lectures here in 1690, and met with the same success as before on the part of the young nobility; and the increase in the number of students induced the elector in 1694 to found the University of Halle, in which he appointed Thomasius professor of jurisprudence, and conferred upon him the title of councillor, with a salary of 600 thalers. In this new position too Thomasius continued to be annoyed by numerous disputes, partly with his former adversaries and partly with others. In the year 1709 he had the satisfaction to receive an invitation to the chair of jurisprudence in the University of Leipzig, which however he refused. King Frederick I. of Prussia, notwithstanding the determination of Thomasius not to leave Halle, rewarded him with the title of privy-councillor. In 1710 Thomasius was elected rector of the University of Halle, and dean of the faculty of jurisprudence. He died on the 23rd of September 1728, in the seventy-third year of his age.

If ever a man exercised an influence upon his age and country which will extend to the latest posterity, it is Thomasius. He was one of the few men, like Luther and Lessing, who new and then rise up in a nation, give it an impulse, and determine its course. At the time when Thomasius began to think for himself, philosophy and theology were studied and taught in such a manner that it was evident that the spirit which had been created by the Reformation would soon vanish altogether. All philosophical and scientific works were written in Latin, which formed an inadequate medium for communicating new thoughts and ideas, which were frequently scripted and imperfect on that account, or the language itself was barbarous. In the universities also Latin was the ordinary language for communicating knowledge, which thus remained in the exclusive possession of a small number, and without influence upon the nation at large. Thomasius opened the first way for better and more successful communicating knowledge in his native language, and by extending the sphere within which speculation had until then been carried on. At the same time he urged the necessity of writing in a clear and intelligible style, which many of his countrymen in recent times have greatly neglected. His own style, though not often pure, is precise and vigorous. As in places of learning Thomasius destroyed old prejudices and pedantry, he also boldly combated superstition and hypocrisy in the affairs of common life, such as the belief in ghosts, spectres, and witchcraft; and it is almost entirely owing to his exertions that trials for witchcraft and torture were abolished in Germany. In reference to this Frederick the Great says of Thomasius, "He denounced trials for witchcraft so loudly, that persons began to be ashamed of them, and from that time the female sex has been permitted to grow old and die in peace." All this would alone be sufficient to immortalise his name, even if he had no claim to it by what he did in philosophy. Here he indeed found things in such a state, that it required all his energy to

Digitized by Google

clear the field from the weeds with which it was overgrown, before it was fit to receive the seed, and accordingly his philosophy is more of a destructive than of a constructive character. But in this negative way he has done incalculable service to his nation, and Frederick the Great justly says, that among all the philosophers of Germany, none have contributed more to render its name illustrious than Leibnitz and Thomasius.

The number of works of Thomasius is considerable. Besides those mentioned above, the following must be noticed:—'Einleitung zu der Vernunftlehre, worinnen durch eine leichte, und allen vernünftigen Menschen, wesserlei Standes oder Geschlechts sie seyn, verständliche Manier, der Weg gezeiget wird, ohne die Syllogistica, das Wahre, Wahrscheinliche und Falsche von einander zu entscheiden und neue Wahrheiten zu erfinden.' 8vo, Halle, 1691. The fifth and last edition of this work appeared at Halle, 8vo, 1719; it was the first readable book that had ever been produced in Germany on logic. 'Von der Kunst vernünftig und tugendhaft zu lieben, als dem einzigen Mittel, zu einem glückseligen, galanten, und vergnügten Leben zu gelangen, oder Einleitung der Sittenlehre,' &c., 8vo, Halle, 1692; an eighth edition of it appeared in 1726. This work contains a system of ethics better than any that had appeared before him. 'Historie der Weisheit und Thorheit,' in three parts, 8vo, Halle, 1693. 'Weitere Erläuterung durch unterschiedene Exempel, anderer Menschen Gemüther kennen zu lernen,' 8vo, Halle, 1693, reprinted in 1711. 'Der Kern wahrer und nützlicher Weltweisheit,' 8vo, Halle, 1693: this is a translation of Xenophon's 'Memorabilia of Socrates,' which Thomasius strangely enough took from the French translation of Charpentier, although he himself was well acquainted with the Greek. 'Versuch einiger Regeln des Geistes, oder Grundlehren die einem Studioso Juris zu wissen und auf Universitäten zu lernen nöthig sind,' 8vo, Halle, 1699, reprinted in 1709. 'Ernsthafte aber doch muntere und vermünftige Gedanken und Erinnerungen über allerhand auserlesene juristische Händel,' 4 vols., Halle, 1720-21. His miscellaneous and smaller essays appeared in a collection under the title 'Kleine Deutsche Schriften mit Fleiss zusammengetragen,' 8vo, Halle, 1701. A complete list of his works is given in Ludeu's 'Christian Thomasius nach seinen Schicksalen und Schriften dargestellt,' with a preface by Johann Müller, 8vo, Berlin, 1805; and in Jordeu's 'Lexikon Deutscher Dichter und Prosaisten, vol. v., p. 37—59.

THOMOND, THOMAS, an architect who practised at St. Petersburg, and held the rank of a major in the Russian service, was a native of France, and born at Nancy, on 21st December 1754. He early had he completed his professional education at Paris when the revolution rendered it unsafe for him (he and his family being royalists) to remain in the country, and he accordingly emigrated to Russia, where he at first supported himself by the productions of his pencil, which not only found purchasers, but made him favourably known to the St. Petersburg public. The taste he displayed in architectural subjects led at length to his being employed by the government in that branch of art which he had originally intended to follow, and one of the first works of any importance intrusted to him was the Great Theatre (erected by the German architect Tischbein, 1782-83), which he was commissioned to improve and partly remodel in 1804. Although not altogether free from the peculiarities of the French school, the façade and octastyle Ionic portico which he added to that structure is one of the noblest pieces of architecture in the northern capital of Russia, and, of its kind and date, in Europe. Had he executed nothing else, that alone would have entitled him to rank higher in his profession as an artist than many who owe their celebrity as much to the number as to the merit of their works. But he had also the opportunity of displaying his taste and ability in another very striking public edifice at St. Petersburg, namely, the Imperial Birzha, or Exchange, erected by him between the years 1804 and 1810, which is an insulated structure (about 256 feet by 306 feet) of the Roman Doric order, peripteral and decastyle at both ends, although without pediments, and having altogether 44 columns. Situated at the southern point of the Vassilievskii Island, immediately facing the Neva, it stands in the centre of a spacious *plotchad*, or 'place,' upon a rich architectural terrace, which sweeps out so as to form a semicircular esplanade in front, at each extremity of which is a flight of steps leading down to the river, and a massive rostral column 120 feet high. Taken altogether, the architectural combination thus produced is exceedingly picturesque, and may be said to be unique.

Thomond also erected some private mansions and other buildings at St. Petersburg, the mausoleum of the Emperor Paul at Pavlovska, the theatre at Odessa, and the Pultava monument. In 1808 he published some of his buildings and architectural designs in a quarto volume, very unsatisfactorily executed however; and he also wrote a treatise on painting, an art to which he was greatly attached. He died on the 23rd of August 1813. (Kukolnik, in *Khudozhestvennya Gazeta*, 1837.)

THOMPSON, SIR BENJAMIN. [RUMFORD, COUNT.]

'THOMPSON, MAJOR-GENERAL THOMAS PERRONET, was born in 1783, at Hull in Yorkshire. He received his early education at the Hull grammar-school, of which the Rev. Joseph Milner was then head-master. In October 1798 he was entered of Queen's College, Cambridge, and in 1802 took his degree of B.A. He soon afterwards entered the navy as a midshipman, but left it for the army, in which he became a second lieutenant, January 23, 1805, and in 1807 served in the Rifle Brigade in the attack on Buenos Ayres. On the 21st of January 1808 he became lieutenant, and in the same year was sent out to the colony of Sierra Leone as governor. In 1812 he returned to active service in the army. In 1814 he served with the 14th Light Dragoons, and was engaged in the battles of Nivelle, Nive, Orthez, and Toulouse, for his services in which he received the war-medal with four clasps. He attained the rank of captain on the 7th of July 1814, and from 1815 to 1819 was engaged in the Pindaree and other campaigns in India as captain of the 17th Light Dragoons. In 1819 he served in the expedition to the Persian Gulf, under Sir William Grant Keir, as secretary and Arabic interpreter, and was for a time political agent there.

In 1821 Captain Thompson returned to England, and attained the rank of major on the 9th of June 1825. In the meantime he had become acquainted with Jeremy Bentham and Dr. Bowring (now Sir John Bowring), and was a contributor to the 'Westminster Review,' of which he afterwards became one of the proprietors. He soon distinguished himself as one of the most powerful of the opponents of the system of protection of native industry, and in his 'Corn-Law Catechism,' first published in 1827, stated with great clearness of reasoning and vivacity of illustration the leading arguments which were afterwards successfully employed by the Anti-Corn-Law League to overthrow the restrictive laws on the importation of wheat and other grain. [COBDEN, RICHARD.] The Catechism was published under the title of 'Catechism on the Corn-Laws, with a List of the Fallacies and the Answers; to which is added an article on Free Trade, from the "Westminster Review,"' No. 23, with a Collection of Objections and Answers; by a Member of the University of Cambridge,' 8vo, 15th edition, 1831. He also published a 'Catechism on the Currency, by the Author of the Catechism on the Corn-Laws,' 8vo, 3rd edit., 1848. On the 24th of February 1829 Captain Thompson became lieutenant-colonel, unattached, and was placed on half-pay. He continued the assiduous and unflinching opponent of liberal policy in the 'Westminster Review,' in pamphlets, and in newspapers, and was an active supporter of the parliamentary reform movement by speeches as well as by his writings. Colonel Thompson's investigations however were not confined to questions of political and social reform. In 1829 he published an 'Enharmonic Theory of Music,' which he republished in 1850 under the title of 'Theory and Practice of Just Intonation, with a View to the Abolition of Temperament, as illustrated in the Description and Use of the Enharmonic Organ, presenting the Means of executing with the simple Motion in Tune of a Key a Correction for Change of Temperature; built by Messrs. Robson for the Exhibition of 1851; with an Appendix tracing the Identity of Design with the Enharmonic of the Ancients,' 12mo. In 1830 Colonel Thompson published a small work entitled 'Geometry without Axioms.'

Colonel Thompson was returned to parliament as member for the borough of Hull on the 20th of June 1835. He was not returned in the next election, and was out of parliament till he was returned for Bradford in Yorkshire. He was not returned to the next parliament, but was returned to that elected in March 1857, when he was again elected for Bradford. He attained the rank of major-general on the 20th of June 1854.

Major-General Thompson has published an edition of his collected works, under the title of 'Exercises, Political and Others, by Lieut.-Colonel T. Perronet Thompson, consisting of Matter previously published with and without the Author's name, and some not published before,' 6 vols. 12mo, 1843.

THOMPSON, WILLIAM, a celebrated Irish naturalist. His father was an Irish linen merchant at Belfast, and William, his eldest son, was born on the 2nd of November 1805. As his father destined him for a commercial life, he received such an education as was supposed to fit him for that pursuit. In 1821 he was apprenticed to a firm in the linen trade in Belfast. Although at this time he had acquired no taste for natural history, he soon took an interest in this subject from making excursions with a fellow apprentice who possessed a copy of Bewick's 'British Birds,' and a passion for collecting and stuffing birds. For several years he was barely more than amateur; but in 1832 circumstances occurred which induced him to give up business, and from that time he devoted himself in earnest to natural history. Although birds were his favourite study, he took an interest in all kinds of animals and plants, and eventually there were few Irish minerals, plants, and animals, with which he was not cognisant. He first became known as a naturalist by his contributions to the 'Proceedings' of the Zoological Society of London, on the natural history of Ireland. The names of some of these early contributions indicate the direction of his mind: 'Catalogue of Birds new to the Irish Fauna;' 'On some Vertebrata new to the Irish Fauna;' 'On some rare Irish Birds;' 'On the Natural History of Ireland, with a description of a new Genus of Fishes;' 'On the Irish Hare.' He also prepared to lay before the meeting of the British Association for the Advancement of Science, held at York in 1840, a 'Report on the Fauna of Ireland, Division Vertebrata.' This was not a mere enumeration of the vertebrate animals of Ireland, or an account of their comparative scarcity and abundance, but an exposition of the number of species in Ireland, the most western land of Europe, compared with other British and European species. In 1841

Digitized by Google

Mr. Thompson accompanied the late Professor Edward Forbes on a voyage in the Ægean in H.M.S. Beacon, commanded by the late Captain Graves, R.N., during which he made a large number of observations on the natural history of the countries which he visited. Some of these he subsequently made use of in his works on the natural history of Ireland. From 1841 to 1843 he was a frequent contributor to the 'Annals of Natural History,' and also engaged in collecting materials for his further report to the British Association on the invertebrate Fauna of Ireland. This report was read at the meeting of the association at Cork in 1843, and is remarkable for the large amount of minute information it contains on the natural history of Ireland. From this time his papers on Irish natural history became more numerous; a list of above seventy is given in the Royal Society's 'Bibliography,' and these were preparations for the great work which he had projected on the natural history of his native country. The first volume of this work appeared in 1849, the second in 1850, the third in 1851. These three were devoted to the birds. He did not live to complete his work. He had been mainly instrumental in inducing the British Association to meet in 1852 in Belfast. In promoting this object he came to London in the January of that year, when he was seized with paralysis, and died in the course of a few hours. The manuscript of another volume on the 'Natural History of Ireland' was found after his death in a sufficiently advanced state to be given to the public, and this was published with a short memoir of the author in 1856. He took an active interest in all the local institutions of his native town. He was president of the Natural History and Philosophical Society of Belfast, member of the Royal Irish Academy, honorary fellow and member of several foreign scientific societies.' William Thompson is a remarkable instance of a man who, by the devotion of average talents to one great object, succeeded in his work on the natural history of Ireland in achieving for himself a lasting reputation, and giving to science one of its most valuable monographs on the distribution of animals in Europe.

'THOMS, WILLIAM JOHN, born in Westminster, on Nov. 10, 1803, his father being Nathaniel Thoms, the secretary of the first Commission of Revenue Inquiry. After a careful education he became a clerk in the secretary's office at Chelsea Hospital, and his subsequently been made one of the clerks of the Printed Papers Department in the House of Lords, and in 1863, deputy librarian. He wrote articles for the 'Foreign Quarterly Review,' and other periodical works. In 1828 he published in three volumes 'The Romance and Early Prose Romances;' in 1834, 'Lays and Legends of Various Nations;' and in 1838 the 'Book of the Court.' In this year he was elected a Fellow of the Society of Antiquaries, and he is also a member of those of Edinburgh and Copenhagen. In 1839 he edited 'Anecdotes and Traditions;' in 1842, 'Stow's Survey of London,' including many valuable notes and verifications, and a notice of the life and writings of Stow; and in 1844, Caxton's 'Reynard the Fox;' he has likewise published a translation of Worsaae's 'Primeval Antiquities of Denmark,' 8vo, 1849, of which he considerably increased the value by a preface and notes, pointing out the extent and the manner in which the researches of the author on the primeval remains of Denmark threw light upon those of this country. For a considerable time he has held the office of secretary to the Camden Society. His most noticeable effort however has been the originating of the Collectanea of 'Notes and Queries,' of which he has been the editor since the commencement in Nov. 1849; a work which has been most successfully carried on under his management, and which has collected an amount of curious and valuable information scarcely paralleled by any publication with which we are acquainted; and to the contributions of Mr. Thoms, as well as to his editorial supervision, has the value and success of 'Notes and Queries' been essentially indebted.

THOMSON, ANTHONY TODD, was born in Edinburgh on the 7th of January 1778. His father, by birth a Scotchman, was settled in America, where he held two lucrative appointments under the British government, being Postmaster-General for the province of Georgia, and Collector of Customs for the town of Savannah. Having refused to take the oath of allegiance to the American government, on the breaking out of the Revolution he was compelled to relinquish his appointments, and returned to Edinburgh. Anthony Todd was born previous to this whilst his mother was on a visit to Edinburgh. He received his education at the High School, Edinburgh. When a boy he formed an intimacy with Henry, afterwards Lord Cockburn, which lasted till his death. His father destined him for business, but having obtained a clerkship in the Post-office, he was enabled by the leisure it afforded him to gratify a wish he had always entertained to study medicine. He attended the lectures of Munro, Gregory, Black, and Dugald Stewart. In 1799 he became a member of the Speculative Society, and the companion of Jeffrey, Horner, Brougham, and Lord Lansdowne. In 1799 he became a member of the Royal Medical Society. Having graduated in 1799, he left Edinburgh, and established himself in London about the year 1800. He commenced the practice of his profession in Sloane-street, Chelsea, as a general practitioner. His progress was at first slow, but when once commenced it was never interrupted. In the midst of a large general practice, he found time to cultivate science and literature. He was mainly instrumental in procuring the enactment of the Apothecaries Act in 1814. His first literary work was published in 1810, and entitled 'Conspectus Pharmacopiæ.' He sold the copyright of this book for twenty pounds. In 1833 it was bought by the Messrs. Longman for two hundred pounds. It has gone through fourteen editions. In 1811 he published the 'London Dispensatory,' which was a work of great labour. It contained a critical account of all the medicines and their compounds which were in use in Great Britain. It has been translated into several European languages, and ten editions have been published in England. During his researches into the materia medica he was impressed with the importance of the study of botany, and he was one of the first to give a course of lectures on this subject in London. In 1821 he published a first volume of his 'Lectures on Botany.' This work contained many very valuable observations on the structure and functions of plants which have since become a part of the science of botany. His first editions, he made extensive use of the microscope, and very fairly claim to be one of those who appreciated the value of this instrument, when its use was generally neglected. In 1826 he became a member of the Royal College of Physicians of London, and commenced practice as a consulting physician. In 1828 he was elected professor of Materia Medica to the then London University, now University College. In this position he worked with great ardour at the subject of Therapeutics, and was one of the first to introduce the new substances discovered by the chemist into the practice of medicine. He formed here a very fine collection of specimens of materia medica, but the college had not the means of purchasing it after his death, and it has been lost to the country. In 1832 he was appointed professor of Medical Jurisprudence. The lectures delivered from this chair were published in the 'Lancet' in 1839. In 1832 Dr. Thomson published his 'Elements of Materia Medica,' a work of a more scientific character than his 'London Dispensatory,' and entering more fully into the subject of Therapeutics. Three editions of this work had been published at the time of his death. In 1839 he edited 'Bateman on Cutaneous Diseases,' and at the time of his death, he was engaged in preparing 'A practical Treatise on Diseases affecting the Skin,' which has since been completed and edited by Dr. Parkes. In 1843 his health first began to fail. He continued to give his lectures, with considerable interruptions, till the following summer, when he was obliged to retire into the country, and died of bronchitis at Ealing on the 3rd of July 1849.

Dr. Thomson was a man of unwearied industry, and throughout his long career, pursued his labours with few or no interruptions. He was a man of varied attainments, being literature as well as science, and was not an unfrequent contributor of literary articles to the Magazines and Reviews. He translated from the French, and edited, a work by Mons. Salvarte, entitled 'The Philosophy of Magic, Omens, and apparent Miracles.' His notes to this work are full of curious and interesting matter. He edited the 'Poetical works of Thomson's 'Seasons;' to which he appended a large number of notes, and a life of the author. He contributed many articles to the 'Cyclopædia of Practical Medicine.' He was for many years editor of the 'Medical Repository;' to which journal he also extensively contributed. One of his last works was entitled 'Domestic Management of the Sick-room,' of which several editions have been printed. A sketch of his life, from which the materials of this notice have been principally obtained, is published with his posthumous work on 'Diseases of the Skin.'

MRS. A. T. THOMSON, the wife of Dr. Thomson, has contributed rather largely to literature, chiefly in the department of historical biography. She has published 'Memoirs of the Court of Henry VIII.,' 2 vols. 8vo, 1826; 'Memoirs of Sarah, Duchess of Marlborough, and of her Contemporaries,' 2 vols. 8vo, Queen Anne, 1839; 8vo, 1839; 'Memoirs of the Jacobites of 1715 and 1745,' 3 vols. 8vo, 1845; and 'Memoirs of Viscountess Sundon, Mistress of the Robes to Queen Caroline, Consort of George II., including Letters from the most celebrated Persons of their Time, now first published from their Originals,' 2 vols. 8vo, 1847. She has also written several romances and novels. Her latest publication is 'Recollections of Literary Characters and Celebrated Places,' 2 vols. 8vo. This work consists chiefly of a series of articles which appeared originally in 'Bentley's Miscellany' and 'Fraser's Magazine,' with the signature of 'A Middle-Aged Man,' an affectation which she assumed, as she states, "in order that by better disguising myself, I might at that time express myself the more unreservedly." [SUPP.]

THOMSON, JAMES, was born at Ednam in Roxburghshire on the 11th September 1700. His father was clergyman of the place, and distinguished for his piety and pastoral character. James was first sent to the grammar-school at Jedburgh, and completed his education at the University of Edinburgh, where in 1719 he was admitted as a student of divinity.

Thomson turned from divinity to poetry owing to the following incident:—The Rev. Mr. Hamilton, who then filled the chair of divinity, gave as a subject for an exercise a psalm in which the majesty and power of God are described. Of this psalm Thomson gave a paraphrase and illustration as the exercise required, but in so poetical and figurative a style as to astonish the audience. Mr. Hamilton commented the performance, and pointed out to the audience its most striking points; but, turning to Thomson, he suggested that if he intended to become a minister he must keep a stricter rein over his imagination, and learn to be intelligible to an ordinary congregation. Some encouragement held out to him by Lady Grisel Baillie following

Digitized by Google

this intimation of the Professor, he determined to give up divinity and try his fortune in London. Slender as this pretext of 'encouragement' was, there have been many poets who have thus sought their fortune from no stronger reason. The truth is, Thomson wanted to try his capacity in London, and seized on this as a pretext.

Arrived in London, says Dr. Johnson, he was one day loitering about "with the gaping curiosity of a new-comer, his attention upon everything rather than upon his pocket," when his handkerchief, containing his letters of recommendation to several persons of consequence, was stolen from him. And now the lonely poet in the vast city first felt his inexperience and his poverty. A pair of shoes was his first want; his manuscript of 'Winter' his only property. A purchaser for this poem was found with great difficulty; but Mr. Millar consented to give a trifle for it, and it was published in 1726. It was little read till Mr. Whately and Mr. Spence spoke so favourably of it that attention was attracted, and it rose rapidly into popularity, and one edition very speedily followed another. This success procured him many friends, among whom was Dr. Rundle, who introduced him to the lord chancellor Talbot, and some years after, when the eldest son of that nobleman made a tour on the continent, Thomson was appointed his travelling companion. Meanwhile his poetical powers were fully employed, and in 1727 appeared his 'Summer,' in 1728 his 'Spring,' and in 1730 his 'Autumn.' Besides these, he published, in 1727, 'A Poem sacred to the memory of Sir Isaac Newton,' and 'Britannia,' a poetical invective against the ministry for the indifference they showed to the depredations of the Spaniards in America. By this piece he declared himself a favourer of the opposition, and therefore could expect nothing from the court.

The tragedy of 'Sophonisba' was acted in 1727, Wilks taking the part of Masinissa, and Mrs. Oldfield that of Sophonisba. So high were the expectations raised, that every rehearsal was dignified with a splendid audience collected to anticipate the pleasure that was preparing for the public. Its success however was very equivocal. "There is," says Johnson, "a feeble line in the play:—

'O, Sophonisba, Sophonisba, O!'

This gave occasion to a waggish parody,

'O, Jemmy Thomson, Jemmy Thomson, O!'

which for awhile was echoed through the town."

At this time long opposition to Sir Robert Walpole had filled the nation with clamours for liberty, and Thomson, instinctively seizing the poet's office to utter in verse the voice of the nation, determined on writing a poem on 'Liberty.' He spent two years on this undertaking, and viewed it as his noblest work, probably because it had cost him the most trouble. It was divided into five parts, which were published separately, thus: 'Ancient and Modern Italy compared,' being the first part of "Liberty," a poem,' 1735; 'Greece, being the second part, &c.,' 1735; 'Rome, being the third part, &c.,' 1735; 'Britain, being the fourth part, &c.,' 1736; 'The Prospect, being the fifth part, &c.,' 1736. The poem of 'Liberty' does not now appear in its original state, having been altered by Sir George (afterwards Lord) Lyttelton. Of all Thomson's poems this is the least read, and deservedly so, for, independent of the feebleness of its execution, it is obvious, as Johnson remarked, that "the recurrence of the same images must tire in time; an enumeration of examples to prove a position which nobody denied must quickly grow disgusting."

His friend Talbot appointed him secretary of briefs, a place requiring little attendance, suiting his retired indolent way of life, and equal to all his wants. When his patron died Lord Hardwicke succeeded him, and kept the office vacant for some time, probably till Thomson should apply for it; but either his modesty, pride, or depression of spirits prevented his asking, and the new chancellor would not give him what he would not request. This reverse of fortune increased his literary activity. In 1738, besides editing his own works in two volumes and writing a preface to Milton's 'Areopagitica,' he produced the tragedy of 'Agamemnon,' with Quin for his hero. For this he got "no inconsiderable sum," though it had but poor success. Johnson says that on the first night Thomson seated himself in the upper gallery, and was so interested in the performance, that "he accompanied the players by audible recitation, till a friendly hint frighted him to silence." Thomson's next tragedy was 'Edward and Eleonora,' which was not allowed to be represented on account of certain pretended allusions. He then wrote, conjointly with Mallet, the masque of 'Alfred,' which was represented before the Prince and Princess of Wales at Cliefden in 1740. This masque contains the national song of 'Rule Britannia,' which Mr. Bolton Corney ascribes, "on no slight evidence," to Mallet. Thomson's next work was another tragedy, 'Tancred and Sigismunda,' which, being taken from the interesting story in 'Gil Blas,' instead of the Grecian mythology, as were his other pieces, had more success. Garrick and Mrs. Cibber played the principal parts. His friend Sir George Lyttelton now appointed him surveyor-general of the Leeward Islands, from which, after paying a deputy, he received about 300*l.* a year.

The 'Castle of Indolence,' which was many years under his hands, was now finished and published (1748). It was at first little more than a few detached stanzas, in the way of raillery on himself, and on some of his friends who reproached him with indolence, while he thought them at least as indolent as himself. But the subject grew under his hands till it became his masterpiece.

A violent cold, which from inattention became worse, at last carried him off, on the 27th of August 1748. He left behind him a tragedy of 'Coriolanus,' which was brought on the stage by Sir George Lyttelton for the benefit of his family. A considerable sum was raised, which paid his debts and relieved his sisters. The remains of the poet are deposited in Richmond Churchyard.

Thomson was "more fat than bard becomes;" of a simple, unaffected, indolent, sensual character; silent in company, but cheerful among friends, of whom he had many and true. This character is discernible in his writings. His simplicity is seen in the purity and warmth of his sentiments, sometimes even childish; his indolence in the slovenliness of his versification, and the inappropriateness of so many of his epithets: he never seems to have thought anything worth the toil of polishing, and hence the perpetual use of pompous glittering diction substituted for thought or description; his sensuality appears in the gusto with which he describes all luxuries of the senses, and the horrors of deprivation. Amidst much that is truly exquisite both in feeling and expression, he mingles the absurdities of a schoolboy's trite commonplaces and mechanical contrivances to piece out his verse. A sweet line of almost perfect beauty is followed by a bombastic allusion, or some feeble personification as tiresome as the first was unwelcome. A touch of nature is overlaid by superfluous ornaments—a picturesque description is often marred by pedantry or by carelessness. In spite of these drawbacks, Thomson is a charming poet, and one whose works have always been the delight of all classes. The popularity of his 'Seasons' equals that of any poem in the language, and it is said that some one, finding a shabby copy of it lying on the window-seat of a country ale-house, exclaimed "That's true fame!" Thomson's beauties are genuine: his descriptions of nature often come with the force of reality upon the mind; and no one ever painted nature successfully the 'changing scene' and the 'rustic joys' of England.

His 'Castle of Indolence' may be regarded as his best-sustained effort; for, although separate passages of the 'Seasons' may be superior, yet on the whole it has fewer defects, while some of the stanzas, especially in the first canto, fill the mind with a deep luxury. Of his tragedies we need say little: their neglect has been so signal, that we may accept so unanimous a verdict without further examination; indeed the genius of Thomson was eminently undramatic.

THOMSON, THOMAS, M.D., a celebrated chemist, was born April 12, 1773, at Crieff, Perthshire, and received his early education at the parish school of that place. He afterwards studied at St. Andrews and Edinburgh, and was a pupil of the celebrated Dr. Black. In 1802 he delivered a course of lectures on chemistry, and continued to lecture on that science for nearly fifty years. He was one of the editors of the 'Encyclopædia Britannica' from 1796 to 1800, and wrote the articles 'Chemistry,' 'Mineralogy,' &c. in that work. In 1802 he published his 'System of Chemistry.' He first suggested the use of asphalt in chemistry, which have since become so generally employed. He was one of the first chemists who recognised the value of Dalton's atomic theory, and devoted himself to its elucidation. He also at this time conducted for the Board of Excise a series of investigations on brewing, which formed the basis of Scottish legislation on that subject. In 1813 Dr. Thomson came to London, and started the 'Annals of Philosophy,' a scientific journal, which he edited till the year 1822, when he resigned it to his friend Mr. Richard Phillips. In 1827 this journal became merged in the 'Philosophical Magazine.' In 1817 he was elected lecturer on chemistry in the University of Glasgow, and the following year received the title of professor. This chair he held till his death, assisted in his later years by his nephew and son-in-law Dr. R. D. Thomson. In 1835 he published a work, entitled 'Outlines of Mineralogy, Geology, and Mineral Analysis,' and in 1849 a work on 'Brewing and Distillation.' He died on the 2nd of July 1852. His son, Dr. Thomas Thomson, is celebrated for his botanical knowledge; he has published an account of his travels in Thibet, and is now the superintendent of the East India Company's botanic gardens at Calcutta.

THORBURN, ROBERT, A.R.A., was born at Dumfries, Scotland, in 1818, and entered in 1833 as a student in the Scottish Academy, Edinburgh, where he gained the highest honours. Having chosen miniature-painting as his special province, he in 1836 came to London, and quickly succeeded in securing a considerable measure of patronage among the leading members of the court and aristocracy. He has adopted a largeness of size as well as of style unusual with miniature-painters, and he has endeavoured to supersede something of the depth of tone and breadth of chiaroscuro usually found only in oil-paintings to the brilliancy and transparency belonging to painting on ivory. He has succeeded to a great extent in raising the style of painting on ivory; but under his hands, and still more in the hands of his imitators, the miniature has lost something of the gaiety which seems essential to that class of paintings. Mr. Thorburn's likenesses are usually good and characteristic, but there may often be seen a too evident attempt to impart historical elevation to the countenances and figures of his sitters, and this is sometimes sought to be increased by the adaptation of the forms and arrangement of well-known compositions of the great Italian masters. For many years, from the rank or eminence of his

Digitized by Google

sitters, and the size and beauty of his paintings, his miniatures have been among the most attractive of those annually exhibited in the rooms of the Royal Academy. The Queen, the Prince Consort, and several of the royal children, many members of the royal families of France, Belgium, and Germany, with an almost endless array of the female aristocracy of England, have been painted by him, and seldom indeed have female loveliness and dignity been more happily portrayed. Mr. Thorburn was elected an associate of the Royal Academy in 1848. During the last few years he has resided chiefly in Edinburgh, and painted portraits and scriptural pieces in oil.

THORDO is the Latinised name of a celebrated Danish lawyer, whose real name was THORD, or, more completely, THORD DEGN. He lived in the reign of Waldemar II., king of Denmark, and was descended from an ancient family of that country. Concerning his life, little is known beyond the fact that he was chief judge of the province of Jutland. His name has come down to us through a collection of Danish laws which he formed into a kind of code. It contains the earliest Danish laws, to which no historical origin can be assigned, as well as the subsequent laws which were passed between the years 1200 and 1377 by the Danish parliament, and sanctioned by the kings. They are not arranged in chronological order, but systematically, and comprise civil as well as constitutional laws. They are of very great value to the student of the social and political history of Denmark. Danish editions of this small code appeared at Ripen, 4to, 1504, and at Copenhagen, 4to, 1508. Ludewig, in his 'Reliquiæ Manuscriptorum omnis ævi diplomatum ac momentorum inauditorum,' vol. xii. pp. 196-216, has published a Latin translation of this code of laws. In the title to them Thordo calls himself "Thordo legifer Dacis," where Dacia must mean Dania, that is, Denmark.

THORLESON, STURLA, belonged to the celebrated Icelandic family of the Sturlæ; his name Thordson indicates that he was a son of Thordo. He was a nephew of Snorri Sturluson, and born about A.D. 1218. Being a man of high rank and great knowledge, he was appointed to the most important offices by the Danish kings Hacon and Magnus, and it was at their command that he wrote the history of Iceland, Denmark, and Norway. From the time when the work of Snorri Sturluson broke off. This history bears the title of 'Historia Sturlungorum,' but the work which is new extant under that name is only an abridgment of the original history, and the latter part is altogether lost. The substance of the work is given in Torfæus, 'Historia Rerum Norvegicarum,' who, in his Prolegomena, also gives an account of the 'Historia Sturlungorum.' Thordson died in 1238, at the age of seventy.

THORER, ALBAN. [TORINUS, ALBANUS.]

THORESBY, RALPH, a virtuoso and antiquary, and an early Fellow of the Royal Society, was the son of a merchant of Leeds, and born in that town in 1658. He had his early education in the Leeds grammar-school, but, being intended by his father for commercial life, he did not pass to any of the higher seats of learning. He had however what may be called a liberal commercial education, being sent by his father to Holland for the purpose of becoming acquainted with the mode of conducting business in that country, and of acquiring the modern languages; and afterwards to London for a similar purpose. He settled in his native town, where his family was connected with some of the principal persons who then formed the society of Leeds, and where he had a business prepared for him, which had been successfully conducted by his father, who died when the son was just twenty-one.

Thoresby possessed from a very early period of life an eager curiosity respecting the things and persons around him which presented any features of historical interest, and a desire of collecting objects of curiosity, natural or artificial. His father had something of the same taste, having purchased the collection of coins and medals of which had been formed by the family of Lord Fairfax, the parliamentary general, and this collection was the basis of the museum formed in a few years by the son. This museum was a means of bringing him acquainted with all the celebrated antiquaries and naturalists of the time, and was a perpetual attraction to persons of curiosity, who often visited Leeds for no other purpose than to see it. It is not too much to say of it that it was the best museum that had been formed in England by a gentleman of private and rather small fortune; containing, it is true, some things which would now be esteemed of not the smallest value, but also many objects of very high value, especially in the two grand departments of manuscripts and coins. As he advanced in life, the curiosity which had at first been directed upon the objects more immediately around him became expanded so as to comprehend objects of more general interest, and in fact the whole range of what is generally understood to be comprehended in the term antiquarian literature. In the department of natural history he was also not merely a collector, but an observer, and he made many communications, esteemed of value, to his private friends or to the Royal Society.

With this turn of mind, it will hardly be supposed that he was very successful in his mercantile affairs. He had however the good sense to withdraw from business before his fortune was entirely lost to him, and about the forty-sixth year of his age he seems to have wholly retired from it, and to have formed the determination of living on the little income which the portion of his property that remained would afford him.

Besides amassing such manuscript matter as he could by any means become possessed of, he was himself a laborious transcriber, and was also accustomed to commit to writing notes of things which he observed, or information collected from his friends or the old people of his time. When released from the cares of business, he had leisure to make use of these notes, and he entered upon the preparation for the press of two works, which it was intended by him should contain all that he had gathered in what had been from the first his favourite subject, the illustration of the history, and whatever belonged to it, of his native town. One of them was to be in the form of a topographical survey of the whole of the township of Leeds, and of a few of the smaller parishes which are supposed to have been comprehended under the very ancient local term 'Elmete:' the other, a history of the various transactions of which that district had been the scene, of its more eminent inhabitants, of the public benefactors, and of the changes which had taken place in the state or fortunes of its inhabitants. The first of these designs only was accomplished. The work appeared in a folio volume in 1715, under the title of 'Ducatus Leodiensis, or the Topography of the Town and Parish of Leeds.' This work leaves little for the inhabitants of the town to desire in this kind, except that he had prepared the 'historical part' also, to which the author is perpetually referring the reader. The work is more than its title promises, since it contains a large body of genealogical information, comprehending the descents of nearly all the families of consequence that have inhabited the central part of the West Riding. There is also a very large descriptive catalogue of the treasures deposited in his museum.

The 'Ducatus' is the principal literary work for which we are indebted to him. As a kind of supplement to it, he published, in 1724, a history of the Church of Leeds, under the title of 'Vicaria Leodiensis,' which, like his former work, has many things not strictly belonging to his subject, but in themselves valuable. A new edition of the 'Ducatus,' containing also all the matter of the 'Vicaria' which properly belonged to Leeds, was published by Thomas Dunham Whitaker, LL.D., in 1816. The writings of Bishop Nicolson, Bishop Gibson, Obadiah Walker, Calamy, Strype, Hearne, and many other persons, show how willing Thoresby was to give assistance to any of his literary friends in their various publications. He died in 1725.

Thoresby kept during the greater part of his life an exact diary of each day's occurrences. Large extracts from the portions which remain of it were published in two octavo volumes in 1830, and two more volumes were published at the same time of selections from the letters of his various friends; these were published under the care of Dr. Hunter. They exhibit the peculiar features of a somewhat remarkable character, and the particular incidents of his life. An ample account of Thoresby may be found in the 'Biographia Britannica,' and another prefixed to Dr. Whitaker's edition of his topographical work.

THORILD, THOMAS, an eminent Swedish poet and political speculator, the author of several works not only in Swedish but in English and German, to some of which his countrymen ascribe a high value, was born on the 18th of April 1759, in the parish of Svartcberg in Bohuslän. His father's name was Thorén, which the son, after bearing for a short time, changed to that of Thorild, for which he is not apparent. After studying at Lund he took up his residence in Stockholm, and his first work 'Passionerna,' an Ode on the Passions, was criticised with some severity by Kellgren (KELLGREN), and in consequence a lengthy paper war took place between the two which brought Thorild's name into notice. In 1786 he addressed a pair of memorials, one to the king, the other to the people, in favour of liberty of the press, and was so disgusted at the little effect they produced, that for that and other reasons he determined to transfer himself to England. "England," he declared, "was the fatherland of his soul, he was born for it, if not in it." Before going however, he wished to obtain the degree of doctor at the University of Upsal, with the view of inspiring more respect. His public disputation for a degree on the 22nd of March 1788 was the most remarkable ever known at that university. The king, Gustavus III., and all the court were present, and among the opponents of Thorild on his theme, which was 'A Criticism on Montesquieu,' were fifteen of the courtiers, one of whom was the minister Schrodescheim, another the poet Leopold, at that time the leading poet of Sweden. The king was, it is said, struck with admiration at the talents of Thorild, and testified a desire to take him under his patronage; but much of this rests on Thorild's own testimony, and he was throughout life remarkable for inordinate self-conceit. If an offer was really made it did not prevent him from coming to England. His object in doing so, as appears from some private letters to his patron Thaun, a dry antiquary, who supplied him with money, was to effect a 'World Revolution.' "To understand and to act were," Thorild said, "the two great attributes of humanity. He who excels in one is called a Genius, in the other a Hero. The legislative power ought to be in the possession of Genius, and as mankind requires an armed executive also, that power ought to be in the possession of Heroes. Scoundrels —that is, kings, ministers, and priests—should receive a warning, and if say did not attend to it, the sentence should then be passed on them—'Feriendus' (To be Struck)." "This is a hero-worship," says

Digitized by Google

Pamblad, in his Swedish biography of Thorild, "resembling that of Thomas Carlyle, who in mind is near akin to Thorild." The ideas however of Thorild, which include, among other things, the destruction by fire of all great cities, as "nests of folly and tyranny," have a far more striking resemblance to those of the wildest of the French revolutionists, which they have the merit, such as it is, of anticipating. It was in September 1788 that Thorild came to England, where he remained a year and a half, so that he must have been in London at the time of the outbreak of the French revolution, yet he seems to have made no movement to transfer himself to Paris. At first he was delighted with England, and wrote from Scarborough, "Almost everything here is of its kind the best, the beer, the theatre, the letters, the persons." As might be expected his opinions soon changed, and for the rest of his life he wrote of the country with great contempt. "The whole government of England," he told Thaun in 1790, "is a balance of violence and justice, of sense and nonsense, of truth and falsehood, which is indeed necessary in the idea of a balance." While here he published two pamphlets in English, 'The Sermon of Sermons on the Impiety of Priests and the Fall of Religion,' London, 1789; and 'Pure Heavenly Religion restored,' London, 1790; the one an attack on religion in general, the other, not very consistently, a defence of the doctrines of Swedenborg. Both of them fell still-born from the press. Some others, 'On the Dignity of a free Death, with a view to state that grand right of man, by a Druid,' and 'The Royal Moon, or on Insanity in Politics,' appear not to have been printed, and 'Cromwell, a sketch of an epic poem,' was left unfinished, but was afterwards printed in Sweden by Geijer. It begins—

> "Great is the man I sing, and bold my theme,
> A dread to feeble souls as lightning's gleam
> In midnight, or loud thunderings' solemn roar,"

and shows, amid occasional incorrectness, a power over English poetical language very rarely attained by a foreigner. Cromwell was Thorild's favourite hero—another point of resemblance to Carlyle. The Swede, as might be anticipated, hailed with delight the outbreak of the French revolution, though, as we have seen, he kept at a safe distance from it. He continued to express his warm admiration of its progress, and his detestation of those who thought otherwise, for some years, till he was suddenly converted to an anti-revolutionist by the Reign of Terror. On his return to Sweden in 1790 he resumed his literary labours, and not long after the death of Gustavus III., who was always his admirer, issued a new edition of a former publication, an 'Essay on the Freedom of the Public Mind,' with a dedication to the Duke of Sudermania, then regent, and successor as Charles XIII., in which these words occurred, "Give us then the freedom of the public mind, honestly and fairly, before it is taken with blood and violence." For this passage and some others of similar tendency Thorild was brought to trial on a capital charge, but was finally only sentenced to four years' banishment. This trial, which terminated in February 1739, was at once the most conspicuous and the most honourable incident in Thorild's life, he showed great coolness during its progress, and wrote a series of poems in prison. He removed to Greifswald, then part of Swedish Pomerania, and before his year of banishment was over was appointed by the Swedish government librarian of the university there, and afterwards a professor. The rest of his life was spent quietly at Greifswald, where he died on the 1st of October 1808.

A collection of the works of Thorild, 'Thomas Thorild's Samlade Skrifter' was published in 3 vols. at Upsal and Stockholm, between 1819 and 1824, under the editorship of Geijer, who took the objectionable liberty of leaving out such passages as he thought ought not to have been written. One volume consists of poems, the two others of literary criticism and essays on general subjects. As a literary critic the most striking peculiarity of Thorild was his boundless admiration of Ossian. Those who feel a curiosity as to his philosophical opinions in general, may find ample information in the 'Svenskt Pantheon,' and in Atterbom's 'Svenska Siare och Skalder' (Swedish Seers and Bards). While at Greifswald he was the friend of Herder, the German philosopher, whose works were left to him to edit.

THORKELIN, GRIM JONSSON, a learned Icelander, was born in 1749, according to a life in the 'Monthly Magazine' for 1803, in 1750, according to Jens Worm in the 'Lives of Icelanders,' and in 1752, according to Gralow, who refers to the accounts in the 'Monthly Magazine,' and Worm, as "autobiographies of Thorkelin." Many similar discrepancies occur in the accounts of other circumstances of his early life, but they are hardly worth the trouble of pointing out. According to a rescript of the King of Denmark, issued in 1759, one of the best scholars in Iceland was to be selected every year to be sent to Denmark, and educated at the public expense, and the choice of Bishop Finn Jonsson [JONSSON] fell in 1770 upon Thorkelin. As his chest was too weak to allow him to become a preacher, he took to the study of law, and combined with it that of antiquities. He soon distinguished himself by the publication of several Icelandic works which he edited, among others of the 'Eyrbiggia-Saga,' of which an abstract was afterwards published by Walter Scott. He obtained various posts in connection with the Arne-Magnæan Commission, the Secret Archives, and other learned establishments of Copenhagen; received in 1783 the title of Professor Extraordinary, and in 1786 he was sent to England, mainly at the King of Denmark's expense, on a tour of antiquarian research, which was to last for four years, and ultimately extended to five. In England he made himself acquainted with many of the distinguished literary men of the time, Pinkerton, Horace Walpole, and Macpherson, the translator of 'Ossian' included. He was presented to King George III., and at his desire, made a selection of Danish literature for the library then at Buckingham House, now in the British Museum. The 39th volume in the manuscripts of that library is a 'Catalogue consisting of 2085 books relative to the Danish, Swedish, Norwegian, and Icelandic Literature and Philosophy, written by the natives, and published within the borders of Scandinavia. A collection made for purpose [on purpose (?) or for a purpose (?)] during a time of more than twenty years.' Besides the collection and catalogue were made by Thorkelin, and most of the books were acquired for the royal library. He made a tour in Ireland, and also a tour on the Scottish coast, of which he published an account in English in 1790, in some letters to the 'Public Advertiser.' This was not his only contribution to English literature. In 1788 he published an 'Essay on the Slave Trade,' and also 'Fragments of English and Irish history in the ninth and tenth century, translated from the original Icelandic, and illustrated with some notes,' the latter work forming the 44th number of Nicholsa's 'Bibliotheca Topographica Britannica.' The selections from the Icelandic sagas are interesting, but the translation is far from clear, and is vague and inflated in style. Another English work by Thorkelin which ran to a second edition, a 'Sketch of the character of his royal highness the Prince of Denmark,' to which is added a short view of the present state of literature and the polite arts in that country,' London, 1791, was translated into Danish, and led to a paper war with other Danish writers, who complained of some of its statements. The most important result of Thorkelin's visit to England however was the copy that he made of an ancient Anglo-Saxon poem in the Cottonian library, to which attention had been called nearly a hundred years before, in Wanley's 'Catalogue,' published in Hickes's 'Thesaurus,' but which had remained all the time unedited by the learned of Britain. When in 1791 he returned to Denmark on his nomination as Gehimer Archivarius, or Keeper of the Secret Archives, it seems to have been his intention to publish this work without delay, but his biographer in the 'Monthly Magazine' for 1803, concludes his narrative by the statement that "his subsequent course of a year after his return, he married a widow in the brewing line, which he conducts at this day," and business seems to have interfered with literature. Thorkelin had however prepared it for publication at the time of the unexpected attack on Copenhagen, in 1807, when his translation of the poem perished with his house and furniture in the English bombardment. He was encouraged to take up the work again by Counsellor von Bülow, and finally the poem and translation were published together in one quarto volume at Copenhagen in 1815, at von Bülow's expense, under the singular title of 'De Danorum Rebus Gestis Seculi III., IV., Poema Danicum Dialecto Anglo-Saxonica.' This is the poem which has since become so celebrated under the name of 'Beowulf.' It will be seen that in the title Thorkelin calls it a Danish poem in the Anglo-Saxon dialect, and in his preface his language would lead a reader to conclude that the poem was written in Icelandic. What he meant by this is not easy to say, but the only merit of his edition is that of having called attention to this very interesting relic of ancient literature. "I am most reluctantly compelled to state," says Kemble in his edition of Beowulf (London, 1833), "that not the slightest use can be made of the text found in succession in which some gross faults either in the transcript or the translation does not betray the editor's utter ignorance of the Anglo-Saxon language." Thorkelin died on the 4th of March 1829, at Copenhagen, after long suffering from ill-health. A full and appreciative account of his works is given in Rask's 'Icelandic Reader.' Among them we find a "Proof that the Irish at the time of the Eastmen's arrival in Ireland in the 8th century, deserve a distinguished place among the most enlightened nations of Europe at that period," written in Danish, and published in the Transactions of the Royal Society for the Sciences in 1794.

THORLAKSSON, JON, the Icelandic translator of 'Paradise Lost,' was born on the 13th of December 1744, at Selardal, near Arnarfjord, the son of a priest who was afterwards dismissed from the priesthood. His grandfather himself incurred a similar fate in 1725; a second bastard child having been sworn to him he was dismissed from being priest of Grunnarik, and deprived of holy orders. Fortunately for him, Olaf Olafsson obtained in the following year from the king of Denmark the privilege of establishing a printing-office at Hrappsey in Iceland, and Thorlaksson, who would otherwise probably have been reduced to starvation, procured employment as corrector of the press. Though he had never left his native island, he had received a good classical education during three years spent at the school of Skalholt, then the Icelandic capital; and he assisted in translating into Latin the Annals of Biorn of Skardsá, perhaps the most distinguished production of the Hrappsey press. His learning won him favour: he married the daughter of a peasant, who was partner with Olafsson in the printing-office, and in 1780 he was restored to the priesthood, but with the reservation that he was never to officiate in the diocese or Skalholt. It was eight years later before he was presented to the living of Bogsas in the north of Iceland, the value of which was somewhat under seven pounds sterling a year, and reduced by his having

Digitized by Google

to pay a curate. The north of Iceland is still more uncultivated than the other parts of the island. His wife refused to accompany him to his living, and died, separated from him, in 1808. In 1791 Halldor Hjallmarsson, one of his parishioners, wrote to the Icelandic Literary Society to say, that having acquired the year before a Danish translation of 'Paradise Lost,' he had put it into the hands of a "gifted friend," who had turned into Icelandic some specimens which he submitted to their notice. The translation was so remarkably excellent, that the society, on learning from whom it came, elected Thorlaksson an honorary member, and undertook to supply him with a set of their works, on condition of his supplying them with a translation of one book of the poem every year. Before they had published three books however the society itself came to a stop for want of funds, and Thorlakssom completed his translation in manuscript. The fame of it was spread widely by the English travellers who came to Iceland, especially Sir George Mackenzie and the Rev. Ebenezer Henderson; but Thorlakson's desire to see it in print was never gratified in his lifetime. One of his poems, some verses addressed to the British and Foreign Bible Society on the occasion of their publishing an Icelandic Bible, having been inserted in their Report, had a very wide circulation, and was even reprinted at Calcutta. Henderson, who visited him at Bergsa in 1814, and who was the first Englishman he had ever seen, found the old man of seventy-one in the fields, assisting in haymaking, and accompanied him home to a house of which he gives an interesting description:—"The door is not quite four feet in height, and the room may be about eight feet in length by six in breadth. At the inner end is the poet's bed, and close to the door over against a small window not exceeding two feet square is a table where he commits to paper the effusions of his muse." In this cottage Thorlaksson died on the 21st of October 1819, at the age of seventy-four. He had received not long before a subscription of 30*l.*, collected by Henderson from friends and admirers in England, and the King of Denmark had conferred upon him a pension of about 6*l.* a year.

The collected poems of Thorlaksson fill about 1100 pages in the 'Islenzk Ljódabok Jons Thorlakssonar presta ad Bergsa,' 2 vols., Copenhagen, 1842-43. These volumes comprise all his shorter poems, composed from the age of twelve to over seventy, gathered from seven Icelandic periodicals in which they had appeared, or from translations, among others one of Pope's 'Essay on Man,' rendered through the Danish, which had been printed at Leyra in Iceland in 1793. The fame of Thorlakson rests however on his version of 'Paradise Lost.' That this, in the shape in which he gives it, is a fine Icelandic poem, is established by the testimony of all Icelandic readers. Its value as a correct representation of the original is less clear. The versification adopted, the 'fornyrda-lag,' or 'antique verse' of Iceland, with short lines and alliterative correspondences, is as different as possible from the blank verse of Milton, being in fact very nearly the metre of Piers Plowman. The translation is made from two versions, one in Danish, the other in German, and Thorlaksson, it is said, had never even seen the original. When, at the outset of his task, the Icelandic Literary Society offered to send him a copy, together with a German translation, he accepted the offer of the German with thanks, but remarked, "with the English original I can have little to do, though once, in my early years, I had some acquaintance with easy English prose." The translation is about twice the length of the original, from the necessity of explaining to the common Icelandic reader not only the classical allusions with which Milton abounds, but even various allusions which to an Englishman need no explanation. Finn Magnusson, himself an Icelander, in a review of the poem, observes that the passage in the description of Paradise, "fruit with golden rind," has been rendered by Thorlaksson, "med gyllnum nyttum" (with golden *nuts*), probably from his having no notion of rind, having never seen an apple or any fruit that had any. The 'Paradise Lost' was finally printed at Copenhagen in 1828, at the expense of an English gentleman named Heath, who presented most of the copies to the Icelandic Literary Society. The society sold them in Iceland at a very low price, and it is now a household book in many of the poorest cottages. A translation of Klopstock's 'Messiah' from his pen was printed by the society itself in 1834-38; but it was the work of his old age, and seems to be generally recognised as inferior to the Milton.

THORNHILL, SIR JAMES, an eminent painter during the reigns of Queen Anne and George I., and, says Walpole, "a man of much note in his time, who succeeded Verrio, and was the rival of Laguerre in the decorations of our public buildings," was descended of a very ancient family in Dorsetshire, and was born at Weymouth in 1676. Through the extravagance of his father, who disposed of the family estate, Thornhill was compelled to support himself by his own exertions. He adopted the profession of a painter, and, by the liberality of an uncle, Dr. Sydenham, an eminent physician, was enabled to pursue his studies in London, where he placed himself with a painter, whose name is not known, with whom however he did not remain long. Thornhill appears to have made rapid progress in the public favour, for in his fortieth year, when he made a tour through Flanders, Holland, and France, he was sufficiently wealthy to purchase many valuable pictures of the old masters and others. Upon his return he received the commission from Queen Anne to paint the interior of the cupola of St. Paul's cathedral, in which he executed eight pictures illustrating the history of St. Paul, painted in chiaroscuro, with the lights hatched in gold: for this work he was appointed historical painter to the queen, yet was paid only forty shillings the square yard for his production. Thornhill's reputation was now established, and, through the favour of the Earl of Halifax, he received the commission to paint the princess's apartment at Hampton Court, which the lord chamberlain, the Duke of Shrewsbury, had intended should be painted by Sebastiano Ricci, then in great favour with the court in England; but the Earl of Halifax, who was then first commissioner of the treasury, declared that if Ricci painted it he would not pay him. Sir James executed many other great works, as the staircase, the gallery, and several ceilings in the palace at Kensington, a hall at Bleuheim, the chapel at Lord Oxford's at Wimpole in Cambridgeshire, a saloon for Mr. Styles at Moor Park in Herefordshire, and the ceiling of the great hall at Greenwich Hospital. Sir James commenced the last work in 1703, and was occupied upon it for several subsequent years, but it was not entirely painted by his own hands. The paintings are allegorical: on the ceiling of the lower hall, which is 112 feet by 56, are represented the founders of the institution, William III. and Queen Mary, in the centre, surrounded by the attributes of national prosperity; in the other compartments are figures which represent the zodiac, the four seasons and the four elements, with naval trophies and emblems of science, among which are introduced the portraits of famous mathematicians who have advanced the science of navigation, as Tycho Brahé, Copernicus, Newton, and others. On the ceiling of the upper hall are represented Queen Anne and her husband Prince George of Denmark; other figures represent the four quarters of the world; on the upper walls of the same apartment are the landing of William III. at Torbay, and the arrival of George I. at Greenwich; on the end wall facing the entrance are portrait groups of George I. and two generations of his family, with accessories, and Sir James Thornhill's own portrait. These works, which are executed in oil, have little to recommend them besides their vastness; yet the invention of the subjects they are equal to the majority of such works in the great building on the continent: in design and colouring however they are perhaps inferior.

Walpole has preserved some interesting details respecting the remuneration Thornhill received for many of his works: he says, "Great as his reputation was, and laborious as his works, he was far from being generously rewarded for some of them, and for others he found it difficult to obtain the stipulated prices. His demands were contested at Greenwich; and though La Fosse received 2000*l.* for his staircase in Montague House, and was allowed 500*l.* for his dirt besides, Sir James could obtain but forty shillings a square yard for the cupola of St. Paul's, and I think no more for Greenwich. When the affairs of the South Sea Company were made up, Thornhill, who had painted their staircase and a little hall, by order of Mr. Knight, their cashier, demanded 1200*l.*, but the directors observing that he had been paid but twenty-five shillings a yard for the hall at Blenheim, they would allow no more. He had a longer contest with Mr. Styles, who had agreed to give him 350*l.*, but, not being satisfied with the execution, a lawsuit was commenced, and Dahl, Richardson, and Vanderbank were appointed to inspect the work. They appeared in court bearing testimony to the merit of the performance; Mr. Styles was condemned to pay the money, and, by their arbitration, 500*l.* more, for decorations about the house, and for Thornhill's acting as surveyor of the building." Thornhill obtained permission through the Earl of Halifax to copy the Cartoons of Raffaelle at Hampton Court, upon which he bestowed three years' labour; he made also a smaller set, one-fourth the size of the originals, and distinct studies of the heads, hands, and feet, intending to publish an account of the whole for the use of students, but the work never appeared. These two sets of the Cartoons were sold the year after his death, with his collection of pictures, among which were a few capital specimens of the great masters: the smaller set sold for seventy-five guineas, the larger for 500*l.* only, a price, says Walpole, which can have been owing solely to the circumstance of few persons having spaces in their houses large enough to receive them. They were purchased by the Duke of Bedford, and were placed in his gallery at Bedford House in Bloomsbury Square, where they remained until that house was pulled down, when they were presented by the owner to the Royal Academy.

Thornhill painted also several portraits and some altar-pieces: he painted the altar-piece of the chapel of All Souls at Oxford; and one which he presented to the church of his native town, Weymouth. There is also at Oxford, executed by himself, a good portrait of Sir Christopher Wren by Thornhill; and in the hall of Greenwich Hospital there is by him the portrait of John Worley, in his ninety-eighth year, one of the first pensioners admitted into the hospital; it is painted in a bold careless style, and was presented to the hospital by Thornhill himself. In 1720 he opened an academy for drawing at his house in Covent Garden. He had previously proposed to the Earl of Halifax the foundation of a Royal Academy of the Arts, with apartments for professors, but without result: Sir James estimated the cost at 3120*l.*; for, amongst his other occupations, he occasionally 'dabbled' in architecture. At the end of his life he was afflicted with the gout, and in the spring of 1734 he retired to his paternal seat at Thornhill, near Weymouth, which he had the satisfaction of repurchasing; but his period of repose was extremely short, for, says Walpole,

Digitized by Google

('Anecdotes of Painting in England') "four days after his arrival, he expired in his chair, May 4, 1734, aged fifty-seven, leaving one son named James, whom he had procured to be appointed serjeant-painter and painter to the navy; and one daughter, married to that original and unequalled genius, Hogarth."

Sir James Thornhill amassed considerable property, was a man of agreeable manners, was a Fellow of the Royal Society, and represented his native town, Weymouth, in parliament for several years until his death. He was knighted by George I.: his widow, Lady Thornhill, died at Chiswick in 1757.

THORNTON, BONNELL, was born in London, in the year 1724. He was educated at Westminster School, and at Christchurch, Oxford. In compliance with the wish of his father, who was an apothecary in Maiden-lane, he studied medicine, but he seems not to have liked the profession, and left it for literature. George Colman the elder was his fellow-student both at Westminster School and at Christchurch, though about nine years younger than Thornton. Similarity of taste led to friendship, and they commenced in conjunction the series of periodical essays called 'The Connoisseur,' which was continued from January 31, 1754, till September 30, 1756. The papers are chiefly of a humorous character, and the wit and shrewd observation of life which they display well entitle them to the place which they still retain among the works of British Essayists. Thornton contributed largely to 'The St. James's Chronicle,' of which he was one of the original proprietors along with Colman; 'The Public Advertiser,' and to various periodical called 'Have at ye all, or the Drury Lane Journal,' in rivalry of Fielding's 'Covent Garden Journal.' He published separately 'An Ode on St. Cecilia's Day, adapted to the antient British music, viz. the salt-box, the Jews-harp, the marrow-bones and cleavers, the hum-strum or hurdy-gurdy, &c., with an Introduction giving an account of those truly British instruments,' 4to, London, 1762; and he carried out the jest. Dr. Burney having set the ode to music it was performed on the instruments named, at Ranelagh, to a crowded auditory. He was indeed singularly fond of these somewhat elaborate drolleries. He was one of the members of the famous Nonsense Club, and was the chief agent in getting up an exhibition of the London street signs in burlesque of the annual exhibition of the Royal Academy. Thornton opened his exhibition on the same day as that of the Royal Academy, describing it in preliminary advertisement and in the catalogues (which exhibited genuine though somewhat broad humour) as 'The Exhibition of the Society of Sign Painters of all the curious signs to be met with in town or country, together with such original designs as might be discovered to them as specimens of the native genius of the nation.' Hogarth, who entered into the spirit of the fun, added to some of the signs a few touches to heighten the absurdity, and the exhibition proved remarkably attractive.

In 1767, in conjunction with Colman and Richard Warner, he published two volumes of an English translation of Plautus, 'The Comedies of Plautus, translated into familiar Blank Verse.' Of the plays contained in these two volumes, Thornton translated 'Amphitryon,' 'The Braggart Captain,' 'The Treasure,' 'The Miser,' and 'The Shipwreck;' 'The Menechmi' was translated by Colman, and 'The Captives' by Warner. The rest of the plays were translated by Warner, and were published after Thornton's death, in two additional volumes. Thornton's translations are incomparably the best. In 1768 Thornton published 'The Battle of the Wigs, an additional Canto to Dr. Garth's Poem of The Dispensary,' 4to, London.

Thornton, who appears to have injured his constitution by habitual indulgence in drinking, but who was of a thoroughly kind and generous disposition, died May 9, 1768, at the age of forty-four. There is an inscription to his memory, by Thomas Warton, in the cloisters of Westminster Abbey.

THORWALDSEN, BERTEL (ALBERT), was born November 19, 1770, at Copenhagen. He was the son of Gottschalk Thorwaldsen, a carver in wood, and his wife Karen Grönlund, the daughter of a priest of Jütland. Gottschalk was a native of Iceland, and was in very poor circumstances when his son Bertel was born. Bertel assisted his father in his work at a very early age, and when only eleven years old he attended the free school of the Academy of Arts at Copenhagen, and made such progress in two years that he was enabled to improve his father's carvings; and himself undertook to execute the head-work of ships. At the age of seventeen he obtained the silver medal of the academy, for a bas-relief of Cupid reposing; and in 1791, when he was only twenty years of age, the small gold medal for a sketch of Heliodorus driven from the temple. Two years later he obtained the principal gold medal of the academy, and with it the privilege of studying for three years abroad at the government expense. Before setting out however he devoted a year or two to preliminary general study, for scholarship was not one of his acquirements, and he had much to read and much to learn. On the 20th of May 1796, he set out for Italy in the Danish frigate Thetis, and he arrived at Naples in the end of January of the following year, in the packet-boat from Palermo. The Thetis cruised in the North Sea until September; in October it touched at Algiers; it then performed quarantine at Malta, made a voyage to Tripoli to protect Danish commerce, and performed quarantine a second time at Malta, when Thorwaldsen left it in a small sailing boat for Palermo, where he took the packet-boat to Naples.

At Naples, wholly unacquainted with the Italian language, and for the first time entirely separated from his own countrymen, Thorwaldsen's heart failed him, and he longed to return to Denmark, which according to his own account he would have done if he had found a Danish vessel about to leave the port at the time. However, in a little time he found courage to engage a place in the coach of a vetturino for Rome, where he arrived March 3, 1797.

Thorwaldsen brought letters of introduction to his distinguished countryman Zoëga, who however did not give the young sculptor much encouragement, nor did he estimate his ability very high. When Zoëga was once asked what he thought of him, three years after the arrival, he answered, with a shake of the head, "He has a mouth to find fault with, little to be contented with, and he wants industry." Up to this time Zoëga was right, except in the last particular. Thorwaldsen was industrious, but fastidious, and often destroyed what had cost him much labour. This was the fate of a statue of Jason with the Golden Fleece which he had modelled to take back with him to Copenhagen at the expiration of his term of three years allowed by the academy. He however made a second attempt at the same figure, and this statue satisfied even the difficult Zoëga, with whom Thorwaldsen was about to return to Denmark; and Canova exclaimed, "This work of the young Dane is in a new and grand style." By the assistance of a Danish lady, Frederika Brun, who gave him the necessary funds, which he had not, and praised the statue in song, it was cast in plaster, and Thorwaldsen prepared for his return home: but he was now on the point of starting, and had to stay for the vetturino, one of his companions, the Prussian sculptor Hagemann, found that his passport was not in order, and he was obliged to put off his journey until the next day. Thorwaldsen determined to wait with him, the vetturino started without them, the delay was followed by another, and it eventually happened that Thorwaldsen did not return to his native country until 1819, after an absence of twenty-three years. The liberality of Thomas Hope was the immediate cause of Thorwaldsen's finally settling in Rome. The words of Canova upon the statue of Jason were repeated in the saloons of Rome, and echoed by the professional ciceroni of the place. One of these ciceroni took Mr. Thomas Hope in the year 1803 to the studio of the young Dane to see the statue which the great sculptor had praised. The English connoisseur stood long before the plaster figure, then inquired what Thorwaldsen required for a marble copy of it: "600 ducats," was the answer; "You shall have 800," was the generous reply of the Englishman.

From this time the star of Thorwaldsen was in the ascendant; the statue was however not finished until many years afterwards, but many celebrated works were done in the meanwhile; as the bas-reliefs of Summer and Autumn, and the dance of the Muses on Helicon; Cupid and Psyche; and Venus with the apple. His fame spread far and wide, and Christian VIII. (then crown-prince), of Denmark, wrote him a pressing invitation to return to Copenhagen, communicating at the same time the discovery of a white marble quarry in Norway. Thorwaldsen was eager to return, but commission upon commission rendered it difficult if not impossible, and he remained in the papal city. In 1818 he visited Naples, and executed himself the statue of the summer seasons at Leghorn, in the beautiful villa of Baron Schubert, the Danish minister at Florence: he executed also some of his works here. In 1812, when arrangements were making for Napoleon's visit to Rome, the architect Stern, who superintended the preparations, happened to sit next to Thorwaldsen at one of the receptions of the Academy of St. Luke, and asked him if he could get ready a plaster frieze for one of the large apartments of the Quirinal Palace, in three months. Thorwaldsen undertook the commission, and in three months the plaster sketch of Canova's celebrated Triumph of Alexander was completed. The immediate subject was Alexander's triumphal entry into Babylon: the length of the frieze is 160 Roman palms, its height five palms: it has been twice executed in marble, with slight variations, and is engraved in a series of plates by S. Amsler, of Munich, after drawings by Overbeck and others. In 1815 Thorwaldsen modelled, in a single day, two of his most popular works, the bas-reliefs of Night and Day; but he had done nothing whatever for weeks and months before.

In July 1819, he started in the company of two friends on his first visit to his native land, and he arrived at Copenhagen on the 3rd of October in the same year: his parents had died some years before. His fame was now so well established, that even through Italy and Germany his journey was a species of triumphal passage, and at its termination he was lodged in the palace of Charlottenburg and entertained with public feasts. In about a year he left Copenhagen and returned to Rome through Berlin, Dresden, and Warsaw, where he received several commissions, and made a bust of the Emperor Alexander.

He executed his principal works after his return to Rome—as Christ and the Twelve Apostles; the group of St. John in the Wilderness; and the monuments to Copernicus, Pius VII., Maximilian of Bavaria, the Penitentowki monument, and others. In 1823 he had a narrow escape of his life: a boy, the son of his landlady, contrived to get hold of one of his pistols, which he had carelessly hung up loaded; the boy, ignorant of the danger, pointed it and discharged it at Thorwaldsen, but the ball, after grazing two of his fingers, lodged in his dress without doing him any further injury.

In 1838 the Christ, the St. John preaching, and the Apostles,—the principal works for the cathedral or church of Our Lady at Copenhagen—and other works for the palace of Christiansburg, on which Thorwaldsen had been many years engaged, were completed, and the Danish government sent the frigate Rota to carry them and the sculptor to Copenhagen. Thorwaldsen was received with enthusiasm by his countrymen. He remained among them on this occasion about three years, and chiefly at Nysö, the seat of his friend the Baron Stampe, where a studio was built for him; and he finished here some of his last works—the frieze of the Procession to Golgotha, for the cathedral; the Entrance into Jerusalem; Rebecca at the Well; his own statue; and the busts of the poets Oehlenschläger and Holberg.

In 1841, finding the climate disagree with him, he felt compelled to return to Italy, and he executed at this time his group of the Graces for the King of Würtemburg. He returned however to Denmark and Nysö in the following year, and executed two other works, bas-reliefs, which are among his last productions—Christmas Joy in Heaven; and the Genius of Poetry, which he presented to his friend Oehlenschläger. He intended to return to Rome in the summer of 1844, but he died suddenly in the theatre of Copenhagen, on March 24th, in that year, aged seventy-three: he died of disease of the heart. He lay in state in the Academy, and was buried with extraordinary ceremony beneath his own greatest productions in the cathedral church of Copenhagen.

Thorwaldsen's will bears much resemblance to Sir F. Chantrey's: he bequeathed all works of art in his possession, including casts of his own works, to the city of Copenhagen, to form a distinct museum, which was to bear his name, on the condition that the city furnished an appropriate building for their reception. This building was nearly completed before the death of Thorwaldsen; it now forms one of the prime attractions of the city. Besides casts of the numerous works of Thorwaldsen, which would alone constitute an important collection of its class, it contains many works of ancient and modern sculpture, numerous paintings by old and recent masters, casts, vases, engraved gems, cameos, terracottas, bronzes, medals, curiosities, engravings, prints of all descriptions, books on the fine arts, and drawings. With the exception of 12,000 dollars to each of his grandchildren, and the life-interest of 40,000 dollars to their mother, Madame Poulsen, his natural daughter, to descend to her children, the whole of his personal estate was directed to be converted into capital, and to be added to the 25,000 dollars already presented for the purpose by Thorwaldsen, to form a museum penfund, for the preservation of the museum itself and for the purchase of the works of Danish artists, for the encouragement of Danish art, and to add to the collections of the museum.

Thorwaldsen is considered by his admirers the greatest of modern sculptors, and many have not hesitated to compare him with the antique. This is however hardly the rank he will hold with posterity; his style is uniform to monotony, though many individual figures are bold, solid, and of beautiful proportions. His beau-idéal appears to have been something between the Antinous and the Discobolus of Naucydes, as it is sometimes but an his subjects, though generally heroic, he seldom required more than a moderate expression of heroic vigour or robust strength and activity: in this respect, and in execution generally, he was much surpassed by Canova; but still more so in the grace of the female form, in which Thorwaldsen certainly did not excel. His females are much too square in the frame, the head and shoulders being generally heavy; and in no instance do we find in his female figures, in full relief, that beautiful undulation of line and development of form characteristic of the female, which is displayed in the antique, in the works of Canova, and in those of some other modern sculptors; as, for instance, the Ariadne of Dannecker. Bassorilievo was a favourite style with Thorwaldsen, and a great proportion of his works are executed in this style. Of this class some of his minor works are the most expressive; but the principal are—the Triumph of Alexander, and the Procession to Golgotha, which is the frieze of the cathedral church of Copenhagen, immediately below the numerous group of John preaching in the Wilderness, in full relief, in the pediment: in the vestibule are the four great Prophets; Christ and the Twelve Apostles above and around the church. The Triumph of Alexander, of which there is a copy in marble in the palace of Christiansburg (the first marble copy was made for Count Somariva's villa on the Lake of Como), is a long triumphal procession in two divisions, one meeting the other. In the centre, Alexander, in the chariot of Victory, and followed by his army, is met by the goddess of Peace, followed by Mazzeus and Bagophanes with presents for the conqueror. The subject is taken from the work of Quintus Curtius. Much of the frieze is symbolical: perspective is nowhere introduced. The whole arrangement is beautiful, especially that portion which comes from Babylon, comprising the General Mazzeus with his family; female figures strewing flowers; Bagophanes placing silver altars with burning incense, musicians, and attendants leading horses, sheep, wild animals, and other presents for the conqueror; next to these are symbolic representations of the river Euphrates, and the peaceful occupations of the Babylonians. The human figures of this work are admirable, as is also the management of the costumes, but the horses are below mediocrity both in design and modelling, especially that of Alexander himself, Bucephalus, which is led following the chariot of Alexander; it is a complete distortion. None of the horses of Thorwaldsen are successful. The colossal animal of the Poniatowski monument at Warsaw, and that (of smaller proportions) of the monument to Maximilian of Bavaria at Munich, are heavy and graceless, and wanting in the finer characteristics of form which belong to the horse.

Many years ago some admirers of Lord Byron raised a subscription for a monument to the poet, to be placed in Westminster Abbey. Chantrey was requested to execute it, but on account of the smallness of the sum subscribed, he declined, and Thorwaldsen was then applied to, and cheerfully undertook the work. In about 1833 the finished statue arrived at the custom-house in London, but, to the astonishment of the subscribers, the Dean of Westminster, Dr. Ireland, declined to give permission to have it set up in the Abbey, and owing to this difficulty, which proved insurmountable, for Dr. Ireland's successor was of the same opinion, it remained for upwards of twelve years in the custom-house; when (1846) it was removed to the library of Trinity College, Cambridge. The poet is represented of the size of life, seated on a ruin, with his left foot resting on the fragment of a column; in his right hand he holds a style up to his mouth; in his left is a book, inscribed 'Childe Harold:' he is dressed in a frock-coat and cloak. Beside him on the left is a skull, above which is the Athenian owl. The execution is not of the highest order; both face and figure are squarely modelled; thus fineness of expression is precluded through want of elaboration. The likeness is of course posthumous. Some of the finest of Thorwaldsen's imaginative works are in private collections in this country. At the Crystal palace, Sydenham, are casts of several of his most celebrated statues and bassi-rilievi, including his famous Triumph of Alexander.

THOU, JACQUES-AUGUSTE DE (or, as he called himself in Latin, Jacobus Augustus Thuanus), was born at Paris, on the 8th of October 1553: he was the third son of Christophe de Thou, first president of the parlement de Paris, and of Jacqueline Tuelles de Carvil. Besides their three sons and four daughters, who grew to be men and women, De Thou's parents lost six children in infancy; and he himself was so weak and sickly a child till he reached his fifth year, that he was not expected to live. In the exemption which this state of health procured him in his childhood and early boyhood from severer taskwork, he amused himself in cultivating a turn for drawing, which was hereditary in his family; and in this way, he tells us himself, he learned to write before he had learned to read. Although originally intended for the church, he went in his early studies the whole round of literature and science he was then taught; and while yet only in his eighteenth year he had conceived from the perusal of some of his writings so great an admiration of the celebrated jurist Cujacius, that he proceeded to Valence in Dauphiné, and attended his lectures on civil law for a year. Here he met with Joseph Scaliger, with whom he contracted an intimate friendship, which was kept up for the thirty-eight remaining years that Scaliger lived.

In 1572, after he had been a year at Valence, he was recalled home by his father; and he arrived in Paris in time to be present at the marriage of Henry, the young king of Navarre, and the scenes and horrors of the massacre of St. Bartholomew which followed. He relates that he saw the dead body of Coligny hanging from the gibbet of Montmartre. The next year he embraced an opportunity of visiting Italy, in the suite of Paul de Foix, who was sent by Charles IX. on a mission to certain of the Italian courts; and he remained in that country till the death of Charles, in May, 1574, and the accession of Henry III., the news of which reached them at Rome, recalled De Foix home. In 1576 he made a journey to Flanders and Holland. In 1578 he succeeded Jean de la Garde, Sieur de Seigne, as one of the ecclesiastical counsellors of the parlement de Paris—an entrance into public life which, he says, he made with reluctance, as withdrawing him in part from the society of his books and the cultivation of literature, in which he would have been much better pleased to spend the days. The next year he lost his eldest brother; and from this time it began to be proposed that, for the better chance of continuing the family, his original destination should be changed, and that he should quit his ecclesiastical for a civil career. Some years elapsed however before this scheme was finally determined upon. Meanwhile he continued to pursue his usual studies; and he states that he had already conceived the project of his great historical work, and began industriously to collect materials for it wherever he went.

It was in the year 1582, while on a visit to Bordeaux, that he made the acquaintance of Montaigne, whose character as well as genius he has warmly eulogised. The same year his father died: and having also by this time lost his second brother, he, in 1584, resigned his rank as an ecclesiastical counsellor, and on the 10th of April was received by the king in the parlement de Paris as counsellor, which rank was wont to be held indifferently by ecclesiastics or laymen. Two years after he obtained the reversion of the place held by his uncle, of one of the présidents au mortier in the parlement de Paris; and in 1587 he married Marie, daughter of François Barbançon, Sieur de Cani. When, in the next year, in the increasing distractions of the state, Henry III. found himself obliged to leave Paris, De Thou, who, as well as his father and his brothers, adhered steadily throughout the troubles of the time to the royal party, accompanied his majesty to Normandy, and afterwards to Picardy. At Chartres, in August 1588,

Digitized by Google

he was admitted a councillor of state; and from this date he took a leading part in all the principal public transactions which followed. When the estates of the kingdom were assembled at Blois, in October of this year, De Thou, as he tells, was there courted with much blandishment by the Duke of Guise, but steadily resisted the attempt to seduce him from his loyalty. He had left Blois and was in Paris when the news of the murders of the Duke of Guise and his brother the cardinal (on the 23rd and 24th of December) reached the capital; and he had great difficulty in effecting his escape from the popular fury. He succeeded however in rejoining the king at Blois; and having soon after been despatched on a mission into Germany and Italy to raise succours of men and money for the royal cause, he was at Venice when he heard of the death of Henry, in August 1589. He immediately set out by the way of Switzerland for France, and met the King of Navarre, now calling himself Henry IV., at Chateaudun. He was received very graciously; and for some years from this time he was constantly with Henry, or employed on missions to different quarters in his service.

In 1591, while Henry was at Nantes, he received accounts of the death of Amyot, bishop of Auxerre (renowned for his translations of Plutarch and other Greek authors); upon which his majesty immediately bestowed his office of keeper of the royal library on De Thou. It was in the year 1593, as he has noted, that he at last actually commenced the composition of his 'History,' which he now states he had conceived in his mind so long as fifteen years before. In 1594 the death of his uncle opened to him his reversionary office of one of the presidents of the parlement de Paris.

Among other important transactions in which he had a part after this, was that of the Edict of Nantes, published in 1598, which he was greatly instrumental in arranging. He has left an account of his own life, in ample detail, down to the year 1601, in which the last event he notices is the death of his wife, in August of that year. In 1604 he published the first eighteen books of his 'History.' The work was received with general applause by the literary public throughout Europe, and, although some things in it gave umbrage to the more zealous friends of the Roman Catholic faith, it was not till several years afterwards, when a second portion of it had been published, that it was formally stigmatised by being inserted in the 'Index Expurgatorius.' De Thou however severely felt this authoritative condemnation of his performance, when it did take place, in November 1609. The death of Henry IV., in 1610, did not deprive De Thou of his place in the ministry, but he had no longer the same influence as before; and a new appointment, which he received the following year, of one of the three directors charged with the management of the finances, on the retirement of the great Sully, was felt by himself to be not so much an accession of power or honour, as a burdensome and obnoxious office thrust upon him, for which he was unfitted neither by tastes, habits, nor qualifications. In this same year his brother-in-law, Archille de Harlay, resigned his office of first president of the parlement de Paris, in the hope that De Thou would be nominated his successor; but the place was given to another. These disappointments and disgusts, together with the loss of a second wife, are supposed to have shortened the life of De Thou, who died at Paris on the 7th of May 1617, in his sixty-fourth year. By his second wife, whose family name was de Bourdeilles, he left three sons and three daughters, one of the former of whom, François Auguste de Thou, the inheritor of his father's virtues and of a considerable share of his talents, fell a sacrifice to the inexorable revenge of Cardinal Richelieu, one of whose last acts was his putting this unfortunate young man to death for his alleged participation in what was called the conspiracy of Cinqmars:—he was executed at Lyon, in his thirty-fifth year, on the 12th of September 1642, not three months before Richelieu's own death.

The president De Thou is the author of a number of Latin poems, one of the principal of which, entitled 'De Re Accipitraria' (on Hawking), was published in 1584; but his fame rests upon his 'Historia sui Temporis,' or 'History of his own Time,' written also in Latin, in 138 books, of which the first 80 appeared in his lifetime, the remainder not till 1620. The space over which it extends is from the year 1544 to 1607, comprehending the closing years of the reign of Francis I., the entire reigns of Henry II., Francis II., Charles IX., and Henry III., and nearly the whole of that of Henry IV. For about one-half of this period of sixty-three years it has the value belonging to the narrative of one who was himself a principal actor in many of the affairs which he relates, and who with regard to many others was so placed as to have an opportunity of seeing much that was concealed from the common eye; but in truth, from the author's family connections, and the extended acquaintance among the eminent and remarkable persons of his time, this is an advantage which belongs in some degree to the earlier as well as to the later part of the work. It is also admitted to have throughout the merit of a rare impartiality: with no deficiency of patriotic feeling, and perfect steadiness to his own political principles, De Thou is always ready frankly to recognise the high qualities, of whatever kind, that may have belonged either to the citizen of a rival state or a party opponent. As for religious prejudice, he shows so little of that, as to have exposed himself to the imputation of having no religion, or at least of not being really a believer in the form of Christianity, the Roman Catholic, which he professed. But for either of these charges there seems to be no ground. The reputation of his 'History' however stands not so much upon the facts contained in it that are not elsewhere to be found, as upon the skill displayed in its composition—not so much upon the material as upon the workmanship; and it is very evident that with all the pains he took in the collecting of information, this was the praise of which he was the most ambitious, as indeed may perhaps be said to have been the case with the most famous historians of every age and country, from Herodotus and Thucydides among the Greeks, and Livy and Tacitus among the Latins, to Hume and Gibbon—not to speak of contemporaries—among ourselves. But De Thou's manner of writing, though flowing and eloquent, is not very picturesque; and of course he also loses something in rachness and natural grace, ease, and expressiveness, by writing in a dead language. De Thou's Latin style, with all its merit, is not admitted to be faultless, though he has taken great pains to give it as uniformly classical an air as possible, not only by metamorphosing all his modern names, both of places and persons, so as to give them antique forms, often to the no small perplexity and hindrance of the reader, but, what sometimes produces still more obscurity or ambiguity, by generally endeavouring to describe modern proceedings and transactions in the established legal, political, and military phraseology of the old Romans. The best edition of De Thou's 'History' is that published at London in 1733, in seven volumes, folio, under the superintendence of Samuel Buckley, Esq., and at the expense of Dr. Mead. The last volume of this edition contains De Thou's autobiographical memoir (first published in 1620, and also written in Latin), in six books, together with a host of additional materials illustrative of the history of his life and works.

THOUARS, LOUIS-MARIE-AUBERT-DU-PETIT, an eminent French botanist, was born at the château de Boumois, in Anjou, 1756. His family was wealthy and noble, and being destined for the army, he was early sent to the school of La Flèche. He was made a lieutenant of infantry at the age of sixteen. This was in a time of peace, and he occupied his leisure in studying the science of botany and its literature. At the time of the loss of La Peyrouse and his companions, the brothers Petit Thouars proposed to his brother Aubert that they should go in search of him. To this he willingly consented, hoping to add to his stock of plants and his fame by the voyage. The two brothers sold their patrimony, raised a subscription, and having secured the patronage of Louis XVI., were ready to start on their voyage, when an curious accident detained them. The ship that was to have taken them lay at Brest, and Aubert, with his vasculum (the tin box which botanists carry to put their plants in) at his back, intended to botanise on his way from the capital to the port. He was however found by some gens d'armes in the woods, and being suspected to be a spy and an enemy of his country, three days of durance was arrested and thrown into prison at Quimper. He was however soon released, but too late, as his brother had sailed. He followed him to the Isle of France, but his brother had again departed; and being here without money and without friends, his only resource was his botanical knowledge, and he accordingly applied for employment to some of the rich planters of that island. He quickly obtained an engagement, and remained in the island for nearly ten years. On this spot he was very favourably placed for making those observations for which his previous studies had so well prepared him; during his stay here he collected most of the materials for the numerous works which he published on his return. Whilst a resident in the Isle of France he made a voyage to Madagascar, and collected plants from that island. He returned to Paris in 1802. Many of the results of his researches in the Isle of France and Madagascar were communicated to the Institute and other scientific bodies in Paris. His first work on the botany of the islands which he had visited, was published at Paris in 1804, with the title 'Plantes des Iles de l'Afrique Australe formant le Continent nouveaux,' &c. 4to. He also published on the same subject the 'Histoire des Végétaux des Iles de France, de Bourbon, et de Madagascar,' 4to, 1804. In the same year Bory St. Vincent gave an account of the vegetation of the African islands, in his 'Voyage dans les quatre principales Iles des Mers d'Afrique,' 4to, from which he did not go out till Du Petit Thouars had returned. In 1806 Du Petit Thouars was appointed director of the royal nursery-ground at Paris, which office he held till the closing of the institution a short time before his death. In 1806 he published another work on the plants of Africa, with the title 'Histoire des Végétaux recueillis dans les Iles Australes d'Afrique,' 4to, Paris. In 1810 his 'Genera nova Madagascariensia' appeared, in which the Madagascar plants were arranged according to the system of Jussieu. His latest work on systematic botany was one on the Orchideæ of the African Islands, 'Histoire des Plantes Orchidées recueillies dans les trois Iles Australes d'Afrique,' 8vo, Paris 1822. His publications on vegetable physiology are equally numerous. Most of these had their foundation in observations and experiments which he made while in the Isle of France. In 1805 he published his 'Essai sur l'Organisation des Plantes, 8vo, Paris; in 1809, another essay on the vegetation of plants; in 1811, 'Mdianges de Botanique et de Voyages,' 8vo, Paris; in 1819, a kind of botanical miscellany, passing in review his own labours, under the title 'Revue générale des Matériaux de Botanique et autres, fruit de trente-cinq années d'observations,' 8vo, Paris. He died in May 1831.

As a systematic botanist the views of Du Petit Thours were uncertain and speculative, and the delay in the publication of his works on African botany deprived him of the merit of introducing to the world many new species. In his physiological works his views are legenious, but in most cases wanting in sufficient data to establish them. His views on the formation of buds, the motion of the sap, and the origin of wood, are those which have excited most attention. But each of these is perhaps more indebted to the speciousness of its reasoning than to the correctness of the facts, for the importance that botanical writers have attached to it. But at the same time his great activity of mind, his extensive erudition and original observation, have had a great influence on the progress of botany in the present century. He was a contributor to the 'Biographie Universelle,' and wrote the lives of many of the botanists in that work. The genus of plants *Thouarea* was named after him, and Bory St. Vincent named *Aubertia* in honour of him.

THOURET, MICHEL-AUGUSTIN, an eminent French physician, was born in 1749, at Pont-l'Evêque, in the ancient province of Normandy and the modern department of Calvados, where his father was royal notary (notaire royal). His education was commenced in his native town, and finished at the University of Caen. He afterwards went to Paris, and in 1774 was admitted gratuitously by the Faculty of Medicine in that city to the degree of M.D., an honour which was gained by public competition (concours). A few years later, upon the foundation of the Royal Society of Medicine, Thouret became one of its earliest members, and enriched the Memoirs of the Society by several valuable essays. The most important public work in which he took part was the exhumation of the bodies in the cemetery of the Holy Innocents, of which he drew up a most interesting report. This cemetery, together with a church of the same name, stood on the spot now occupied by the Marché des Innocens, and had become in process of time so unhealthy from being the principal burial-ground in Paris, that it was absolutely necessary to destroy it. This great work had been several times attempted, but as often abandoned on account of the dangers and difficulties of the undertaking; at last however, in 1785, a committee was named for directing the works, which were carried on without intermission by night and by day for more than six months, and which were at length completely successful. Thouret afterwards filled several public situations with equal zeal and integrity; and in the midst of the labours of his numerous employments was carried off, after a few days' illness, by a cerebral affection, at Meudon, near Paris, June 19, 1810. Great honours were paid to him after his death by the Faculty of Medicine at Paris, of which body he was dean. His works consist almost entirely of essays published in the 'Histoire et Mémoires de la Société Royale,' of which perhaps the most interesting are the 'Rapports sur les Exhumations du Cimetière des SS. Innocens,' mentioned above. These were afterwards published in a separate form at Paris, 12mo, 1789. (*Biographie Médicale.*)

THRA'SEA PAETUS. His prænomen is uncertain; some writers call him Lucius, and others Publius, but he is generally called simply Thrasea Paetus or Thrasea. He was a native of Patavium, Padua (Tacitus, 'Annal.,' xvi. 21: Dion. Cass., lxii. 26), and, like most men of talent at the time, he went to Rome, where he afterwards became a senator and a member of the priestly college of the quindecimviri. The first time that Thrasea came prominently forward in the senate was in A.D. 59, when a senatus-consultum was passed by which the city of Syracuse obtained permission to employ a greater number of gladiators in the public games than had been fixed by a law passed in the time of J. Cæsar. (Tacitus, 'Annal.,' xiii. 49; Dion. Cass., lv. 2; Suetonn., 'Cæs.,' 10.) Although the matter was of no importance, Thrasea took an active part in the deliberations, and impressed upon his colleagues the necessity of paying attention even to the smallest matters belonging to the administration of the senate. In the same year Nero determined to carry into effect his design of getting rid of his mother Agrippina. [NERO; AGRIPPINA.] When the crime was committed, and when the emperor sent a letter to the senate in which he endeavoured to exculpate himself, the degraded senators congratulated him upon having got rid of so dangerous a woman. The only man who on that occasion had the courage to show his detestation of the crime was Thrasea. (Dion. Cass., lxi. 15: Tacit., 'Aenal,' xiv. 12.)

In the year A.D. 62, when the prætor Antistius was charged by Cossutianus Capito with high treason for having composed and read at a numerous party of friends some libellous verses upon the emperor, and when the emperor showed an inclination to interfere in the trial, Thrasea boldly claimed for the senate the right to try the case according to the existing laws. The firmness of Thrasea induced most of the senators to follow his example and to vote with him. Cossutianus was thwarted in his hope of getting Antistius sentenced to death by the emperor, though highly annoyed, endeavoured to disguise his anger. (Tacitus, 'Annal.,' xiv. 48, 49.) A short time afterwards Thrasea again attracted general attention in the senate by a speech against the assumption and insolence of wealthy provincials. It had at that time become customary with the provincials to request the Roman senate, by embassies, to offer public thanks to the proconsuls who returned from their province, and who had conducted the administration to their satisfaction. The ambition to gain this distinction often deprived the proconsuls of their independence, and degraded them into flatterers of influential provincials, who thus obtained an improper power. Thrasea proposed to the senate a measure to remedy the evil, but although it met with general approbation, he did not succeed in making the senate pass a decree, which was however done shortly after on the proposal of Nero himself. (Tacitus, 'Annal.,' xv. 20-22.) Nero already hated Thrasea, and envy now began to increase the hatred. When therefore in 63, Poppæa, the wife of Nero, was expecting her confinement at Antium, and all the senators flocked thither to wait for the event, Thrasea was forbidden to go. Thrasea the Stoic philosopher bore this insult with his usual calmness. Nero afterwards indeed declared to Seneca that he was reconciled to Thrasea, but this was probably no more than an expression of his fear. The inflexible character of Thrasea, his refusal to take any part in the disgraceful proceedings of the senate, and the esteem which he enjoyed among his contemporaries, increased the hatred of Nero, who only waited for a favourable opportunity to get rid of him. It appears that from the year 63 Thrasea never attended the meetings of the senate. Three years thus passed away, when at length, in 66, his old enemy Cossutianus brought forward a number of charges against Thrasea, the substance of which was, that he took little or no part in public affairs, and that when he did so, it was only to oppose the measures of the government; that he was a secret enemy of the emperor, and fulfilled neither his political duties as a senator nor his religious duties as a priest. Thrasea first requested a personal interview with the emperor, which was refused. He then wrote to him, asking for a statement of the charges against him, and declaring that he would refute them. When Nero had read this letter, instead of which he had expected a confession of guilt and an humble petition for pardon, he convoked the senate, to decide upon the charges against Thrasea and others. Some of Thrasea's friends advised him to attend the meeting, but most dissuaded him from it. One young and spirited friend, Rusticus Arulenus, who was tribune of the people, offered to put his veto upon the senatus-consultum, which Nero intended to have passed. The philosopher now withdrew to his country-house. In the senate, which was surrounded by armed bands, the quæstor of the emperor read his oration, whereupon Cossutianus and others began their attacks upon Thrasea. The subject of Nero, and the presence of armed soldiers ready to enforce them, left the senators no choice, and it was decreed that Thrasea, Soranus, and Servilia should choose their mode of death, and that Helvidius, the son-in-law of Thrasea, and Paconius, should be banished from Italy. The accusers were munificently rewarded. Towards the evening of this day the quæstor of the consul was sent to Thrasea, who had assembled around him a numerous party of friends and philosophers; but before he arrived, a friend, Domitius Cæcilianus, came to inform him of the decree of the senate, which spread consternation among all who were present. Thrasea's wife Arria, who was a relation of Arria, the genius of Pliny, A. Persii Flacci') was on the point of making away with herself, but her husband entreated her not to deprive her daughter of the last support which now remained to her. When at length the quæstor arrived and officially announced the decree, Thrasea took Helvidius and his friend Demetrius to his bed-room, and had the veins of both his arms opened; and when the blood gushed forth, he called out, "Jove, my deliverer, accept this libation." (Tacitus, 'Annal.,' xvi. 21-35; Dion. Cass., lxii. 26.)

Thus died Thrasea, according to the unanimous consent of the ancients a man who professed the genuine and stern virtues of the olden time in the midst of a degenerate age. Tacitus calls him virtue itself, and even Nero is reported to have said, "I would that Thrasea liked me as much as he is a just judge." (Plutarch, 'Rei Publicæ Gerendæ Præcepta,' p. 810, Ed. Frankf.; Martial, I. 9; Juvenal, v. 36; Pliny, 'Epist.,' viii. 22.) The principles which guided him through life he had imbibed from the Stoic philosophy. Cato the Younger was his favourite character in the history of the Roman republic; he wrote a Life of Cato, which Plutarch made use of in his biography, and thus we probably still possess the substance of it. (Plutarch, 'Cato Min.,' 25 sed 37; compare Heeren, 'De Fontibus Plutarchi,' p. 163.) Rusticus Arulenus wrote a work on Thrasea and Helvidius, in which he characterised them as men of the purest integrity—an expression which became fatal to the author. (Sueton., 'Domit.,' 10; Tacitus, 'Agric.,' 2 and 45.)

THRASYBU'LUS (Θρασύβουλος), the son of Lycus, was born at Steiria in Attica. In the year B.C. 411 the oligarchical party at Athens gained the ascendancy, and formed a new senate of 400 members. The oligarchs in the fleet stationed at Samos, endeavoured to bring about a similar revolution there, but their efforts failed; and among the men who exerted themselves to maintain the democratical constitution, Thrasybulus, who then had the command of a trireme, was foremost. He and his friend Thrasyllus persuaded the generals to swear to keep quiet, and not to attempt any alteration in the constitution. The generals who were known to belong to the oligarchs were removed, and Thrasybulus and Thrasyllus were appointed in their stead. The army under their command assumed the rights and power of the people of Athens, and in an assembly of the camp Thrasybulus got a decree passed, by which Alcibiades, who had lately been the chief support of the democratical party, and who was living in exile with Tissaphernes, should be recalled. Thrasybulus set out to fetch him to the camp. (Thucydides, viii. 81.) In B.C. 410 he greatly con-

Digitized by Google

tributed to the victory which the Athenians gained in the battle of Cyzicus. In B.C. 408, when Alcibiades returned to Athens from Byzantium, Thrasybulus was sent with a fleet of eighty galleys to the coast of Thrace, where he restored the Athenian sovereignty in most of the revolted towns; and while he was engaged here he was elected at Athens one of the generals, together with Alcibiades and Conon. In B.C. 406 Thrasybulus was engaged as one of the inferior officers in the Athenian fleet during the battle of Arginusæ; and after the battle he and Theramenes were commissioned by the generals to save the men on the wrecks; but a storm prevented their executing this order. Respecting the fate of the generals and the conduct of Theramenes on this occasion, see THERAMENES. Thrasybulus is not charged with any improper act during the proceedings against the generals, and for two years after his name does not occur in the history of Attica.

During the government of the Thirty Tyrants at Athens, he was sent into exile, and took refuge at Thebes. The calamities under which his country was suffering roused him to exertion. The spirit which prevailed at Thebes against Sparta, and against its partisans at Athens, emboldened him to undertake the deliverance of his country. With a band of about seventy, or, according to others, of only thirty fellow-exiles, he took possession of the fortress of Phyle, in the north of Attica. The Thirty, sure of victory over so insignificant a garrison, sent out the 3000 Athenians whom they had left in the enjoyment of a kind of franchise, and the knights, the only part of the population of Athens who were allowed to bear arms. On their approach to Phyle some of the younger men, eager to distinguish themselves, made an assault upon the place, but were repelled with considerable loss. The oligarchs then determined to reduce the fortress by blockade; but a heavy fall of snow compelled them to return to Athens. During their retreat the exiles sallied forth, attacked the rear, and threw it into a great number of them. The Thirty now sent the greater part of the Lacedæmonian garrison of Athens and two detachments of cavalry to encamp at the distance of about fifteen stadia (nearly two miles) from Phyle, for the purpose of keeping the exiles in check. The small band of Thrasybulus had in the meantime increased to 700, as the Athenian exiles flocked to him from all parts. With this increased force he one morning descended from Phyle, surprised the enemy, and slew upwards of 120 hoplites and a few horsemen, and put the rest to flight. Thrasybulus erected a trophy, took all the arms and military implements which he found in the enemy's camp, and returned to Phyle.

The Thirty now began to be alarmed at the success of the exiles, and thought it necessary to secure a place of refuge in case the exiles should succeed in getting possession of Athens. For this purpose they, or rather Critias, devised a most atrocious plan. By force and fraud he contrived to secure 300 citizens of Eleusis and Salamis capable of bearing arms; and after they were conveyed to Athens he compelled the 3000 and the knights to condemn them to death. All were accordingly executed, and Eleusis was deprived of that part of its population to which it might have looked for protection. In the meantime the number of exiles at Phyle had continued to increase, and now amounted to one thousand. With these Thrasybulus marched by night to Piræus, where he was joyfully received, and great numbers of other exiles immediately increased his army. The Thirty soon got heard of this movement than they marched against Peiræus with all their forces. Thrasybulus by a skilful manœuvre obliged the enemy, who was superior in numbers, to occupy an unfavourable position at the foot of the hill of Munychia. In the ensuing battle the army of the tyrants was put to flight and driven back to the city. Critias fell in the contest.

The consequences of this success showed that there had been little unity among the oligarchs, and that an open breach had only been prevented by fear of Critias. Some of the Thirty and a great number of the 3000 were in their hearts opposed to the atrocities which had been committed, and had avoided, as much as they could, taking part in the rapine and bloodshed. They also were aware that the hatred and contempt under which they were labouring were owing mainly to the violence of their colleagues; and for the purpose of maintaining their own power they now resolved to sacrifice their colleagues. An assembly was held, in which the Thirty were deposed, and a college of ten men, one from each tribe, was appointed to conduct the government. Two of these ten had formerly belonged to the Thirty, and the rest of the Thirty withdrew to Eleusis. As regards the army of exiles under Thrasybulus, the new government of Athens was no less determined to put them down than the Thirty had been. Thrasybulus therefore continued to strengthen himself, and to prepare for further operations. His army had gradually become more numerous than that of Athens, for he engaged aliens in his service, and promised them, in case of their success, the same immunities at Athens as those enjoyed by the citizens (ἰσοτέλειαι). Arms, of which he was still in want, were generally supplied by the wealthy citizens of Peiræus and other places, and by the ingenuity of his own men. As the danger from the exiles became at last very imminent, the Ten of Athens applied to Sparta for assistance. At the same time the faction at Eleusis also sent envoys to Sparta; but the government of Sparta refused to send an army for an undertaking from which it could reap no advantages. However Lysander, as harmostes, obtained leave to levy an army, and his brother Libys was appointed admiral to blockade Peiræus. Lysander went to Eleusis, and got together a numerous army. Being thus enclosed by land and by sea, Thrasybulus and his army had no prospect except to surrender.

But their deliverance came from a quarter whence it could have least been expected. The power and influence which Lysander had gradually acquired, had excited the envy of the leading men at Sparta, even of the ephors and kings, and they were now bent upon thwarting his plans. King Pausanias was accordingly sent out with an army to Attica, avowedly to assist Lysander in his operations, but in reality for the purpose of preventing the accomplishment of his designs. He encamped near Piræus, as if he designed to besiege the place in conjunction with Lysander. After several sham manœuvres against the exiles, Pausanias gained a victory over them without fighting it up. He now sent secretly an embassy to them, requesting them to send a deputation to him and the ephors; and he also suggested the language which the deputies should use. At the same time he invited the pacific party at Athens to meet and make a public declaration of their sentiments. Hereupon a truce was concluded with the exiles, and a deputation of them, as well as of the pacific party at Athens, was sent to Sparta to negociate a general settlement of affairs. As soon as the Ten of Athens heard of this, they also sent envoys to Sparta to oppose the other embassy. But this attempt failed, and the ephors appointed fifteen commissioners with full powers, in conjunction with King Pausanias, to settle all the differences between the parties in Attica. In accordance with the wishes of the exiles and the peaceful party of the city, the commissioners proclaimed a general amnesty, from which none were to be excluded except the Thirty, the Eleven, and the Ten who had formed the government of Peiræus. Any one who might not think it safe to return to Athens was permitted to take up his residence at Eleusis. This clause is unintelligible, unless we suppose that the Spartans still looked to see Eleusis in the hands of a party which might check the reviving spirit of independence among the Athenians. Sparta guaranteed the execution of the proclamation. Pausanias withdrew his forces, and Thrasybulus at the head of the exiles entered Athens in triumph, and marched up the Acropolis to offer thanks to Athena: an assembly was then held, in which Thrasybulus impressed upon all parties the necessity of strictly observing the conditions of the peace.

Eleusis was now the seat of the most violent of the oligarchical party, and they still indulged some hope of recovering what was lost. For they assembled a body of mercenaries and carried on the civil war; but Athens sent out a strong force against them. Xenophon says that the leaders of the Eleusinian party were drawn to a conference and then put to death. This isolated statement is rather surprising, as in all other cases the popular party showed the greatest moderation, and immediately after the quelling of the Eleusinian rebellion Thrasybulus induced the Athenians to proclaim a second amnesty, from which no one was to be excluded. This amnesty was faithfully observed. The first step after the abolition of the oligarchy was the passing of a decree which restored the democratic form of government.

Thrasybulus acquired the esteem of his fellow-citizens by the courage and perseverance which he had shown in the deliverance of his country, and although for many years he does not come forth very prominently in the history of Attica, he was no less active in restoring Athens to her former greatness than he had been in wresting her from the hands of her enemies. His last military undertaking belongs to the year B.C. 389, when the government of Athens placed a fleet of 40 galleys at his command, with which he was to support the democratical party in the island of Rhodes. On his arrival there he found that no protection was needed, and he sailed to the north part of the Ægean. In Thrace he settled a dispute between two princes, and gained them as allies for Athens. At Byzantium and Chalcedon also the influence of Athens was restored, and with it new sources of revenue to the republic were opened. After this he sailed to Mitylene, the only town in the island of Lesbos in which the Spartan party had not gained the ascendancy. Thrasybulus here fought a battle with Therimachus, the Spartan harmostes, who was defeated and slain. Several towns were now reduced, and after he had plundered the lands of these who refused to submit to Athens, he prepared to sail to Rhodes; but before he landed there he sailed along the southern coast of Asia Minor to levy some contributions there. His fleet cast anchor in the mouth of the river Eurymedon in Pamphylia, near Aspendus. In consequence of some outrage committed by his soldiers on land, the Aspendians were exasperated, and during the night they surprised and killed Thrasybulus in his tent, B.C. 389.

(Thucydides, viii.; Xenophon, *Hellen.*, i. 1, 12; i. 6, 36; ii. 3, 42; ii. 4, 2, &c.; iv. 8, 25, &c.; Diodorus Sic., xiv. 32, &c.; 94 and 99; C. Nepos, *Thrasybulus*; compare E. Th. Hinrichs, *De Theramenis, Critiæ, et Thrasybuli Rebus et Ingenio*, 4to, Hamburg, 1820; Thirlwall; Grote.)

THRASYBU'LUS, of Collytus in Attica, was a contemporary of Thrasybulus the deliverer of Athens, from whom he is usually distinguished by the epithet of the Collytian. He was one of the Athenian exiles who joined his namesake at Phyle, and afterwards at Peiræus. (Demosthenes, in 'Timocrat.,' p. 742.) In the war against Antalcidas he commanded eight Athenian galleys, with which he was taken prisoner by the Spartan admiral. (Xenophon, *Hellen.*, v. 1, 26, &c.; compare Æschines, in *Ctesiphont.*, p. 73, ed. Steph.)

THRASYBU'LUS, a tyrant of Syracuse. He was a son of Gelo,

Digitized by Google

and brother of Hiero the Elder, who ruled over Syracuse till the year B.C. 466. Hiero was succeeded by his brother Thrasybulus, who was a bloodthirsty tyrant, and oppressed the people still more than Hiero: great numbers of citizens were put to death and others sent into exile, and their property filled the private coffers of the tyrant. In order to protect himself against the exasperated citizens, he got together a large force of mercenaries, and relying on this new support, he carried his reckless cruelties so far that at last the Syracusans determined to rid themselves of their tyrant. They chose leaders to give them a military organisation, that they might be enabled to resist the mercenaries of Thrasybulus. The tyrant at first endeavoured to stop the insurrection by persuasion, but this attempt failing, he drew reinforcements from Catana and other places, and also engaged new mercenaries. With this army, consisting of about 15,000 men, he occupied that part of the city which was called Achradina, and the fortified island, and harassed by frequent sallies the citizens, who fortified themselves in a quarter of their city called Ityce. The Syracusans sent envoys to several Greek towns in the interior of Sicily, soliciting their aid. The request was readily complied with, and they soon had an army and a fleet at their disposal. Thrasybulus attacked them both by sea and land, but his fleet was compelled to sail back to the island after the loss of several triremes, and his army was obliged to retreat to Achradina. Seeing no possibility of maintaining himself, he sent ambassadors to the Syracusans with offers of terms of peace, which was granted on condition of his quitting Syracuse. Thrasybulus submitted to these terms, after having scarcely reigned one year, and went to Locri in Southern Italy, in B.C. 466, in exile. After the Syracusans had thus delivered themselves of the tyrant, they granted to his mercenaries free departure, and also assisted other Greek towns in Sicily in recovering their freedom. (Diodorus Sic., xi. 67 and 68.)

THROCMORTON, SIR NICHOLAS, was descended from an ancient family in Warwickshire, and his ancestors had been employed in the higher offices of state for some centuries. His father, Sir George Throcmorton, had been in favour with Henry VIII., but being a zealous papist, he incurred the king's displeasure by refusing to take the oath of supremacy, and about 1538 was imprisoned in the Tower of London, where he remained several years.

Nicholas, who was Sir George's fourth son, was born about the year 1513. Having been appointed page to the Duke of Richmond, the king's natural son, he accompanied his master to France, and was also in his service till the duke's death in 1536. Sir George Throcmorton was released from the Tower in 1543. His son Nicholas was then appointed sewer to the king. In 1544 he headed a troop in the armament against France which Henry VIII. commanded in person; he assisted at the siege of Boulogne, and after his return received a pension from the king as a reward for his services. After the king's death he attached himself to the queen-dowager Catherine Parr, and to the Princess Elizabeth. In 1547 he distinguished himself in the campaign in Scotland under the Protector Somerset, and was present at the battle of Pinkey (or Musselburgh), and Somerset sent him to London with the news of the victory. He was soon afterwards created a knight, appointed to a place in the privy-chamber, and admitted to great intimacy with Edward VI. The king bestowed upon him some valuable manors, and made him under-treasurer of the mint. He sat in parliament during Edward's reign as member for Northampton.

A short time before the king's death, Sir Nicholas married the daughter of Sir Nicholas Carew, and on taking his wife to visit his father at Coughton in Warwickshire, he was received with coldness by the old knight; partly perhaps on account of his Protestant principles, but chiefly because he had been knighted before his eldest brother. To remove this cause of offence, he took his brother back with him to court, and, at the request of Sir Nicholas, the king raised him to the dignity of a knight.

Sir Nicholas Throcmorton was present when Edward VI. died at Greenwich in 1553. He was aware of the designs of the partisans of Lady Jane Grey, but, though a Protestant, he was too much attached to law and legitimacy to give any sanction to them. He therefore came immediately to London, and despatched Mary's goldsmith to announce to her the king's demise. On the 2nd of February 1554, Sir Nicholas Throcmorton was arrested and committed to the Tower on a charge of being concerned in the rebellion of Sir Thomas Wyatt. On the 17th of April he was brought to trial at Guildhall, London. This trial is the most important and interesting event in his life. It is certain that he was acquainted with Wyatt's intentions, and there is little doubt that he was to some extent implicated in the rebellion. He was tried before commissioners, some of whom were bitterly inimical to him, and who seemed to regard his trial as merely a form necessary to be gone through previous to his execution. Sir Nicholas however conducted his own defence; and this he did with such admirable adroitness, such promptness of reply and coolness of argument, intermixed with retorts spirited, fearless, and reiterated, in answer to the partial remarks of the lord chief justice and other commissioners, and followed up by an impassioned earnestness of appeal to the jury, that, in defiance of the threats of the chief justice and the attorney-general, he obtained a verdict of acquittal. Sir Nicholas was directed to be discharged, but was remanded, and kept in prison till the 18th of January 1555. The jury were made to suffer severely for their independent verdict. Two were fined 2000*l.* each, six were fined 1000 marks each, and four, who expressed contrition, were not fined. All were remanded to prison, where they remained till the 12th of December, when five were discharged on payment of the reduced fine of 220*l.* each, three on payment of 60*l.* each, and four without fine.

Sir Nicholas Throcmorton, after his release, avoided the approaching storm of persecution by going to France, where he remained till 1556. Though he afterwards served in Queen Mary's army under the Earl of Pembroke, he devoted himself chiefly to the Princess Elizabeth, whom he visited privately at Hatfield. When Queen Mary died, he was admitted to see her corpse, and, as Elizabeth had requested, took from her finger the wedding-ring which had been given to her by Philip, and delivered it to Elizabeth. Elizabeth gave him the office of butler of England, a situation of some dignity, but incconsiderable emolument, and afterwards made him chamberlain of the exchequer. In 1559 he was sent on an embassy to France, and remained at the French court as resident ambassador till the beginning of 1563. Dr. Forbes has published the greater part of Throcmorton's correspondence with his own government while he was in this confidential situation. It displays great diplomatic skill and management, but perhaps rather too much tendency to intrigue; and he supported the cautious and somewhat doubtful policy of Cecil with zeal and discretion. Indeed he was on the most confidential terms with Cecil during the whole of this period, but after his return a coolness arose between the two statesmen, which increased till it became a strong personal animosity.

In 1565 Throcmorton was sent on a special embassy to Scotland, to remonstrate with Mary Queen of Scots against her intended marriage with Darnley; and when Mary was imprisoned at Lochleven in 1567, Throcmorton was commissioned by Elizabeth to negociate with the rebel lords for her release.

In 1569 Throcmorton was sent to the Tower on a charge, which indeed appears to have been well founded, of having been engaged in the intrigue for a marriage between Mary Queen of Scots and the Duke of Norfolk. Though he was not kept long in confinement, he never afterwards regained the confidence of Elizabeth, and the distress of mind occasioned by the loss of her favour has been thought to have hastened his death, which took place at the house of the Earl of Leicester, February 12, 1571, in his fifty-eighth year.

Sir Francis Walsingham, in a letter to the Earl of Leicester on the occasion of Throcmorton's death, says of him that "for counsel in matters of estate, and for the carriage of the affairs of like sufficiency that I know." Camden says he was "a man of large experience, piercing judgment, and singular prudence; but he died very luckily for himself and his family, his life and estate being in great danger by reason of his turbulent spirit."

THUCYDIDES, J.A. [Thuc, De.]

THUCYDIDES (Θουκυδίδης), the son of Olorus, or Orolus, and Hegesipyle, was a native of the demus of Alimus in Attica. He was connected by his mother's side with the family of the great Miltiades, and the name of his father was in common use among the Thracian princes. If he was forty years old at the commencement of the Peloponnesian war, according to the statement of Pamphila (Gellius, xv. 23), he was born in B.C. 471. In his own work he nowhere mentions his age or the time of his birth, but he says that he lived through the whole of the Peloponnesian war, and that he was of the proper age for observing its progress (v. 26).

Our principal information respecting the life of Thucydides is a biography of him written by Marcellinus, which is however full of contradictions and doubtful stories. There is also an anonymous biography of him prefixed to most editions of his works, which is still worse than that of Marcellinus. Thucydides mentions incidentally a few facts concerning himself, which is almost all that we know with certainty about his life.

Lucian tells a well-known story that when a boy he heard Herodotus read his History at Olympia, and was so much moved that he burst into tears. But there is good reason for believing that this recitation of the History of Herodotus never took place at the Olympic games [Herodotus]; and if there is any foundation for the story of Thucydides having heard him read it, we would rather refer it to a like recitation at Athens, which is mentioned by Plutarch and Eusebius. Suidas is the only writer who says that Thucydides heard Herodotus at Olympia; Marcellinus and Photius relate the same tale without mentioning where the recitation took place.

There seems nothing improbable in the accounts of the ancient biographers that Thucydides was taught philosophy by Anaxagoras and rhetoric by Antiphon; but their statement that he accompanied the Athenian colony to Thurii is probably a mistake arising from their confounding him with Herodotus, who, we know, was of the colonists. But whether he went to Thurii or not, it is certain that he was in Athens in the second year of the Peloponnesian war, B.C. 430, when he was one of those who had the plague. (Thucyd., ii. 48.) In the eighth year of the war, B.C. 424, he was in command of an Athenian fleet of seven ships, which lay off Thasos. Brasidas, the Lacedemonian commander, made an attempt to obtain possession of Amphipolis on the Strymon, which then belonged to Athens; and Thucydides, as soon as he heard of it, sailed to protect Amphipolis, but was only in sufficient time to save Eion, a seaport at the mouth of the Strymon. Amphipolis had fallen before he could arrive there. (Thucyd., iv. 102, &c.) For this he was either condemned to death or banished by

Digitized by Google

the Athenians in the year following, B.C. 423; and in consequence of the sentence passed upon him he spent twenty years in exile, namely, till B.C. 403. (Thucyd., v. 26.) This year coincides exactly with the restoration of the democracy by Thrasybulus, when a general amnesty was granted, of which Thucydides seems to have availed himself. Where he passed the time of his exile is not mentioned by himself. Marcellinus says that he first went to Ægina, and afterwards to Scapte-Hyle in Thrace, opposite the island of Thasos, where he had some valuable gold-mines. (Compare Plutarch, 'De Exilio,' p. 605.) It appears however not improbable that he visited several places during his exile: the intimate knowledge which he shows respecting the history of the Italiotes and Siceliotes almost inclines one to suppose that he may have visited Italy and Sicily after the failure of the Athenian expedition in the latter island. His property and influence would however naturally lead him to pass the greater part of his time in that country. This property, which was very considerable (Thucyd., iv. 105), was probably derived from his family, which came from Thrace, though Marcellinus says that he obtained it by marrying a Thracian heiress.

How long he lived after his return from exile, and whether he continued at Athens till the time of his death, is quite uncertain. According to some accounts he was assassinated at Athens, according to others he died at Thasos, and his bones were carried to Athens. He is said to have been buried in the sepulchre of the family of Miltiades.

The Peloponnesian war forms the subject of the History of Thucydides. He tells us that he foresaw it would be the most important war that Greece had ever known, and that he therefore began collecting materials for its history from its very commencement; that, where he had to rely upon the testimony of others, he carefully weighed and examined the statements that were made to him; and that he spared neither time nor trouble to arrive at the truth, and that in consequence of his exile he was enabled to obtain information from the Peloponnesians as well as his own countrymen (i. 22; v. 26). Though he was engaged in collecting materials during the whole of the war, he does not appear to have reduced them into the form of a regular history till after his return from exile, since he alludes in many parts of it to the conclusion of the war (i. 13; v. 26, &c.). He did not however live to complete it: the eighth book ends abruptly in the middle of the year B.C. 411, seven years before the termination of the war. Even the eighth book itself does not seem to have received the last revision of the author, although there is no reason at all for doubting its genuineness, as it bears on every page indubitable traces of his style and mode of thought. Some ancient writers however attributed it to his daughter, others to Theopompus or Xenophon. As the work of Thucydides is evidently incomplete, it would appear that it was not published in his lifetime; and there is therefore great probability that the statement is correct which attributes the publication of it to Xenophon. Niebuhr has brought forward reasons which seem to render it almost certain that Xenophon's 'Hellenics' consist of two distinct works, and that the last five books were not published till long after the first two. The first two, which seem to have borne the title of the 'Paralipomena' of Thucydides, complete the history of the Peloponnesian war, and were not improbably published by Xenophon, together with the eighth books of Thucydides. (Niebuhr, in 'Philological Museum,' i. 485, &c.)

The first book of Thucydides is a kind of introduction to the history. He commences by observing that the Peloponnesian war was more important than any that had been known before; and to prove this, he reviews the state of Greece from the earliest times down to the commencement of the war (c. 1-21). He then proceeds to investigate the causes which led to it, of which the real one was the jealousy which the Peloponnesians entertained of the power of Athens; and interrupts his narrative to give an account of the rise and progress of the Athenian empire down to the commencement of the war (c. 89-118). He had an additional reason for making this digression, since this history had either been passed over by previous writers altogether, or had been treated briefly, without attention to chronology (c. 97). He resumes the thread of his narrative at c. 118, with the negociations of the Peloponnesian confederacy previous to the declaration of the war; but the demand of the Lacedæmonians, that the Athenians should drive out the accused, which was answered by the Athenians requiring the Lacedæmonians to do the same, leads to another digression respecting the treason and death of Pausanias (c. 128-134); and as proofs were found implicating Themistocles in the designs of the Spartan king, he continues the digression in order to give an account of the exile and death of Themistocles (c. 135-138). He then resumes the narrative, and concludes the book with the speech of Pericles which induced the Athenians to refuse compliance with the demands of the Peloponnesians. The history of the war does not therefore begin till the second book; but it would be out of place to give here an abstract of the remainder of the work.

Thucydides had formed a high opinion of the value and importance of the work he had undertaken. It was not his object to afford amusement, like former writers, but to give such a faithful representation of the past as would serve as a guide for the future (i. 22). His observation of human character was profound; he penetrates with extraordinary clearsightedness into the motives and policy of the leading actors of the war; and he draws from the events he relates those lessons of political wisdom which have always made his work a favourite study with thoughtful men of all countries.

He claims for himself the merit of the strictest accuracy, and it is impossible to read his History without being convinced of the trustworthiness of his statements. His impartiality also is conspicuous: although he had been banished from his native city, he does not, like Xenophon, turn renegade, and try to misrepresent the conduct and motives of his own countrymen. Although a contemporary, and one who had taken an active part in public affairs, he writes as free from prejudice and party-feeling as if he had lived at a time long subsequent to the events he narrates.

The History is constructed on entirely different principles from those of his predecessors. He confines himself strictly to his subject, and seldom makes any digressions. He feels deeply the importance of his work, and constantly strives to impress the same feeling upon his readers: he had proposed to himself a noble subject, and writes with the consciousness of the value of his labours, and the presentiment that his work will be read in all future ages. There is consequently a moral elevation in his style and mode of treating a subject, which is scarcely to be found in any other writer except Tacitus.

In narrating the events of the war, Thucydides pays particular attention to chronology. He divides each year into two portions, the summer and the winter, and is careful to relate under each the events that took place respectively during that time. The speeches which he introduces are not mere inventions of his own, but contain the general sense of what the speakers actually delivered, although the style and the arrangement are his (i. 22).

The style of Thucydides is marked by great strength and energy. Not only his expressions, but even single words seem to have been well weighed before they were used; each has its proper force and significance, and none are used merely for the sake of ornament and effect. The style is not easy, and it is probable that Thucydides never intended it should be so, even to his own countrymen: his work was not to be read without thought. Still his style is open to serious objections. He does not sufficiently consult perspicuity, which is the first virtue in all writing. His sentences too are frequently unnecessarily long, and the constructions harsh and involved. These remarks are more especially applicable to the speeches inserted in the History, which Cicero found so difficult as we do. ('Orator,' 9.)

The Greek text was first published by Aldus, Venice, 1502, and the scholia in the following year. The first Latin translation, which was made by Laurentius Valla, appeared at Paris in fol., 1513. The first Greek and Latin edition was that of Henry Stephens, the Latin being that of Laurentius of Valla, with corrections by Stephens, fol. 1564. Among the modern editions, those most worthy of notice are Bekker's, 3 vols., 8vo, Berlin, 1821; Poppo's, which contains two volumes of prolegomena, with the scholia and numerous notes, 11 vols. 8vo., Leipzig, 1821-1840; Haack's, with selections from the Greek scholia and short notes, which the student will find very useful, 2 vols. 8vo, Leipzig, 1820, reprinted in London, in 3 vols. 8vo, 1823; Göller's, 2 vols. 8vo, Leipzig, 1836, 2nd edition, reprinted in London; Arnold's, 3 vols. 8vo, Oxford, 1st edition, 1830-1835; and Haase's, Paris, 1845. There are also translations of Thucydides into most of the modern European languages. In English the first translation was made by Thomas Nicolls, from the French version of Seyssel, and was published in London, fol., 1550. This was succeeded by the translations of Hobbes and William Smith, which have been frequently reprinted. The most recent are those of C. T. Bloomfield, 2 vols. 8vo, London, 1829, and by Dale, published in Bohn's 'Classical Library.' A recent translation in German is by Klein, 8vo, München, 1826; and in French one of the best is said to be by Gail.

For information respecting the life of Thucydides may consult Dodwell, 'Annales Thucydidei et Xenophontei,' &c., 4to, Oxford, 1702; and Krüger, 'Untersuchungen über das Leben des Thucydides,' Berlin, 1832.

THULDEN, THEODOR VAN, born at Bois-le-Duc in 1607, was one of the most distinguished scholars and assistants of Rubens, with whom he was also a favourite. He was with Rubens in Paris, and is said to have executed the greater part of the celebrated series of the so-called Gallery of the Luxembourg, painted in honour of Mary de' Medici. Van Thulden is distinguished both as a painter and as an etcher. As a painter he excelled in various styles. There are several large pictures, both historical and allegorical, by him, dispersed over Germany and the Netherlands; he painted also small pictures from common life in the manner of Teniers, such as markets, fairs, and the like; and he was frequently employed by architectural and landscape painters to embellish their pictures with small appropriate figures, in which he was excellent; he painted many such in the pictures of Neefs and Steenwyck.

Van Thulden's style in his greater works is altogether that of Rubens, and, although inferior in boldness of design and colouring, his works may easily be mistaken for those of Rubens; the 'Martyrdom of St. Andrew,' in St. Michael's church at Ghent, was long thought to be a work of Rubens. In chiar'oscuro, Van Thulden was nearly if not quite equal to his master. A 'St. Sebastian,' in the church of the Bernardines at Mechlin, and an 'Assumption of the Virgin,' in the

Digitized by Google

church of the Jesuits at Bruges, were considered two of his best altar-pieces. While at Paris he painted twenty-four pictures of the Life of St. John of Matha in the church of the Mathurins, which he himself etched on copper in 1633; the pictures have since been painted over. Van Thuldon's etchings are numerous, and in a masterly style: he published a set of fifty-eight plates from the paintings of Nicolò Abati at Fontainebleau, after the designs of Primaticcio, which are greatly valued, for as the paintings were destroyed in 1738, they are all that remains of the original designs. They have been copied several times: the original set appeared under the following title: 'Les Travaux d'Ulysse, desseignez par le Sieur de Sainct-Martin, de la façon qu'ils se voyent dans le Maison Royale de Fontainebeau, peint par le Sieur Nicolas, et gravez en cuivre par Theodore van Thulden avec le sujeet et l'explication morale de chaque figure.' He etched also forty-two plates after Rubens, of the entrance of Ferdinand the Cardinal-Infant into Antwerp: 'Pompa introitus Ferdinandi,' &c. The eight plates of the History of the Prodigal Son, to which he put Rubens' name, are considered to be from his own designs; they are entitled, 'De variooren Soon, door P. P. Rubens. Th. van Thulden fec.' Van Thulden died in his native place, Bois-le-Duc, in 1676.

THUMMEL, MORITZ AUGUST VON, a German writer who was greatly admired by his contemporaries, and who still continues to hold a high literary rank with his own countrymen. He was born at Schönfeld, near Leipzig, May 27th 1738, where his father possessed considerable property, but lost much of it by the plundering of the Prussian troops in Saxony, 1745. Moritz, who was the second son of a family of nineteen, was sent to the university of Leipzig in 1756. There he found in Gellert not only an instructor, but a friend; and he also formed an acquaintance with Weisse, Rabener, von Kleist, &c., and, among others, with an old advocate named Beiz, who at his death, in 1776, left him the whole of his fortune, 24,000 dollars. This accession of wealth enabled Moritz to give up the share he held under Duke Ernest of Saxe-Coburg, first as Kammer-junker, and, from 1768, as privy councillor and minister, and to retire in 1783 to Sonneborn, an estate of his wife, at which place and at Gotha he continued chiefly to reside until his death, which happened while he was on a visit at Coburg, October 26th 1817. Thümmel's literary reputation was established by his 'Wilhelmine,' a 'comic poem in prose,' first published in 1764. This short production, for it is in only five cantos or chapters, was received as something altogether new in German literature, and as a masterpiece of polished humour and pleasantry. It was soon translated not only into French, but Dutch, Italian, and Russian; and it has been reprinted entire in Wolff's 'Encyclopädie' (1842). His poetical tale, 'Die Inoculation der Liebe,' 1771, and other pieces in verse, did not add much to his fame; but his last and longest work 'Reise in den Mittaglichen Provinzen von Frankreich' (Travels in the Southern Provinces of France), in 9 vols., 1799-1805, is also his literary chef-d'œuvre. Instead of being, as its title would import, the mere record of his tours in that country, it is, like Sterne's 'Sentimental Journey,' to a great extent a work of fiction, interspersed with Romaunts in verse, which breathe more of poetry than his other productions of that kind. It abounds with satiric humour and pleasantry, with witty and shrewd observations, and shows the author to have been an accomplished man of the world, intimately acquainted with human nature. That it is a work of no ordinary merit such a production may be supposed from the notice it has obtained from Schiller, in his essay 'Ueber Naive und Sentimentalische Dichtung;' who, if he praises it with greater reserva than other critics, admits that, as a work of amusement, it is one of a superior kind, and will no doubt continue to enjoy the character it has obtained. A portrait of Thümmel, after Oeser, is prefixed to the 6th volume of the 'Neue Bibliothek der Schönen Wissenschaften,' a complete edition of his works, in six volumes.

THUNBERG, CARL PETTER, an eminent Swedish traveller and botanist, and professor of natural history in the University of Upsal, was born on the 11th of November 1743, at Jönköping in Sweden, where his father was a clergyman. He was early sent to the University of Upsal for the purpose of studying medicine, and became a pupil of the great Linnæus. Under his instruction he acquired that taste for natural history which so remarkably distinguished the school of Linnæus, and which has given to the world so many famous naturalists. Having completed his course of study, he graduated in 1770, and was honoured by having bestowed upon him the Swedish pension for the space of three years. Although the sum was small, about fifteen pounds per annum, he determined to use it for the purposes of improvement, and accordingly left Upsal for the purpose of visiting Paris and the universities of Holland. Whilst in Amsterdam he became acquainted with the Botanists and florists of that city, and they suggested to him the desirableness of some person visiting Japan for the purpose of exploring its vegetable treasures. Thunberg immediately offered his services, and a situation as surgeon to one of the Dutch East India Company's vessels having been obtained for him, he left Amsterdam for Japan in the year 1771. He landed at the Cape of Good Hope for the purpose of learning amongst the Dutch settlers there the Dutch language, which is the only European language spoken extensively in Japan, and also in the hope of adding to his knowledge of natural objects by researches in Africa. Here he made several excursio: s into the interior, visiting various of the native tribes, and after having remained three winters at the Cape, where he collected much valuable information, he set sail in 1773 for Java and the Japan Isles. He remained in these islands five years, making large collections of the plants of those countries, as well as observations on the habits, manners, and language of their inhabitants. His ability to labour however during his residence both in Africa and Asia, was very much diminished by a frightful accident which he met with on first leaving Holland. The keeper of the stores in the ship, having inadvertently given out white lead instead of flour, it was mixed with flour and used for making pancakes, of which the whole crew partook. All were ill, and many suffered severely at the time, but none was so bad as Thunberg; he only gradually recovered his health, and through his life he always laboured under the debility and derangement his system had thus received. He returned to his native country in 1779, making first a short stay in England. Here he formed the acquaintance of Sir Joseph Banks, Dryander, and Solander, and availed himself of the extensive collection of plants from all parts of the world, and valuable library of Sir Joseph, for the purpose of adding to his botanical knowledge. During his absence he had been made demonstrator of botany at Upsal in 1777, and in 1784 was installed in the chair of the great Linnæus as professor of botany. In 1785 he was made a knight of the order of Wasa, and in 1815 commander of the same order.

On gaining his home, Thunberg immediately commenced arranging the vast mass of materials he had collected in his travels for the purpose of publication. His first important work was a description of 1430 Japanese plants, which was published at Leipzig in 1784, with the title 'Flora Japonica, sistens Plantas Insularum Japonicarum, secundum Systema Sexuale emendatum,' 8vo, and illustrated with thirty-one engravings. In this work a great number of new plants were described and arranged according to the Linnæan system, in which he ventured to dispense with the three classes called Monœcia, Dioecia, and Polygamia. He subsequently published some botanical observations on this 'Flora,' in the second volume of the 'Transactions' of the Linnean Society.

In 1788 he commenced the publication of an account of his travels, under the title, 'Resa uti Europa, Africa, Asia, forattad åren 1770-79,' 8vo, Upsal. This work was completed in four volumes, and contains a full account of his eventful life, from the time he started from Upsal with his Kohrean pension, till he returned to the same place laden with treasures from a hitherto unexplored region. In these volumes he has taken great pains to collect all possible information on the medicinal and dietetic properties of plants in the countries he visited, as well as their uses in rural and domestic economy. He recommends several new plants for cultivation in Europe as substitutes for those at present in use. This work also gives a very pleasing account of the original natives of the places in which he sojourned, as well as of the European settlers. It has been translated into German by Groskund, and published at Berlin in 1792. It appeared in English at London in 1793, and in French at Paris in 1796.

His next work was a 'Prodromus Plantarum Capensium, Annis 1772-75 collectarum,' Upsaliæ, 1794-1800: being an account of the plants he had collected at the Cape. From 1794 to 1805 he published in folio, under the title 'Icones Plantarum Japonicarum,' illustrated by a series of plates illustrative of the botany of Japan Isles. These were followed by the 'Flora Capensis,' 8vo, Upsaliæ, 1807-13. In this work the most complete view of the botany of the Cape of Good Hope is given that has hitherto been published. In 1812 he published, conjunction with Palisot, the 'Plantarum Brasiliensium Decas Prima,' 4to, Upsaliæ. In this work the plants collected by Freireiss and Sauerländer, in the province of Minas Geraës in Brazil, are described; but the subsequent parts were published by other hands.

Besides the above works, on which the reputation of Thunberg as a traveller and a botanist mainly rests, he was the author of almost countless memoirs and academical dissertations. The subjects of these were chiefly those which his long residence in Africa and Asia afforded. The majority of them are upon botanical topics; not a few however are devoted to the discussion of zoological subjects. Although botany was his primary object in his travels, he yet lost no opportunity of obtaining a knowledge of the new animals he met with, and several of his papers are descriptions of these. He published several memoirs in the London 'Philosophical Transactions,' and the 'Transactions' of the Linnean Society, also in the Transactions of Russian, German, French, and Dutch scientific societies and journals, and a much greater number in those of Sweden. The academical dissertations bearing his name, and presented at the University of Upsal, are nearly 100 in number, and were published between the years 1789 and 1813.

Thunberg was elected an honorary member of sixty-six learned societies. He died at the advanced age of eighty-five, on the 8th of August 1828.

Retzius named a genus of plants in the natural order *Acanthaceæ*, in honour of him, *Thunbergia*. The following genera of plants have species named after him:—*Iria, Ixiopsis, Cyperus, Imperata, Spatalla, Convolvulus, Campanula, Gardenia, Atriplex, Hydrocotyle, Rhus, Crassula, Bertolonia, Erica, Passerina, Thalictrum, Cocculus, Eysenhar., Hypnum, Fissidens, Cyrtoceira, Dyalceta,* and *Endocarpon*. Of insects,

Digitized by Google

the genera *Harpalus*, *Lygæus*, *Pyralis*, and *Tenea* have specific names after Thunberg.

Thunberg was an amiable kind man, and highly esteemed by his friends and pupils. The great additions that he has made to our knowledge of the plants of the world, as well as their uses to man, place him amongst the most distinguished botanists of the last and present century. He was not great as a vegetable physiologist, nor did he attempt anything more in systematic botany than a slight emendation of the system of Linnæus. As a traveller, Thunberg is remarkable for the accuracy of his observations on the manners, habits, and domestic economy of the people that he visited.

THURLOE, JOHN, who held the office of secretary of state during the Commonwealth, was born in 1616, at Abbots Roding, in Essex, of which place his father, the Rev. Thomas Thurloe, was rector. He was designed for the profession of the law. Through the interest of Oliver St. John, who was his patron through life, he was appointed, in 1645, one of the secretaries to the parliament commissioners for conducting the treaty of Uxbridge. He was called to the bar after this, in 1647, by the society of Lincoln's Inn; and in March 1648 he received the appointment of receiver or clerk of the curator's fines, "worth at least 350*l.* per annum," says Whitelocke; "and in this place was Mr. Thurloe servant to Mr. Solicitor St. John." ('Memorials,' p. 296.)

Thurloe has left behind him a distinct denial of knowledge of or participation in King Charles's death, which took place, as is well known, in January 1649. Writing to Sir Harbottle Grimston for the purpose of contradicting reports that St. John had been Cromwell's counsellor on that and on other occasions, and "that I was the medium or hand between them by which their counsels were communicated to each other," he says, "I was almost a stranger to that fact and to all the counsels about it, having not had the least communication with any person whatsoever therein." (Thurloe's 'State Papers,' vol. vii., p. 914.) It was very unlikely that a person in Thurloe's subordinate position at that time should have been consulted; and if it were a question of any importance whether he approved of the king's death or not, his subsequent continual identification with the authors of that event is more than sufficient to fix him with responsibility.

On the 11th of February 1650 Thurloe was appointed one of the officers of the treasury of the company of undertakers for draining Bedford Level, a new effort to drain this tract of country having been set on foot the year before. In a letter from St. John to Thurloe, dated April 13, 1652 ('State Papers,' vol. i, p. 265), which is interesting as showing the terms on which Thurloe and St. John were, we find that Thurloe was then on an official tour of inspection: "Now you are upon the place, it would be well to see all the works on the north of Bedford river to be begun. Pray by the next let me know whether Bedford river be finished as to the bottoming." In the same letter are directions from St. John, now Lord Chief Justice, for purchases of a place for him in the neighbourhood of London, from which it would appear that Thurloe was in the habit of managing St. John's private affairs for him. The same letter contains St. John's congratulations to Thurloe on his appointment as secretary to the council of state, which appointment had just taken place: "I hear from Sir Hen. Vayne, and otherwise, of your election into Mr. Frost's place, with the circumstances. God forbid I should in the least repine at any of his works of Providence, much more at those relating to your own good, and the good of many. I bless him. As soon as I heard the news, in what concerned you, I rejoiced in it upon those grounds. Ne, go on and prosper: let not your hands faint: wait upon Him in his ways, and He hath called you will cause his presence and blessing to go along with you." In the course of his previous year, 1651, Thurloe had been to the Hague, as secretary to St. John and Strickland, ambassadors to the states of the United Provinces.

When Cromwell assumed the Protectorship, in December 1653, Thurloe was appointed his secretary of state. In consequence of his attaining to this distinction, he was, in the February succeeding, elected a bencher of the society of Lincoln's Inn. Thurloe was elected member for the Isle of Ely in Cromwell's second parliament, called in June 1654, and framed on the model prescribed by the Instrument of Government. He was re-elected for the Isle of Ely in the next parliament, called in September 1656. Cromwell obtained from this parliament an act settling the office of post of letters, both inland and foreign, in the state for ever, and granting power to the Protector to let it for eleven years at such rent as he should judge reasonable; and it was let by him to Thurloe, at a rent of 4000*l.* a year, as we learn from a memorandum drawn up by him when the Rump Parliament had cancelled the grant. ('State Papers,' vol. vii., p. 783.) It is to be inferred that he made much profit by this farming of the post office. The salary of secretary of state was 2000*l.* a year. He is described in a 'Narrative of the Late Parliament,' reprinted in the 'Harleian Miscellany' (vol. iii., p. 453), as "secretary of state and chief postmaster of England, places of a vast income."

There is the following entry in Whitelocke's 'Memorials,' under the date of April 9, 1657:—"A plot discovered by the vigilancy of Thurloe, of an intended insurrection by Major-General Harrison and many of the Fifth-Monarchy Men" (p. 655). Thurloe afterwards, by Cromwell's desire, reported on the subject of this plot to the parliament, and received in his place the thanks of the house, through the speaker, for his detection of the plot, and "for the great services done by him to the commonwealth and to the parliament, both in this and many other particulars." On the 13th of July 1657 he was sworn one of the privy council to the Protector, appointed in accordance with the 'Humble Petition and Advice.' Honours now came thick upon him. In the year 1658 he was elected one of the governors of the Charter-House and chancellor of the University of Glasgow.

In September 1658 Cromwell died, and his son Richard was proclaimed in his stead. In the parliament that was called in December, Thurloe was solicited to sit for Tewkesbury, in a letter which is worth extracting, as showing his estimation and position at this time, and the spirit of constituencies:—"Noble Sir, We understand that you are pleased so much to honour this poor corporation as to accept of our free and unanimous electing you one of our burgesses in the next parliament, and to sit a member for this place. Sir, we are so amiable of the greatness of the obligation, that we know not by what expressions sufficiently to demonstrate our acknowledgements; only at present we beseech you to accept of this for an earnest, that whomsoever you shall think worthy to be your partner shall have the second election; and our zeal and hearty affection to serve and honour you whilst we are, as we shall ever strive to be, Sir, your most humble and obliged servents," &c.: signed by the bailiffs and justices of Tewkesbury. ('State Papers,' vol. vii., p. 572.) He was not after all chosen for Tewkesbury, but elected for Wisbech, Huntingdon, and the University of Cambridge. His election for the last was communicated to him in a letter from the celebrated Dr. Cudworth, who wrote to him in this strain:—"We being all very glad that there was a person of so much worth and so good a friend to the university and learning as yourself, whom we might betrust with the care of our privileges and concernments." ('State Papers,' vol. vii., p. 687.) Thurloe made his election to sit for the University of Cambridge.

The meeting of this parliament was the beginning of discontents and of Richard Cromwell's fall. We find Thurloe, in a letter to Henry Cromwell, viewing the complaints of the army and of the opposition in parliament as pointed principally against himself, and stating that he had asked the Protector's permission to retire from his place. "I trust," he adds, "neither houses nor army have their property, and may do the same thing with myself with better acceptance, having not been engaged in many particulars, as I have, in your father's lifetime, which must be the true reason of those stirrings; for they were all set on foot before his now highness had done or refused one single thing, or had received any advice from any one person whatsoever." Thurloe remained however secretary of state. It was one of the objects set before themselves by the royalists in this parliament, who, by uniting with the republican party, formed a most troublesome opposition to Richard Cromwell's government, to impeach Thurloe; but this object was yet undeveloped when the parliament was dissolved. Thurloe appears to have given strong counsel against the dissolution, though it is generally stated otherwise, on the authority of the following passage in Whitelocke:—"Richard advised with the Lord Broghill, Fleetwood, Thurloe, Wolsey, myself, and some others, whether it were not fit to dissolve the present parliament: most of them were for it; I doubted the success of it" (p. 677). Those mentioned are very few of the council, and, even if there had been no others, it would be quite consistent with the words of this passage that Thurloe should have sided with Whitelocke. That Thurloe strenuously opposed the dissolution is distinctly stated, and with circumstantial mention of the authority, in Calamy's Life of Howe, prefixed to Howe's Works, p. 9, ed. 1724, fol. We know further that the dissolution was urged on Richard Cromwell by the republican and royalist parties, which were united against Thurloe. Whitelocke says, a little afterwards, of the dissolution, that it "caused much trouble in the minds of many honest men; the cavaliers and republicans rejoiced at it." One of the "many honest men" was doubtless Thurloe. (See also Thurloe's 'State Papers,' vol. iii., pp. 420-60.) The immediate consequence of the dissolution was the summoning, by Fleetwood and the council of officers, of the Rump of the Long Parliament, and Richard Cromwell's deposition.

The letters written during Richard Cromwell's short Protectorate, in the third volume of Clarendon's 'State Papers,' are full of acknowledgments of Thurloe's influence with Richard Cromwell, and of the importance attached to him by the intriguing Royalists. Thus, Cooper, one of Hyde's spies, writes to him, February 13, 1659, "Cromwell is governed by Thurloe, whether for fear or love I know not; but sure it is, he hath power to dispose him against the sense of right, or indeed his own interests. Thurloe's malice, I doubt, will never suffer him to do us good" (p. 425). Again Hyde writes to another of his agents, Brodrick, "There is nothing we have to consider more importance, or have given more in charge to our friends since the beginning of the parliament, then that they should advance all charges and accusations against Thurloe and St. John, who will never think of serving the king; and if they two were thoroughly prosecuted, and some of the members of the High Court of Justice, Cromwell's spirits would fall apace" (p. 428). "It is strange," Hyde writes a month after, March 10, 1659, "they have not in all this time fell upon Thurloe and those other persons who advanced Cromwell's tyranny" (p. 436). Then overtures to Thurloe to aid the king are thought of. "I do

Digitized by Google

confess to you," Hyde writes, "I cannot comprehend why Thurloe, and even his master St. John, should not be very ready to dispose Cromwell to join with the king, and why they should not reasonably promise themselves more particular advantages from thence than from anything else that is like to fall out" (p. 449). After the dissolution of the parliament, serious thoughts seem to have been entertained of soliciting Thurloe's and St. John's aid (p. 477). But Thurloe afterwards becomes again an object of fear to Hyde. During the government by the army, he writes, "I do less understand how Thurloe shapes, and is in danger to be exempted out of the Act of Oblivion, and at the same time employed in the greatest secrets of the government, for I have some reason to believe that he meddles as much as ever in the foreign intelligences" (p. 532).

On the 14th of January 1660, Thurloe was succeeded in his office of secretary of state by Scot, one of the republican party; but he was reappointed on the 27th of February. His patent as chief postmaster had been cancelled in the interval, on the 2nd of February. ('Commons' Journals,' vol. vii. p. 533.) In the movements that followed for the restoration of Charles II., Thurloe made an offer of his services to those who were bringing about that event. Sir E. Hyde writes to Sir John Grenville, April 23rd, 1660, "We have since I saw you, received very frank overtures from Secretary Thurloe, with many great professions of resolving to serve the king, and not only in his own endeavours, but by the services of his friends, who are easily enough guessed at. This comes through the hands of a person who will not deceive us, nor is easily to be deceived himself, except by such bold dissimulation of the other, which cannot be at first discerned. . . . The king received such assurances as are fit, and desires to see some effects of his good affection, and then he will find his service more acceptable." (Thurloe's 'State Papers,' vol. vii., p. 897.) And Hyde goes on to instruct his correspondent to consult Monk as to Thurloe's character, and as to his power to be of use, supposing he were sincere in his offer. On the 15th of May Thurloe was excused by the parliament of high treason, and ordered to be secured; but on the 29th of June a vote was passed "allowing him liberty to attend the secretary of state, at such times as they [the House] shall appoint, and for so long a time as they shall own his attendance for the service of the state, without any trouble or molestation during such attendance, and in his going and returning to and from the secretary of state, any former order of this House notwithstanding."

After his release from imprisonment, he retired to Great Milton in Oxfordshire, where he generally resided except in term-time, when he occupied his chambers in Lincoln's Inn. It is said that he was often solicited by Charles II. to resume public business, and always refused, telling the king that he despaired of serving him as he had served Cromwell, whose rule was to seek out men for places, and not places for men. (Birch's 'Life of Thurloe,' prefixed to 'State Papers,' p. xix.) Thurloe died at Lincoln's-Inn on the 21st of February, 1668.

He had been twice married, and left four sons and two daughters, all by his second wife, a sister of Sir Thomas Overbury. He was possessed, during the days of power, of the manors of Whittlesey St. Mary's and Whittlesey St. Andrew's, and the rectory of Whittlesey St. Mary's, in the Isle of Ely, and of Wisbech Castle which he rebuilt. But after the Restoration they reverted to the Bishop of Ely. There is a survey in the Commons' Journals of the 11th of May 1660: "Mr. Secretary Thurloe put out of the ordinance for assessment of the Isle of Ely" (vol. viii. p. 36). Dr. Birch says he had an estate of about 400*l.* a-year at Astwood in Buckinghamshire. In a monumental inscription to the memory of his son-in-law in St. Paul's Church, Bedford ('Cole's MSS.,' vol. iii., p. 43), Thurloe is described as of Astwood, Bucks.

Thurloe does not appear to have possessed any striking qualities, either moral or intellectual, to impress the minds of his contemporaries; and we know little else of him than that he had a taste for business. Burnet describes him as "a very dexterous man at getting intelligence." ('Hist. of his own Times,' i. 66.) From a story in Burnet relative to Syndercomb's conspiracy against Cromwell, and from what is said by Pepys of Morland, when assistant to Thurloe, who played his master false, and gained a bursarship from Charles for his treachery, it might appear that he was not of a very generous disposition, or much liked by those who were under him. Morland attributed his misconduct to "Thurloe's bad usage of him." (Pepys, 'Diary' under May 13, and July 4, 1660. [MORLAND, Sir SAMUEL.] Burnet's story is, that Thurloe treated lightly information which had been given him of the design on Cromwell's life, and that when, on the subsequent discovery of the design, Cromwell became aware that information had been given to Thurloe, on which he had not acted, and blamed Thurloe for his conduct, Thurloe availed himself of his influence with the Protector to malign his informant; "So he (the informant) found," says Burnet, "how dangerous it was even to preserve a prince (so he called him), when a minister was wounded in the doing of it, and that the minister would be too hard for the prince, even though his own safety was concerned in it" (vol. i., p. 79).

Thurloe's 'State Papers,' 7 vols. folio, 1742, contain a large mass of records of his official transactions, together with a number of private letters and papers. They were edited by Dr. Birch, who gives the following history of Thurloe's papers: "The principal part of this collection consists of a series of papers discovered in the reign of King William, in a false ceiling in the garrets belonging to Secretary Thurloe's chambers, No. xiii., near the chapel in Lincoln's-Inn, by a clergyman who had borrowed those chambers, during the long vacation, of his friend Mr. Tomlinson, the owner of them. This clergyman soon after disposed of the papers to the Right Honourable John Lord Somers, then lord high chancellor of England, who caused them to be bound up in 67 volumes in folio. These afterwards descended to Sir Joseph Jekyll, master of the rolls; upon whose decease they were purchased by the late Mr. Fletcher Gyles, bookseller." They were published by Mrs. Gyles's executors. Dr. Birch, the editor, received many other papers from different individuals, especially from Lord Shelburne and the then Archbishop of Canterbury, which he has incorporated in the collection. For historical purposes this is an invaluable collection.

THURLOW, EDWARD, LORD, was born in 1732, at Little Ashfield near Stowmarket, in Suffolk. His father, Thomas Thurlow, was a clergyman, and held successively the livings of Little Ashfield, and of Stratton St. Mary's in Norfolk. After receiving the rudiments of his education from his father, young Thurlow was sent to the grammar-school at Canterbury at the suggestion of Dr. Donne, who sought (as Southey states in his 'Life of Cowper' upon the authority of Sir Egerton Brydges) to gratify a malignant feeling towards the headmaster, by placing under his care "a daring, refractory, clever boy, who would be sure to torment him." The motive ascribed to Donne is far-fetched, and seems improbable; but there is no doubt that Thurlow was educated at the Canterbury school, and that he continued there several years, and until he was removed to Caius College, Cambridge. His character and conduct at the university did not promise that extraordinary eminence in future life. He gained no academical honours, and was compelled to leave Cambridge abruptly in consequence of turbulent and indecorous behaviour towards the dean of his college. Soon after he quitted Cambridge he was entered as a member of the Society of the Inner Temple. In Michaelmas Term, 1754, he was called to the bar, and joined the Western Circuit in the ensuing spring.

Thurlow immediately applied himself to the practice of his profession with great assiduity; and although he brought with him an indifferent share of learning, he soon made up for it by unusually early reputation and employment both in Westminster Hall and on the circuit. His name appears frequently in the Law Reports soon after he was called to the bar; and his success in the profession he had chosen was clearly ascertained in less than seven years from the commencement of his practice. In 1761 he obtained the rank of king's counsel; and it may perhaps be inferred from an anecdote which is related by his early friend and associate Cowper, in one of his letters (Cowper's 'Works,' vol. v., p. 254, Southey's edit.), and which refers to this period, that Thurlow had then acquired a degree of reputation which suggested the prediction that he would eventually rise to the highest office in his profession. A more convincing proof of his position in the law is however recorded in the Reports, from which it appears that immediately after his appointment as king's counsel his practice in the courts rapidly increased, and during ten years preceding his appointment as solicitor-general, was exceeded only by that of Sir Fletcher Norton, and one or two others of the most eminent advocates of his time. To have succeeded so early and to so great an extent in obtaining without adventitious influence or connexion, and in competition with advocates of unquestioned ability and learning, is a substantial argument of professional merit. His employment in preparing and arranging the documentary evidence for the trial of the appeal in the House of Lords against the decision of the Court of Session in the Douglas Cause (Douglas of Douglas, according to ancient tradition, resulted from mere accident) may have had the effect of bringing his talents, industry, and legal acquirements under the immediate notice of persons of power and influence, and of thus opening the way to his subsequent elevation.

In the new parliament called in 1768 he was returned as member for the borough of Tamworth, and became a constant and useful supporter of Lord North's administration. Upon Dunning's resignation of the office of solicitor-general in March 1770, and Blackstone's refusal to accept it ('Life of Sir William Blackstone,' prefixed to Blackstone's 'Reports'), Thurlow received the appointment, and in January 1771, he succeeded Sir William De Gray as attorney-general. Soon after his introduction to office, he attracted the particular notice of George III. by the zeal and energy displayed by him in supporting the policy of Lord North's government respecting America, and in which the king is known to have taken the warmest interest. Thurlow's strenuous and steady support of the minister in the great parliamentary contest which ensued respecting that policy, procured for him a degree of confidence and even of personal regard on the part of the king, which continued unabated for upwards of twenty years, and had unquestionably great influence in the remarkable vicissitudes of party which occurred in that period.

In the summer of 1778 lord chancellor Bathurst resigned his office; and on the 2nd of June in that year Thurlow was appointed his successor, and raised to the peerage with the title of Baron Thurlow of Ashfield in the county of Suffolk. Four years afterwards, in March 1782, when Lord North was removed from power, and the ephemeral Rockingham administration was formed, Thurlow remained in possession of the great seal by the express command of the king, and in

Digitized by Google

spite of Mr. Fox's opposition to his continuance in office; thus furnishing an instance without a parallel in the history of English party, of a lord chancellor retaining office under an administration to all the leading features of whose policy he was resolutely opposed. Nor was he content in this inconsistent association to differ from his colleagues in opinion only; on the contrary, he took no pains to conceal his hostility to their principles, and even opposed in the House of Lords with all his characteristic energy the measures which they unanimously supported. Thus, after the bill for preventing government contractors from sitting in the House of Commons had been introduced into the House of Lords, where it was supported by Lord Shelburne and all the ministers in that house, the lord chancellor left the woolsack, and himself moved that "the bill be not committed," denouncing the measure as "an attempt to deprive the crown of its people," and designating it "a jumble of contradictions." (Hansard's 'Parl. Hist.' vol. xxii. pp. 1356-1379.) The inconvenience produced by this embarrassing disunion of councils was deeply felt, and was one of the principal reasons for Mr. Fox's retirement from administration, on the death of the Marquis of Rockingham; and from the wreck of administration was dissolved in February 1783, upon the coalition formed between Lord North and Mr. Fox. Lord Thurlow was compelled to retire from office, notwithstanding the exertions of the king to retain him. But though no longer chancellor, he still continued to be one of those who were described by Junius as "the king's friends," and was supposed to have been his secret and confidential adviser during the short reign of the Coalition ministry. Upon the dissolution of that ministry at the end of the same year in which it was formed, the great seal was restored to Lord Thurlow by Mr. Pitt, who became first prime minister. He continued to hold the office of lord chancellor for nine years after his reappointment: and until the occurrence of the king's madness in 1788, appeared to act cordially with the rest of the cabinet; but when that event rendered a change of counsels, by means of a regency probable, he was suspected, with good reason, of some intriguing communications with the Prince of Wales and the Whigs (Moore's 'Life of Sheridan,' vol. ii. chap. xiii.), and was always subsequently regarded with distrust by Pitt and his colleagues. On the other hand, Lord Thurlow took no pains to conceal his dislike of Pitt; and that minister felt himself so embarrassed by the chancellor's personal hostility to him, that in 1789 he complained to the king, who immediately wrote to Thurlow upon the subject, and obtained from him a satisfactory answer. His angry feelings however still continued, until at length, in 1792, probably relying upon his personal influence with the king, he ventured to adopt a similar course to that which he had followed in very different circumstances under the Rockingham administration, and actually opposed several measures brought into parliament by the government. Among the latter he violently opposed Mr. Pitt's favourite scheme for continuing the Sinking Fund, and voted against it in the House of Lords, though he had never expressed his dissent from the measure in the cabinet. This kind of opposition, though submitted to from necessity by a weak government like that of the Marquis of Rockingham, could not be endured by so powerful a minister as Pitt; and on the next day he informed the king that either the lord chancellor or himself must retire from the administration. The king, without any struggle or even apparent reluctance, at once consented to the removal of Lord Thurlow, who was acquainted by command of his majesty that he must resign the great seal upon the prorogation of parliament. Lord Thurlow is said to have been deeply mortified by this conduct on the part of the king; and he is related to have declared in conversation that "no man had a right to treat another as the king had treated him." Subsequently to his notice of dismissal, and before he quitted office, his ill humour was displayed by his opposition to another measure prepared and supported by Mr. Pitt, the object of which was the encouragement of the growth of timber in the New Forest. On the motion for reference to a committee upon those who advised the king upon this measure, and went so far as to say that his majesty had been imposed upon. (Tomline's 'Life of Pitt,' vol. iii. p. 398-99.) One of his latest acts as lord chancellor was to sign a protest in the House of Lords against Mr. Fox's Libel Act. The opportunity of his retirement from office was taken to grant him a new patent, by which he was created Baron Thurlow, of Thurlow, in the county of Suffolk, with remainder, failing his male issue, to his three nephews, one of whom afterwards succeeded to the title under this limitation.

After his retirement from office in 1792, Lord Thurlow ceased to take any leading part in politics, and having little personal influence with any party, became insignificant as a public character. He occasionally spoke in the House of Lords on the subjects of interest which were discussed at the period of the French revolution; and it is worthy of remark that he frequently opposed the measures adopted by the Tory government at that time for the suppression of popular disturbances. Instances of this occur with respect to the Treasonable Practices Bill and the Seditious Meetings Bill, in 1795; and a comparison of the sentiments expressed by him on these occasions, with his speeches respecting America during Lord North's administration, affords a striking example of political inconsistency. A circumstance is recorded in the 'Memoirs of Sir Samuel Romilly' (vol. ii. p. 124), which proves that within a few months of his death Lord Thurlow was still confidentially consulted by members of the royal family. On occasion of the first communication of the charges made by Lady Douglas against the princess of Wales in 1805, the prince (afterwards George IV.) directed that Thurlow should be consulted, and the particulars of the interview between him and Sir Samuel Romilly are characteristic and interesting. Lord Thurlow died at Brighton on the 12th of September 1806, after an illness of two years.

THURMER, JOSEPH, a German architect of some note, was born at Münich, November 3, 1789, but did not begin to apply himself to architecture professionally until 1817, when he became a pupil of Professor Fischer's, and had for his fellow-students Gaertner, Zieblland, Ohlmuller [Gaertner; Ohlmuller], and many others who have since rendered themselves more or less distinguished. At the end of the following year (after a previous visit to Rome at the commencement of 1818) he joined Hübsch, Hesse (died 1834), and Koch, in a professional excursion to Greece, where he spent five months in studying and drawing the remains of buildings at Athens, some few of which he published on his return, with the title of 'Ansichten von Athen und seine Denkmaler,' 1823-26. He did not however confine himself to the study of the Grecian style, nor was he such a prejudiced admirer of it as to have no relish for any other; on the contrary, he considered the Italian style of the time of Leo X. to be equally worthy of the architect's attention, and to deserve to be far better, more faithfully and tastefully, represented by means of engravings than it had previously been. He accordingly joined with Gutensohn in bringing out a 'Sammlung von Denkmaler,' &c., 'Collection of Architectural Studies, and Decorations from Buildings at Rome, of the fifteenth and sixteenth centuries,' the first number of which appeared in 1829; but, unfortunately, it did not meet with the encouragement it deserved, and was therefore given up, when very little progress had been made with it. The publication however was advantageous to Thurmer, since it recommended him to notice, and led to his receiving (in 1827) at the same time two offers of employment, from Frankfurt, the other from Dresden, to which last he gave the preference. He was there made professor-extraordinary at the school of architecture, and in 1832 was promoted to be first professor of architecture, in which capacity he did much for the advancement of the art and the improvement of taste. He has left very little executed by himself in that city, the only public building in it entirely by him being the post-office (for though the 'Hauptwache,' or guard-house, was erected by him, it was after Schinkel's designs), his opinions had a very beneficial influence. That he should have had so few opportunities for displaying his ability, is not very surprising, nor does it detract from his reputation, since he did not long survive the completion of his first edifice: he died November 13th, 1833, while staying at Münich. What he might have done, had a longer life been granted him, is shown by the number of designs he left, more or less stamped by originality and artistical feeling. That the grateful regard expressed for his memory and his talents by his friends and pupils was not a mere temporary effusion, is proved by their having erected a bronze bust and monument to him, in 1838, at the Academy of Arts.

THURNEYSSER ZUM THURN, LEONARD, a celebrated alchemist and astrologer, was born in 1531 at Basle, where his father carried on the trade of a goldsmith. He was himself brought up to this employment, but he was obliged to leave his native place when eighteen years of age, on account of having sold to a Jew a piece of gilt lead for pure gold. He first went to England, thence to France, and afterwards to Germany, where he enlisted among the troops of the margrave of Brandenburg. The following year he was taken prisoner; from that time he gave up a military life, and having visited the mines and foundries of Germany and the north of Europe, he came back in 1551 to Nürnberg, Strasburg, and Kostnitz. Here he again carried on the trade of a goldsmith, and made much money by it, till on account of his reputation for skill in the art of alchemy he was sent for to the Tyrol to superintend different mineral works. Accordingly in 1558 he went to Tarenz in Upper Inntlal, and established on his own account in that place, as well as at St. Leonard, foundries for the purifying of sulphur, the success of which contributed still more to his celebrity. The Archduke Ferdinand had so much confidence in him that he sent him to travel in Scotland, the Orkney Islands, Spain, and Portugal. Thurneysser also visited the coasts of Barbary, Ethiopia, Egypt, Arabia, Syria, and Palestine, and returned to the Tyrol in 1567. Two years afterwards, at the request of the same prince, he again visited the mines of Hungary and Bohemia. The publication of his works made him determine to go to Münster and Frankfort on the Oder, at which latter place he became acquainted with the elector of Brandenburg, whose wife he cured of a dangerous illness, and who resolved to attach him to his service in the hope that he might discover in his estates some unknown mineral treasures. Thurneysser accepted the office of physician to the prince, and accompanied him to Berlin, where, from his skill in profiting by the prejudices and weaknesses of his contemporaries, and from being acquainted with all the resources of charlatanism, he soon succeeded not only in acquiring considerable wealth, but also in passing himself off for one of the most learned and scientific men of his age. At length however, by the envy of others, and still more by his own imprudence, his deceptions were discovered, and he was, in 1584, obliged to leave Berlin. He went to Prague, Cologne, and Rome; and after having thus led a

Digitized by Google

wandering life for some years, he died at last in a convent at Cologne, at the age of sixty-six, in 1596. He was an advocate for the pretended sciences of alchemy and uromancy, and his whole history (like that of most similar characters) is a proof of the influence that may be acquired in an ignorant age by a bold and enterprising man, when he possesses some little information above the generality of his contemporaries. His writings were numerous, but of little worth, and they are now very seldom looked into. The titles of twelve of them are given in the 'Biographie Médicale,' from which work the preceding account is taken.

TIARI'NI, ALESSANDRO, one of the most celebrated painters of the Bolognese schooi, was born at Bologna in 1577. He first studied under Prospero Fontana, and, after Fontana's death in 1597, under Bartolomeo Cesi; but having in a quarrel disobeyed his master, he threw his weapon at a fellow scholar, without however doing him any injury, he was obliged to fly from Bologna. He went to Florence, and there engaged himself with a portrait-painter, for whom he painted hands and draperies, and some of his performances having attracted the notice of Domenico da Passignano, he was admitted by that painter into his studio as a scholar. Tiarini remained with Passignano seven years, and by that time acquired so great a reputation, that he received invitations from Bologna to return to that city. In Bologna his works excited universal admiration for their invention and earnestness of character, and for their boldness of foreshortening, correctness of design, and propriety of colouring: the tone of Tiarini's pictures is sombre; he used little red, and avoided gay colours generally. His works, which are very numerous, consist chiefly in oil-paintings: he executed comparatively little in fresco: these are principally in Bologna and its vicinity, and in Mantua, Modena, Reggio, Parma, Cremona, and Pavia, amounting to upwards of two hundred: their subjects are generally of a melancholy or serious nature. The following are the most celebrated:—A Miracle of St. Dominic, in the Capella del Rosario, in the church of San Domenico at Bologna, painted in competition with Liocello Spada, in which the saint restores a dead child to life; the exhumation of a dead monk, in the convent of San Michele in Bosco; and St. Peter repenting his Denial of Christ, standing outside the door of the high priest, with the Mocking of Christ in the background, illuminated by torchlight.

Ludovico Caracci, whose style Tiarini ultimately adopted, was a great admirer of his works: when he first saw Tiarini's picture of the Miracle of San Domenico, he is reported to have exclaimed that he knew no living master that could be compared with Tiarini. Many of Tiarini's pictures, ont of Bologna, have been attributed to one or other of the Caracci: such was the case with the celebrated Deposition from the Cross, now in the Gallery of the Academy of Bologna, formerly in the church of the college of Montalto: it is engraved in the work of Rosaspini, 'La Pinacoteca della Pontificia Accademia delle Belle Arti in Bologna.'

Several of Tiarini's pictnres have lost their colour, owing to his practice of glazing; in some the colouring consists entirely of glazed tints, the design being executed in grey. He opened a little academy in Bologna, and had many scholars. Malvasia has preserved the name of a famous model that he used frequently to engage, Valstrago. Tiarini died at Bologna, February 8, 1668, aged ninety-one.

(Tiraboschi.) (TRAILDEI.)

TIBALDI, PELLEGRI'NO, otherwise called Pellegrino Pellegrini, or sometimes Pellegrino da Bologna, distinguished himself both in painting and in architecture. He was born in 1527, at Bologna, where his father, who originally came from Valsolda in the Milanese territory, was only a common mason. How, or circumstanced, the father was able to bring up his son to a profession requiring means beyond those of his own condition in life, does not appear; neither is it known from whom Tibaldi received his first instruction in painting. In 1547 he visited Rome, with the intention, it is said, of studying under Pierino del Vaga, but as the latter died in that same year, he could hardly have received any lessons from him. Whether he became a pupil of Michael Agnolo is unknown: he certainly studied his works very successfully, for while he caught from them grandeur of style and energy of forms, he so attempered their severity by the freedom and grace of his pencil, that he afterwards acquired from the Caracci the name of 'Michelagnolo Riformato,' and may be considered as the oriciuator of that style which they perfected. We must however conclude that although he was employed there in the church of S. Lodovico di Francesi, he did not display any great ability with his pencil during his residence at Rome, it being related of him that he felt so discouraged as to have determined to starve himself to death, from which desperate resolution he was withheld only by Ottaviano Mascherino, who advised him to give up painting and devote himself entirely to architecture, for which he had shown considerable taste. In all probability this anecdote has been strangely exaggerated, nor are we informed how he set about putting Mascherino's advice into practice. That he partly adopted it, is certain, and equally certain that if he renounced painting for a while, he returned to it: in fact, not very long after the circumstance just spoken of, he was sent to Bologna by Cardinal Poggio to adorn his palace (afterwards occupied by the Academia Clementina), where he painted the history of Ulysses. For the same prelate he also painted the Poggi Chapel, which had been erected after Tibaldi's own designs, and it was those productions which excited the admiration of the Caracci. He was next employed at Loretto and Ancona, where he executed several works in fresco, and among them those with which he adorned the Sala de' Mercanti, or Exchange, in the last-mentioned city.

His reputation as an architect in the meanwhile increased, and after being employed to design, if not to execute, several buildings at Bologna, and the Palazzo della Sapienza, or Collegio Borromeo, at Pavia (which last was begun by Cardinal Carlo Borromeo in 1564), he restored the Archiepiscopal Palace at Milan, and was appointed chief architect of the Duomo, or cathedral, in that city (1570). He suggested the idea or first design of the modern façade attached to that celebrated Gothic structure,—a design which has obtained him both praise and censure in almost equal degree. Among other buildings erected by him at Milan are the church of San Lorenzo, that of S. Fedele, and that of the Jesuits. But the work which, if less celebrated than some of his others, is considered by one of his critics his chef d'œuvre, and a masterpiece for the contrivance and ability shown in it, is the Casa Professa, or that of the Jesuits at Genoa, with its church, &c., where he completely mastered all the difficulties arising from the inconvenience of the site. Neither his fame nor his works were confined to Italy, for the former caused him to be invited to Spain in 1586, by Philip II., where he was employed both in his capacity of architect and in that of painter, in which last he executed many admirable frescoes in the Escurial. Liberally rewarded by Philip, who also conferred on him the title of Marquis of Valsolda (his birthplace), Tibaldi returned to Italy after passing about nine years in Spain, and died at Milan in 1598; such at least is the date assigned by Tiraboschi, though some make it much earlier, 1590 or 1591, and others about as much later, viz. 1606.

(Tiraboschi; Lazoi; Milizia; Zanotti; Naglar.)

TIBALDI, DOMENICO, younger brother, not son of the preceding, as he is sometimes called, was born in 1541, and, if not equally celebrated, like him both a painter and architect, but ranks far higher in the latter than in the other character. He executed many buildings at Bologna, the principal among which are the Palazzo Magnani, the Degana, or custom-house, the chapel in the cathedral, so greatly admired by Clement VIII. as being more splendid than anything of the kind at Rome, and the small church of the Madonna del Borgo. Domenico also practised engraving with success, and in that branch of art was the instructor of Agostino Caracci. He died at Bologna in 1583.

TIBE'RIUS CLAUDIUS NERO was born in Rome, on the 16th November, B.C. 42, according to Suetonius. He belonged to the gens Claudia, an old patrician family of great distinction, which was known for its aristocratical pride. Tiberius belonged to this house by the side of his father, Tiberius Claudius Nero, as well as his mother, Livia Drusilla, who was the wife of his father, and the daughter of Appius Pulcher. This Appius Pulcher was a brother of Tiberius Claudius Nero the elder, and they were both sons of Appius Cæcus. His father was quæstor to C. Julius Cæsar, and distinguished himself as commander of the fleet in the Alexandrian war. He became successively pretor and pontifex, and in the civil troubles during the triumvirate he followed the party of M. Antonius. Being compelled by Octavianus to fly from Rome, he escaped by sea, and hastened to M. Antonius, who was then in Greece. His wife and his infant son accompanied him in his flight, and they happily escaped. Tiberius the elder soon made his peace with Octavianus; he gave up to him his wife, Livia Drusilla, who was then pregoant with Nero Claudius Drusus, and he died shortly afterwards (B.C. 38). Thus Tiberius the younger and his brother Nero Claudius Drusus became stepsons of Octavianus, who from the year B.C. 27 was Augustus.

The great talents of Tiberius were developed at a very early age. In his ninth year he delivered a public speech in honour of his father: in B.C. 29 he accompanied Octavianus in his triumph after the battle of Actium, and rode on his left side, Marcellus being on his right. After having assumed the toga virilis, he distinguished himself by splendid entertainments which he gave to the people. He married Vipsania Agrippina, the daughter of Agrippa, and the granddaughter of Cicero's friend T. Pomponius Atticus. She brought him a son, Drusus, and she was again with child when Tiberius was obliged to sacrifice her to the policy of Augustus, who compelled him to marry his daughter Julia, the widow of Marcellus and of Agrippa, and the mother of Caius and Lucius Cæsar, (B.C. 12.) Tiberius obeyed reluctantly, but he never ceased to love Vipsania. Such was his affection for her, that whenever he saw his repudiated wife he would follow her with tears; and accordingly an order was given that Agrippina should never appear in sight of Tiberius. For some time Tiberius lived in harmony with Julia, and had a son by her, who died young. But the scandalous conduct of Julia soon disgusted him, and he withdrew from all intimate intercourse with her.

During this time Tiberius took an active part in public affairs. He defended the interests of King Archelaus (of Judæa, or of Cappadocia), of the Trallians, and of the Thessalians; he was active in obtaining relief for the inhabitants of Laodicea, of Thyatira, and of Chios, who, having suffered from an earthquake, had implored the assistance of the senate: he pleaded against Fannius Caepio, who had conspired against Augustus, and who was condemned for high treason; and he was twice intrusted with the 'cura annonæ.' Tiberius made his first campaign as Tribunus militum in the Cantabrian war. From Spain

Digitized by Google

he went to Asia Minor, and succeeded in restoring Tigranes to the throne of Armenia, and in forcing the Parthians to surrender the eagles which they had taken from M. Crassus. He returned to Rome in B.C. 18. During a year he had the command in Gallia Comata, the peace of which province was troubled by disputes between the princes and by incursions of the barbarians.

In B.C. 15 he and his brother Drusus brought the Alpine nations of Rhætia to obedience. He also put an end to the war in Pannonia, which had lasted since B.C. 18, and which he terminated by subduing the Breuci, the Scordisci, and the Dalmatæ, who were allied with the Pannonians. (B.C. 14.) The German having defeated M. Lollius and taken the eagle of the fifth legion in B.C. 16. (Velleius Paterculus, ii. 97), Drusus was sent to the Rhine, and Tiberius returned to Rome, where he celebrated his first triumph. In the Rhætian war Tiberius had shown great military skill, but he subjugated peaceable peasants, and by negociation he obtained more influence over them than his brother Drusus by all his victories. (Velleius Paterculus, ii. 97; Tacitus, 'Annal.' ii. 26.) He left the command in Germany in B.C. 7, and returned to Rome, where he celebrated his second triumph, and he was consul for the second time in the same year.

Tiberius was now at the height of his fame; he was respected by the army, and admired by the people; and he enjoyed the confidence of the emperor. He nevertheless suddenly abandoned his important functions, left Rome, and, without communicating his motives to anybody, retired to the island of Rhodes. So firm was his resolution to retire from public affairs, that he refused to take any nourishment for four days, in order to show his mother that her prayers and tears could not keep him any longer in Rome. (Suetonius, 'Tiberius,' c. 10.) During eight years he led a private life at Rhodes, renouncing all honours, and living in the Greek style, and on terms of equality with those around him, with whom he kept up a friendly intercourse, especially Greek philosophers and poets. The Romans were surprised to see the step-son of their emperor retire to a distant island; and various hypotheses were raised to explain the motive of his voluntary exile. The disgusting conduct of his wife Julia was supposed to be a sufficient cause for this extraordinary resolution; but Tiberius himself afterwards avowed that he had renounced public business in order to escape all charges of having ambitious schemes against the sons of his step-sons Caius and Lucius Cæsar, who were created 'principes juventutis,' and appointed successors of Augustus in the very year in which Tiberius went to Rhodes. It seems that he was dissatisfied with the elevation of these two young men, and that there was discord between him and them; for when he afterwards wished to go back to Rome, Augustus would not allow it until Caius Cæsar had consented, and it was also on condition that he should take no part in the government of the state. From all this we may conclude that Tiberius and his mother Livia had perhaps been intriguing to exclude Caius and Lucius Cæsar from the succession, and that he preferred a voluntary exile to a compulsory banishment, such as was inflicted by Augustus upon his own daughter Julia. But this is mere supposition, and there are no facts on which a direct accusation against Tiberius can be sustained. With regard to his banished wife Julia, Tiberius acted with great delicacy, notwithstanding her conduct, and he besought Augustus to leave her all those presents which he had formerly given her. (Suetonius, 'Tiberius,' c. 12, 13.) At last Tiberius returned to Rome (A.D. 2), and was received by the people with demonstrations of great joy. In the same year Lucius Cæsar died at Massilia (Marseille), and his death was followed by that of his brother, who died in A.D. 4, in consequence of a wound which he had received in the Parthian war. Augustus then adopted Tiberius as his future successor, in A.D. 4, and Tiberius in his turn was compelled by Augustus to adopt Drusus Germanicus, the son of his late brother Drusus Nero. Augustus also adopted M. Agrippa, the posthumous son of Agrippa and Julia, but he did not designate him as a successor in the empire. The imperial throne was thus secured to the house of the Claudii. In the same year (A.D. 4) Tiberius was appointed commander-in-chief in Germany, and he was accompanied by the historian Velleius Paterculus, who was prefectus equitum. After having subdued the Bructeri, and renewed the alliance with the Chatti, Tiberius in A.D. 5 made a campaign against the Longobards, who were defeated; and he obliged the whole north-west of Germany to acknowledge the Roman authority. In the following year (A.D. 6) he led 70,000 foot and 4000 horse against Maroboduus, the king of the Marcomanni, who was saved from ruin by a rising of the inhabitants of Pannonia and northern Illyricum, who intercepted the communications of the Roman army with Italy. Tiberius employed fifteen legions and an equal number of auxiliaries, against these nations, and, in spite of difficulties of every description, he quelled the outbreak within three years. This war was especially dangerous because the Germani threatened to join the Pannonians, but Tiberius prevented their junction by negociations and by the success of his arms. After having celebrated his third triumph, he was again sent against the Germani, who had slain Varus and his army (A.D. 9). Tiberius, who was accompanied by Germanicus, succeeded in preventing the Germani from invading the countries on the left bank of the Rhine, and he then celebrated his fourth triumph. Velleius Paterculus, an able judge of military talents, gives us a most favourable idea of him as a general. Suetonius says also that, sharing in all the hardships of the common soldiers, he maintained a severe discipline, but at the same time he carefully watched over the security and the comfort of the soldiers.

Augustus died at Nola on his return from Naples, where he had accompanied Tiberius, who was going to conduct the war in Illyria (29th of August, A.D. 14). Anxious to see her son at that critical moment in Rome, Livia concealed the emperor's death until Tiberius, who was informed of it by messengers, had arrived at Nola. (Dio. Cassius, vi. 20, 31.)

Tiberius became emperor in his fifty-fifth year, at an age when both the virtues and the vices have acquired strength from habit, and when a man's character seldom changes. Until that time he was generally supposed to be a virtuous man; his virtues were imbued with the severe gravity of his character. Among his biographers none has blamed his early life; yet no sooner was he emperor, than he was charged with crimes the most dreadful and disgusting. His former life is represented as dissimulation and hypocrisy. An example of such dissimulation is known in history. Sixtus V. concealed his real intentions for thirty years; however it was not his real character which he thus concealed; but by retiring from affairs, and by simulating decrepitude and infirmity, he made the cardinals believe that by choosing him pope they would make him their instrument, because his infirmities would not allow him to act with energy. Tiberius however, except the eight years that he spent in Rhodes, was constantly employed in matters which, although they would have allowed him to conceal his real disposition, he could never have managed with such success, unless his conduct had been directed by the force of his real character.

Augustus succeeded in making himself master of the republic by concentrating in his person the different high functions of the state. Tiberius, proud and energetic, abolished even the shadow of the sovereignty of a nation which he despised. The Romans being sufficiently disposed to obedience, the only obstacles in his way were the institutions of the ancient republic. Immediately upon the accession of Tiberius, Agrippa Postumus was put to death, probably by order of Tiberius (Suetonius, 'Tiberius,' c. 22; Tacitus, 'Annal.,' i. 6.) About this time the supreme power was offered by the troops on the Lower Rhine to Germanicus, who however refused it; and the mutiny was then quelled by him and by Drusus, the son of Tiberius, who commanded in Pannonia. Tiberius began by some enactments which tended to ameliorate the state of morals; he abolished the comitia for the election of the various officers of the state, and transferred the election to the senate, the members of which were subservient to him. It has been already said that Tiberius intended to destroy the last remnants of the ancient sovereignty of the people, and to supplant the majesty of the Roman nation by the majesty of the emperor. Augustus had already employed the Lex Julia Majestatis to punish the authors of libels against his person (Tacitus, 'Annal.,' i. 72); and his example was followed by Tiberius, who established the Judicia Majestatis, by which all those who were suspected of having impugned the majesty of the emperor either by deeds or words, were prosecuted with the utmost severity. The number of the delatores, or denouncers of such crimes, daily increased, and a secret police was gradually established in Rome, as well organised and as well supported by spies as the secret police of Napoleon. The property, honour, and life of the citizens were exposed to the most unfounded calumnies, and a system of terror and anxiety and mutual disease prevailed throughout the empire. The natural severity of Tiberius gradually degenerated into cruelty, and he showed symptoms of that misanthropy and that gloomy state of mind which increased with years. In the meantime Germanicus, the favourite of the army, had avenged the defeat of Varus, but Tiberius recalled him from Germany, and sent him into the East (A.D. 17). Germanicus conquered Cilicia and Commageue, and he renewed the alliance with the Parthians, but he died suddenly at Antioch (A.D. 19.) Public opinion accused Cneius Piso, the commander in Syria, of having poisoned Germanicus by order of the emperor; but before Piso could be sent to trial, he was found dead.

Sejanus, the son of a Præfectus Prætorio, succeeded in obtaining the confidence of the emperor (A.D. 19-22), who henceforth gradually abandoned to him the direction of public affairs, of which Sejanus became the absolute master from the year A.D. 22. [Sejanus,

Digitized by Google

LUCIUS ÆLIUS DRUSUS, the son of Tiberius, who had governed the Roman part of Germany with great ability, was poisoned by Sejanus (A.D. 23), and this crime was followed by a great many others, with which it is possible that the emperor was very imperfectly acquainted. His practice was to shut himself up within his palace, and to spend his time in the most revolting debauchery. After the death of Drusus, Tiberius recommended to the senate as his successors Nero and Drusus, the sons of the unfortunate Germanicus and of Agrippina, who was still alive. In A.D. 26 Sejanus at last persuaded him to retire from public affairs. Tiberius followed his advice, and went to Capua and Nola, until at last he fixed his residence on the island of Capreæ in the Gulf of Naples. The life which he led at Capreæ was a series of infamous pleasures.

From this time all public affairs were directed by Sejanus: the emperor was inaccessible. T. Sabinus, a friend of Nero, was put to death; statues were erected to Sejanus, and received divine honours. After the death of Livia, in A.D. 29, the authority of Sejanus was at its height; but at last Antonio, the aged mother of Germanicus, penetrated through the barriers of Capreæ, and informed the aged Tiberius that Sejanus had left him only the name of emperor. She was supported by Macro, the commander of the Prætorian guard. In consequence of this information, Tiberius ordered the senate to condemn Sejanus; and the senate obeyed: Sejanus, his family, and his friends, were put to death in A.D. 31. Some time after this event, Tiberius retired from Capreæ, and took up his residence at a villa near Misenum, which had formerly belonged to Lucullus. (Suetonius, 'Tiberius,' c. 73.) On the 16th of March, A.D. 37, he fell into a lethargy, and everybody believing him to be dead, Caligula, the third son of Germanicus, the favourite of old Tiberius, was proclaimed emperor. However, Tiberius recovered, and Macro, in order to save himself and the new emperor, ordered him to be suffocated in his bed. Thus died Tiberius, at the age of seventy-eight, after a reign of twenty-three years. (Tacitus, 'Annal,' vi. 50; Suetonius, 'Tiberius,' c. 73.)

There is little doubt that the crimes said to have been committed during the reign of Tiberius, either by himself or by others in his name, are real facts. But the question is whether they are all to be imputed as crimes to Tiberius. His insanity is a fact which can hardly be doubted; a dark melancholy, disgust of life, and misanthropy, had taken possession of him, and his strange acts are those of self-destruction often threw him into wild despair. He found consolation in the sufferings of others, and thus gave those bloody orders which he afterwards regretted. The unnatural pleasures to which he was addicted were only another mode of soothing the despair of his soul. It is probable that his insanity was not extreme when he retired to Capreæ. Sometimes he had lucid intervals, in which he wrote those letters of which Suetonius gives some extracts ('Tiberius,' c. 67), and in which he confesses the wretched state of his soul. His physical health was robust, until some years before his death. Tiberius loved the arts and literature. According to Suetonius, he wrote a lyric poem, 'Conquestio de L. Cæsaris Morte;' he also wrote poems in Greek, choosing for his models Euphorion, Rhianus, and Parthenius, the author of an erotic poem which has come down to us.

(Suetonius, *Tiberius;* Velleius Paterculus, ii., c. 94, &c.; Tacitus, *Annal.*, lib. i.-vi.; Dion Cassius, lib. xlvi.-xlviii.; Horn, *Tiberius, ein Historisches Gemälde.* The character of Tiberius has been defended by Buchholz, *Philosophische Untersuchungen*, vol. ii., p. 66, &c.)

TIBERIUS II, ANI'CIUS THRAX, FLA'VIUS CONSTANTI'NUS, one of the greatest and most virtuous emperors of the east. He was born in Thrace towards the middle of the 6th century, and belonged to a rich and very distinguished family, the history of which is unknown to us. He was educated at the court of Justinian, whose successor, Justin II. (565-78), loved him as his son, and employed him in various civil and military offices. In 573 Tiberius, who was then general of the imperial guards, commanded the army against the Avars, who were powerful north of the Save and the Danube. His lieutenant having neglected to watch the passages of the Danube, Tiberius was surprised by the Avars and lost a battle. However, he recovered this loss, and concluded a peace, by which the possession of the important fortress of Sirmium, now Mitrowicz, on the Save, near its junction with the Danube, was ceded to the Romans. This was one of the few advantages obtained by the Greek armies during the unfortunate reign of Justin II. Italy, which had been conquered by Justinian, was overrun by the Longobards; the Berbers ravaged the kingdom of Carthage, which had been taken from the Vandals; and on the Persian frontier Chosroes (Khosrow) made various conquests. Justin, feeling his incompetency, and having lost his son, looked for a regent, and his choice fell upon Tiberius. The great talents of Tiberius, his amiable character, his generosity and love of justice, and his sincere piety, had won him the hearts of the nation, and the esteem of the emperor and his ministers. Justin was confirmed in his choice by the empress Sophia, whose private views on this occasion harmonised with the interest of the state. Tiberius was the handsomest man at the court, and it seems that Sophia intended to marry him on the death of Justin. However this may be, before she declared in his favour she asked him whether he was married. Tiberius immediately guessed the motive of the question, and answered that he was not, although he was secretly married to a lady named Anastasia. He thus gained the protection of the empress, and was proclaimed Cæsar by Justin on the 7th of December 574, in a most solemn assembly of the civil and military officers, and of the clergy under the presidency of the patriarch Eutychius, by whom Tiberius was crowned with the imperial diadem. In this assembly the emperor Justin addressed to his future successor the remarkable speech (Theophylactus, iii. 11), which Gibbon translates thus:—"You behold the ensigns of supreme power. You are about to receive them, not from my hand, but from the hand of God. Honour them, and from them you will derive honour. Respect the empress your mother—you are now her son—before, you were her servant. Delight not in blood, abstain from revenge, avoid those actions by which I have incurred the public hatred, and consult the experience rather than the example of your predecessor. As a man, I have sinned; as a sinner, even in this life I have been severely punished: but these servants (his ministers), who have abused my confidence and inflamed my passion, will appear with me before the tribunal of Christ. I have been dazzled by the splendour of the diadem: be thou wise and modest; remember what you have been, remember what you are." To this speech of a dying sinner, Tiberius answered, "If you consent, I live; if you command, I die: may the God of heaven and earth infuse into your heart what ever I have neglected or forgotten."

The burden of government devolved upon Tiberius, whose authority was never checked by Justin. The war with Persia prevented Tiberius from expelling the Longobards from Italy; but he sent there all the troops he could dispose of, and succeeded in maintaining the imperial authority in the exarchate of Ravenna, on the Ligurian coast, in the fortified places in the Cottian Alps, in Rome, in Naples, and in the greater part of Campania and of Lucania. He saved Rome and Pope Pelagius II. from the Longobards by sending a fleet laden with provisions (775). Some years later he concluded an alliance with the Frankish king Chilperic, who checked the Longobards in the north of Italy, and Tiberius succeeded in bribing several of the thirty Longobardian dukes, who, after the murder of King Cleph (573-74) and during the minority of Authari, imitated in Italy the Thirty Tyrants of Athens. The daughter of King Alboin and Rosamond, who had fled from Italy, was then living at the court of Constantinople.

The most important event in the reign of Justin and Tiberius was the war with Persia. Khosrow, the king of Persia, had made extensive conquests in Asia Minor during the reign of Justin. In 575 Tiberius concluded a partial truce for three years with him, on condition that hostilities should cease except on the frontiers of Armenia, where the war was still carried on. These frontiers being nearly defended on account of the great number of defiles in the Armenian Mountains, Tiberius levied a strong army while Khosrow lost time in forcing passages or in besieging small fortified places. For several centuries the Eastern empire had not seen such an army as was then raised by Tiberius. A body of near fifty thousand men, among whom were many Teutonic and Slavonic barbarians, crossed the Bosporus in 576, under the command of Justinian, and advanced to the relief of Theodosiopolis, the key of Armenia. Theodore, the Byzantine general, defended the fortress against the whole army of Khosrow. At the approach of Justinian the Persian king left the siege and advanced to meet the Greeks. The encounter took place near Melitene (in the district of Melitene in Armenia Minor). The Persians were routed, and many of them were drowned in their retreat across the Euphrates; twenty-four standards, along with the treasures of Khosrow and the spoil of his camp, were sent to Constantinople. Justinian then advanced as far as the Persian Gulf, and a peace was about to be concluded in 577; but Khosrow broke off the negociations on account of a victory which his general Tamchosroes (Tam-khosrew) had unexpectedly obtained over Justinian by surprising him in Armenia. Tiberius now recalled Justinian, and appointed in his place Mauritius, who was afterwards emperor. Mauritius restored the old Roman precaution of never passing the night except in a fortified camp; he advanced to meet the Persians, who had broken the truce of 575, and attacked the empire on the side of Mesopotamia (577). The Persians retired at the approach of Mauritius, who took up his winter quarters in Mesopotamia (577-78).

On the 26th of September 578 Tiberius became sole emperor by the solemn abdication of Justin, who died on the 5th of October next. After the funeral of Justin, when the new emperor appeared in the Hippodrome, the people became impatient to see the empress. The widow of Justin, who was in the Hippodrome, expected to be presented to the people as empress; but she was soon undeceived by the sight of Anastasia, who suddenly appeared at the side of Tiberius. In revenge, Sophia formed a plot against Tiberius, and persuaded Justinian, the former commander in the Persian war, to put himself at the head of the conspiracy. Tiberius however was informed of this design. Justinian was arrested, and the emperor, by pardoning him, made him for ever his faithful friend. Sophia was deprived of her imperial pension and palaces, and she died in neglect and obscurity.

A quarrel broke out between Eutychius, the patriarch, and Gregorius, the apocrisiarius of Constantinople, who could not agree on the state of the soul after death. The Greeks were then the most disputatious people in the world about religious matters, and their disputes often led to serious trouble. The emperor accordingly undertook to

Digitized by Google

settle this dispute. Adhering to the opinion of Gregorius, he convinced the patriarch that he was wrong, and he persuaded him to burn a book which he had written on the corporeal nature of the soul after death.

Khosrew died in 579, after a reign of forty-eight years. He had entered into negociations with the Greeks, but his successor, Hormisdas (Ormuz) broke them off and recommenced the war. Hormisdas was defeated by Mauritius and his lieutenant, Narses, a great captain, who must not be confounded with Narses, the victor of the Ostro-Goths. They overran Persia in one campaign in 579, and in 580 they routed the army of Hormisdas in a bloody battle on the banks of the Euphrates, and took up their winter-quarters in Mesopotamia. At the same time the Greeks obtained great advantages in Africa. Gamuli, king of the Maurusii, or Berbers, had defeated and killed three Greek generals—Theodore, Theocristes, and Amahilis; but in 580 he was defeated by the exarch Gennadius, and put to death. Tiberius was less fortunate in Europe, the Avars having surprised and taken the town of Sirmium. But in the following year (581) Mauritius destroyed the Persian army in the plain of Constantina, and their general, Tam-Khosrew, lost his life. Mauritius had a triumph in Constantinople, and on the 5th of August he was created Cæsar by Tiberius, who was then worn out by illness, and who had no male issue. After having given his daughter Constantina in marriage to Mauritius, Tiberius died on the 14th of August 582, and since the time of the great Theodosius no emperor's death caused regret so universal. It is a remarkable circumstance in the reign of this emperor, that he was always provided with money without oppressing the people by taxation; and yet he invariably was so great that his people used to say that he had an inexhaustible treasure. But all these resources did not enable him to save Italy, which may be accounted for thus:—During the invasions of Italy and other parts of the Roman empire by the barbarians, many rich men saved great quantities of gold and silver, which they carried to Constantinople, then the only safe place in Europe. This city being the centre of the arts, and the commerce and industry of the East being very extensive, even the money which fell into the hands of the barbarians gradually found its way into the Greek empire, where the barbarians purchased all those articles which they had not still enough to fabricate themselves. This view is corroborated by the fact, that notwithstanding the immense tribute which the Greek emperors often paid to the barbarians, there was always a want of coin in the barbarian kingdoms. On the other hand, the Greeks had lost their martial habits, and the emperors were obliged to recruit their armies among the barbarians. These people however were as ready to fight against the emperors as for them; and it would have endangered the existence of the empire if too large a number had not been in its service. Thus Tiberius preferred bribing the Longobardian dukes to raising a large army of barbarians, who would probably have joined the Longobards as soon as they had got their pay.

(Cedrenus; Theophanes; Theophylactus; Zonaras; Gregorius Turonensis; Paulus Diaconus; Gibbon, *Decline and Fall*; Le Beau, *Histoire du Bas Empire*.)

TIBERIUS ALEXANDER, prefect of Egypt, was the son of Tiberius Alexander who was alabarcha of Alexandria, and the brother of Philo Judæus, the well-known writer. Tacitus calls him an Egyptian, but this only means that he was a native of Alexandria; for he was a Jew, though he afterwards adopted paganism. Nero appointed him governor of Judæa, where he succeeded Cuspius Fadus, and he made him a Roman eques. In the last campaign of Corbulo against the Parthians, Tiberius Alexander and Vologæsus, the son-in-law of Corbulo, were given as hostages to King Tiridates, who came to the Roman camp for the purpose of settling his differences with the Romans (A.D. 63). Tiberius Alexander was afterwards appointed prefect of Egypt, in which capacity he quelled a dangerous insurrection of the Jews of Alexandria, who were jealous of the favour which Nero showed the Greek inhabitants of that town. The resistance of the Jews was so obstinate, that Tiberius was obliged to employ two legions and five thousand Libyan soldiers against them; and it is said that more than fifty thousand Jews perished on this occasion. On the 1st of July, A.D. 69, Tiberius Alexander proclaimed Vespasian emperor, pursuant to a scheme which had been concerted by Vespasian, Titus, and Mucianus, the proconsul of Syria. In consequence of this event, the 1st of July 69 is regarded as the beginning of the reign of Vespasian, who showed great regard for his governor of Egypt. When Titus, the successor of Vespasian, was about to undertake the siege of Jerusalem, which resulted in its capture, he was accompanied by Tiberius Alexander.

(Josephus, *Antiq. Jud.* and *De Bello Jud.*; Suetonius, *Vespasianus*; Tacitus, *Annal.*, xv. 28; *Hist.* i. 11; ii. 74, 79; the notes of Ernesti to Suetonius and Tacitus.)

TIBERIUS, an Alexandrine grammarian, who probably lived in the 4th century of our era. Suidas (s. v. *Τιβέριος*), who calls him a philosopher and a sophist, ascribes to him a long list of rhetorical works, all of which are lost, with the exception of one, which formerly used to be called *Περὶ τῶν παρὰ δημοσθένει σχημάτων*, and which is one of the best works of the kind that were produced at the time. The editio princeps of it, which is ascribed to Leo Allatius, appeared at Rome in 1643. The next edition is that of Gale, who incorporated the work of Tiberius in his 'Rhetores Selecti,' 8vo, Oxford, 1676. A reprint of this collection of rhetoricians was edited by J. F. Fischer, 8vo, Leipzig, 1773. In all these editions the work of Tiberius contains only 22 short chapters, which treat on Schemata, that is, those forms of expression which are not the natural forms, but are adopted for ornament or use. In 1815 J. F. Boissonade published at London a new edition, in 8vo, from a Vatican manuscript, in which the work is called *Περὶ σχημάτων ῥητορικῶν*, and in which there are 26 chapters more than had ever before been published; and this second part of the work treats on the so-called 'figures of diction,' or the ornamental forms of elocution. This edition of Boissonade also contains a work of Rufus, entitled *τέχνη ῥητορική*, the author of which has only become known through the Vatican manuscript containing the complete work of Tiberius; in the editions of Gale and Fischer it was called the work of an anonymous writer. A few fragments of other works of Tiberius are preserved in the scholiast on Hermogenes, ii., pp. 385 and 401, edit. Aldus.

(Groddeck, *Initia Historiæ Græcorum Literariæ*, ii. 173; Westermann, *Geschichte der Griech. Beredtsamkeit*, p. 251, &c.)

TIBERIUS ABSIMARUS became emperor of the East, in A.D. 698, under the following circumstances:—Leontius dethroned and banished the tyrant Justinian II., and having assumed the imperial title in 695, continued the war with the Arabs in Africa. Notwithstanding which, the Greeks were assisted by the Berbers, they lost Carthage in 697; they reconquered it shortly afterwards, but in 698 the Arabs retook the town from the Greeks and entirely destroyed it. A powerful fleet, commanded by the patrician John, was then off Carthage, and though although John entered the harbour with a division of his fleet, and landed a body of troops, his measures had only a partial effect, and he was obliged to leave Carthage to her fate. The destruction of this famous town was attributed by the Greek officers to the incompetency of John, and they were afraid to return to Constantinople without having prevented the loss of Carthage. Absimarus, the commander of the Cibyratæ, or the troops of the province of Cibyra, then the collective name of Caria and Lycia, turned the discontent of the soldiers to his own profit. He persuaded his men that the emperor would punish them severely for not having obtained some advantage over the Arabs, and that they ran the risk of suffering for the faults of their commander-in-chief. When the fleet was off Crete, a mutiny broke out. The Cibyratæ proclaimed Absimarus emperor, the rest of the fleet followed their example, and John was made prisoner.

Absimarus having arrived at Constantinople, cast anchor in the bay of Ceras (new the Golden Horn), between this city and the suburb of Syce. Leontius prepared a vigorous resistance; but the courage of his soldiers and of the inhabitants was weakened by an epidemic disease, and at last Absimarus found his way into the town by bribing some sentinels.

Absimarus assumed the name of Tiberius and was acknowledged emperor: his rival Leontius had his nose and his ears cut off, and was confined in a monastery. Tiberius continued the war with the Arabs, and appointed his brother Heraclius commander-in-chief. This experienced general conquered Syria in 699 and 700, and treated the Mohammedan inhabitants most barbarously: it is said that seventy thousand of them lost their lives by sword at the Greeks. This war continued during the years 701, 702, and 703; and, although the Greeks did not recover Carthage, they obtained many signal advantages. Tiberius Absimarus had great influence in Italy, where Popes Sergius and John VI. were continually harassed by John Platys, and afterwards by Theophylact, the Exarch of Ravenna.

Tiberius Absimarus lost his crown by a sudden revolution. When Leontius dethroned Justinian II., this prince had his nose cut off, and was banished to the town of Cherson, in the present Crimea. Some years later he fled to the khaghan, or khan, of the Khazars, who received him respectfully, and assigned for his residence Phanagoria, once an opulent city, on the island of Tamatarcha. The khaghan, whose name was Busirus, gave him in marriage his sister Theodora; but Tiberius Absimarus bribed the khan with a large sum of gold, and Justinian's life was only saved by the affection of Theodora, who revealed to him the treacherous design of her brother. After strangling with his own hands the two emissaries of the khaghan, Justinian rewarded the love of his wife by repudiating her and sending her back to her brother Busirus; and he fled to Tzibelis, or Terbellus, the king of the Bulgarians. He now formed the plan of recovering his throne, and he purchased the aid of Terbelis by promising him his daughter and a part of the imperial treasury. At the head of 15,000 horse, they set out for Constantinople. Tiberius Absimarus was dismayed by the sudden appearance of his rival, whose life had been promised by the khaghan, and of whose escape he was yet ignorant. Justinian had still some adherents in Constantinople, who introduced his troops into the city, by means of an aqueduct. Tiberius escaped from Constantinople, but he was seized at Apollonia on the Pontus Euxinus (705), and Justinian ordered him, his brother Heraclius, and the deposed Leontius, who was still alive, to be dragged into the Hippodrome. Before their execution, the two usurpers were led in chains to the throne, and forced to prostrate themselves before Justinian, who had sworn not to spare one of his enemies. Planting his feet on their necks, the tyrant watched the chariot-race for more than an hour, while the people

Digitized by Google

shouted out the words of the Psalmist, "Thou shalt trample on the asp and basilisk, and on the lion and dragon shalt thou set thy foot." He then gave orders to behead Tiberius, Leontius, and Heraclius. Justinian II. reigned till 711. The Greeks gave him the surname of Rhinotmetus, that is, 'he whose nose is cut off.' Tiberius Abdimarus had two sons, Theodore and Constantine, who probably perished with their father. It is said however that Theodore, who is also called Theodosius, survived his father, and became bishop of Ephesus, and one of the leaders of the Iconoclasts; but this is doubtful.

(Theophanes; Cedrenus; Zonaras; Gibbon, *Decline and Fall*; Le Beau, *Histoire du Bas Empire.*)

TIBULLUS, A'LBIUS, lived in the time of Augustus, and was a friend and contemporary of Horace. He was of equestrian rank, and originally possessed considerable property, of which he lost the greater part (Tibull., i. 1, 19, &c.; iv. 1, 128, &c.), probably, as it is conjectured, in consequence of the assignments of lands among the veterans of Augustus; and this supposition is rendered still more probable by the circumstance that Tibullus never celebrates the praises of Augustus, like the other poets of his time. He was not however reduced to absolute poverty; the estate on which he resided at Pedum (Horace, 'Ep.,' i. 4), a town between Praeneste and Tibur, appears to have been his own, and to have descended to him from his ancestors. (Tibull., i. 10, 15, &c.) Here he passed the greater part of his time in the enjoyment of a quiet country-life, which had for him the greatest charms. He left it however to accompany his patron, Valerius Messalla, into Aquitania, and was present with him through the campaign, either in B.C. 28 or 27. (Tibull., i. 7, 9.) He afterwards set out with him to Asia, but was taken ill at Corcyra; but that he died at Corcyra, as is stated by some modern writers, is only a conjecture, unsupported by any ancient authority, and is directly contradicted by what Ovid says. It appears from an epigram of Domitius Marsus (in Tibull., iv. 1 6), who lived in the age of Augustus, that Tibullus died soon after Virgil; and as Virgil died in B.C. 19, we may perhaps place the death of Tibullus in the following year, B.C. 18. It has been already mentioned that Tibullus was the friend of Horace; two poems have come down to us addressed to him by the latter ('Carm.,' i. 33; 'Epist.,' i. 4). Ovid too laments his death in a beautiful elegy, from which it appears that his mother and sister were present at his death ('Amor.,' iii. 9).

It is difficult to determine at what time Tibullus was born; and we can but at best make some approximation to it. In the epigram of Domitius Marsus, already referred to, he is called juvenis, and Ovid deplores his untimely death. We must not however be misled by the expression juvenis into supposing that he was quite a young man, in our sense of the word, at the time of his death, since the ancients extended the meaning of juvenis to a time which we consider to be that of mature manhood. Several circumstances tend to show that he could not be much less than forty at his death. Ovid speaks of Tibullus as preceding Propertius, and of Propertius as preceding himself; and as Ovid was born B.C. 43, we must place the birth of Tibullus a few years at least before that time. Again, Horace in the first book of his Odes addressed Tibullus as an intimate friend, which hardly allows us to suppose that Tibullus was a mere youth at the time. If Bentley's supposition is correct, that the first book of the Odes was published about B.C. 30 or 29, Horace was then about 35, and Tibullus may have been a few years younger. Moreover he does not appear to have been a very young man when he accompanied Messalla into Aquitania in B.C. 28 or 27. We may therefore perhaps place his birth at about B.C. 57. There are indeed two lines in Tibullus (iii. 5, 17, 18), which expressly assign his birth to B.C. 54, the same year in which Ovid was born; but these are, without doubt, an interpolation derived from one of Ovid's poems ('Trist.,' iv. 10, 6).

We have thirty-six poems of Tibullus, written, with one exception, in elegiac metre, and divided into four books. The first two books are admitted by all critics to have been written by Tibullus, but of the genuineness of the last two, considerable doubts have been raised. J. H. Voss and others attribute the third book to a poet of the name of Lygdamus, but the style and mode of treating the subjects resemble the other elegies of Tibullus, and there appear sufficient reasons for doubting that it is his composition. There are however stronger grounds for supposing the first poem in the fourth book, written in hexameters, not to be genuine. It differs considerably in style and expression from the other poems, is stuffed by some writers to Sulpicia, who lived under Domitian, by others to a Sulpicia of the age of Augustus; but we know nothing with certainty respecting its author. Of the other poems in this book, almost all bear traces of being the genuine works of Tibullus.

The elegies of Tibullus are chiefly of an amatory kind. In the earlier period of his life Delia seems to have been his favourite, and afterwards Nemesis, and their names occur most frequently in his poems. Several of his elegies are devoted more or less to celebrating the praises of his patron Messalla, but these are the least pleasing parts of his works, for he does not appear to have excelled in panegyric.

Tibullus is placed by Quinctilian at the head of the Roman elegiac poets ('Inst. Orat.,' x. 1). His poems are distinguished by great tenderness of feeling, which sometimes degenerates into effeminacy, but they at the same time excite our warmest sympathies. He seems to have been of a melancholy temperament, and to have looked at things from a gloomy point of view; hence we find the subject of death frequently introduced, and the enjoyment of the present interrupted by dark forebodings of the future. He constantly describes the pleasures of a country-life and the beauties of nature, for which he had the most exquisite relish; and there is in these descriptions a naturalness and truthfulness which place him above his contemporary Propertius. His style too is not of the artificial character which distinguishes the elegies of Propertius; and his subjects are not, like the latter, mere imitations or translations of the Greek poets, but essentially original works.

Tibullus was formerly edited together with Catullus and Propertius, the earlier editions of which are mentioned under Propertius. The most useful separate editions are by Broukhusius (Amst., 4to, 1708), Vulpius (Padua, 4to, 1749), Heyne (Leips. 8vo, 1777, often reprinted, of which the fourth edition, containing the notes of Wunderlich and Dissen, appeared in 1817-19, 2 vols. 8vo, Leipz.), J. H. Voss (Heidelberg, 8vo, 1811), Bach, (Leips., 8vo, 1819), Goldbery (Paris, 8vo, 1826), Lachmann (Berlin, 8vo, 1829), and Dissen (Göttingen, 2 vols. 8vo, 1835), of which the two last contain the best text.

Tibullus has been translated into English by Dart (1720), and Grainger (1759). There are modern German translations by J. H. Voss (Tübingen, 1810), Günther (Leipz., 1825), and Richter (Magdeburg, 1831). There are also French and Italian translations.

Respecting the life of Tibullus and the Roman elegy in general, the reader may consult with advantage Gruppe's 'Die Römische Elegie,' Leipzig, 1838.

TICKELL, THOMAS, an English poet of unblemished mediocrity, was born in 1686, at Bridekirk in Cumberland. He was sent to Queen's College, Oxford, and he took his degree of Master of Arts in 1708. Two years afterwards he was chosen fellow of his college, and as he did not comply with the statutes by taking orders, he obtained a dispensation from the crown for holding his fellowship, till he vacated it by marrying in 1726. His praises of Addison were so acceptable that they procured him the patronage of that writer, who "initiated him," says Johnson, "into public affairs." When the queen was negociating with France, Tickell published 'The Prospect of Peace,' in which he raised his voice to reclaim the nation from the pride of conquest to the pleasures of tranquillity. This, owing perhaps to Addison's friendly praises of it in 'The Spectator,' had a rapid sale, and six editions were in a short time vended. On the arrival of George I. Tickell wrote 'The Royal Progress,' which was printed in the 'Spectator.' Johnson says of it that "it is neither high nor low," a very equivocal criticism, considering Johnson's habitual tastes.

The translation of the first book of the 'Iliad' was the most important thing in Tickell's poetical career, having been published in opposition to Pope's; both appeared at the same time. Addison declared that the rival versions were both excellent, but that Tickell's was the best that was ever made. Strong suspicions of Addison himself having the translator's hire were thrown out by Pope, Young, and Warburton. Dr. Johnson says, "To compare the two translations would be tedious; the palm is now universally given to Pope. But I think the first lines of Tickell's were rather to be preferred; and Pope confessed that he had borrowed something from them in connection with his own."

During the dispute on the Hanoverian succession Tickell assisted the royal cause with his 'Letter to Avignon,' of which five editions were sold. Addison now employed him in important public business, and when, in 1717, Addison himself rose to be secretary of state, he made Tickell under secretary. On Addison's death, Tickell published his works, to which he prefixed an elegy on the author, which Johnson pronounces to be equal for sublimity and elegance to any funeral poem in the English language. Considering that we have had 'Lycidas' of Milton, this sounds oddly: on turning to this elegy, we are forced to admit, with Steele, that it is only "prose in rhyme," and occasionally very bad prose too. In 1725 Tickell was made secretary to the Lords Justices of Ireland, a place of honour in which he continued till his death, which was on the 23rd April 1740.

* TICKNOR, GEORGE, a distinguished American scholar and writer, was born on the 1st of August 1791, at Boston, Massachusetts, and was educated at Dartmouth College, New Hampshire, where he graduated in 1807. He entered upon the study of the law, and was called to the bar in 1813; but his time and thoughts continued to be mainly given to literature, and in 1815 he finally abandoned the law and proceeded to Europe in order to fit himself for the more congenial occupation to which he now fully devoted himself. After remaining a couple of years in the University of Göttingen he visited successively the cities of Paris, Rome, Madrid (where he spent several months in the year 1818), Lisbon, Edinburgh, and London. During the four years which he stayed in Europe Mr. Ticknor had zealously prosecuted his philological studies, his chief attention being given to the living languages of Europe, and he had made himself intimately acquainted with the literature of the middle ages. Among the many eminent literary men whose friendship he at this time acquired, were Southey and Sir Walter Scott, both of whom were delighted with his stores of old Spanish reading—Scott in writing to Southey in April 1819 (Lockhart's 'Life,' c. xliv.), calls him "a wondrous

Digitized by Google

fellow for romantic lore and antiquarian research, considering his country." The fame of his attainments had during his absence secured his election to the chair of modern languages in Harvard University, and on his return to America in 1819 he entered with energy upon the duties of his office. His lectures upon the great writers of Italy, France, Spain, and England excited, as Mr. Prescott has testified, a remarkable amount of interest, and Mr. Ticknor's labours are acknowledged to have been largely instrumental in stimulating among his contemporaries the study of the modern languages and literature of Europe. Mr. Ticknor retained his professorship for fifteen years. He then returned in 1835 with his family to Europe, and spent there some three years in extending and verifying his investigations, and in collecting, with the assistance of Professor Pascual de Gayangos of Madrid, rare and valuable Spanish books, of which he succeeded in forming an almost unrivalled collection. Whilst largely assisting other literary men and students, Mr. Ticknor had himself published nothing more than an occasional essay, but he was now concentrating his attention upon Spanish literature. With a rare amount of industry and intelligence he laboured on for years, and at length in 1849 produced his 'History of Spanish Literature: with Criticisms on the particular Works and Biographical Notices of Prominent Writers,' 3 vols. 8vo. The work is by general consent the most complete history of Spanish literature in any language, full, minute, and precise in information, and eminently fair and candid in spirit. The author appears in his researches almost to have exhausted existing materials whether bibliographical or biographical—overlooking nothing and neglecting nothing. However other judgments of the poets and imaginative writers of Spain may differ from Mr. Ticknor in his critical estimates of particular authors or books, all willingly admit the immense benefit they derive from his labours, and with entire unanimity his work has been accepted by Europeans as well as American scholars as the standard book of reference on the history of Spanish literature. It has been translated into both the Spanish and German languages.

TICOZZI, STEFANO, was born in 1762, in the Val Sassina, in the province of Como. He studied at Milan, and afterwards at Pavia, took priest's orders, and afterwards was appointed incumbent of a country parish near Lecco, in his native province. When the French invaded Lombardy in 1796, he and his brother Cesare Francesco, who was an advocate, favoured the revolutionary movement; but when the Austrians came back in 1799, Ticozzi was obliged to emigrate to France, and his brother was seized and sent prisoner to Cattaro. Ticozzi returned with the victorious French in the following year, and was appointed to several political offices under the Italian republic, and in 1806 was made chief clerk in the department of the Navy under Napoleon's administration. In 1810 he published some disquisitions on monastic institutions: 'Degli Istituti Claustrali Dialoghi Tre,' 8vo, Belluno. He lost his situation on the fall of Napoleon, and retired to Milan, where he lived mainly by literary labour. He translated into Italian Simonde's 'History of the Italian Republics,' Llorente's 'History of the Inquisition,' Agincourt's 'History of the Arts,' and other works. In 1818 he published his 'Dizionario dei Pittori dal Rinnovamento delle Arti fino al 1800,' which he afterwards merged in his larger work, 'Dizionario degli Architetti, Scultori, Pittori, Intagliatori in rame e in pietra, Coniatori di Medaglie, Musaicisti, Niellatori, Intarsiatori d'ogni Età e d'ogni Nazione,' 4 vols. 8vo, Milan. This is a really useful compilation, although not always exact about dates. He also published—1, 'Memorie Storiche,' 12 vols. 8vo, Florence, being a series of historical tales taken from the annals of Italy in the Middle Ages; 2, 'Viaggi di Messer Francesco Novello da Carrara, Signore di Padova, e di Taddea d'Este, sua consorte, a diverse parti d'Europa,' 2 vols. 8vo, a work also illustrative of the same period; 3, a continuation of Corniani's biographical work, 'I Secoli della Letteratura Italiana,' down to our own times, and also a continuation of Bottari's collection of letters concerning the arts: 'Raccolta di Lettere sulla Pittura, Scultura, ed Architettura, scritti dai più celebri Personaggi dei Secoli XV., XVI., e XVII., continuata fino ai nostri Giorni,' 8 vols. 8vo; and likewise, a continuation of Verri's 'History of Milan:' 'Storia di Milano del Conte Pietro Verri, dal suo più rimoti Tempi fino al 1525, continuata fino alla presente Età,' 6 vols. 12mo, Milan, besides several dissertations upon various paintings and other minor works. He left inedited and unfinished a Life of Correggio, and 'A Treatise on the Art of distinguishing Copies from the Originals in Paintings.'

Ticozzi died in 1836. He married a grand-daughter of the historian Giannone, by whom he had several children.

TIDEMAN, PHILIP, was a native of Nürnberg, where he was born in the year 1657. He studied first under a painter named Nicholas Rase, with whom he remained eight years, and was distinguished by his diligent application to his art, in which he attained great proficiency. Desiring however to improve his knowledge and taste, he went to Amsterdam to study the capital works of the great masters in the collections in that city.

Lairesse being at that time in great esteem at Amsterdam, Tideman resolved to place himself under his direction; and so gained the good opinion of his teacher by his pleasing manners and his talents, that Lairesse conceived a great affection for him, and not only gave him the best instruction in the art, but employed him to assist in some important works on which he was engaged. In executing these works Tideman gave such evident proof of his abilities, that he soon obtained sufficient employment independent of Lairesse.

His compositions of fabulous history and allegory indicate a lively fancy, genius, and invention; insomuch that in this respect his designs have been recommended as models to succeeding artists. Two of his capital compositions were Venus complaining to Jupiter of Juno's persecution of Æneas, and Juno applying to Æolus to destroy the Trojan fleet. He died in 1715, at the age of fifty-eight, leaving a very great number of sketches and designs, which afford proofs both of his industry and the fertility of his invention.

TIECK, CHRISTIAN FRIEDRICH, a celebrated sculptor, brother of Ludwig Tieck, was born in Berlin on the 14th of August 1776. Having studied awhile under Schadow, he in 1793 proceeded to Paris, where he became a pupil of David. In 1801 he returned to Berlin, and afterwards went to Weimar, then a great centre of literary and artistic activity. Here he found in Göthe a warm and most valuable friend and adviser, and whilst here he not only assisted in the execution of the sculptural decorations of the new palace, but executed busts of Göthe, Voss, and Wolff, besides many of members of princely and noble families. In 1805 he went with his brother Ludwig to Italy, and carefully studied the great works of art there, maintaining at the same time by his numerous busts, &c., his manual dexterity. Here he found friends and patrons in Madame de Staël, and the crown-prince, afterwards King Ludwig, of Bavaria. For the former he executed a rilievo for the family sepulchre at Coppet, and subsequently a full-size statue of Necker, and busts of Madame de Staël, Jne de Broglie, Augustus Schlegel, and M. Rocca. For Ludwig of Bavaria he executed at various times busts of Ludwig himself, Jacobi, Schelling, Ludwig Tieck, Lessing, Erasmus, Grotius, Herder, Wallenstein, and numerous others, chiefly for the Walhalla. On his second visit to Italy (1812) he became acquainted with Rauch, and the two great sculptors ever after remained fast friends. He returned in 1819 to Berlin, where he established his atelier, and was elected a member of the academy. During the remainder of his life he was employed upon many of the public buildings, and was a prominent figure in the artistic movements in the Prussian capital. Among his productions were the friezes, the sculptures in the pediment, and other external decorations of the Theatre Royal, the gates, and the statue of the angel in the porch of the Cathedral in Berlin; a series of fifteen seated marble statues of classical personages for the royal palace; a bronze equestrian statue of Frederick William at Ruppin, besides several monumental works and numerous busts and rilievi. He was also during many years extensively employed on the restoration of ancient works for the public museums, in which institution he was director of the department of sculpture. He died at Berlin on the 14th of May, 1851. Tieck was not possessed of much imaginative power; he executed some good statues and rilievi, but his chief strength lay in his memorial busts, many of which display great elevation of style and admirable truthfulness. In his studio several distinguished sculptors have learned, among whom perhaps the best known is Kiss, the sculptor of the Amazon. There are casts of some of Tieck's works in the Crystal Palace at Sydenham.

TIECK, LUDWIG, one of the most influential actors upon the modern literature of Germany, was born in Berlin, on May 31, 1773. At the universities of Halle, Göttingen, and Erlangen, he studied with great ardour; history and the poetical literature of both the ancients and the moderns being his favourite pursuits. His poetical powers developed themselves early, but they took a direction opposite to the usual classical models, and exercised themselves on the feelings and opinions of what may be termed the Christian chivalry or romance of the Middle Ages, although his first efforts, 'Almansur,' a prose idyll, in 1790, and 'Alla Moddin,' a prose play, in three acts, in 1790-1, assumed an eastern locality. Both displayed great poetical ability, but he did not attempt verse, except in a few short pieces introduced amid the prose. In 1792 he produced the tragedy of 'Der Abschied' (The Parting), also in prose, which, like most of his other dramatic pieces, is more fitted for the closet than the stage. He gradually found himself began to perceive that his true strength lay in narrative, and in the same year he produced 'Das grüne Band,' a medizeval tale of considerable pathos, with great truth of characterisation and much interest; and 'Abdallah,' an oriental tale, with little of oriental colouring, and of a ghastly terror-inspiring character. He had made considerable progress in the study of English literature, particularly the drama, and the result was, in 1793, a compressed translation, or rather paraphrase, of Ben Jonson's 'Volpone,' in three acts, in which it is remarkable how carefully he has omitted all the more poetical passages which ornament the original, and in which, for the scene where Volpone plays the mountebank, he substitutes a satirical one between an Englishman and a German author come to England for a few weeks to write volumes on the character of the country and its inhabitants. To the same period belongs also his novel of 'William Lovell,' of which the characters and scenery are intended to be English, but they have a very foreign air, and the tone of the whole is more gloomy than most of Tieck's productions.

The six years, from 1795 to 1800, both inclusive, was a period of incessant activity. During it he travelled; visited Jena, where he formed an intimate friendship with the two Schlegels, Novalis, and

Digitized by Google

Schelling; Weimar, where he became acquainted with Herder; and Hamburg, where he married the daughter of a clergyman named Alberti. The intercourse with the above-named literary celebrities had much influence on his future course. While still adhering to the romantic school, his productions embraced a wider field. He continued to write tales, novels, tragedies, and comedies; but in embodying nursery tales, as in his 'Blaubart,' a play in five acts, 'Die Sieben Weiber des Blaubarts' (Seven Wives of Bluebeard), a tale, and the 'Leben und Tod des kleinen Rothkappchen' (Life and Death of Little Red Riding Hood), a tragedy in three acts, he united much of the simplicity of the old traditions, with the added interest of poetical conception, a close adherence to the story, and occasional passages of pathos or of humour. Occasionally he took for his subject legends of a higher character, as in his 'Leben und Tod der heiligen Genovefa;' and in 1804, in 'Kaiser Octavianus,' a work which had been long expected, and which his countrymen consider as one of the most successful of his romantic productions. To this he has prefixed a long prologue, in which various characters are introduced to display the prosaic element, and a poet, to whom comes Romance, a female, who describes herself as infusing joy throughout the world, and says that her father is Faith, and Love her mother. In this prologue, and in the following play, which is partly in prose, is found the most favourable specimen of Tieck's versification. It is not of the most careful construction; and it is singular that though his conception were highly poetical, the best examples of them are found in his prose. This line was followed out in subsequent works, as in 'Fortunat,' which however embodies a considerable amount of good-humoured satire on the various conditions of the existing state of society. Another class comprises, what may be called by the Germans Art-Novels, to which belong 'Franz Sternbald's Wanderungen,' 'Phantasien über die Kunst,' and 'Herzensergiessungen eines Kunstliebenden Klosterbruders' (Heart-outpourings of an Art-loving Monk), written in conjunction with his friend Wackenroder, in all of which he displays a love and knowledge of the beautiful and elevated in art, a contempt for the self-complacency of affected connoisseurship, and a manifestation of Roman Catholic feeling, to which faith he for some time adhered about this period. Perhaps less distinctive as a class, as his previous tales had much of a similar character, were his 'Volksmährchen' (Popular Legends), such as the history of Heymon's Children, the Fair Magelone, Melusina, &c., legends which are European, and the 'Denkwurdige Geschichtschronik der Schildbürger' (Memorable History of the Simpletons), a sort of German version our Men of Gotham; tales full of rounding and exuberant fancy, interspersed with picturesque descriptions or strokes of broad humour, and told with a simplicity and an apparent childish belief in the wonders related that give an indescribable charm to the whole. Upon yet another class he evidently bestowed more thought and labour. In the dramas, for they assume that form, 'Der gestiefelten Kater' (Puss in Boots); in 'Prinz Zerbino, oder die Reise nach dem guten Geschmack' (Travels in search of Good Taste); 'Die verkehrte Welt' (The World turned upside down); and 'Leben und Thaten des Kleinen Thomas, genannt Daumchen' (Tom Thumb); in all of which he attacked with keen irony the low, material, anti-poetical notions of poetry advocated by learned pedants, and defended by implication, by example, and by occasional parodies on the classicists, the theory of the romantic school. A key to 'Zerbino' may be thoroughly acquainted with the peculiarities of all the authors allinded to in that drama, would possess much interest for the English student. These pieces, independent of their critical merits, have an interest of their own from the wit and humour of the dialogue. Many of the productions of this period, including those above mentioned, have been subsequently published together, under the title of 'Phantasus,' in a frame-work of a conversational party, to whom or by whom they are related. An excellent translation of 'Don Quixote,' a very good one of Ben Jonson's 'Epicene, or the Silent Woman,' and a remarkably successful one of Shakspere's 'Tempest,' also belong to this period.

In 1801-2, while residing in Dresden, he assisted F. Schlegel in bringing out the 'Musen-Almanach,' to which he contributed some of his tales. He then lived for a while in Berlin, and next at Ziebingen, near Frankfurt-on-the-Oder, seeming to enjoy a poetical leisure, during which he produced nothing but 'Kaiser Octavianus' of which we have already spoken, in 1804; and in the same year he made a journey to Italy, returning to Dresden in the autumn of 1805, where he had the first attack of gout, from which he was ever after an extreme sufferer. This attack was so violent, that he produced little for several years. He occupied himself, when able, in revising and adding to his previous works, publishing the 'Phantasus' as above stated, and a collection of his poems: in studying and collecting the early poetry of his own country, of which in 1803 he had published 'Minnelieder aus dem Schwäbischen Zeitalter' (Love Songs of the Swabian period), and in 1815 'Ulrich's von Lichtenstein Frauendienst' (Worth of Woman); and in extending his acquaintance with the English drama. In 1812 he published the 'Alt-englisches Theater,' containing translations of the old King John, the Pindar of Wakefield, Fericles, Locrine, the Merry Devil of Edmonton, and the old Lear, all of which he contends are the genuine, though chiefly early, productions of Shakspere. In 1817 he published two volumes of specimens of the early German drama, and in the same year visited England for the purpose of acquainting himself with the literature connected with the drama which he could not procure in Germany. He laboured diligently; the treasures of the British Museum as well as those of many private collections were opened to him; and it is probable that no foreigner ever attained so wide and so exact an acquaintance as Tieck with the English literature of the great Elizabethan period, or so just an appreciation of Shakspere, although his enthusiasm has led him to the discovery of beauties hidden from Englishmen in the apocryphal or rejected works attributed to Shakspere, in the genuineness of nearly all of which he is a stedfast believer, but of which his countryman and follower Ulrici has formed a more sober judgment. On his return to Germany he settled at Dresden, and for some time his literary publications were chiefly novels and tales and the collected text-books and similar works. In 1823 he published the first volume of 'Shakspeare's Vorschule' containing translations of Green's 'Friar Bacon,' 'Arden of Feversham,' of which he has doubts whether it is a production of Green's or an early work of Shakspere, and Heywood's 'Lancashire Witches;' this was followed by a second volume in 1829 containing 'Fair Em,' 'The second Maid's Tragedy,' by Mussingen, translated from one of the three manuscript plays saved from the fire by Warburton the herald, and 'The Birth of Merlin:' the first he considers to be more probably an early effort of Shakspere's than of any of the other names to which it has been assigned, grounding his opinion of this and other of the doubtful plays on the belief that Shakspere commenced writing for the stage many years earlier than had at that time been admitted; a belief which the investigations of Mr. C. Knight in his 'Pictorial Shakspere' have proved to be very probable, though not leading always to the conclusions at which Tieck has arrived regarding the particular plays. In 1828 he published his 'Dramaturgische Blatter,' chiefly written in 1817, a collection of reviews or criticisms of modern German plays, including Goethe's 'Iphigenie auf Tauris,' and 'Wallenstein's Tod;' Göthe's 'Jery und Bätelei,' and 'Clavigo;' and Shakspere's 'Romeo and Julist,' 'Lear,' 'Henry VIII.,' 'Macbeth,' and 'Hamlet;' all containing much genial criticism, with a delicate and true apprehension of their poetical feeling and harmony; with notices of the acting of Kemble and Miss Smithson, and comparisons of German and English stage. About the same time he took an active part in the continuation and completion of the translation of Shakspere's acknowledged plays, which had been begun by Schlegel, and of which the first volume appeared in 1825. The merits of this translation, of which many were entirely from his own hands, and all were subjected to his revision, are universally acknowledged. Less literal, but more spirited and equally true to the sense of the author, than the previous translation by the Vosses, they are illustrated by a number of notes which display a vast amount of reading and many ingenious comments as to various disputed readings, and they now form the recognised text of Shakspere's plays in Germany. The work was completed in 1829. But his labours were not confined to this work, he continued to write tales for periodical publications, and in 1828 he produced his novel of 'Dichterleben,' (Life of a Poet) in which Shakspere and several of his contemporaries are introduced, and in which the death of Marlow is vividly described. In 1829 he published 'Der Tod des Dichters,' (the Poet's Death) in which the unhappy fate of Camoens is pathetically related. In 1831 he also produced one of his most picturesque narratives, 'Der Aufruhr in den Cevennes,' in which the insurrection in the Cevennes is graphically told, but unfortunately was left incomplete. While residing at Dresden his evening circles became celebrated, at which his readings and the relation of his private life formed a principal charm, and which were visited by all the literary celebrities who were in the vicinity and could gain admission. In 1836 and 1840 he published his two latest novels—'Der Tischlermeister' (The Cabinet-maker) and 'Victoria Accorombona,' both of which are very inferior to most of his previous works of a similar character. He also took an active part in the management of the Dresden theatres. In 1840, on the accession of Friedrich Wilhelm IV. to the throne of Prussia, Tieck was invited to Berlin, an invitation which he accepted. He was then created a privy-councillor, and passed the remainder of his life partly in Berlin and partly at Potsdam, occupied chiefly with some theatrical productions, and in revising and correcting his works, which were published in 20 volumes at Berlin between 1828 and 1846. At various times he also edited 'Novalis's Schriften,' in conjunction with Friedrich Schlegel, 1802; Heinrich von Kleist's 'Nachgelassenen Schriften' (Posthumous Works, 1826; Solger's 'Nachlass und Briefwechsel' (Remains and Correspondence) with Friedrich von Raumer, 1826; and Reinhard Lenz's 'Gesammelte Schriften,' (Collected Works) in 1828. After suffering for some years from continued illness, borne with wonderful patience and cheerfulness, he died at Berlin, April 28, 1853, leaving a name which may rank with the highest in his native country, and which Englishmen may reverence as that which in Germany is most connected with the popularising of the fame of the great dramatic poet of England.

TIEDEMANN, DIETRICH, a German philosopher, was born on the 3rd of April 1748, at Bremervörde, near Bremen, where his father was burgomaster. He received his earliest education at home, and as he was scarcely allowed to have any intercourse with other children, his leisure hours were spent in reading. His father sent him in 1763 to Verden, where he was chiefly engaged in acquiring a knowledge of

Digitized by Google

the ancient and some modern languages. After a stay of two years he entered the Athenæum of Bremen. The system of education and the distinguished masters of this institution had great influence on young Tiedemann. It was here that he first conceived a love for philosophy and its history, and he began his philosophical studies by reading the works of Descartes, Locke, Helvetius, and Malebranche. After spending eighteen months at Bremen, he entered the University of Göttingen, with the intention of studying theology pursuant to his father's wish; but he continued the study of classical literature, mathematics, and philosophy. The study of philosophy raised in his mind strong doubts respecting certain main points of the Christian religion, which he was unable to overcome, and this led him to abandon the study of theology. He now tried jurisprudence, but notwithstanding the entreaties of his father to devote himself to some profession, he abandoned the study of the law also, and at last determined to follow his own inclinations, and to give himself up entirely to philosophy and its history. His father, dissatisfied with his son's conduct, refused to send him further means of subsistance. After having spent two years and a half at Göttingen, Professor Eyring proposed to him to take the place of tutor in a nobleman's family in Livonia, which Tiedemann accepted very reluctantly. In 1769 he entered his new situation, in which he remained four years, although he was shut out from all means of prosecuting his own studies, and had to devote almost all his time to his pupils. Nevertheless, he found time to write a little work on the origin of language, a favourite topic with the philosophers of that time. It was published under the title, 'Versuch einer Erklärung des Ursprunge der Sprache,' 8vo, Riga, 1772. In the year following his return to his native place, and after having spent a year there in studying various subjects which he had neglected in Livonia, he again went to Göttingen. His friend Meiners, who was now a professor in the university, introduced him to Heyne, who immediately made him a member of the philological seminary. The small income derived from this institution, and from private instruction, together with what he got by writing, enabled him to live in independence. His work on the Stoic philosophy appeared under the title of 'System der Stoischen Philosophie,' 8vo, Leipzig, 1776. with a preface by Heyne, who recommended the publication. In this year Heyne was applied to in order to recommend a competent person for the professorship of ancient literature at the Carolinum in Cassel. Heyne recommended Tiedemann, and accepted the place for him without telling him of it. Tiedemann was delighted with the place, as it did not occupy too much of his time, and put him in connection with some of the most distinguished men in Germany. The study of philosophy and its history was now prosecuted with fresh zeal and vigour. The philosophical views which he had imbibed from the authors whom he had most studied tended towards materialism; but his friend Tetens vigorously encountered them, and at length succeeded in turning his mind in a different direction. In the year 1786, when the Carolinum was broken up, Tiedemann was transferred with the other professors to Marburg. Here he lectured at different times on logic, metaphysics, the law of nature, on moral philosophy, psychology, universal history, history of philosophy, and sometimes also on some classical Greek writer. His lectures were very popular, and his kind disposition made his hearers look upon him more as a friend than as a master. Sometimes, especially during the last period of his life, he did not conduct himself with the calmness and dignity of a philosopher in combating the philosophy of Kant, to which he was opposed. He died in the midst of literary undertakings, after a short illness, on the 24th of May 1803.

Tiedemann was beloved and esteemed by all who knew him. His life was spent in intellectual occupations and bodily exercise, of which he was very fond. His striking qualities were great self-control, cheerfulness, and a total absence of all pretension to literary superiority, although his works were extremely popular. Besides the works already mentioned, the following deserve notice:—'Untersuchungen über den Menschen,' 3 vols. 8vo, Leipzig, 1777, &c.; 'Griechenlands erste Philosophen, oder Leben und Systeme des Orpheus, Pherecydes, Thales, und Pythagoras,' 8vo, Leipzig, 1780; 'Hermes Trismegistus Poemander, oder von der göttlichen Macht und Weisheit,' 8vo, Berlin and Stettin, 1781. This work is a translation from the Greek of Hermes Trismegistus. 'Geist der Speculativen Philosophie,' 6 vols. 8vo, Marburg, 1791-97. This work is a history of philosophy from the time of Thales down to Leibnitz and Christian Wolff, and is still useful for the materials which it contains. In style and arrangement it is deficient, and the author did not possess that critical and profound knowledge of philosophy which would have enabled him to perceive the organic connection and the necessary succession of the various philosophical systems. 'Theaetet, oder das menschliche Wissen,' 2 vols. 8vo, Frankfurt, 1794; 'Handbuch der Psychologie.' This work was edited after the author's death (8vo, Leipzig, 1804) by L. Wachler, who has prefixed to it a biographical memoir of Tiedemann. Besides these greater works, Tiedemann wrote numerous smaller treatises and made many translations from the French: he also contributed papers to several periodicals. He is the author of some Latin dissertations, among which we may mention three programs: 'De Antiquis quibusdam Musei Fridericiani Simulacris,' 4to, Cassel, 1773-80; 'Dialogorum Platonis Argumenta exposita et illustrata,' 8vo, Bipont, 1786; 'Disserlatio de Quæstione: quo fuerit artium magicarum origo, quomodo illæ ab Asiæ populis ad Græcos atque Romanos et ab his ad cæteras gentes sint propagatæ,' &c., 4to, Marburg, 1787.

(L. Wachler's Memoir of Tiedemann, in his *Handbuch der Psychologie*; Creuzer, *Memoria Dieterici Tiedemanni*, 4to, Marburg, 1803; and *Jördens, Lexikon Deutscher Dichter und Prosaisten*, vol v., pp. 76-86.)

TIEDEMANN, FRIEDRICH, a celebrated German anatomist, was the son of the celebrated philosophical writer, Dietrich Tiedemann, and was born at Cassel on the 23rd of August 1781. He received his early education at the gymnasium at Marburg, where he also commenced the study of anatomy and physiology. He subsequently studied in the hospitals of Bamberg and Würzburg, and took his degree in 1804. At this time he took up the study of phrenology, which he pursued with great earnestness. He visited Frankfurt, and made the friendship of the celebrated Sömmering. He also attended a course of Schelling's lectures on natural philosophy at Würzburg, and afterwards repaired to Paris. In 1805 he was appointed professor of anatomy and physiology at Landshut. Here he published his first work on 'Zoology,' the first volume of which appeared in 1808 and the third in 1810. In 1809 he also published a work on the 'Anatomy of the Heart of Fishes,' which was the result of a journey in Italy and the Tyrol. In 1811 he published his 'Anatomy of the Flying Lizard or Dragon.' In 1813 appeared an essay on the 'Anatomy of Headless Monsters.' He obtained the prize offered by the Institute of France in 1811 for the best essay on the 'Structure and Relations of the Radiate Animals.' In order to qualify himself for this work he made a journey to the coast of the Adriatic. This essay was published in 1812. In 1814 he was called to the chair of comparative anatomy and zoology at Heidelberg. In this position he not only gained a great reputation as a teacher, but published a large number of works upon human anatomy and zoology, which have contributed greatly to the advancement of those sciences during the present century. Amongst these may be best known are his two splendidly illustrated anatomical works on the 'Nerves of the Uterus' and the 'Arteries of the Human Body. These were published in folio in 1822. In the same year he also published 'Plates of the Brain of Monkeys.' In 1830 he commenced the publication of a 'Physiology of Man,' which was finished in 1836. As a physiologist he devoted great attention to the physiology of digestion, and in conjunction with Leopold Gmelin, professor of chemistry in Heidelberg, he made many original researches and observations on this subject. In conjunction with L. C. Treviranus he edited five volumes of the 'Zeitschrift für Physiologie.' He has also published numerous papers in journals, &c., both on anatomy and zoology, of great value. In 1849 he retired from his chair at Heidelberg on the occasion of the death of his eldest son, who was commander of the castle of Rastadt, which fortress was condemned to death for having sided with the revolutionary party. [See SUPPLEMENT.]

TIEDGE, CHRISTOPH AUGUST, 'The Nestor of German Poetry,' and one who has now taken his place among the German classics, was born at Gardelegen in Altmark, December 14th 1752. His early prospects in life were by no means flattering, for the death of his father (Conrector at the Magdeburg gymnasium), in 1772, left him and a family of young children in a very destitute situation. He completed however his legal studies at Halle; but notwithstanding the favourable opinion his talents had acquired for him, he soon abandoned the profession for which he had prepared himself, and in 1776, accepted the situation of private teacher in the Arnstadt family at Elrich in Hohenstein. The choice he had made proved a fortunate one, since it eventually led to connections and friendships that proved very advantageous. The immediate result of the change was he had adopted was an intimacy with Gökingk, Gleim, and other literary persons of that day, including the Baroness von der Recke. The friendships thus formed, laid the foundation of the prosperous and unsullied tenour of his after-life. On quitting Elrich he was invited by Gleim to reside with him at Halberstadt, which he continued to do until 1792, when he became private secretary to Domherr von Stedern; and though he died in the following year, Tiedge remained in the family upon the same footing during the life of Madame von Stedern, who, at her death, in 1799, secured to him a handsome competency. Being thus placed perfectly at ease in his circumstances, he travelled through the north of Germany, and visited Berlin, where it was his good fortune again to meet with Madame von der Recke, and the intimacy thus resumed continued for life. Though not in accordance with the ordinary usages of society, it was an entirely free from the slightest suspicion of impropriety, as was the similar domestication of Cowper with Mrs. Unwin. This union, of a kind so exceedingly rare that no name has been invented for it, was that of two noble and pure minds, congenial in their tastes, and equally inspired with a feeling for poetry and those pursuits which, while they refine, also elevate our nature. The author of 'Urania' was as well shielded from scandal as was the author of the 'Task;' for although very different in form, the first-mentioned poem is, like the other, deeply tinged by religious sentiment; and its merits were more immediately appreciated, for it went through several editions within a very short time from its first appearance in 1801.

In 1804 Tiedge and his female friend visited Italy, where they remained about two years; and of this journey we have an account from the pen of Madame von der Recke herself 'Tagebuch einer

Digitized by Google

Reise,' &c., 4 vols. 8vo, with a preface and notes by Büttiger, which, besides being very superior to the general class of tour-books, affords evidence of her being a zealous though candid Protestant, and a woman of strict piety. On their return to Germany, Madame von der Recke made Berlin, and afterwards (1819) Dresden, her chief place of residence, passing the summer months at Teplitz or Carlsbad. The only change Tiedge henceforth experienced was that occasioned by the loss of his companion and benefactress, for she had taken care that her death (1833) should cause no change whatever in his outward circumstances, not even that of his residence; as she directed that her establishment should be kept up for him precisely as before, and that he should continue to enjoy the luxuries and comforts he had so long been accustomed to. Nor was her anxious solicitude for her friend's welfare useless; for so pre-eminently was Tiedge favoured beyond the ordinary lot, that he not only attained an unusual age, but remained nearly free from all infirmities of either body or mind. In his eighty-ninth year, says one who appears to have known him personally, he did not seem to be much more than sixty: the only alteration in him was, that for some years he could not take exercise on foot, or stir out except in a carriage or a wheel-chair. Even but a week before his death (March 8th 1841) he was at the birth-day fete of one of his friends.

Soon after his death, his 'Life and Literary Remains' were given to the world by Dr. K. Falkenstein, in 4 vols.; and a complete edition of his works has been published in 10 vols., 8vo. After his 'Urania,' his most original production is perhaps his 'Wanderungen durch die Mark des Lebens,' 1836, which, like the other, may be said to be lyric-didactic, and similar in tendancy, though of a less decidedly religious character, the seriousness of its moral precepts being relieved by the tone of playful irony which pervades many parts of the poem. His principal other productions are his 'Poetical Epistles,' his 'Elegies,' and his 'Frauenspiegel,' all of which have contributed to his reputation. The esteem in which the poet of 'Urania' is held is proved by the fact that, in honour of his memory, a 'Tiedge Verein,' or Tiedge Institution, was after his death established at Halberstadt, the object of which is to give a literary prize every five years, and another to make some provision in their declining years for meritorious writers who may have fallen into adversity in consequence of age and infirmities.

TIEPOLO, GIOVANNI BATTISTA, a celebrated Italian painter of the 18th century, was born of a good family at Venice in 1693. Tiepolo, says Lanzi, was the last of the Venetians who acquired a European fame; celebrated in Italy, in Germany, and in Spain. He studied a boy under Gregorio Lazzarini, painted at first in his manner, then imitated the style of Piazzetta, but attached himself eventually to that of Paul Veronese. Already at the age of sixteen he was known even out of Venice, and when still young he received invitations from various Italian cities to decorate their churches and their public buildings. His works in the north of Italy, both in oil and in fresco, are numerous: one of his first works of note was the Shipwreck of San Satiro, in the church of St. Ambrose, at Milan: he excelled chiefly in fresco, and his colouring and the folds of his draperies bear great resemblance to those of Paul Veronese. In Spain many also Tiepolo executed several works: at Würzburg he painted the staircase and the saloon of the bishop's palace and two altar-pieces. He was afterwards invited by Charles III. to Spain, where, in Madrid, he painted the ceiling of the saloon in the new palace of the king, and the hall of the royal guard, by which he is said to have excited the jealousy of Mengs: he executed also the chief altar-piece in oil for the convent church of St. Paschal, at Aranjuez. He died in Madrid on March 25th, 1769.

Tiepolo's style was slight and brilliant, yet his colouring was not glaring: the effect of his paintings was not produced by a recourse to bright colours, but by a judicious contrast of tints: his drawing was however feeble, though this weakness was nearly concealed by the grace fulness of his attitudes. One of his best pictures in oil is the Martyrdom of St. Agatha, in the church of St. Antonio, at Padua. He etched several plates in a very free and spirited manner. He left two sons, Giovanni Domenico and Lorenzo, who were both painters: the elder etched some of his father's designs.

TIGHE, MRS. MARY, was born in 1773, the daughter of the Rev. William Blachford, by Theodosia, the daughter of William Tighe of Rosanna, in Wicklow county, Ireland. She married in 1793 her relative Henry Tighe of Woodstock, in the county of Wicklow. In 1805 she printed for private circulation her poem of 'Psyche,' a work founded on the story of Cupid and Psyche, as told in the Golden Ass of Apulsius. The poem is remarkable for the beauty of its descriptions, the tenderness and purity of its sentiments, the ingenious manner in which the writer has completed the story, the poetical imagery, and the musical flow of the versification, which is in the Spenserian stanza, managed with great skill. After six years of continued ill-health she died on March 24, 1810, and in 1811 'Psyche' was published with a collection of miscellaneous poems, many of them written during her illness, and breathing a deep religious feeling. All of them show the same virtuous tendencies as are developed in her principal work, but they do not on the whole display the same amount of poetic power.

TIGRA'NES, king of Armenia, the ally of Mithridates the Great, who gave him his daughter Cleopatra in marriage. He was master of the large tract between Egypt in the south-west, and the Caspian Sea in the north-east, which was bounded by Assyria and Media on the east, and by the kingdoms of Pontus and Cappadocia on the west and north-west. The earlier history of Tigranes is little known; Strabo (p. 532, Cas) and Justin (xxxiii. 3) state that he was sent in his youth as a hostage to the king of the Parthians, who afterwards restored him to liberty. He conquered Gordyene and Mesopotamia, and the Syrians chose him for their king in B.C. 84, or, according to Appian ('De Reb. Syr.,' 70), in B.C. 80. Before B.C. 74 he concluded an alliance with Mithridates, who was then about to begin his third war with the Romans. The motives of this alliance were, that Mithridates should be master of the countries which they hoped to conquer, and that Tigranes should have the inhabitants and all the moveable property that he could carry off. Plutarch states ('Lucullus,' p. 500, Xyland.) that the army of Tigranes was composed of 200,000 men,—20,000 archers, 55,000 horse, 150,000 foot, and 35,000 pioneers and train,—and that Arabs and warlike Albani from the Caucasus abounded in the Armenian camp. The campaign was opened in B.C. 74. Cappadocia and Bithynia were conquered, and Mithridates laid siege to Cyzicus in Bithynia, but Lucullus came to relieve it, and after various reverses Mithridates was compelled to fly to Tigranes (B.C. 69). The conduct of the Armenian king had been insincere during these events, and the Romans being now victorious, he not only refused to receive his father-in-law, but set a prize of a hundred talents on his head, on the pretext that he had persuaded his son, who was likewise called Tigranes, to rebel against his father and to join the Romans. Mithridates nevertheless succeeded in pacifying his son-in-law, and they joined their armies to meet Lucullus, who had crossed the Euphrates and the Tigris, and had laid siege to Tigranocerta, the new capital of the Armenian kingdom. A battle ensued near this town, in which Tigranes was compl-tely defeated (6th October, B.C. 69), and his capital fell into the hands of the Romans. Tigranes and Mithridates having entered into negociation with Piranes [1], king of the Parthians, for the purpose of drawing him into their alliance, Lucullus, who had now carried his conquest in Armenia as far as Artaxata on the upper part of the Araxes, marched to Mesopotamia to attack the Parthians. But a mutiny of his soldiers compelled him to retreat to Cappadocia, where they dispersed, as it seems, by the instigation of Pompey, who aimed at the supreme command in the war (B.C. 67). The Romans lost Cappadocia, and Tigranes carried off a great number of the inhabitants of this province, as well as of Cilicia and Galatia. Pompey entered Asia Minor in B.C. 66, and in the same year he defeated Mithridates in a great battle on the Euphrates. Mithridates, having experienced the faithless character of his son-in-law, fled to Phanagoria in the island of Taman, while Tigranes humiliated himself before the Romans, then encamped in the neighbourhood of Artaxata. He went to the tent of Pompey, and, kneeling before his victorious enemy, took off his royal diadem, which Pompey however would not accept. The policy of the Romans required an independent kingdom between their dominions and the dangerous power of the Parthians. Tigranes therefore was reinstated in Armenia, except the districts of Gordyene and that of Sophene, or that westernmost part of Armenia Magna, which he was obliged to cede to his rebellious son Tigranes, then an ally of the Romans. Besides these districts, he ceded to the Romans his kingdom of Syria, including Phœnicia and all his conquests in Cilicia, Galatia, and Cappadocia; he paid six thousand talents, and he gave half a mina to each Roman soldier, ten mine to each centurion, and sixty mine, or one talent, to each tribune. (Plutarch, 'Lucullus,' p. 637, Xyland.; comp. Appian, 'De Bello Mithrid.,' c. 104.) It seems that after this humiliation Tigranes led an obscure and tranquil life, for his name disappears from history. He appears to have died about B.C. 55. His successor was Artavasdes. [MITHRIDATES; POMPEIUS; LUCULLUS.]

(Valerius Maximus, v. 1, 9; Velleius Paterculus, ii. 33, 1, and c. 37; Cicero, *Pro Lege Manilia*; Wolterdorf, *Commentatio Vitam Mithridatis M. per annos dignatam sistens*, Goettingæ, 1812.)

Coin of Tigranes.

British Museum. Actual size. Silver. Weight 245½ grains.

TIGRA'NES, prince of Armenia and lord of Sophene, was the son of Tigranes, king of Armenia. During the last war between the Romans and Mithridates aided by his ally king Tigranes, prince Tigranes forsook his father and went over to the Romans. When his father humiliated himself before Pompey, he sat by the side of the Roman general, but he did not rise before his father, nor did he show

Digitized by Google

him the slightest degree of filial respect. Having been created lord of Sophene and Gordyene, he refused to surrender the treasures of Sophene to Pompey, who suspected him of being in secret communication with Phraates, the king of the Parthians, whose daughter he had married. Tigranes also became suspected of having formed a plan for seizing or putting to death his father, and accordingly he was arrested by order of Pompey, who sent him to Rome. He figured in the triumph of Pompey.

Appian ('De Bello Mithrid.,' c. 105 and 117) states that Tigranes was afterwards put to death in his prison. [TIGRANES.]

TILLEMONT, SEBASTIEN-LENAIN-DE, an historical writer of considerable note, was born at Paris on the 30th of November 1637. He was the son of Jean Lenain, master of the requests, and his wife Marie le Ragois. His excellence of character was manifested very early; and even as a child he always abstained from those mischievous pranks in which children commonly indulge. When between nine and ten years of age he was placed under the charge of the members of the religious society then established in the vacant abbey of Port Royal, and under these instructors he devoted himself to the exercises of learning and piety. His favourite author, while at school, was Livy; a preference indicative of the bias of his mind to historical studies. He studied logic and ecclesiastical history under Nicole; and his questions on the latter subject at once evinced the earnestness with which he pursued it, and put the knowledge of his instructor to a severe test. He studied the theology of Estius, from which, when about eighteen years of age, he turned with much satisfaction to the study of the Scriptures themselves, and of the Fathers; and while thus engaged he began to collect the historical notices of the Apostles and Apostolical Fathers, and to arrange them after the plan of Usher's 'Annales.'

The tenderness of his conscience, and the strictness of his notions of duty, kept him for some time undetermined as to the choice of a profession. At the age of twenty-three he entered the Episcopal seminary of Beauvais, where he was received with much respect from the reputation for historical knowledge, that, fearing it might be a snare to his humility, he contemplated leaving it, but was persuaded to remain by Isaac de Sacy, one of the members of the Society of Port Royal, whom he had chosen for his spiritual guide. He remained three or four years in the seminary of Beauvais, and then spent five or six with Godefroi Hermant, canon of that city. He was much respected and beloved by the bishop of Beauvais, Choart de Buzanval, and fearing still that this estimation would make him vain, he suddenly left the place and returned to Paris, where he remained for two years with his intimate friend and early fellow at Port Royal, Thomas du Fossé; but not finding in Paris that retirement which he desired, he withdrew to St. Lambert, a country parish in the neighbourhood of that city.

In September 1672, at the mature age of thirty-five, he became subdeacon, and fifteen months after deacon. The following extract from a letter addressed to his brother (Pierre Lenain, then or afterwards subprior of La Trappe) evinces at once his piety and his humility. After stating that it was at the desire of Isaac de Sacy, his friend and guide, that he had become subdeacon, and was about to take on him that of the deaconship, he goes on, "I assure you, my dearest brother, that it is with great agitation and fear that I have resolved to comply with his wish, for I feel that I am far from those dispositions which I myself see to be necessary for the worthy discharge of the office; and that I am obliged to confess that I have profited little from the grace which I might have received from the order and duties of the subdeaconship. But on the other hand I could not resist one whom I believe I ought to obey in everything, and who, I am well aware, has the greatest love for me. I beg, my dearest brother, that you will pray to God for me, and to ask him either to cause M. de Sacy to see things in a different light, or to give to me such dispositions that the advice of my friend may be for my salvation, and not for my condemnation."

In 1676 he received priest's orders, at the further persuasion of De Sacy, who contemplated making him his successor in the office of spiritual director of the Bernardine nuns, now re-established in their original seat, the abbey of Port Royal, to the immediate neighbourhood of which establishment Tillemont removed. He was forced, in 1679, obliged to remove, and he took up his residence at the estate of Tillemont, a short distance from Paris, near Vincennes, which belonged to his family, and from which he took his name. In 1681 he visited Flanders and Holland; and in 1682 undertook the charge of the parish of St. Lambert, where he had formerly resided, but soon gave it up at the desire of his father, to whom he ever paid the greatest respect and obedience.

Having prepared the first volume of his great work on ecclesiastical history, he was about to publish it, when it was stopped by the censor, under whose notice, as a work connected with theology, it had to pass, and who raised some objections of the most frivolous character. Tillemont refused to alter the parts specified, deeming them not justly within the censor's province; and chose rather to suppress the work, upon which however he continued to labour diligently, though without any immediate intention of publishing it.

This exercise of the censorship led to an alteration of his plan: he determined to separate from the rest of his work the history of the Roman emperors and other princes whose actions were interwoven with the affairs of the Christian church, and to publish it separately: the first volume of this work, which, as not being theological, was exempt from the censorship, appeared in 1690, and was received with general approbation. It excited a desire for the appearance of his Church history, and the chancellor Boucherat, in order to remove the obstacle to its publication, appointed a new censor. Thus encouraged, he brought out the first volume in 1693, under the title of 'Mémoires pour servir à l'Histoire Ecclesiastique des Six Premiers Siècles.' A note to this volume, on the question whether Jesus Christ celebrated the Passover the evening before his death, in which he examined the views of Bernard Lami, a learned priest of the Oratory, on that question, involved him in a controversy with that writer, who read Tillemont's note before publication, and examined the arguments contained in it in a subsequent work of his own. Tillemont in consequence addressed to Lami a letter, which is printed at the close of the second volume of his 'Mémoires,' and is remarkable for its spirit of modesty and meekness. Lami replied, but Tillemont declined to continue the discussion, thinking he had said enough to enable those interested in the question to form a judgment. Faydit de Blom, an ecclesiastic whom the Congregation of the Oratory had expelled from their body, a man of considerable talent, but of jealous disposition, published at Bâle, in 1695, the first number (28 pp. 4to.) of a work, to be continued every fortnight, entitled 'Mémoires contre les Mémoires de M. Tillemont.' It contained several violent and unjust reflections on the work, to which Tillemont did not reply, though some of his friends with needless apprehension procured the stopping of Faydit's work, which never proceeded beyond the first number. Faydit repeated his attack in a subsequent work, but it produced little effect.

The remainder of Tillemont's life was passed in the quiet pursuit of his studies. He was attacked by a slight cough at the end of Lent, 1697, and in the course of the summer was seized with fainting, owing to a sudden chill while hearing mass in the chapel of Notre Dame des Anges: toward the end of September his illness increased so as to excite the anxiety of his friends. He consequently removed to Paris for the sake of medical advice; and there, after an illness which rendered his piety and submissiveness to the divine will more conspicuous, he expired, and breathed his last, on Wednesday, 10th January 1698, aged sixty years. He was buried in the abbey of Port Royal, in which the Bernardine or Cistertian nuns, to whom the abbey had originally belonged, were now again established.

The works by which Tillemont is known are, his 'Histoire des Empereurs,' and his 'Mémoires pour servir à l'Histoire Ecclesiastique.' The first was published in 6 vols. 4to; the first four during the author's life, at intervals from 1690 to 1697: the remaining two after his death, in 1701 and 1738. The earlier volumes were reprinted at Brussels in 12mo, in 1707, et seq., and a new edition appeared at Paris, in 4to, in 1720-23, with the author's latest corrections. He explains his plan in the 'Avertissement' to the first volume: his intention was to illustrate the history of the Church for the first six centuries; but instead of commencing with the first persecutor, Nero, he goes back to Augustus, whose edict occasioned the journey of Joseph and Mary to Bethlehem, and thus determined the place of our Lord's nativity. The history ends with the Byzantine emperor Anastasius (A.D. 518). The style is unpretending, and consists for the most part of a translation of the ancient writers with slight modifications, and with such additions (marked by brackets) as were needed to form the whole into one continuous narrative, or such reflections as the author deemed requisite to correct the false morality of heathen writers. To each volume are appended notes relating to difficulties of history or of chronology which require discussion or of kindred matter unsuited for insertion in the body of the work. "There is nothing," says Dupin, "which has escaped the exactness of M. Tillemont; and there is nothing obscure or intricate which his criticism has not cleared up or disentangled."

The 'Mémoires,' &c., extend to 16 vols. 4to, of which the first appeared in 1693; three volumes more during the author's lifetime, in 1694-5-6; and the fifth was in the press at the time of his death. These five volumes came to a second edition in 1701-2, and were followed in 1702-11 by the remaining eleven, which the author had left in manuscript. This great work is on the same plan as the former, being composed of translations from the original writers, connected by paragraphs or sentences in brackets. Dupin characterises it as being not a continuous and general history of the Church, but an assemblage of particular histories of saints, persecutions, and heresies, a description accordant with the modest title of the work, 'Mémoires pour servir à l'Histoire,' &c. The author concerns himself chiefly with facts, without entering into questions of doctrine and discipline; and notices not all the saints in the calendar, but only those of whom there are some ancient and authentic records. Each volume has notes of similar character to those given in 'L'Histoire des Empereurs.'

Tillemont supplied materials for several works published by others, as for the Life of St. Louis, begun by De Sacy and finished and published by La Chaise; for the lives of St. Athanasius and St. Basil, by Godefroi Hermant; of Tertullian and Origen, by Du Fossé, under the name of La Motte, &c.

TILLOCH, ALEXANDER, LL.D., was born at Glasgow, on the 28th of February 1759, and was educated with a view to following the business of his father, who was a tobacconist, and for many years filled the office of magistrate in that city. He was however more inclined to the pursuit of scientific knowledge than to the routine of business. His biographer states that in early life his attention was greatly attracted by the occult sciences, and that although he was not long subject to their delusions, he never was inclined to treat judicial astrology with contempt. One of the earliest subjects to which Tilloch applied himself was the improvement of the art of printing; his experiments enabled him, in connection with Foulis, the celebrated printer of Glasgow, to carry farther the process invented by Ged of Edinburgh, of printing from casts of whole pages of type; but he stopped short of arriving at a practical application of stereotype printing, though to his communications to Earl Stanhope, nearly thirty years later, may be ascribed its eventual application. After carrying on the tobacco business for a time in his native city in connection with his brother and brother-in-law, Tilloch abandoned it, and for several years exercised that of printing, either singly or in partnership with others.

In 1787 he removed to London, where he subsequently resided; and in 1789 he, in connection with other parties, purchased the 'Star,' a daily evening newspaper, of which he became editor. Politics he continued to hold until within a few years of his death, when bodily infirmities and the pressure of other engagements compelled him to relinquish it. The political opinions of Tilloch were temperate. For many years he devoted attention to means for the prevention of the forgery of bank-notes, and in 1790 he made a proposal to the British ministry on the subject, which met with an unfavourable reception. He then offered his invention to the French government, who were anxious to apply it to the printing of assignats; but, after some experiments had been made, and negotiations had been urgently sought by the French authorities, all communication on the subject was cut short by the passing of the Treasonable Correspondence Bill. In 1797 he presented to the Bank of England a specimen note, produced by block or relief printing, which was certified by the most eminent engravers to be impossible of imitation; yet nothing was done towards the adoption of his or of any similar plan.

Considering that there was room for a new scientific journal, in addition to that published by Nicholson, Tilloch published, in June 1797, the first number of the 'Philosophical Magazine,' a periodical which has ever since maintained a high reputation as a record of the progress of science, and a digest of the proceedings of learned societies at home and abroad. Of this work he was sole proprietor and editor until a few years before his death, when Mr. Richard Taylor, who succeeded him in its management, became associated with him. In the earlier numbers of the 'Star,' Tilloch published several essays on theological subjects, some of which, relating to the prophecies, were subsequently collected into a volume by another person, and published with the name 'Bibliens;' and in 1823 he issued an octavo volume entitled 'Dissertations introductory to a study and critical understanding of the language, structure, and contents of the Apocalypse,' in which he endeavours to prove that that portion of Scripture was written much earlier than is usually supposed, and before most of the apostolical epistles. His views on this and other points are discussed at length in a notice of this work, published soon after his death, in the 'Eclectic Review.' The last work undertaken by Tilloch was a weekly periodical entitled the 'Mechanic's Oracle,' devoted principally to the instruction and improvement of the working classes. The first number appeared in July 1824, and it was discontinued soon after his death, which took place at his residence at Islington, on the 26th of January 1825.

Tilloch married early in life. His wife died in 1783, leaving a daughter, who became wife of Mr. John Gale. His religious opinions were peculiar, and he was one of the elders who acted as ministers of a small body who took the name of Christian Dissenters, and met for worship in a private house in Goswell Street Road. He was a member of many learned societies in Great Britain and elsewhere, and was proposed, about twenty years before his death, as a Fellow of the Royal Society of London; but his name was withdrawn before coming to the ballot, in consequence of an intimation that he would be objected to, not on account of any deficiency in talent or character, but solely because he was the proprietor of a newspaper. A memoir of Dr. Tilloch appeared in the 'Imperial Magazine' for March 1825, from which, with the assistance of other obituary notices, the above account is condensed. This was reprinted in the last number of the 'Mechanic's Oracle,' with a portrait.

TILLOTSON, JOHN, Archbishop of Canterbury, and one of the most celebrated divines of the Church of England, was born in 1630 at Sowerby in Yorkshire, a member of the great parish of Halifax, of a Puritan family. His father, who was engaged in the clothing trade, belonged to that extreme section of the Puritans who were for establishing a general system of Independency, and he belonged himself to an Independent church, of which Mr. Root was the pastor. After having been a pupil in the grammar-schools in the country, the writers of his Life not having told us what schools they mean, but doubtless the grammar-school at Halifax was one, he became a pensioner of Clare Hall, Cambridge, in 1647, and a Fellow of the college in 1651. It appears that he remained in the University till 1657. Puritanism was at that period in the ascendancy at Cambridge; but Tillotson very early freed himself from his educational prejudices, became a great admirer of the writings of Chillingworth, and soon showed himself one of a class of persons who were then beginning to be considerable in England, who, taking their stand on the Scriptures, opposed themselves at once to Romanism on the one hand and to Calvinism on the other. This position he ever after maintained, and his celebrity arises principally from the ability with which he illustrated and defended, both from the pulpit and the press, the principles of Protestantism, and of a rational and moderate orthodoxy. It may be added also, that so much of the effects of his original Puritan education remained with him, that he was in politics a Whig, although it must be owned that he entertained and occasionally expressed notions of the duty of submission, which, if acted upon, would have maintained the House of Stuart on the throne.

Before he entered holy orders, he was tutor in the family of Prideaux, the attorney-general to Cromwell. This led to his residence in London, and brought him into acquaintance with several eminent persons. He was thirty years of age before he received ordination, and the service appears to have been performed with some degree of privacy, as it is, we believe, not known when or where it was performed, and only that the bishop from whose hands he received it was not a bishop of the English Church, but the bishop of Galloway in Scotland, Dr. Thomas Sydserf. All the supposed irregularities and imperfections of his early religious history—for amongst other things it was even asserted that he had never been baptised—were brought before the public by the non-jurring party, when they saw him elevated to the primacy from which Sancroft had retired.

It is said by his biographer, Dr. Thomas Birch, that he was not perfectly satisfied with the terms of ministerial conformity required by the Act of 1662, which restored the Episcopal Church of England; yet on the whole he judged it proper to accept of the terms, and to become a regular and conformable minister of that Church.

He was for a short time curate at Cheshunt, and also for a short time rector at Ketton in Suffolk, a living to which he was presented by Sir Thomas Barnardiston, one of his Puritan friends. But he was soon called to a wider sphere of duty, being appointed in 1664 the preacher at Lincoln's Inn, and lecturer at St. Lawrence's church in the Jewry. Here it was that those sermons were preached which attracted crowds of the most accomplished and the learned of the time, and which have been since read and studied by many succeeding divines of eminence, and are at this day the basis of his fame.

The course of his preferment in the Church during the reign of Charles II. was—1669, a prebendary in the church of Canterbury; 1672, dean of Canterbury; 1675, a prebendary of the church of St. Paul; and 1677, a canon residentiary in the same cathedral. But as soon as King William was established on the throne he was made dean of St. Paul's and clerk of the closet; and in April 1691, he was nominated by the king to the archbishopric of Canterbury, an appointment which appears to have been received by him with reluctance, and which exposed him to no small share of envy from very different parties. The truth is, that besides his eminent merits as having been the ablest opposer both of popery and irreligion, in a reign when the tendencies of too many persons in exalted stations were in one or other of these directions, he had a strong personal interest in the new king's affections, who is said, on credible authority, to have declared that there was no honester man than Dr. Tillotson, nor had he ever a better friend. He was archbishop only three years and a half, dying November 22d, 1694. He was interred in the church of St. Lawrence Jewry, which had been the chief scene of his high popularity.

Tillotson died poor. He had survived both his children; but he left a widow, who was a niece of Cromwell and granddaughter of Bishop Wilkins, without any provision except the copyright of his works, which it is said produced 2500*l.* The king granted her a pension, first of 400*l.*, and afterwards of 200*l.* more, which she enjoyed till her death in 1702.

An account of the Life of Dr. Tillotson was published in 8vo, 1717. There is a much larger Life of him by Dr. Birch, prefixed to an edition of the works of Tillotson, and published also in an 8vo volume, the second edition of which was printed in 1753, containing additional matter. There is also an account of him in Le Neve's 'Lives of the Protestant Archbishops of England.' Birch's edition of the Works is in 3 vols. folio, 1752.

TILLY, or TILLI, JOHN TSERCLAS, COUNT OF, was the son of Martin Tserclas, of Tilly. The Tserclas, whose name is also written Tserclaes, were an old patrician family of Brussels; John, a member of this family, acquired, in 1448, the lordship of Tilly, in South Brabant. John Tilly was born in 1559, at the castle of Tilly, and he early entered the order of Jesuits, from whom he acquired that spirit of fanaticism, of blind obedience, and of absolute command, which distinguished him during his whole life. He soon abandoned his ecclesiastical profession, and entered the army of Philip II., king of Spain and lord of the Netherlands, and he learned the principles of war under Alba, Requesens, the governor of the Netherlands, Don

Digitized by Google

Juan of Austria, and Alexander Farnese. In the war of the Spaniards against the Protestant inhabitants of the northern Netherlands he acquired that hatred of heretics and that warlike enthusiasm for the Roman Catholic religion, which became one of the most prominent features of his character. Towards the end of the 16th century he entered the service of the Emperor Rudolph II., and distinguished himself, first as lieutenant-colonel, and afterwards as colonel and commander of a regiment of Wallons, in the wars against the Hungarian insurgents and the Sultans Murad III. and Ahmed I. After the peace of Sitvatorok in 1606, between Rudolph II. and Ahmed I., he was appointed commander-in-chief of the army of Maximilian, duke of Bavaria, which was in a very disorganised state. In 1609 Tilly commanded the expedition against Donauwerth, an imperial town which had been put under the ban for having persecuted the Roman Catholics, and which surrendered to Tilly without defence. The Liga, or the union of the Roman Catholic states in Germany, appointed him commander-in-chief of their troops, and he held this high office until his death. Tilly gained the first great victory in the Thirty Years' War, which broke out in 1618. After having conquered the Upper Palatinate with the troops of the Liga and those of the Duke of Bavaria, he proposed to the Imperial generals to pursue the army of Frederick, king of Bohemia, instead of taking winter-quarters and thus losing all the fruits of their conquests. Warfare in winter was, in the 17th century, a very unusual thing, and Tilly met with much opposition to his plan; but at last the Imperial generals consented to continue the war. Tilly attacked the Bohemians, who had taken up a fortified position on the Weisse Berg, near Prague, and in a few hours the Bohemian army was nearly destroyed (8th of November 1620), while only seven of Tilly's Bavarians were killed. Several of the Bohemian nobles, who lived at Prague or resided in their castles, were warned by Tilly to fly if they would avoid the vengeance of the emperor; but they paid no attention to this generous advice, and were surprised: twenty-seven of them were beheaded.

After the brilliant victory on the Weisse Berg, Tilly hastened to the Rhine for the purpose of preventing the Count of Mansfeld from joining the margrave of Baden. He succeeded in this object by his skilful manœuvres. The margrave of Baden-Durlach was attacked in the defiles of Wimpfen, and defeated, after an heroic resistance (1622). On the 2nd of June 1622, he defeated Christian of Halberstadt at Höchst; he pursued Christian and Mansfeld to Westphalia; defeated them at Stadt-Loo, near Münster, in a battle which lasted three days (4th to the 6th of August 1623), and forced them both to disband their troops and to take refuge in England. For this victory at Stadt-Loo, Tilly was created a count of the empire. With extraordinary skill Tilly first weakened and then destroyed the army of King Christian IV. of Denmark; but the principal glory of this campaign was earned by Waldstein, who after having joined Tilly on the banks of the Lower Elbe, persuaded Tilly to turn his arms against Holland, and to leave him the conquest of Denmark. After Waldstein had been deprived of his command in 1630, and Gustavus Adolphus, king of Sweden had landed in Germany, Tilly was appointed field-marshal and commander-in-chief of the imperial army. He appreciated so justly the military talents of his new opponent, that in the assembly of the electors of Ratisbon he declared Gustavus Adolphus to be so great a commander, that not to oppose him was as honourable as to gain victories over other generals.

The first great event of the new campaign wee the capture of Magdeburg, on the 10th of May 1631. The Croats and the Walloons in the imperial army committed unheard-of cruelties against the unhappy inhabitants; 30,000 of them were killed, and the town was totally destroyed after three days' plunder. It has generally been believed that some imperial officers besought Tilly to stop the atrocities of the soldiers, and that he coolly answered, "Let them alone, and come back in an hour." But this appears to be a mere invention, and however severe Tilly was, he cannot be charged with having urged the commission of cruelty, although he considered the plunder of a conquered town as the fair reward of the soldier. On the 14th of May Tilly made his entrance into the smoking ruins of Magdeburg. In a letter to the emperor he said that since the destruction of Troy no such problem there had been no such spectacle as that which Magdeburg presented. Six months later Tilly, who was in a fortified camp at Breitenfeld near Leipsig, was forced, by the impetuosity of his lieutenant, Pappenheim, to engage in battle with Gustavus Adolphus before his reinforcements had arrived. Tilly himself was successful in his attack on the left wing of the Swedes, which was broken, and the elector of Saxony, who commanded it, fled as far as Eilenburg. But Gustavus Adolphus, who had beaten the left wing of the Imperialists, under the command of Pappenheim, despised the cowardice of the Saxons; after a long and bloody struggle the imperial army was routed. When Tilly saw the flight of his soldiers, he swore that he would not survive the day on which he, the victor in thirty-six battles, was to fly for the first time in his life. Alone on the field the old field-marshal, bleeding from three wounds, shed tears of despair, and looked for death as his only consolation. However Duke Rudolph of Saxe-Lauenburg persuaded him to withdraw; and Tilly, putting himself at the head of four regiments of veterans, fought his way through the main body of the Swedish army. He narrowly escaped from the bold attack of a Swedish captain, called 'Long-Frite,' who was killed by a pistol-shot at the moment when he was seizing the field-marshal (17th of September 1631). After the loss of the battle of Leipsig, fortune abandoned Tilly for ever. Although he afterwards succeeded in driving the Swedes from Franconia, Gustavus Adolphus compelled him to retire beyond the Lech. In order to prevent the Swedes from penetrating into Bavaria, Tilly took up a very strong position near Rain, on the right bank of that river. Gustavus Adolphus, having arrived on the left bank opposite Rain, opened a fire from all his batteries upon the Bavarian camp, while his pontooniers endeavoured to construct a bridge over the river (5th of April 1632). Tilly made a most active resistance, but a ball broke his thigh, and he was removed from the field and carried to Ingolstadt. After the fall of Tilly, the elector of Bavaria abandoned his invincible position, and the Swedes crossed the river. Tilly died a few days after the battle, in his seventy-third year, without leaving any issue.

Tilly was a little ugly man, with red hair, large whiskers, a pale face, and piercing eyes. He continued to lead a monastic life in the midst of the noise and the licence of his camp; he boasted that he had never touched wine nor women; he spoke little, but thought much; he despised honours and money; the emperor wished to confer the dnchy of Brunswick-Calenberg upon him, but Tilly refused it, and he died poor.

(Julius Bellus, *Laurea Austriaca*; Breyer, *Geschichte des Dreissigjährigen Krieges*; Schiller, *Geschichte des Dreissigjährigen Krieges*; Leo, *Universal-Geschichte.*)

TIMÆUS (*Τίμαιος*), the son of Andromachus, was born at Tauromenium in Sicily, whence he is sometimes called a Tauromenian, and sometimes a Sicilian, to distinguish him from other persons of the same name. The year of his birth was B.C. 352. He was a disciple of Philiscus of Miletus, who had himself been instructed by Isocrates. He was driven from his native country by Agathocles, the tyrant of Syracuse, whereupon he went to Athens. This seems to have happened in B.C. 310, when Agathocles, after the battle of Himera, and before taking his army over to Africa, confiscated under various pretexts the property of his wealthy subjects, and endeavoured to secure his possessions in Sicily by putting to death or sending into exile such as he thought ill-disposed towards him. (Diodorus Siculus, *x.* 4.) Timæus spent fifty years at Athens in reading and studying. (Polybius, xii. 25.) About B.C. 260, when Athens was taken by Antigonus, Timæus returned to his native country, either to Tauromenium or to Syracuse, where he spent the remainder of his life, and died (B.C. 256) at the advanced age of ninety-six.

Timæus wrote a great historical work, the main subject of which was a history of Sicily. It began at the earliest times, and brought the events down to Olympiad 129 (B.C. 264), where the work of Polybius begins. (Polybius, i. 5.) How many books the history contained is uncertain, though we know that there were more than one. It appears to have been divided into large sections, each of which formed in itself a separate work, whence they are spoken of by several writers as so many independent works. Thus one section bore the title of Ἀρχαιολογία Ἑλληνική, and contained the early history of Sicily in connection with that of Italy; another was called Ἱστορίαι καὶ Ἑλλήνικαι, and contained the history of Sicily and Greece during the time of the Athenian expeditions to Sicily. Another part again contained the history of Agathocles; and the last the history of Pyrrhus, especially his campaigns in Italy and Sicily. This last section was, according to the testimony of Cicero ('Ad. Fam.,' v. 12), a separate work, though, as regards the period which it comprehended, it may be viewed as a continuation of the great historical work.

The history of Timæus, which, with the exception of a considerable number of fragments, is now lost, was commenced by him during his exile at Athens, and at a very advanced age, but he did not complete it till after his return to his own country; and it was here that he added the history of the last years of the reign of Agathocles, and wrote the history of Pyrrhus. As regards the character and value of the work the ancients do not agree. Polybius is a vehement opponent of Timæus, and complains of his ignorance of political as well as military affairs; he further states that Timæus made blunders in the topography even of places and countries which he must have visited. His knowledge, he says, was altogether derived from books; his judgment was puerile; and the whole work bore strong marks of credulity and superstition. But this is not all that Polybius blames: he even charges Timæus with wilfully perverting the truth. The fault which Timæus himself had for censuring others is said to have drawn upon him the nickname of Epitimæus ('faith-finder'). (Athenæus, vi. 272.) Most parts of this severe criticism of Polybius may be perfectly just; but in regard to others we should remember that these two historians entertain their works with such totally different views, that the work of Timæus, who knew the world only from his books, must in many respects have appeared absurd to the author of a 'pragmatical' history, and to a statesman and general like Polybius. But the loss of the work of Timæus, even if he did no more than make an uncritical compilation of what others had told before him, is one of the greatest in ancient history. Other ancient writers, such as Diodorus, Agathachides, Cicero, and others judge far more favourably of Timæus. The style of the work, as far as we can judge from the fragments, is justly censured by some ancient critics for its rhetorical and declamatory character; although others, like Cicero ('De Orat.,' ii. 14; 'Brutus,' 95),

Digitized by Google

speak of it with praise. Timæus is the first Greek historian who introduced a regular system of chronology—that is, he regularly recorded events according to Olympiads and the archons of Athens; and although in the early period of his history his want of criticism led him into gross chronological errors, he set the example which others found very useful and convenient. It must have been with a view to an accurate study of chronology that he wrote a work on the victors in the Olympian Games, of which we still possess a few fragments.

The fragments of Timæus are collected in Göller's work, 'De Situ et Origine Syracusarum,' p. 207, &c., which also contains (pp. 179-206) an elaborate dissertation on the life and writings of Timæus. The fragments are also contained in C. and T. Müller, 'Fragmenta Historicorum Græcorum,' Paris, 1841, pp. 193-233. Compare Vossius, *De Historicis Græcis*, p. 117, edit. Westermann; Clinton, *Fast. Hellen.*, iii., p. 489, &c.

TIMÆUS (*Τίμαιος*), of Locri, a Pythagorean philosopher, was a contemporary of Plato, who is mentioned among his pupils, and is said to have been connected with him by friendship. (Cicero, 'De Finibus,' v. 29; 'De Re Publ.,' i. 10.) There exists a work, *Περὶ τῆς τοῦ κόσμου ψυχῆς* ('De Anima Mundi,' or on the Soul of the Universe), written in the Doric dialect, which is usually ascribed to Timæus the Locrian. It contains a brief exposition of the main ideas which are developed in the 'Dialogue' of Plato, which is called after him Timæus. (Tennemann, 'System der Platonischen Philosophie,' i. 93, &c.) Separate editions of it have been published by D'Argens, 8vo, Berlin, 1762, with a French translation; and by J. J. de Gelder, 8vo, Leyden, 1836.

Louis Timæus of Locri is said by Suidas to have also written the Life of Pythagoras; but the usual carelessness of Suidas renders this a doubtful point, as he may possibly have confounded the Locrian with the Sicilian Timæus, who in his great historical work must have treated of the History of Pythagoras at considerable length.

(Fabricius, *Biblioth. Græc.*, iii. 94, &c.; Göller, *De Situ et Origine Syracusarum*, p. 200, &c.)

TIMÆUS, a Greek sophist, who, according to the supposition of Ruhnken, lived in the 3rd century of the Christian era. Concerning his life nothing is known; his name has only come down to us in connection with a vocabulary containing the explanation of words and phrases which occur in the writings of Plato. It bears the title *Λέξεις τῶν τοῦ Πλάτωνος λέξεων*, and is dedicated to one Gentianus, of whom likewise nothing is known. Whether we possess the genuine and complete Vocabulary of Timæus is doubtful; and from the title, as well as from certain articles in it which have no reference to Plato, and must undoubtedly be regarded as interpolations, one might feel inclined to consider the work as it now stands as an abridgment of the Glossary of Timæus; if Photius, who must have had this latter work before him, did not describe it as a very little work (*βραχὺ κομμάτιον ἐν ἐπὶ λόγῳ*). But notwithstanding its brevity, the work is very valuable; and Ruhnken owns that he has not discovered in it a single instance of a word or a phrase being explained incorrectly. There is only one manuscript of this Glossary, which appears to have been made in the 10th century of our era, and which was unknown until Montfaucon drew attention to it. It was first edited, with an excellent commentary, by Ruhnken, at Leyden, 8vo, 1754; a second and much improved edition appeared in the same place, 8vo, 1789. Two other editions have since been published in Germany, with additional notes by G. A. Koch (8vo, Leipzig, 1828 and 1833).

Suidas (*s. v. Τίμαιος*) ascribes to Timæus, the Sicilian historian, a rhetorical work, called *Συναγὼγ ἀφορισῶν λεξικῶν*, in 63 books, which Ruhnken, with great probability, ascribes to Timæus the Sophist, who wrote the Glossary to Plato.

(Ruhnken, *Præfatio ad Timæi Glossarium Platonicum.*)

TIMANTHES, a native of Sicyon or of Cythnos, was one of the most celebrated painters of Greece; he was contemporary with Zeuxis and Parrhasius, and lived about B.C. 400. The works of Timanthes were distinguished particularly for their invention and expression, and one of the chief merits of his invention was, that he left much to be supplied by the imagination of the spectator. There is a remark in Pliny ('Hist. Nat.,' xxxv. 36), probably a quotation, which bestows the highest praise upon Timanthes: it says, though in execution always excellent, the execution is invariably surpassed by the conception. As an instance of the ingenuity of Timanthes' invention, the same writer tells us of a picture of a sleeping Cyclops, painted upon a small panel, but in which the painter had conveyed a perfect idea of the giant's huge size, by adding a few satyrs measuring his thumb with a thyrsus.

Though Timanthes was evidently one of the greatest painters of antiquity, ancient authors have mentioned only five of his works: Pausanias makes no mention of him at all, and Cicero classes him among the painters who used only four colours. He painted a celebrated picture of the stoning to death of the unfortunate Palamedes, the victim of the ignoble revenge of Ulysses for having proclaimed his apparent insanity to be feigned—a subject worthy of the pencil of a great master. This picture is said to have made Alexander shudder when he saw it at Ephesus. (Tzetzes, 'Chil.,' viii. 198; Jenius, 'Cat. Artif.,' v. 'Timanthes.') Timanthes entered into competition with Parrhasius at Samos, and gained the victory; the subject of the paintings was the contest of Ajax and Ulysses for the arms of Achilles [PARRHASIUS.] His most celebrated work however was that with which he bore away the palm from Colotes of Teos; the subject was the Sacrifice of Iphigenia; and perhaps no other work of ancient art has been the object of so much criticism, for and against, as this painting, on account of the concealment of the face of Agamemnon in his mantle. The ancients have all given the incident their unqualified approbation, but its propriety has been questioned by several modern critics, especially by Falconet and Sir Joshua Reynolds; Fuseli, however, in one of his elaborate and ascent criticism in his first lecture, has amply justified the conception of the painter. The Sacrifice of Iphigenia was given as the subject of a prize-picture to the students of the Royal Academy in 1778, and all the candidates imitated the 'trick' of Timanthes, as Sir Joshua Reynolds terms it, which was the origin of the criticism upon the subject in his eighth lecture. He says, "Supposing this method of leaving the expression of grief to the imagination to be, as it was thought to be, the invention of the painter, and that it deserves all the praise that has been given it, still it is a trick that will serve but once; whoever does it a second time will not only want novelty, but be justly suspected of using artifice to evade difficulties."

The shallow remark of Falconet about Timanthes' exposing his own ignorance by concealing Agamemnon's face, is scarcely worthy of an allusion. It may be questioned whether Agamemnon, under such circumstances as he was placed, could have been well or even naturally represented in any other way: although many things might combine to render his presence at the sacrifice absolutely necessary, still it is not to be supposed that he could calmly stand by and be an unmoved witness of his own daughter's immolation; notwithstanding his firm conviction that his attendance was necessary to sanction the deed, he could not look upon it, it would be unnatural. The criticism of Quintilian, Cicero, and others, that the painter, having represented Calchas sorrowful, Ulysses much more so, and having expressed extreme sorrow in the countenance of Menelaus, was in consequence compelled to conceal the face of the father, is not more pertinent than that of the modern critics. "They were not aware," says Fuseli, "that by making Timanthes waste expression on inferior actors at the expense of a principal one, they call him an unskilful painter, a squanderer, and not a wise economist." Falconet observes that Timanthes had not even the merit of inventing the incident, but that he copied it from Euripides: upon this point Fuseli remarks, "It is observed by an ingenious critic that in the tragedy of Euripides the procession is described; and Agamemnon's veiling back upon her father, his groans and hides his face to conceal his tears; whilst the picture gives the moment that precedes the sacrifice, and the hiding has a different object, and arises from another impression" (v. 1550).

There are not sufficient data to enable proofs to decide whether Euripides or Timanthes, who were contemporaries about the period of the Peloponnesian war, fell first on this expedient; though the silence of Pliny and Quintilian on that head seems to be in favour of the painter, neither of whom could be ignorant of the celebrated drama of Euripides, and would not willingly have suffered the honour of this master-stroke of an art they were so much better acquainted with than painting, to be transferred to another from its real author, had the poet's claim been prior." As far as regards priority, the Agamemnon was made use of by Polygnotus long before Timanthes or Euripides; in the Destruction of Troy, in the Lesche at Delphi, an infant is holding his hands over his eyes, to avoid the horrors of the scene. (Pausanias, 'Phoc.,' x. 26.)

The fifth work of Timanthes mentioned by the ancients was the picture of a hero, preserved in the time of Pliny in the Temple of Peace at Rome, an admirable performance.

There was another ancient painter of the name of Timanthes; he was contemporary with Aratus, and distinguished himself for a painting of the battle of Pellene, in Arcadia, in which Aratus gained a victory over the Ætolians, Olym. 135.1 (B.C. 240). Plutarch prases the picture; he terms it an exact and animate representation. ('Aratus,' 32.)

TIMBS, JOHN, was born in 1801, at Clerkenwell, London. He was educated under the Rev. Joseph Hamilton, D.D., and his brother, Mr. Jeremiah Hamilton, at New Mariows, Hemel Hempstead, where he issued a manuscript newspaper for the edification of his schoolfellows. At the age of fourteen he was articled to a druggist and subsequently to a Dorking bookseller, at his master's table, he first met Sir Richard Phillips, the publisher, who kindly encouraged him to contribute to his 'Monthly Magazine,' and he furnished to that work 'A Picturesque Promenade round Dorking,' in 1822. In 1821 John Timbs came to London, and for some years served as amanuensis to Sir Richard Phillips, in Blackfriars. About this time Mr. Timbs became acquainted with Mr. Britton, F.S.A., with whom he long maintained an unbroken friendship. In 1825-26 Mr. Timbs published anonymously 'Laconics,' an excellent selection of moral passages, the result of a course of ethical reading. In 1827 he became editor of 'The Mirror,' and so continued until 1838; compiling also an annual volume of records of Discoveries in Science and Art. This design he improved as 'The Year-Book of Facts' in 1839, fitly characterised as "a laborious production of patient industry." Besides contributing to periodicals, Mr. Timbs has written, compiled, and edited at least a hundred volumes. Among his recent and most successful works are—

'Curiosities of London,' 800 pp., 1855; 'Things not generally known familiarly Explained,' and 'Curiosities of History,' 1856: of the two latter works, more than 20,000 copies were sold within twenty months. His 'Arcana of Science' was published yearly from 1823 to 1839 inclusive, and his 'Year-Book of Facts' from 1839 to 1857. Soon after the establishment of the 'Illustrated London News,' in 1842, Mr. Timbs became one of its editors, in which position he continued till 1858. In 1854 he was elected Fellow of the Society of Antiquaries.

TIMOLEON, a Greek general and statesman. He was a native of Corinth, and the son of Timodemus and Timariste. Respecting his youth we know nothing, except that he was no less distinguished by his noble character and his love of freedom than by his illustrious descent. When he had grown up to manhood, his elder brother Timophanes, who had been elected general by the Corinthians, assumed the tyrannis in his native city by the help of his friends and his mercenaries. Timoleon at first only remonstrated with his brother, but when this was useless, he formed a plot against him, and Timophanes was killed. Soon after this event, which threw all Corinth into a state of violent agitation, some extolling the conduct of Timoleon as magnanimous and worthy of a real patriot, others cursing and condemning him as a fratricide, there arrived at Corinth ambassadors from Syracuse soliciting the aid of the Corinthians against its oppressors. This was a favourable opportunity for the party hostile to Timoleon to get rid of his followers, while at the same time it opened to Timoleon a field of action in Sicily, where he might act according to his principles and deliver the island from its oppressors. Timoleon was accordingly sent to Syracuse with a small band of mercenaries, which he himself had raised, B.C. 344. Syracuse was then divided into three parties: the popular party, which had engaged the service of Timoleon; a Carthaginian party; and the party of Dionysius, the tyrant, who had returned from Italy in B.C. 346. Dionysius had already been driven out of a part of the city by Hicetas, the tyrant of Leontini, who supported the Carthaginian party. On the arrival of Timoleon, Hicetas was compelled to withdraw to Leontini, and Dionysius, who was reduced to surrender himself and the citadel to Timoleon, was allowed to quit the island in safety, and he retired to Corinth, in B.C. 343. [DIONYSIUS.] Syracuse had almost become desolate by the successive revolutions and party warfare. During the winter and the spring following his victory over Dionysius, Timoleon endeavoured as much as was in his power to restore the prosperity of the city by recalling those who had been exiled, and by inviting colonists from other parts of Sicily and assigning lands to them. After this he continued to carry on petty warfare partly against the Carthaginians and partly against Hicetas. The Carthaginians in the meantime collected a new army, which they had commanded of 70,000 foot and 10,000 horse, and which was conveyed to Sicily by a large fleet. Timoleon could muster no more than 3000 Syracusans and 5000 mercenaries, but in order to strengthen himself he concluded a peace with Hicetas, some of whose troops now joined his army. He marched out against the enemy, and by his superior generalship he succeeded in gaining a brilliant victory over the Carthaginians on the banks of the river Crimessus, and confined them to the part of Sicily between the river Halycus and the western coast, B.C. 339. After this victory and the conclusion of a peace with Carthage he directed his arms against the tyrants in other towns of Sicily, whom he compelled to surrender or withdraw, partly by the terror of his name and partly by force of arms. Hicetas was made prisoner, and condemned to death by the Syracusans, with his wife and family.

After freedom and the ascendancy of Syracuse were thus restored in the greater part of Sicily, Timoleon directed his attention to the restoration of the prosperity of the towns and the country. The former, especially Syracuse, were still thinly peopled, and he invited colonists from Corinth and other parts of Greece there, and distributed the lands among them. He himself, with the consent of the Syracusans, undertook to revise and amend their constitution and laws, and to adapt them to the altered wants and circumstances of the state. Although it would have been easy for him to establish himself as tyrant and to secure to his descendants the kingly power at Syracuse, he fulfilled the duties of the office entrusted to him with a fidelity which has rarely been equalled. He had no other end in view but the establishment of popular liberty, for which he prepared and trained the people. Some acts of cruelty and apparent injustice with which he is charged, find their excuse in the character of those whom he had to deal with, for the Syracusans at that time were a motley and demoralised people, who could not be managed without Timoleon's assuming at times the very power which it was his wish to destroy. But Syracuse and Sicily felt the benefits of his institutions for many years after his death, and continued to enjoy increasing prosperity.

During the latter part of his life Timoleon was blind and lived in retirement, respected and beloved by the Sicilians as their liberator and benefactor. He died in the year B.C. 337, and was buried in the Agora of Syracuse, where subsequently his grave was surrounded by porticoes and adorned with a gymnasium called the Timoleonteum.

(Plutarch, and C. Nepos, *Life of Timoleon;* and Diodorus Siculus, lib. xvi.)

TIMOMACHUS, a celebrated ancient painter, a native of Byzantium, and said to have been the contemporary of Julius Cæsar. Pliny ('Nat. Hist.,' xxxv. 40) informs us that Cæsar purchased two pictures in encaustic by Timomachus, for eighty Attic talents, about 17,280*l.*; one representing Ajax the son of Telamon brooding over his misfortunes; the other, Medea about to destroy her children: he dedicated them in the temple of Venus Genetrix. These pictures have been much celebrated by the poets; there are several epigrams upon them in the Greek anthology, and they are alluded to by Ovid in the two following lines:—

"Utque sedet vultu fassus Telamonius iram,
Inque oculis facinus barbara mater habet." ('Trist.,' ii. 523.)

(Ajax, the son of Telamon, is seated, showing his anger by his countenance; and the barbarous mother betrays by her eyes her intended crime.)

We learn from Pliny also that the picture of Medea was not finished; its completion was interrupted apparently by the death of the painter, yet it was admired, he says, more than any of the finished works of Timomachus, as was the case likewise with the Iris of Aristides, the Tyndaride of Nicomachus, and a Venus by Apelles, which were more admired than any of the finished works of their respective masters. This picture is noticed also by Plutarch ('De Aud. Poet.,' 3) in a passage where he speaks of the representation of improper subjects, but which we admire on account of the excellence of the execution.

In the common text of Pliny, Timomachus is said to be the contemporary of Cæsar ('Julii Cæsaris ætate'), but Durand, in his 'Histoire de la Peinture Ancienne,' &c., expresses an opinion that the word 'ætate' is an addition of the copyist, for which he assigns several reasons. The conjecture has much in its favour; the price of the pictures, (17,280*l.*) is enormous, if we suppose it to have been paid to a living painter; but on the contrary it is a case with many parallels if we suppose the money to have been paid for two of the reputed masterpieces of ancient painting. The fact of the Medea being unfinished puts it beyond a doubt that the picture was not purchased of the painter himself; and from a passage in Cicero ('In Verr.,' I iv., c. 60) it seems equally clear that both pictures were purchased of the city of Cyzicus; and from the manner in which they are mentioned with many of the most celebrated productions of the ancient Greek artists, it would appear that they were works of similar renown, and were likewise the productions of an artist long since deceased. Timomachus was therefore most probably a contemporary of Paunius, Nicias, and other encaustic painters, about B.C. 300. Pliny himself, elsewhere speaking of Timomachus, mentions him together with the more ancient and most celebrated painters of Greece, with Nicomachus, Apelles, and Aristides, as in the passage above quoted.

Pliny mentions also the following works of Timomachus: an Orestes; and Iphigenia in Tauris; Lecythion, a gymnasiast; a 'cognomentum,' or family picture of Gorgon; two philosophers, with the paintings, about to speak, one standing, the other sitting; and a very celebrated picture of a Gorgon.

TIMON (Τίμων), a Greek poet and philosopher who lived in the reign of Ptolemæus Philadelphus, about B.C. 270. He was the son of Timarchus, and a native of Phlius in the territory of Sicyon. He studied philosophy under Stilpo, at Megara, and under Pyrrho, in Elis. He subsequently spent some time in the countries north of the Ægean, and thence went to Athens, where he passed the remainder of his life, and died in the ninetieth year of his age.

Diogenes Laertius, who has written an account of Timon (ix., c. 12), ascribes to him epic poems, sixty tragedies, satyric dramas, thirty comedies, silli (σίλλοι), and cinædi (κίναιδοι) or licentious songs. The silli however appear to have been the kind of poetry in which he excelled. They were satires directed against the arrogance and pedantry of the learned. Timon wrote three books of silli (Athenæus, vi., p. 251; vii., p. 279), in which he parodied all the dogmatic philosophers of Greece: he himself was a Sceptic. The metre of these poems was the hexameter, and it appears from some lines he took whole passages from Homer which he applied as parodies. In the first book Timon spoke in his own person; in the second and third the form of the poems was that of a dialogue, in which he conversed with Xenophanes of Colophon, who was supposed to have been the inventor of the silli. (Diogenes Laert., lx. 111.) We have only possess a few fragments of these poems, which show that in their way they must have been admirable productions. They are collected in H. Stephanus, 'Poesis Philosophica,' and by Wolke in 'De Graecorum Sillis,' Warsw, 1820; by Paul, 'De Sillis Græcorum,' Berlin, 1821, p. 41, &c.; in Brunck's 'Analecta,' ii. 67; and iv. 139. Respecting the other works ascribed to him we possess no information.

(J. F. Langheinrich, *De Timone Sillographo*, in 3 parts, Lipsiæ, 1720-23.)

TIMON, surnamed the Misanthrope, was a son of Echecratides, and a native of Colyttus, a demos in Attica. (Lucian, 'Timon,' c. 7; Tzetzes, 'Chil.,' vi. 273.) He lived during the Peloponnesian war, and is said to have been disappointed in the friendships he had formed, in consequence of which he conceived a bitter hatred of all mankind. His conduct during the period that his mind was in this state was very extraordinary. He lived almost entirely secluded from society, and his eccentricities gave rise to numerous anecdotes, which were current in antiquity. The sea is said to have separated even his grave, which was on the sea-coast, from the mainland, by forming it into an island and thus rendering it inaccessible. (Plutarch, 'Anton.,' 70; Suidas, s. v. ἀποβρέχει.) The comic poets, such as Pherynichus

Digitized by Google

(Bekker. 'Anecdota,' p. 344). Aristophanes ('Lysistr., 809, &c.; 'Aves,' 1548), Plato, and Antiphanes, ridiculed him in their comedies. Antiphanes wrote a comedy called 'Timon,' which perhaps furnished Lucian with the groundwork for his dialogue in which this misanthrope acts the most prominent part. His name has remained proverbial to designate a misanthrope down to the present day, and is immortalised by the genius of Shakspere.

TIMOTEO DA URBINO, or DELLA VITE, a celebrated Italian painter of the Roman school, was born at Urbino in 1470, or rather 1480. In about his 20th year, by the advice of a brother living in Bologna, he repaired to that city to learn the business of a jeweller, &c.; but displaying a power of design worthy of a greater purpose, he devoted himself to painting, and according to Malvasia attended the school of Francia in Bologna for about five years: Vasari however says that Timoteo was his own master. At the age of twenty-six he returned to Urbino, where in a short time he so far distinguished himself, says Vasari, as to receive an invitation from his cousin Raffaelle in Rome to repair thither, and assist him in some of his extensive works. This statement creates a difficulty not easy to be cleared up: Vasari says that Timoteo died in 1524, aged fifty-four; yet we find him in his twenty-seventh or twenth-eighth year, consequently in 1497 or 1498, going to Rome to assist Raffaelle, who however did not go to Rome himself until 1508: 1524 was very probably therefore a misprint for 1534 in the original edition of Vasari, and the error has found its way into all the later works. By this supposition and by allowing a year or two to have elapsed between his return to Urbino and his visit to Rome, the various dates may be easily reconciled, and what Vasari says about Timoteo's assisting Raffaelle to paint the Sibyls in the Chiesa della Pace, which were painted in 1511, becomes quite consistent. He did not remain long in Rome, but returned to his native place at the solicitation of his mother, much to the disgust of Raffaelle. He remained however long enough to learn to appreciate and to imitate the beauties of Raffaelle's style, and to become one of the most distinguished painters of the Roman school; yet there are in all his works traces of the style of Francia, a certain timidity of design, a delicacy of execution, and a richness of colouring. His chief works are at Urbino, at Forli, and in the neighbourhood; he executed many of them in company with Girolamo Genga, as a chapel at Forli and part of the paintings in the chapel of San Martino in the Cathedral of Urbino; the altar-piece was painted entirely by Timoteo: he executed also many detached works in fresco at Castel Durante. Further, in Urbino there are—in the Cathedral, a Magdalen; in San Bernardino, outside the city, a celebrated picture of the Annunciation of the Virgin; and another fine picture with several figures in Santa Agata; and in the residence of the Dukes of Urbino, an Apollo and two of the Muses, extremely beautiful; besides many other works. Vasari remarks that he left some works unfinished at his death, which were afterwards completed by others, and he adds that there could not be a more satisfactory evidence of the general superiority of Timoteo. He was of a cheerful disposition, and used to play every kind of instrument, but especially the lyre, which he accompanied with his voice, with extraordinary grace and feeling. Lanzi says that the Conception at the Observantines at Urbino, and a 'Noli me tangere' in the church of Sant' Angelo at Cagli, are perhaps the best of the works that remain to him. The same writer observes that Pietro della Vite, the brother of Timoteo, also a painter, was probably the priest of Urbino mentioned by Baldinucci (vol. v.) as Raffaelle's cousin and heir.

TIMOTHEUS (Τιμόθεος) of Miletus, a Greek musician and lyric poet. The time when his reputation had reached its height was about the year B.C. 398. (Diodorus Sic., xiv. 46.) He was a contemporary of Euripides, and spent the last year of his life at the court of Macedonia, where he died in B.C. 357, at the advanced age of 97. He increased the number of the strings of the lyre to eleven, an innovation which was considered by the Spartans, who would not go beyond the number of seven strings, to be a corruption of music, and a decree was passed at Sparta, which is still extant in Boethius, condemnatory of his innovation. (Plutarch, 'De Mus.,' p. 1141, ed. Frankf.; Athenæus, xiv. p. 636.) Suidas mentions a great number of poetical compositions of Timotheus, which were in their time very popular in Greece; among them are nineteen nomes, thirty-six proomia, eighteen dithyrambs, and twenty-one hymns. All these works are now lost, with the exception of a few fragments which are preserved in Athenæus and the grammarians.

(Vossius, *De Poetis Græcis*, p. 46; Bode, *Geschichte der Lyrischen Dichtkunst der Hellenen*, vol. ii. p. 305, &c.)

TIMOTHEUS (Τιμόθεος), an Athenian poet of the so-called middle comedy. Suidas mentions the titles of several of his plays, and Athenæus (vi. p. 243) has preserved a fragment of one which bore the title 'The Little Dog.' (Compare A. Meineke, *Historia Critica Comicorum Græcorum*, p. 428.)

TIMOTHEUS, son of Conon of Athens. He inherited from his father a considerable fortune, and if we may judge from his intimacy with Isocrates, Plato, and other men of talent, and from the manner in which others speak of him, he received a most excellent education; but no important particulars are known respecting his earlier life. The first time that he comes prominently forward in the history of his country, was during the war between Thebes and Sparta. In the

year B.C. 375, after the battle of Naxos, the Thebans, who were threatened with an invasion by the Lacedæmonians, requested the Athenians to avert this danger by sending a fleet round Peloponnesus, as they had done at the beginning of the Peloponnesian war. The request was readily complied with, and Timotheus was appointed commander of a fleet of sixty ships, with which he was to sail round Peloponnesus and along the western coast of Greece. In this expedition he first took Corcyra, which he treated with the utmost mildness and without making any use of his right as conqueror. The consequence was, that he had very easy work with Cephalonia and Acarnania, and that even Alcetas, king of the Molossians, was induced to join the Athenian alliance. But while Timotheus was thus reviving the power of Athens in the part of Greece, the Lacedæmonians sent a powerful armament by land, under the command of Nicolochus. A battle was fought near the bay of Alyzia, in which the Spartans were defeated. Soon after Nicolochus offered another battle, but as the fleet of Timotheus had suffered too much to allow him to accept it, Nicolochus raised a trophy. But Timotheus soon restored his fleet, which was increased by reinforcements of the allies to seventy ships, against which Nicolochus could not venture anything. The original object of the expedition however was now accomplished, as the Spartans had not been able to make their projected invasion of Bœotia, and Thebes was thus enabled to direct her forces against the Bœotian towns which asserted their independence. Timotheus at the head of his large fleet had no means of maintaining it, for Thebes herself had contributed nothing towards it, and Athens, which was not in a very flourishing condition, had been exhausted by all the expenses of the fleet, with the exception of what Timotheus himself had furnished from his private purse. Athens therefore concluded a separate peace with Sparta, and sent orders to Timotheus to return home. On his way thither he landed at Zacynthus a body of exiles who probably belonged to the democratical party of the place, and who had sought his protection. He provided them with the means of opposing and annoying their enemies, the oligarchical party of Zacynthus, which was in alliance with Sparta. The oligarchs sent envoys to Sparta to complain, and Sparta sent orders to Athens to remonstrate against the conduct of her admiral. But no satisfaction was given, as the Athenians would not sacrifice the Zacynthian exiles for the purpose of maintaining the peace. The Spartans therefore looked upon the peace as broken, and prepared for new hostilities.

Shortly after these occurrences Corcyra was hard pressed by the Peloponnesian fleet, and implored the Athenians for protection. Timotheus, who, on his former expedition, had given such great proofs of skill and talent, was again entrusted with the command of sixty ships, and Corcyra, which was itself in a flourishing condition, had not the means to equip them, and Timotheus in the spring of B.C. 373 sailed to the coasts and islands of the Ægean to request the Athenian allies to provide him with the means of assisting the Corcyræans. He appears to have received some support from Bœotia (Demosth. 'in Timocr.,' p. 1139), and in Macedonia he formed friendly connections with King Amyntas. His proceedings however went on very slowly, and apparently without much success, for he was of too gentle a disposition to force the allies to furnish what they could not give conveniently. At last however he had sailed as far as the island of Calaurea, where his crews began to murmur because they were not paid. The state of affairs in Corcyra had grown worse every day. His enemies at Athens seized upon the slowness of his progress as a favourable opportunity for aiming a blow at him. Iphicrates and Callistratus came forward as accusers of him, whereupon he was recalled, and the command of the fleet given to his accusers and Chabrias. His trial was deferred till late in the autumn; but he was acquitted, not indeed on account of his innocence, though it was well attested, but on account of the interference of Alcetas, the Molossian, and Jason of Pheræ, who had come to Athens to protect him.

In B.C. 361, after the removal of his rival Iphicrates, Timotheus received the command of the fleet on the coast of Macedonia. He took Potidæa and Torone from Olynthus, and these conquests were followed by the reduction of all the Chalcidian towns. Amphipolis he proceeded to the Hellespont, where, with the assistance of Ariobarzanes, he again gained possession of several towns. In the year following he commenced his operations against Amphipolis, in which however he had no success at all, probably on account of the interference of the Macedonians, who supported the town, and Timotheus was nearly compelled to take to flight.

In the year B.C. 357 Timotheus and Iphicrates, who had for some time been reconciled to each other through the marriage between a daughter of the former and a son of the latter, obtained the command of a fleet of 60 sail against the rebellious allies of Athens, especially against Samos. But the Athenian arms were unsuccessful, and a treaty was concluded between the belligerents, which put an end to the Social War. The Athenian generals however, Timotheus, Iphicrates, and Menestheus, were charged with having caused the ill-luck of the Athenians, and brought to trial. Timotheus in particular was accused of having received bribes from the Chians and Rhodians. His colleagues, who were themselves in the greatest danger, were so convinced of his innocence, that they declared they were willing to take all the responsibility upon themselves. But he was nevertheless condemned to pay a fine of 100 talents. As he was unable to pay the

Digitized by Google

sum, he withdrew to Chalcis in Eubœa, where he died soon after, in B.C. 254. The injustice of this sentence was tacitly acknowledged by the Athenians after the death of Timotheus, by the manner in which his son Conon was allowed to settle the debt of his father: nine-tenths of the penalty were remitted, and the other tenth Conon was permitted to expend in repairing the city walls.

Timotheus was no less distinguished as a man than as a general. He was of a very humane and disinterested character. He sacrificed all his property in the service of his country, while other men of his age used public offices only as a means of enriching themselves. When Alcetas and James came to Athens to petition him, they lodged in his house, at which time he was so poor, that he was obliged to borrow furniture to receive his illustrious friends in a manner worthy of their station. Even his enemies, when they came to know him, could not help feeling attachment and esteem for him.

(Xenephon, *Hellen.*, v. 4. 63, &c., vi. 2. 11, &c.; Isocrates, *De mutatione;* C. Nepos, *Timotheus;* Diodorus Sic., xv. and xvi.; compare Thirlwall and Grote, *Histories of Greece.*)

TIMOTHY, to whom the Epistles of St. Paul, known by his name, are addressed, was a native of Lystra, a city of Lycaonia, in Asia Minor. His father was a Greek, or Gentile, but his mother, Eunice, was a Jewess. Both his mother and grandmother Lois were Christian believers (2 Timoth., i. 5), who were probably converted to the faith by the preaching of Paul and Barnabas on the occasion of their first apostolical journey among the Gentiles. Whether Timothy was himself converted by St. Paul or by the teaching of his mother does not appear; but it is certain that she had taken great pains with her son's education, for from a child, as St. Paul says, "he had known the Holy Scriptures." (2 Timoth., iii. 15.) His devotion to his sacred trust was so ardent, and the progress he made in the knowledge of the gospel so great, that he gained the esteem and good word of all his Christian acquaintance. Accordingly when St. Paul paid his second visit to Lystra, the believers both of that city and Iconium commended him so highly to Paul, that he "would have Timothy go forth with him" as the companion of his travels. Previously to commencing them however St. Paul circumcised Timothy, "because of the Jews," who were numerous and powerful in those parts and likely to take offence at the preaching and ministration of an uncircumcised preacher. (Acts, xvi. 1-3.) He was then solemnly admitted and set apart to the office of an evangelist, or preacher of the gospel, by the elders of Lystra and St. Paul himself laying their hands upon him (1 Tim., iv. 14; 2 Tim. i. 6), though he was probably not more than twenty years of age at the time. From this period (A.D. 46) mention is frequently made of Timothy as the companion of St. Paul in his journeys, as assisting him in preaching the gospel, and in conveying his instructions to the different Christian churches. His first mission was in company with St. Paul and Silas, when they visited the churches of Phrygia and delivered to them the decrees of the council of elders at Jerusalem, by which the Gentiles were released from the obedience to the law of Moses as a requisite for salvation. From Phrygia he proceeded in the same company to Troas, and thence to Macedonia, where he assisted in founding the churches of Philippi, Thessalonica, and Berœa, at the last of which cities he and Silas were left when St. Paul was driven from Macedonia by the persecution of the Jews in that country and retired to Athens. In this city St. Paul was subsequently joined by Timothy (1 Thess. iii. 1), who gave to him an account of the afflicted state of the Thessalonian Christians as induced him to send Timothy back to "establish and comfort them, concerning their faith:" a charge both of difficulty and danger. From Athens St. Paul went to Corinth, where he was joined by Timothy and Silvanus, who both assisted him in converting the Corinthians and establishing the Corinthian church, for a period of a year and a half. (2 Cor., i.) When St. Paul left Corinth, Timothy appears to have accompanied him on his return to Asia, where they resided nearly three years, without interruption, except during the visit of St. Paul to Jerusalem, to keep the feast there, in which however it does not appear that he was accompanied by Timothy. Towards the expiration of their residence at Ephesus, St. Paul despatched Timothy and Erastus together to precede himself on a journey to Macedonia. (Acts, xix. 22.) It would also seem (1 Cor., iv. 17) that St. Paul at the same time charged Timothy to visit the church of Corinth. On returning from Corinth to Macedonia, Timothy was joined by St. Paul from Ephesus, and henceforward they were frequently together, till Timothy was appointed by St. Paul to govern the Church of Ephesus. In the interval between St. Paul's joining Timothy in Macedonia and the appointment of the latter to the superintendence of the Church at Ephesus, Timothy appears either to have accompanied St. Paul on his first journey to Rome, or to have visited him there. St. Paul, as is well known, was a prisoner at Rome, though under but little restraint, and from Hebrews (xiii. 23) we may conclude that Timothy also suffered imprisonment either at Rome or elsewhere in Italy; and that he was released before St. Paul left that city. The subsequent history of St. Paul and Timothy is not clearly given either in the Acts of the Apostles or the Epistles of the New Testament; but it is reasonable to suppose that when they were both set at liberty, they renewed the journeys made for founding new churches and revisiting old. (See Hebrews, xiii. 23; Philipp., i. 1; ii. 19; 1 Tim., i. 3)

Timothy was eventually left with the charge of the Church at Ephesus, where St. Paul had made his headquarters in Asia. How long Timothy exercised this office is not known, nor can we determine the time of his death. An ecclesiastical tradition relates that he suffered martyrdom, being killed with stones and clubs (A.D. 97) while he was preaching against idolatry in the neighbourhood of the temple of Diana at Ephesus. His supposed relics were removed to Constantinople, with great pomp, in 356, in the reign of the Emperor Constantine. Shortly after Timothy's appointment to the superintendence of the Church of Ephesus, St. Paul wrote to him his first Epistle; the date of which was probably about A.D. 64, after St. Paul's first imprisonment at Rome. Some critics indeed assign it to an early a date as 56, supporting their opinion by 1 Tim. i. 3, from which it appears (1.) that Timothy was in Ephesus when the Apostle wrote his first letter to him; (2.), that he had been left there when Paul was going from Ephesus into Macedonia. A careful examination however of the narrative in the Acts will convince the reader that the contemplated journey into Macedonia, of which the Apostle speaks (1 Tim. i. 3), is some journey not mentioned in the Acts, and therefore subsequent to St. Paul's release from his first confinement at Rome. But whatever doubt there may be as to the date of the first, there is none about the genuineness of either of the two Epistles to Timothy. They have always been acknowledged to be the undisputed production of the Apostle Paul. The object and design of the First Epistle to Timothy, of course such as we might have expected from the relation between St. Paul the writer, and Timothy, to whom it was addressed. It was written with the view of guiding and directing Timothy in his responsible and difficult ministry as the head of the Church at Ephesus, to instruct in the choice and ordination of proper officers, and to warn him against the false teachers (Menander thinks they were Essenes) who had "turned aside" from the simplicity of the gospel, to idle controversies and "endless genealogies," and who, setting themselves up as teachers of the Law of Moses, had insisted upon the necessity of obedience to it as a requisite for salvation.

The Epistle was written from Nicopolis in Macedonia ('Titus,' iii. 12), and not from Laodicea, as the subscription informs us. The undesigned coincidences between it and the Acts of the Apostles are given in Paley's "Horæ Paulinæ," p. 323-333.

The Second Epistle of Paul to Timothy appears from chap. i., vers. 8, 12, 17, to have been written by St. Paul while he was a prisoner at Rome; but whether he wrote it during his first imprisonment, recorded in Acts, xxviii., or during a second imprisonment, has been much questioned. According to the unitid ecclesiastical tradition of the ancient church, it was written during the second confinement. The modern critics, who refer it to the time of the first, are for the most part antiepiscopalians or Romanists: the former being concerned to deny the permanency of Timothy's charge at Ephesus; the latter not knowing what to make of the mention of Peter's name in the same Epistle from Rome. The arguments adduced by Macknight (Preface to 2 Timothy) in support of the opinion of the ancient church are, we think, conclusive. St. Paul, it is generally agreed, returned to Rome after his first imprisonment, early in 63; where, after being kept in bonds as an "evil-doer" for more than a year, he is believed to have suffered martyrdom, in 66. As therefore the Apostle requests Timothy (iv. 21) to come to him at Rome before winter, it was probably written in July or August, A.D. 65; and it is generally supposed that Timothy was at Ephesus when St. Paul addressed it to him.

The immediate design of St. Paul in writing this Epistle was, it would seem, to apprise Timothy of the circumstances that had recently happened to himself at Rome, and to request his immediate presence there. Accordingly we gather from the last chapter of this Epistle, that St. Paul was closely confined as a malefactor for some crime laid to his charge; that when he was brought before the Roman magistrates to make his first answer, "no man stood by him, but all men forsook him;" that only Luke was with him: that being thus deserted and friendless, he was greatly desirous of seeing Timothy, his dearly beloved son in the gospel," before the "time of his departure," which he knew "was at hand." He therefore requested him to come to Rome immediately, but being uncertain whether he should live to see Timothy again, he gave him in this Epistle a variety of admonitions, charges, and encouragements. This Epistle in fact is an affectionate and affecting sequel to the first, the principal injunctions and warnings of which it repeats, but with additional earnestness and fervour. St. Paul, as if for the last time (chap. i.), conjures Timothy to apply himself with all his gifts of grace to his holy work, to hold fast the doctrine which he had received from him, and not to be ashamed either of the testimony of the Lord or of St. Paul's own sufferings. In chap. iii. St. Paul gives a description of the "perilous times which should come," and which were to be anticipated by every possible opposition in performing the duties of the ministry. To this work, in chap. iv., he exhorted him by a solemn charge before "God and the Lord Jesus Christ, the judge of the quick and the dead." He then depicted his own present state, and his presentiment of an approaching martyrdom; and after requesting the immediate presence of Timothy, concluded by sending to him the greeting of some of the brethren of the Church at Rome. Whether Timothy arrived at Rome in time to find St. Paul alive, does not anywhere appear: the latest authentic information we have concerning him being given in this letter.

The Epistles to Timothy, in conjunction with those to the Thessa-

Digitized by Google

lonians and Titus, are extremely valuable, as furnishing very strong evidence to the truth of many of the facts related in the Acts of the Apostles. The undesigned coincidences between the Second Epistle to Timothy and the Acts are given by Paley, in his 'Horæ Paulinæ,' pp. 339-356. Their value in another respect is thus described by Macknight, Preface to 1 Timothy—'These Epistles are likewise of great use in the church, as they exhibit to Christian bishops and deacons in every age the most perfect idea of the duties of their functions: teach the manner in which those duties should be performed: describe the qualifications necessary in those who aspire to such offices, and explain the ends for which they were instituted, and are still continued in the church.'

TIMUR, SULTAN, TAMERLANE KOTB-ED-DI'N GURGAN SA'HEB-KIRA'N AIBA'NGIR, that is "Sultan Timur, the fortunate, the axis of the faith, the great wolf, the master of time, the conqueror of the world." Timur, a name which frequently occurs among the princes of the Eastern Turks, signifies 'iron' in the Jagatai dialect, and corresponds to the Osmanli 'demir.' Timur was born on the 5th or 25th of Sha'bán, 736 A.H. (A.D. 1335), at Sebz, a suburb of Kesh, a town south-east of Samarkand. He was the son of Túrághai-Nowian, who was chief of the Turkish tribe of the Berlas, which inhabited the district of Kesh. Timur was descended from a younger son of Bardan-Khan Behadir, or Baghatur, whose eldest son, Yesugai, was the father of Genghis-Khan, and he was a direct descendant of Genghis-Khan on the female side. He was consequently of Mongol origin, and, being of royal blood, he held a high rank among that Mongol nobility which was founded by Genghis-Khan among the Eastern Turks. This rank is expressed by the title Kúrgán, which was added to the name of his father. Yet the power of his family was not great. Timur was a soldier at the age of twelve years, and he spent his youth in the continental feuds between the nobles of those different kingdoms and principalities into which the empire of Genghis-Khan was divided by his successors. After the death of his father, his uncle Seifed-din became chief of the Berlas, being the eldest of the family; but a war having broken out between Husein, khan of Northern Khorásán, and Mowerainchir (Mawar-el-nahr), or Jagatai, and Timur-Toglúk, khan of the Getes (Getæ), in Northern Turkistán, young Timur actively supported Husein, and was appointed chief of the tribe of the Berlas in A.H. 763 (A.D. 1361). In this war Timur received a wound in the thigh, in consequence of which he became lame. From this he was called Timur-lenk, or the lame Timur, which has been corrupted by Europeans into Tamerlane, by which name Timur is as well known in Europe as by his real name. Husein rewarded him also with the hand of his sister Turkan, A.H. 765 (A.D. 1363). Notwithstanding these favours Timur intrigued against his protector, and after the death of his wife he openly rebelled against him in A.H. 767 (A.D. 1365). With a body of only 250 horsemen he surprised and took Nakhshab, a town which was defended by a garrison of 12,000 men, among whom there were most probably a great number of traitors. In A.H. 768 (A.D. 1366) he defeated Husein near his capital, Balkh, and this prince was murdered by Nowians, who, seeing their former master forsaken by fortune, endeavoured to obtain the favour of Timur by putting his rival to death. Balkh, which was defended by the adherents of Husein, was taken by storm and destroyed by fire after a siege of three years, A.H. 771 (A.D. 1369), and Timur was proclaimed khan of Jagatai in the same year by the Kouriltai, or the general assembly of the people. He chose Samerkand for his capital. Husein-Sofi, khan of Kowaresm (Khiwa), having imprisoned Timur's ambassadors, was attacked by Timur, who, after five campaigns, at last succeeded in taking the town of Kowaresm, in A.H. 781 (A.D. 1379). The town was destroyed, and the principal inhabitants, especially artists and scholars, were transplanted to Kesh, which became the second capital of Timur's empire. Previously to this the khan of the Getes, who was master of the country between the Sihun, or Jaxartes, and the Irtish, had likewise been compelled to pay homage to Timur, who thus became master of a part of Siberia and of the whole country which we now call Turkistan, and which was formerly known by the name of Great Tartary. After these conquests Timur thought himself strong enough to carry into effect the plan of making himself master of all those countries which had once obeyed his ancestor Genghis-Khan. He first attacked Khorásán, on the north-eastern part of Persia, which was then divided between Gaiyáth-ed-din-Pir-Áli, who resided at Herat, and Kojah-Ali-Murjid, whose capital was Sebzewár. Kojah-Ali Murjid, whose dominions were on the boundaries of Jagatai, paid homage to Timur as soon as he was summoned, but the master of Herat prepared a vigorous resistance. Timur took Herat by storm, but did not destroy it. He carried off as his only trophy the zone golden of the town, which was adorned with beautiful workmanship, and which he ordered to be transported to his birthplace, Kesh. The larger towns of Khorásán surrendered without resistance, and Timur was only checked by several strong fortresses, such as Shaburkán, Kabushán, and especially Kálkálán, between Balkh and Kelát, in the mountains of the Hindu-Kush. When these fortresses fell, all Khorásán was under his yoke. The inhabitants of Sebzewár having revolted, Timur took the town by storm: two thousand of the inhabitants were placed alive one upon the other, till they formed a mass like a tower, and each layer of human beings was fastened to the rest by mortar, as if they were so many bricks.

Beginning his career at an age when other conquerors are satisfied with their laurels, Timur had employed twenty years in reflecting on the principles of warfare. He led his armies with the prudent boldness of an experienced general, but not with the superiority of genius. The differences between the numerous successors of Genghis-Khan enabled Timur to attack them one after another, and each was pleased with the fall of his rivals. He employed the same policy in his war against Persia. This country was governed by several princes. Shah-Sheja, of the dynasty of Muzaffer, who reigned in Fars and Southern Irák, or in that part of Persia which was most exposed to any army from the east, submitted to Timur without resistance. The Sultan Ahmed, of the house of the Ilkhans, the master of Northern Irák and Azerbijan, or Western Persia, had alone to sustain the attacks of the Tatars, A.H. 783 (A.D. 1380). Timur entered the dominions of Ahmed by following the coast of the Caspian Sea. In one campaign he conquered the provinces of Mazanderán, Rei, and Rustemdar, and took the towns of Sultanía, Tebríz, and Nakhshiwán. He crossed the Araxes at Julfa on a magnificent bridge, which was strongly fortified on both sides, but which is now destroyed. Kars, now the key of Eastern Turkey, fell into his hands; Tiflis surrendered, and the Prince of Georgia purchased his protection by adopting the Mohammedan faith. The prince of Shirwán sent tribute to the camp of Timur, nine pieces of each thing sent (nine was a holy number among the Mongol princes), but only eight slaves; the ninth was himself. On these terms he was allowed to remain in possession of his dominions. Taberían, king of Armenia, submitted to Timur without any resistance; but Kára-Yusuf, prince of Ispahán, and master of the country between Ispahán and Wan, prepared to defend himself. A body of Timur's army marched against him, and took the fortresses of Akhlat and Adiljuwáz by storm; and Timur himself conducted the siege of Wan. This famous fortress fell after a siege of twenty days, the garrison was cast from the steep rock on which the town is situated, and the fortifications were razed by ten thousand miners and pioneers. Ready to cross the Carduchian Mountains and to descend into the valley of the Upper Tigris, Timur was obliged, by a revolt of the inhabitants of Ispahán, to march suddenly to Southern Persia. He took Ispahán by a general assault: he spared the lives and the honours of artists and scholars, but the remainder of the city was destroyed, and the inhabitants were massacred. More than 70,000 heads were laid at the feet of the conqueror, who ordered his soldiers to pile them up on the public places of the town, A.H. 787 (A.D. 1387).

Satisfied with having conquered the greater part of Persia, Timur turned his arms towards the north, and overran the kingdom of Kiptchak, which was then governed by Toktamish-Khan. This war lasted from A.H. 789 to 799 (A.D. 1387 to 1396). We shall here only mention the defeat of Timur in the campaign of A.H. 793 (A.D. 1391), succeeding to Sherefed-din, Timur started from Tashkend, on the Jaxartes, on the 13th of Safer, A.H. 793 (19th of January 1391). He marched in a northern direction, and passed by Kára-suma, Yázi, Kárá-chuk, and Sabrán, until he reached Sirik-Uzen, on the river Arch: thence he proceeded as far as Mount Kustuk-dagh, and subsequently crossed Mount Ulu-dagh, or the range of the Altai. He then took a north-western direction until he reached the upper part of the river Tobol in Siberia, and thence proceeded westward, crossing the Ural Mountains, and the upper part of the river Tura, or Yaik, where he drew up his army on the banks of the Bielaya, a southern tributary of the Kama, which flows into the Wolga. Toktamish, who awaited Timur in the environs of Orenburg, was not able to allow himself to be so far advanced towards the north; but being informed of his having penetrated as far as Bulgar (the country of the Bielaya Kamakiria), and fought that dreadful battle which took place on the 15th of Rejeb, A.H. 793 (18th of June 1391), in which his whole army was slaughtered.

In the following year (A.H. 794; A.D. 1392) Timur returned to his residence at Samarkand, and he left the war with Kiptchak to his lieutenants; he only appeared in the field in A.H. 797 (A.D. 1395) in order to stop the progress of Toktamish in the Caucasian countries. Meanwhile troubles broke out in northern Persia, which were put down by Timur's generals, who committed unheard-of cruelties, especially in the town of Amul, where the whole tribe of the Fedayis was massacred. Timur himself attacked Southern Persia after his first return from Kiptchak. The country of Fars was governed by several princes of the dynasty of Mozaffer, vassals of Timur, who aimed at independence. After having occupied Loristán, Timur entered Fars by the mountain-passes east of Shiraz, which were defended by the stronghold of Kalai-zefid; but this fortress and the capital Shiraz were taken, the princes were put to death or fell in battle, and Timur's son Mirán-Shah was invested with the government of Fars and Khuzistán. From Shiraz Timur marched westwards to attack the King of Baghdad, Ahmed Jelair, of the house of Ilkhan. Baghdad surrendered without resistance, and Sultan Ahmed and his family fled towards the Euphrates, accompanied by a small body of cavalry. Timur and forty-five emirs mounted on the swiftest Arabian horses pursued them, and came up with him before he had reached the Euphrates. In the engagement which ensued Ahmed was again defeated and compelled to fly, leaving his harem and one of his sons in the hands of the victor. The scholars and artists of Baghdad were transplanted to Samarkand; Timur remained at Baghdad for two months, allowing so little licence to his

Digitized by Google

soldiers that he ordered all the wine which was found in the town to be thrown into the Tigris.

During this time Kara-Yūsuf, prince of Diyarbekir, had recovered part of those districts round Lake Van which Timur had won from him in a former campaign; and several princes in Armenia and Georgia were still independent. Timur resolved to bring them to submission, and after having succeeded in this, to attack the kingdom of Kiptshak on its boundaries in the Caucasus. Starting from Baghdad in A.H. 797 (A.D. 1394), he marched to the Upper Tigris by Tekrit, Roha or Edessa, Ho-su, and Keif, all situated in Mesopotamia. He laid siege to Mardin, a strong place in the mountain-passes south-east of Diyarbekir, but not being able to take it, he contented himself with the promise of an annual tribute which Sultan Isa, the master of Mardin, engaged to pay, and he marched to Diyarbekir. This town was taken and plundered. From Diyarbekir Timur marched to Akhlat, north of Lake Van, crossing the mountains, as it seems, by the passes of the Bedlis, or Centrites. After having subdued all Armenia and Georgia, Timur reached Shirwan Tereh in the Caucasus, and there fought another bloody battle with the Khan of Kiptshak. In A.D. 1395 and 1396 Timur conquered all Kiptshak, and penetrated as far as Moscow, whereupon he left the command of these countries to his lieutenants, and returned to Samarkand, in order to prepare for a campaign against India.

After the death of Firus-Shah, the master of India between the Indus and the Ganges, several pretenders made claim to the vacant throne. At last Mahmud succeeded in making himself master of Delhi, and in establishing his authority over all the empire of Firuz-Shah. Under the pretext of suppressing the revolt of Mahmud, Timur declared war against India; and such was the renown of his name, that ambassadors from all the countries of the East arrived at Samarkand and congratulated him on his new conquests before he had obtained any triumph. Timur left his capital in A.H. 801 (A.D. 1398). He took his way through the passes in the Ghur Mountains, or the western part of the Hindu-Kush; and on the 8th of Moharrem, A.H. 801 (19th of September 1398), he crossed the Indus at Attock, where Alexander had entered India, and where Genghis Khan had been compelled to give up his plan of advancing further. Timur traversed the Punjab in a direction from north-west to south-east, crossing the rivers Behut, Chunab, Ravee, the Beeah, the Hyphasis of the ancients, where Alexander terminated his conquests, and the Sutlej, the easternmost of the five great rivers of the Punjab. Although no battle had been fought, the Tatars had already made more than 100,000 prisoners; and as their number daily increased, Timur ordered them all to be massacred, to prevent any mutiny, which might have become fatal to him in case of a defeat. At last the Indian army was defeated in a battle near Delhi, and this town, with all the immense treasures, fell into the hands of the conqueror. Delhi was plundered, and a part of it was destroyed, the inhabitants having set fire to their houses, and thrown themselves and their wives and children into the flames. Several thousands of artists and skilful workmen were transplanted to Samarkand. Timur pursued the army of Mahmud as far as the sources of the Ganges, and after having established his authority in the conquered countries, returned to Samarkand in the same year in which he had set out for the conquest of India.

Meanwhile troubles had broken out between the vassal princes in Persia and the countries west of it; and Timur's own sons, who were governors of this part of the empire, had attacked each other, and one of them was accused of having made an attempt to poison his brother. These events became at many occasions of new conquests for Timur, who overran the whole country between Persia and Syria. Siwas (Sebaste), one of the strongest towns of Asia Minor, which belonged to the Osmanlis, was taken after a siege of eighteen days. The Mohammedan inhabitants were spared; the Christians, among whom were more than 4000 Armenian horsemen, were interred alive. (A.H. 803; A.D. 1400.) Among the prisoners was Ertoghrul, the son of Bayazid, sultan of the Osmanlis, who defended the town for his father, and who was put to death after a short captivity. The fall of Siwas and the murder of Ertoghrul were the signals for war between Timur and Bayazid, who had filled Europe with the terror of his name, and who was then besieging Constantinople. The rapidity of his marches and the impetuosity of his charges had procured him the surname of 'Ilderim,' or the 'Lightning;' and accustomed to victories over the knights of Hungary, Poland, Wallachia, and Germany, he did not dread the Tatars of Timur. Previously to the siege of Siwas, he had negociated with Timur about some Turkish emirs in Asia Minor, and especially about Taherten, king of Armenia, a vassal of Timur, who had been deprived by Bayazid of several of their best towns, and whom Timur protected. To humble his pride, Bayazid imprisoned the Tatarian ambassadors, and Timur in revenge carried devastation into the dominions of the Osmanlis.

Before Bayazid had crossed the Bosporus, Timur, offended by Ferruj, sultan of Egypt, overran Syria, thee a dependence of Egypt. The army of Ferruj was routed with dreadful slaughter at Haleb, and this populous town was taken by the Tatars, who entered it with the flying Egyptians. Plunder, bloodshed, and cruelties signalised this new conquest (11th to 14th of Rebuli-awwal, A.H. 803; 30th of October to 2nd November, A.D. 1400), which was followed by the fall of Damascus (9th of Sha'bán, A.H. 803; 25th of March 1401). Artists

and workmen were as usual carried off to Samarkand and other towns of Turkistan. Ferruj became a vassal of the Tatars. Baghdad having revolted, Timur took it by storm on the 27th of Zilkide, A.H. 803 (9th of July A.D. 1401), and 90,000 human heads were piled up on the public places of the town.

Hitherto negociations had still been carried on between Timur and Bayazid, who had advanced into Asia Minor with a well-disciplined although not very numerous army. But Bayazid having discovered that Timur had bribed several regiments of Turkomans that were in the army of the Osmanlis, the negociations were broken off, and the two greatest conquerors of their time advanced to meet each other in the field.

After the fate of Haleb, Damascus, and Baghdad, Timur had assembled his army near Haleb, and, crossing the range of the Taurus, he had proceeded north-westward, to the northern part of Anatolia. At Angora he met with Bayazid. The battle, one of the most eventful which have ever been fought, took place on the 19th of Zilhije, A.H. 804 (28th of July, A.D. 1402). After an obstinate resistance the Osmanlis, who were much less numerous than the Tatars, were routed. Old Bayazid, to whom flight was unknown, despised every opportunity of saving himself, and so strong was the habit of victory in him, that he could not conceive his defeat even when he saw the general rout of his warriors. At the head of his janissaries, Bayazid maintained himself on the top of a hill; his soldiers died of thirst or fell by the sword and the arrows of the Tatars; at last he was almost alone. When the night came to escape; his horse fell, and Bayazid was made a prisoner by the band of Mahmud Khan, a descendant of Genghis Khan, and who was under-khan of Jagatai. One of his sons, Mura, was likewise made prisoner; another, Mustafa, fell most probably in the battle, for he was never more heard of; three others, Soliman, Mohammed, and Isa, escaped with part of their troops. Timur received his royal prisoner with kindness and generosity. Afterwards, when some faithful Osmanlis tried to save their master, he was put into chains, but only at night. Accompanying Timur on his march, he sat in a 'kafes,' that is, in a sedan hanging between two horses, and this was probably the origin of the story that Timur had put Bayazid in an iron 'cage' like a wild beast, a story which has chiefly been propagated by Arabshah and the Byzantine Phrantzes (i, c. 26). Bayazid died in his captivity at Akshehir, about a year after the battle of Angora (14th of Sha'ban, A.H. 805 (8th of March A.D. 1403), and Timur allowed Prince Mura to carry the body of his father to Brusa.

The sons of Timur pursued the sons of Bayazid as far as the Bosporus, but having no fleet, they did not cross this channel. They ravaged the country, and afterwards joined their father Timur, who with the main body of his army took Ephesus and laid siege to Smyrna. This town, which belonged to the Knights of St. John at Rhodes, fell after a gallant resistance, in the month of December 1402. However, the conquest of Asia Minor from the Osmanlis was only a temporary triumph, for a short time afterwards it was recovered by Mohammed I, the son and successor of Bayazid. After having thus carried his arms as far as the shore of the Ionian Sea, Timur withdrew to Persia to quell an insurrection, and then retired to Samarkand. He was preparing for the conquest of China, but he died on his march to that country, at Otrar on the Jaxartes, on the 17th of Shaban, A.H. 807 (19th of February 1405), in his seventy-first year, after a reign of thirty-six years, leaving thirty-six sons and grandsons, and seventeen grand-daughters. A considerable part of Timur's western and northern conquests, Asia Minor, Baghdad, Syria, Georgia, Armenia, and the whole kingdom of Kiptshak, were lost by his successors almost immediately after his death. In Persia and Jagatai his descendants reigned for a century; and for three centuries they ruled over Northern India under the name of the Great Moguls.

Timur has been compared with Alexander, but he is far below him. It is true, that except in India, Alexander found only effeminate nations on his way, while Timur fought with the most warlike nations of the world; but the enemies of Alexander formed great political bodies which were governed by one absolute master, while the warlike nations which Timur subdued by his arms were divided into a multitude of tribes and governed by numerous princes, each of whom was jealous of his neighbour. Timur overran the territory of two mighty nations, the Turks Osmanlis, and the Tatars of Kiptshak, but he was not able to subdue them. Both Alexander and Timur protected the arts and sciences, but Timur could only transplant them by force from one place to another, while poets and scholars flocked to Alexander because he could appreciate their talents. Timur's cruelty was the consequence of his savage and barbarous temper; Alexander sometimes forgot the laws of humanity when he was overpowered by wine or by passion. Timur was a man of extraordinary talents, who accomplished great things after long experience and severe struggles; Alexander, a true genius, came, saw, and vanquished. The greatness of Timur inspires awe, and we shrink from it with horror; the greatness of Alexander attracts us because it is adorned with the amiable qualities of his character.

The life of Timur is the subject of many valuable works. Sheref-ed-din-Ali wrote the history of Timur in Persian, which has been translated into French by Pétis de la Croix, under the title 'Histoire de Timur-Bec, connu sous le nom du Grand Tamerlan,' &c., Paris,

Digitized by Google

1722. This is the best work concerning Timur, although the author often flatters. Arabshah, a Syrian, on the contrary, depreciates the character of Timur; his history, or rather his epic, has been translated under the title 'Ahmedis Arabsiadæ Vitæ et Rerum Gestarum Timuri qui vulgo Tamerlanes dicitur, Historia,' Lugduni-Batavorum, 1636. Longdit, Argote de Molina, Petrus Perundinus Patensis, Boekler, Richerius, &c. have also written the life of Timur. Among the Byzantines, Ducas, Chalcondylas, and Phrantzes contain many valuable accounts, though Phrantzes is less critical than the others. A very interesting book is 'Schildtberger sine Wunderbarliche und Kurzweilige Historien,' &c., 4to. The same book was translated into modern German by Penzer, 1813. Schildtberger, a Bavarian by birth, a soldier, was made prisoner by the Turks in the battle of Nicopolis (1396), when he was only sixteen years old. In the battle of Angora he was taken by the Tatars, and became a kind of secretary to Shahrokh and Miran-Shah, the sons of Timur. He finally returned to Germany in 1427, after a captivity of thirty years, and then wrote the history of his adventures.

Gibbon gives a splendid view of Timur's conquests in the 'Decline and Fall,' chap. lxv. Another most valuable work is Clavijo, 'Historia del gran Tamerlan, e Ruy Gonzalez Clavijo, ambassador of King Henry III. of Castile at the court of Timur, was present at the battle of Angora. (Desguignes, 'Histoire des Huns,' vol. ii.) Timur may be considered as the author of the 'Tafukat, or the Code of Laws.' This work was originally written in the East-Turkish language, and was translated into Persian. The Persian version, with the Turkish translation and a most valuable index, was published by Major Davy and Professor White, 4to, Oxford, 1783; another version with a full bibliographical account of the work prefixed, was published by Major C. Stewart, late professor of Oriental languages in the East India Company's College, under the title of 'The Mulfoozat Timoory, or Autobiographical Memoirs of the Moghul Emperor Timûr,' 8vo, 1830; and the late Professor Langles translated the Persian version into French, under the title, 'Institutes Politiques et Militaires de Tamerlan,' Paris, 1787. This work is of great importance for the history of Timur; we see that this Tatarian conqueror was provided with maps and works concerning geography, which were composed by his order.

TINDAL, MATTHEW, LL.D., was the son of the Rev. John Tindal, parish clergyman at Beer-Ferres in Devonshire, where Matthew was born about the year 1657. In 1672 he was admitted of Exeter College, Oxford, where Dr. Hickes was his tutor; but he afterwards removed to Exeter College, and he was finally elected to a law fellowship at All Souls, soon after he had taken his degree of B.A. in 1676. He proceeded LL.B. in 1679, and was created LL.D. in 1685. If we may believe certain charges which were long afterwards made in print by the opponents of his theological opinions, his debaucheries while he resided at Oxford were so scandalous as to have drawn down upon him on one occasion a public reprimand from his college. Soon after he obtained the Doctor's degree he went over to the Church of Rome, not without subjecting himself to the imputation of having an eye to the worldly advantages which such a step might seem to promise under the popish king just come to the throne. It does not appear however that he actually courted favour or patronage by this change of religion; and, according to his own account, given in a pamphlet he published in his own defence in 1703, he reverted to the Church of England some months before the revolution, having attended mass for the last time at Candlemas 1688, and publicly received the sacrament in his college chapel at Easter following. He asserts that his mind, which came a *tabula rasa* to the university, had been prepared for being seduced by James's Romish emissaries by the notions as to the high and independent powers of the clergy which then prevailed there, and which he had adopted without examination. Accordingly, when he threw off Popery, he abandoned his high church principles at the same time; or rather, as he puts it, he discovered that these principles were unfounded, and that at once cured him of his Popery. "Meeting," he says, "upon his going into the world, with people who treated that notion of the independent power as it deserved, and finding the absurdities of Popery to be much greater at hand than they appeared at a distance, he began to examine the whole matter with all the attention he was capable of; and then he quickly found, and was surprised at the discovery, that all his other but undoubted maxims were so far from having any solid foundation, that they were built on as great a contradiction as can be, that of two independent powers in the same society. Upon this he returned, as he had good reason, to the Church of England, which he found, by examining into her constitution, established and that independent power he had been bred up to the belief of." The revolution having taken place, he now also, naturally enough, became a zealous partisan of that settlement. The history of the rest of his life, during which he appears to have resided mostly in London, consists almost entirely of that of his successive publications and of the controversies in which they involved him.

He first appeared as an author in November 1693, by the publication, in 4to, of 'An Essay concerning Obedience to the Supreme Powers, and the Duty of Subjects in all Revolutions, with some considerations concerning the present juncture of affairs.' This was followed in March 1694 by 'An Essay concerning the Law of Nature and the Rights of Sovereigns,' a second edition of which, with additions, was brought out in the same year. This year also he published 'A Letter to the Clergy of both Universities,' in recommendation of certain alterations which there was then some talk of making in the Liturgy; and in 1695 another pamphlet in support of the same views. But the first work by which he attracted general attention was an 8vo volume which he published in 1706, entitled 'The Rights of the Christian Church Asserted, against the Romish and all other priests who claim an independent power over it.' This work, which is an elaborate attack upon the theory of hierarchical supremacy, or what are commonly called high-church principles, immediately raised a vast commotion. It is related that to a friend who found him one day engaged upon it, pen in hand, he said, 'I think he is writing a book which would make the clergy mad. Replies to it were immediately published by the celebrated William Wotton, by Dr. Hickes (Tindal's old college tutor), and others; the controversy continued to rage for several years. A bookseller and his shopman were indicted for selling the book. In 1707 Tindal published 'A Defence' of his work, and a few months after, 'A Second Defence,' both of which he republished together, with additions, in 1709; the same year he also reprinted his two Essays on Obedience and the Law of Nations, along with 'A Discourse for the Liberty of the Press, and an Essay concerning the Rights of Mankind in matters of Religion.' About the same time he came forth with a fresh pamphlet, entitled 'New High Church turned Old Presbyterian,' in exposure of the pretensions put forward by Sacheverell and his party; upon which the House of Commons, which the day before had condemned Sacheverell's sermons to be burned, on the 25th of March 1710 impartially ordered Tindal's 'Rights of the Christian Church,' and the second edition of his two 'Defences,' to be committed to the flames at the same time. This proceeding drew from Tindal the same year three more pamphlets—the first entitled 'A High-Church Catechism;' the second, 'The Jacobitism, Perjury, and Popery of the High-Church Priests;' the third, 'The Merciful Judgments of High Church triumphant, on Offending Clergymen and others, in the reign of Charles I.' The next year, on the Lower House of Convocation having drawn up and printed 'A Representation of the present state of Religion, with regard to the late excessive growth of Infidelity, Heresy, and Profaneness,' Tindal forthwith replied in 'The Nation Vindicated from the Aspersions cast on it' in the said representation. The second part of this performance is occupied with an explanation and defence of what has since been called the doctrine of philosophical necessity, in opposition to the assertion of the Convocation, that such views went to overturn the foundations of all morality, and of all religion, natural as well as revealed. For some years from this date Tindal's pen was comparatively occupied with the politics of the day; but his performances do not appear to have been very effective at the time, and have been long forgotten. It is remarkable however that in so voluminous a work as Coxe's 'Memoirs of Sir Robert Walpole,' no notice should be taken of a personal controversy by which Tindal became involved with that minister after his resignation in 1717, and which produced various pamphlets on both sides. Tindal considered himself to have been ill-used by Walpole, who, according to his account, had first courted his alliance, and then suddenly dropped him after he had so far committed himself in writing that it was imagined his hostility in print was not to be dreaded. Walpole, on the other hand, or his friends, accused Tindal of a treacherous desertion to the opposite faction as soon as he found that Walpole had been or was about to be deprived of power. It is probable that there was some misunderstanding on both sides. In any case this ministerial rupture was merely a personal quarrel, in which little or no public principle was involved; and it implies therefore no political versatility or inconsistency in Tindal that a few years after this, in 1721, 1722, and 1723, when Walpole was at the head of the ministry, he came forward as a strenuous defender of his government in a succession of pamphlets. He did not return to his original field of theological polemics till 1728, when he published 'An Address to the Inhabitants of the two great Cities of London and Westminster,' in reply to a pastoral letter which the Bishop of London, Dr. Gibson, had addressed to the people of his diocese on the subject of Anthony Collins's 'Scheme of Literal Prophecy Considered,' and other recent deistical writings. A 'Second Pastoral Letter,' soon after published by the bishop, called forth a 'Second Address' from Tindal; and both addresses were reprinted the same year, in an 8vo volume, with alterations and additions.

From this date Tindal seems to have remained quiet till the year 1730, when he produced, in a 4to volume, the work by which he is now chiefly remembered, his 'Christianity as Old as the Creation, or the Gospel a Republication of the Religion of Nature.' The object of this work, as is indeed sufficiently declared in its title, is to contend that there is nothing more in Christianity, properly understood, than what the human reason is quite capable of discovering for itself, and by implication to deny that any special revelation has ever been made by the Deity to man. It did not however contain any express denial of the truth of Christianity; of which indeed the author and his partisans rather professed to think that he had found out a new defence stronger than any that had been previously thought of. "Tindal," says Warburton, some years after, "a kind of bastard Socrates, had brought our speculations from heaven to earth; and, under pretence of advancing the antiquity of Christianity, laboured to

Digitized by Google

undermine its original." The book made a great noise, and various answers to it soon appeared, the most noted of which were—Dr. Waterland's 'Scripture Vindicated,' 1730; 'The Usefulness, Truth, and Excellency of the Christian Revelation defended,' by Mr. (afterwards Dr.) James Foster (the eminent Dissenting clergyman), 1731; 'A Defence of Revealed Religion,' by Dr. Conybeare (afterwards bishop of Bristol), 1732; and 'An Answer to Christianity as Old as the Creation,' by the Rev. John (afterwards Dr.) Leland (another learned and distinguished Dissenting divine), 1733. The book is also discussed in the last-mentioned writer's more celebrated work, his 'View of the Principal Deistical Writers,' published in 1754. Tindal defended himself in 'Remarks on Scripture Vindicated, and some other late Writings,' published along with a new edition of his 'Second Address to the Inhabitants of London and Westminster,' in 1730. But this was his last publication: his health now began to give way, and he expired on the 16th of August 1733, at a lodging in Cold-bath Fields, to which he had been prevailed upon to remove a few days before from his chambers in Gray's Inn. Tindal never held any preferment except his fellowship; but it is stated, in the 'Biographia Britannica,' that in the reign of King William he frequently sat as judge in the Court of Delegates, and had a pension of 200*l.* a year granted to him by the crown for his services in that capacity. It is added that he "rarely, if ever, practised as an advocate in the courts of civil or ecclesiastical law," which would seem to imply that he had been called to the bar, or been admitted an advocate of Doctors' Commons, although that fact is not mentioned. A new edition of his "Essay on the Law of Nations" was published the year after his death; but the publication of a second part of his 'Christianity as Old as the Creation,' which he left ready for the press, is said to have been prevented by the interference of Bishop Gibson. A will, in which he left most of what he had to Eustace Budgell, in whose hands he was for some time before his decease, was contested by his nephew, the Rev. Nicholas Tindal, and was at last set aside. The will was printed in a pamphlet, with a detail of circumstances connected with it, in 1733.

Of the amount of learning displayed in Tindal's writings very different estimates have been formed by his admirers and his opponents. Waterland, in the Introduction to his 'Scripture Vindicated,' characterises his antagonist in the following terms:—"His attacks are feeble, his artillery contemptible: he has no genius or taste for literature, no acquaintance with the original languages, nor so much as with common critics or commentators; several of his objections are pure English objections, such as affect only our translation: the rest are of the lowest and most trifling sort." Dr. Conyers Middleton, on the other hand, in the Preface which he addressed to Waterland immediately after the latter had published his book, says, "For my own part, to observe our English proverb, and give the devil his due, I cannot discover any such want of literature as you object to him; but, on the contrary, see plainly that his work has been the result of much study and reading; his materials collected from a great variety of the best writers; his pages decently crowded with citations; and his index of authors as numerous as that of most books which have lately appeared." Tindal's English style is unaffected and perspicuous.

TINDAL, REV. NICHOLAS, was the son of a brother of the above, Matthew Tindal, and was born in 1687. Having studied at Exeter College, Oxford, and taken his degree of M.A. in 1713, he was afterwards elected a Fellow of Trinity College in that university. In 1722 he was presented by his college to the vicarage of Great Waltham in Essex: in 1738 Sir Charles Wager, then lord lord of the admiralty, with whom he appears to have some years before sailed for a short time as chaplain, appointed him chaplain to Greenwich Hospital; in 1740 he is said to have been presented to the rectory of Colbourne in the Isle of Wight, upon which he resigned Great Waltham; and two years after he appears to have obtained his last prefermen, the rectory of Aiverstoke in Hampshire, from the bishop of Winchester (Hoadley). He died at Greenwich Hospital on the 27th of June 1774.

Mr. Tindal's first literary attempt was a work published in monthly numbers in 1724, under the title of 'Antiquities, Sacred and Profane, being a Dissertation on the excellency of the History of the Hebrews,' &c., which is described as a translation from the French of Calmet. This was followed by two numbers of a History of Essex, which was then dropped. He then engaged in his most memorable undertaking, the translation, from the French, of Rapin's 'History of England,' which appeared in a succession of octavo volumes in 1726 and following years, and was reprinted in two volumes folio in 1732. This second edition was dedicated to Frederick, prince of Wales, who in return presented the translator with a gold medal of the value of forty guineas. In 1744 a Continuation of Rapin, by Tindal, began to be published in weekly folio numbers, which was completed in two volumes (commonly bound in three), in 1747, the history being brought down to the end of the reign of George I. A second folio edition of this Continuation appeared in 1751, and a third, in 21 vols. 8vo, in 1757, with the addition of the reign of George II. down to that date. The translation and continuation of Rapin were very successful speculations; and the publishers, the Messrs. Knapton, of Ludgate Street, evinced their gratitude by making Tindal a present of 200*l.* It is generally stated that he was assisted in both undertakings by Mr. Philip Morant, to whom solely is attributed the Abridgment or Summary of the History and Continuation given at the end of the latter, and also printed in 3 vols. 8vo, in 1747; but it does not appear upon what authority it is asserted by Coxe, in the Preface to his 'Memoirs of Sir Robert Walpole,' that the Continuation, though published under the name of Tindal, "was principally written by Dr. Birch." There is no hint of this in the very full and elaborate Life of Birch, in the second edition of the 'Biographia Britannica,' which is stated to be compiled from his own papers and the communications of surviving relations and friends. "His papers," Coxe proceeds, "in the Museum and in the Hardwicke Collection, which I have examined with scrupulous attention, and various other documents which were submitted to his inspection, and to which I have had access, prove great accuracy of research, judgment in selection, and fidelity in narration. He derived considerable assistance from persons of political eminence, particularly the late Lord Walpole, the late earl of Hardwicke, and the Honourable Charles Yorke. The account of the Partition Treaty was written by the late earl of Hardwicke. The account of Lord Somers's argument in Barker's case was written by his great-nephew the late Mr. C. Yorke. I can also trace numerous communications by Horace Walpole, though they cannot be so easily specified. Birch was a staunch Whig, but his political opinions have never led him to forget his duty as an historian. He has not garbled or falsified debates, or mis-stated facts; he has not wantonly traduced characters, or scrimoniously reviled individuals because they espoused the cause which he disapproved; but in his whole work, whether he praises or blames, there is a manly integrity and candid temperance, which must recommend him to the discerning reader." This is a sufficiently just character of the Continuation of Rapin: but, although in some parts the work has a claim to be considered as an original authority, it is in the greater part not only a compilation, but a mere translation from preceding writers. The authors themselves indeed frankly state in their prefatory notice that they have not scrupled to copy or imitate any part of the several authors they have made use of, when condncive to the usefulness of the work, or where there was no occasion to alter or abridge. The numerous documents inserted at full length make the Continuation a repository of authentic information; and the notes which accompany the translation of the preceding part of the work add greatly to the value of the original text. Tindal's other publications were—the pamphlet relating to his will; a work entitled 'Rapin's Polydore Vergil,' under the title of 'A Guide to Classical Learning for Schools,' and a translation, from the Latin, of Prince Cantemir's History of the Growth and Decay of the Othman Empire, which appeared in a folio volume in 1734.

TINTORETTO, JACOPO, one of the most celebrated painters of modern times, and the head of the Venetian school, was the son of a dyer (Tintore), whence the sqnomen of Tintoretto: his family name was Robusti; and he was born at Venice in 1512. He exhibited a remarkable facility for drawing at a very early age, which induced his parents to place him in the school of Titian. Ten days however after having Tintoretto had entered this school of the great painter he was sent home again to his parents; Titian's attention being attracted by some very spirited drawings he saw in his studio, he inquired who did them, and upon Tintoretto's acknowledging himself the author, Titian declared that one of his scholars was a clever boy.

This remarkable rebuff in the career of the young painter seems to have added vigour to his energies, and he commenced a course of indefatigable application. He purchased some casts from the antique and some from the models of Daniel da Volterra, from the statues of Michel Angelo of Morning, Twilight, Night, and Day, at the tomb of the Medici, in San Lorenzo at Florence, resolving to follow the style of Michel Angelo in design, and to combine with it the colouring of Titian,—which intention he proclaimed to his visitors by the following line, which he wrote upon the wall of his apartment:—

"Il disegno di Michel Angelo, e 'l colorito di Tiziano."

By day he copied pictures by Titian; and by night he made drawings upon coloured paper, with chalk, from his casts, lighted merely by a candle; by which means he acquired a taste for the contrasts of light and shade, a peculiarity for which all his works are conspicuous. To these studies he added the occasional study of the living model and of anatomy; and to attain a still greater mastery of chiaroscuro, he used to make models of figures in clay and place them in pasteboard cases, making apertures for the light as he required it: he also suspended models and casts from the ceiling, for the purpose of becoming familiar with various perspective views of the figure. In addition to these studies, he is said to have received much gratuitous assistance from Schiavone in colouring. Tintoretto's first picture which attracted notice was one containing portraits of himself and his brother, by candle-light, himself holding a cast in his hand, and his brother playing the guitar. He exhibited this picture in public, and shortly afterwards he exhibited a large historical piece upon the Rialto, which gave him a rank amongst the great painters of Venice. It would be impossible to enumerate all his works here; they amounted to many hundreds. One of his first great works in fresco was a façade in the Arsenal, which he painted in 1546, representing Balaban'ar's Feast and the Writing upon the Wall. Of his first oil pictures, the following were most remarkable:—The Tiburtine Sibyl, for the church of Santa Anna; the Last Supper, and the Washing of the Disciples' Feet, for the church of Santa Marcola; for San Severo,

Digitized by Google

a Crucifixion, very large; and in the church of the Trinità, the Temptation of Eve and the Death of Abel, besides some others.

Tintoretto was so eager for employment, and so desirous of public notice and applause, that he undertook every commission which offered itself, and rather than be inactive or unoccupied with any public work, he frequently volunteered his services, or at most required no further outlay from his employers than would cover the cost of the materials. He painted upon such terms the façade in fresco of a large house near the Ponte dell' Angelo; on the lower part of this house he painted a very spirited representation of a cavalry battle, above which he placed an ornamental cornice in bronze; over this he painted a large historical composition containing many figures; between the windows he introduced various figures of women; and at the top which frieze: the great extent and the boldness of these paintings astonished the Venetian painters of that period. Upon very similar terms he executed two of his greatest works, at Santa Maria dell' Orto, where he painted, for 100 ducats, two immense pictures fifty feet high. In one was the Procession of the Jews with the Golden Calf, and Moses upon a rock in the background receiving the Tables of the Law, which were supported by a group of naked angels; the other was a representation of the Last Judgment, containing an immense number of figures; an extraordinary work, which, in the opinion of Vasari, would have been perhaps without its rival as a work of art, if the execution of the parts had been equal to the conception of the whole.

The following works also are accounted amongst Tintoretto's masterpieces:—Saint Agnes restoring to life the son of the Prefect, painted for the chapel of Cardinal Cornaro, in the church of St. Sylvester, called 'Il Miracolo dello Schiavo,' where the saint delivers a Venetian, who had become a Turkish slave, from a punishment ordered by his master, by rendering him invulnerable, so that hammers and other instruments of torture were broken upon his body without hurting him; this picture, which is generally considered the best of all Tintoretto's works, was painted in his thirty-seventh year, for the brotherhood of St. Mark, and when it was finished and put up, the worthy friars disputed with one another about the price, a dispute which Tintoretto settled by ordering the picture to be taken down and sent home, and telling the brotherhood that they should not have it at any price. He however, after some entreaty, restored it to its place and received his own price, and the friars further gratified him by ordering him to paint three other subjects from the life of the same saint, viz. the Exhumation of the Body of the Saint at Alexandria, through the two Venetian merchants Buono da Malamocco and Rustico da Torcello; the Transport of the Body to the Ship; and the Miraculous Preservation at Sea of a Saracen Sailor through the Saint: the miracle of the slave is in the Academy of Venice; it has been engraved by J. Schiavo; the other three are in the Scuola di San Marco. Pietro di Cortona is reported to have said, that if he lived in Venice, he would never pass a holiday without going to see these works; he admired chiefly the drawing. The pictures he painted for the Scuola di San Rocco are equally celebrated: they consist of the famous Crucifixion, which was engraved by Agostino Caracci, to the greatest satisfaction of Tintoretto; the Resurrection of Christ, engraved by E. Sadeler; the Slaughter of the Innocents and the Miracle of the Loaves and Fishes, engraved by L. Kilian; and several others of less note. To these must be added three painted for the Padri Crociferi, an Assumption of the Virgin, and the Circumcision of the Infant Christ, painted in competition with Schiavone; and a Marriage at Cana, now in the church of Santa Maria della Salute. The Miracolo dello Schiavo, the Crucifixion at San Rocco, and the Marriage at Cana, are said to be the only pictures to which Tintoretto put his name. There is an engraving of the Marriage at Cana, by Volpato, and a spirited etching by E. Fialetti.

Tintoretto executed many great works for the government of Venice, both in oil and fresco; and such was his activity, perseverance, and success, that he left little to be done by others. He was always occupied, and he worked with such unexampled rapidity that he used to be called Il Furioso. Sebastian del Piombo said that Tintoretto could do as much in two days as he could do in six years. He painted for the senate, in the council-hall, the Coronation of Frederick Barbarossa, by Pope Adrian IV., at Rome; and in consequence of Paul Veronese painting a picture in the same hall, Tintoretto procured permission to paint another, in which he represented Pope Alexander III. surrounded by cardinals and prelates, excommunicating the same emperor: the pope was represented throwing the extinguished candle amongst the populace, and a crowd of people was rushing forward to endeavour to catch it. He painted also for the senate, in the hall della Scrutinio, the celebrated naval victory of the Venetians over the Turks in 1571. He painted many other works in the ducal palace, historical and allegorical, commemorating the history of Venice, of which the most fameus are the capture of Zara by storm; and the great picture of Paradise, upon canvas, 74 feet by 34, containing a surprising number of figures. This was his last great work; he commenced it in several pieces in the Scuela Vecchia della Misericordia, and finished it, with the help of his son, in its place on the ceiling of the great council-hall of the Senate, now the library.

Tintoretto painted at Venice eight friezes for the Duke of Mantua, recording the duke's feats, to be placed in his castle, and he visited the duke at Mantua, with all his family, and was splendidly entertained by him. He painted also the portrait of Henri III. of France and Poland, when that king visited Venice; of which picture Ridolfi relates a curious history. Tintoretto was engaged with Paul Veronese in painting some figures in chiar'oscuro upon the arch of trimmph erected by Palladio at Venice in honour of the landing of Henri III., king of France and Poland; but wishing to take a portrait of the king as he landed, he prevailed upon Paul Veronese to complete the arch; and he dressed himself as one of the doge's attendants, and went in the Bucintoro, the state barge, with the others to receive the king, whose portrait he drew in small, in crayons, unknown to the king, whilst he was proceeding in the barge to the landing-place. This portrait he afterwards enlarged in oils, and procured permission from the king to retouch it from life. The king expressed himself very much pleased with the portrait, and accepted it from the painter, whom he wished to create a cavaliere; but Tintoretto declined the honour, upon the plea that to bear a title was inconsistent with his habits. Henri III. afterwards presented the portrait to the doge Luigi Mocenigo. Tintoretto painted many portraits, all in a remarkably bold style; he painted several of the series of doges' portraits along the frieze of the great council-hall.

It has been said above that Tintoretto was a remarkably rapid painter: he was however as careless about the execution of the parts as he was bold. There are pictures by him painted in his youth that are extremely carefully finished, but these are very few: Susanna at the Bath with the two Elders, is of this class; several of his large pictures are merely dead coloured, and many of them were painted off without the slightest pretence to finish. His rapidly-painted and low-priced productions were a frequent source of complaint to his fellow-artists. Upon one occasion, when the brotherhood of San Rocco requested Paul Veronese, Salviati, Zuccaro, Schiavone, and Tintoretto to send them designs for pictures of the Albergo di San Rocco, that they might select the best of them, Tintoretto sent his finished picture as soon as the others sent in their designs, affirming that he had no other way of drawing; and to ensure its being fixed in its destined place, he made the institution a present of the work. Although Tintoretto professed to draw in the style of Michel Angelo, and to colour like Titian, there are few traces of either quality in the great majority of his works; they are however all conspicuous for his own peculiar style of chiar'oscuro, which is frequently both heavy and dark in his larger compositions; a principal characteristic is the number of figures, which are often crowded and confused, and the spectator looks in vain for a spot of repose to relieve the mind; this is however not the case with such pictures as the Miracolo dello Schiavo and other earlier productions. Annibal Caracci has well expressed the inequality of Tintoretto's great talent—that if he was sometimes equal to Titian, he was often inferior to Tintoretto. The Venetians used to say that he had three pencils, one of gold, one of silver, and the other of iron. In his design Tintoretto was muscular, but less, and often incorrect; and in the cast of his draperies frequently mean and confused; his colouring was not gaudy, like that of many of the Venetians, but was often even cold, and shadow predominates in perhaps all his pictures. He was once asked which were the prettiest colours, and he answered "black and white." It was also a maxim of his that none but experienced artists could draw from the living model, as they were alone capable of distinguishing between the beauties and the imperfections of an individual model. Tintoretto painted Aretin's portrait, and Ridolfi relates the following anecdote connected with it:—Aretin was a great friend of Titian's and was in the habit of abusing Tintoretto occasionally: the latter one day meeting the poet, invited him to come and sit to him for his portrait, to which Aretin assented; but he had no sooner seated himself in the painter's studio, than Tintoretto pulled out with great violence a pistol, which underneath his vest and cause towards him: to jumped Aretin in a great fright, and cried out "Jacopo, what are you about?" "Oh! don't alarm yourself," said Tintoretto, "I am only going to measure you;" and suiting the action to the word, he said, "you are just two pistols and a half." "What a mountebank you are!" returned Aretin; "you are always up to some frolic." The poet was afterwards more cautious, and they became friends. Ridolfi records a few other whimsical feats of Tintoretto's. He died at Venice in 1594, aged eighty-two. He had two children—a son, Domenico, and a daughter, Marietta—who both practised painting. Domenico was born in 1562, and died in 1637. He followed in the steps of his father both in history and portrait; but, says Lanzi, as Ascanius did these of Æneas, non passibus æquis. Marietta was born in 1560, and died before her father, in 1590. She painted very excellent portraits. The only picture by Tintoretto in the National Gallery is one of no great merit, 'St. George destroying the Dragon.'

(Ridolfi, *Le Maraviglie dell' Arte, ovvero le Vite degli Illustri Pittori Veneti, e dello Stato;* Zanetti, *Della Pittura Veneziana, e delle Opere publiche de' Veneziani Maestri, &c.*)

TIPPOO SAIB, sultan of Mysore, was born in the year 1749. His father Hyder Aly Khan [HYDER ALY], sensible of the disadvantages under which he himself laboured from want of education, procured for his son the best masters in all the sciences which are cultivated by the Mohammedans. But Tippoo, although he had acquired a taste for reading, did not make any considerable progress, and he

Digitized by Google

preferred martial exercises, into which he was initiated at an early age. The French officers in the employment of his father instructed him in tactics; and in 1767, when Hyder Aly overran the Carnatic, Tippoo was entrusted with the command of a corps of cavalry. He was at that time nineteen years of age; but the success with which he carried on the war in the neighbourhood of Madras sufficiently proved how much he had profited by his European teachers. During the war with the Mahrattas, which lasted from 1775 to 1779, Tippoo acquired the universal esteem of the army; and he rose so high in the favour of his father and his counsellors, that the left division of the Mysore army, consisting of 18,000 cavalry and 6000 regular infantry, was put under his command. With this force Tippoo attacked Colonel Bailey in the neighbourhood of Perimbakum, on the 6th of September 1780. He was obliged to retire; but on the 10th of the same month an engagement, in which Tippoo Saib is said to have taken an active part, ended in the entire defeat of the English army. The whole of the war in the Carnatic gave him opportunities of perfecting himself in the art of war; and on the 18th of February 1782, he showed his skill in the attack and complete defeat of Colonel Braithwaite, on the banks of the Koleroun. This was undoubtedly his greatest stroke of generalship, yet the disproportion of force was very great. Tippoo had 400 Europeans, 10,000 native infantry, and 10,000 cavalry, besides 20 guns; while the entire force under Colonel Braithwaite consisted of 100 European soldiers, 1,500 sepoys, and 900 native cavalry. A few months afterwards Tippoo was obliged to move towards the south, in order to meet the English troops in the provinces of Tanjore and Malwa, under the command of Colonel Humbertson. On the 20th of November Tippoo found the English at Paniany. He made a vigorous attack, but was repulsed and compelled to retreat. He crossed the river Peniany, and prepared himself for another engagement, when on the 11th of December 1782, he received intelligence of the death of his father. On the 20th he was at Seringapatam, where he mounted the musnud without much display or ceremony. He had now time to perform the funeral rites of his father: he returned to Arcot, and assumed the command of his army. But whilst he was engaged in the Carnatic General Matthews took Onore, and the country of Bednore was in the hands of the English. In order to regain these more valuable possessions, Tippoo was obliged to relinquish his conquest in the Carnatic, and by the end of March 1783, scarce a Mysorean was left in that country. His operations were so rapid and successful, that on the 28th of April Tippoo Saib had already reduced the garrison of Bednore to the necessity of capitulating. General Matthews and several of the principal officers were barbarously put to death. After the reduction of this city, it was Tippoo's object to repossess himself of Mangalore, the principal seaport in his dominions. But the place was well defended; and in the midst of his preparations for the assault accounts were received of a treaty of peace having been concluded between England and France. It was early in July 1783 when M. de Bussy, in consequence of this news, declined to act any longer against the English. He quitted the camp with his detachment. A considerable reinforcement having arrived under General Macleod, Tippoo agreed to a cessation of arms; and early in the year 1784 Sir George Staunton and two other ambassadors from Madras arrived in the camp, and on the 11th of March a treaty of peace, which stipulated for the liberation of all the prisoners and the restitution of all places taken by either party during the war, was concluded. About the end of the same year Tippoo concluded a treaty of peace with the court of Poonah. He then returned to Seringapatam, and assumed the title of Sultan, thereby throwing off all dependence on or allegiance to the captive Rajah (imprisoned by his father) or the Great Mogul.

In 1786 he occupied himself with internal regulations; and from an inventory made at this period we find that the treasure, jewels, and other valuable articles were estimated at eight millions sterling. He had also 700 elephants, 4000 camels, 11,000 horses, 100,000 bullocks and cows, 100,000 buffaloes, 600,000 sheep, 300,000 firelocks, 300,000 matchlocks, 200,000 swords, and 2000 pieces of cannon, and an immense quantity of gunpowder and other military stores. His regular army consisted of 19,000 cavalry, 10,000 artillery, and 70,000 infantry. He had also 5000 rocket-men, and 40,000 irregular infantry.

During the years 1787 and 1788 the attention of the sultan was principally engaged in the conversion and subjection of the Nairs, or chiefs of Malabar. He is said to have carried away from that province 70,000 Christians, and to have made Musulmans of 100,000 Hindus. This he effected by forcible circumcision, and compelling them to eat beef.

It was about this time that he published an edict for the destruction of all the Hindoo temples in his dominions, excepting those of Seringapatam and Mail Cottah. Fortunately his officers did not enforce this barbarous regulation.

Although Tippoo Saib did not show any overt hostility toward the English after he had signed the treaty of 1784, yet in 1787 he sent an embassy to France, to enter into an offensive and defensive alliance, and to stimulate the court of Versailles to a speedy renewal of hostilities with England. The ambassadors returned to Seringapatam in the month of May 1789, without having obtained their object. The disappointed sultan vented his rage by putting two of them to death as having betrayed his interests. Tippoo hated the British power in India, and he took every opportunity to annoy such of the native kings as were under its protection. The Rajah of Travancore had by the treaty of Mangalore stipulated for the security of his territories. In April 1789 Tippoo invaded the country and subjected the whole of the northern district. The reasons assigned by Tippoo for the infraction of the terms of the treaty were, that two forts, Cranganagore and Jyacotta, which were on the northern boundaries of the rajah's possession, had belonged to his father. This aggression was considered by the English equivalent to a declaration of war, and Colonel Hartley was sent with a considerable detachment to the assistance of the raja. At this intelligence Tippoo withdrew his army from Travancore, and returned to Seringapatam, when, to his dismay, he heard that the Mahrattas and the Nizam had promised the English a zealous co-operation with their forces.

On the 15th of June 1790 the English troops, under the command of General Meadows, entered the sultan's territory, and took possession of the fort of Carur without resistance. Daraporam and Coimbatore were shortly afterwards reduced. About the same time a detachment, under Colonel Stuart, captured Dindigul and Palgautchery. The movements and operations of the English forces were so well conducted that Tippoo found himself unable to oppose them, and he resolved to follow the plan of warfare adopted by his father: instead of defending his own territories, to lay waste those of his enemy. This he did with considerable ability; for in the beginning of 1791 the English, instead of being masters of great part of Mysore, as they had expected, found themselves attacked and annoyed in the very neighbourhood of Madras.

On the 29th of January 1791, Lord Cornwallis assumed the command of the army, and on the 11th of the same month he was at Vellore. On the 21st of March the fort of Bangalore was taken by storm. On this event Tippoo retired to some distance, and wrote to Lord Cornwallis, requesting a truce. This was refused, and he proceeded to Seringapatam, leaving his army under the command of one of his generals, to watch the motions of the English. On the 3rd of May Lord Cornwallis was at Arakery, within sight of the sultan's capital; but his troops had suffered a great deal from want of food and forage, and he was compelled to retreat towards Bangalore. The Mahrattas came however to his assistance, and the warfare was carried on with great success.

However, whilst the English were carrying on their successful operations in the north-west part of Mysore, the sultan made a diversion towards Coimbatore, situated to the south of Seringapatam; and Lieutenant Chalmers with the whole of his party were made prisoners. The skill of Tippoo Sultan enabled him to protract the war till the month of February 1792, when the allies (the English, the Mahrattas, and the troops of the Nizam) encamped in sight of his capital. But it was not until General Abercromby had united his forces to those of Lord Cornwallis, and had determined to take the town by storm, that the haughty mind of the sultan was humbled. He agreed to give the allies one-half of his dominions, and to pay them in the course of twelve months the sum of three krores and thirty lacs of rupees (3,030,000*l.*), to restore all the prisoners, and to deliver up as hostages two of his sons. Abdul-khalik and Moäs Addeen were the names of the two princes, and the attention and kindness evinced by Lord Cornwallis towards them, were such as to afford the highest gratification to the sultan their father. By signing the definitive treaty of the 16th of March 1792, the sultan lost one-half of his dominions. Soon after this the allies quitted the neighbourhood of Seringapatam, and Tippoo sought the means of replenishing his treasury. This was soon done by imposing exorbitant and extraordinary taxes, which were chiefly levied upon the agriculturists.

Notwithstanding this seeming tranquillity from 1792 to 1796, the sultan was engaged in inciting all the native chiefs against the British power in India; but it was not until 1798 that he had the extent of his secret machinations and intrigues became known. At the commencement of this year ambassadors were sent from Seringapatam to the Mauritius. Their object was to renew the sultan's relations with France, and to solicit the aid of 10,000 European and 30,000 negro troops. The proceedings of the embassy were first made known in the month of June to the Marquis Wellesley, the governor-general. About the same time intelligence was received in India of the operations of the French in Egypt. Circumstances like these left no doubt as to the intentions of the sultan, and on the 3rd of February 1799, orders were issued for the British armies and those of the allies immediately to invade the dominions of Tippoo. Hostilities commenced on the 5th of March; and on the 5th of April General Harris took a strong position opposite the west side of Seringapatam. After besieging this place some time, a general attack was made on the 4th of May 1799. The sultan had scarcely finished his repast when he heard the noise of the assault. He instantly repaired towards a breach which the English had succeeded in making a few days before. His troops fled; he endeavoured to rally them; and so long as any of them remained firm, he continued to dispute the ground against an English column which had forced the breach and gained the ramparts. Finding all his efforts against the enemy fruitless, he mounted his horse, and, in endeavouring to effect his retreat, arrived at a bridge leading to the inner fort; but the place was already occupied by the English, and in

Digitized by Google

his attempts to proceed he was met by a party of Europeans from withinside the gate, by whom he was attacked. Owing to two wounds which he received in his breast he fell from his horse; his attendants placed him upon a palankeen in one of the recesses of the gateway, and entreated him to make himself known to the English. This he disdainfully refused to do. A short time afterwards some European soldiers entered the gateway, and one of them attempting to take off the sultan's sword-belt, the wounded prince, who still held his sword, made a thrust at him and wounded him in the knee; upon which the soldier levelled his musket and shot him through the head. On the afternoon of the 5th of May he was buried in the mausoleum of Hyder Aly. Four companies of European troops escorted the funeral procession, which was strikingly solemn.

When Tippoo met his death he was in his fiftieth year. Although after his misfortunes in 1792 he oppressed the people more than they had ever been in the time of his father, he was nevertheless popular; and the Mysoreans considered him as a martyr to the faith, and as a prince who fell gloriously in the cause of his religion. He used to pass a great portion of his day in reading, and his library, consisting of about 12,000 volumes, was well selected. About one-half of this collection is preserved at the East India House, London; the other half was left at Fort William for the use of the college. The museum and library of the East India House contain many articles both of value and curiosity which once belonged to Tippoo Saib.

('Memoirs of Tippoo Sultan,' in Stewart's *Descriptive Catalogue of the Oriental Library of the late Tippoo Sultan of Mysore*, Cambridge, 1809.)

TIRABOSCHI, GIROLAMO, was born at Bergamo in 1731. He studied in the college of Monza, and afterwards entered the order of the Jesuits. About 1766 he was made professor of rhetoric in the University of Milan, where he wrote his first work, the history of a monastic order long since suppressed, under peculiar circumstances: 'Vetera Humiliatorum Monumenta,' Milan 1766. In 1770 he was appointed by the Duke of Modena librarian of his rich library, in the place of Father Granelli, deceased. He now applied himself to the undertaking of his great work, 'Storia della Letteratura Italiana,' published at Modena 1772-1783, which he completed in eleven years. The subject was vast and intricate; the only author who had yet attempted to write a general history of Italian literature, Gimma of Naples, had only sketched a rough and very defective outline of it in his 'Storia dell' Italia Letterata.' There were however local histories and biographies concerning particular towns and districts, and the materials of the materials had to be sought among the archives and libraries of Italy. Tiraboschi undertook to write the history of the literature of ancient and modern Italy in the most extended sense of the word, including most of, if not all, the published documents of merit, and of every department of learning, who have flourished in Italy, from the oldest times on record, beginning from the Etruscans and the Greek colonies of Magna Grecia and Sicily, and then proceeding with the history of Roman literature through its rise, progress, and decay, down to the invasion of the northern tribes, with which the second volume concludes. The author distributes the great divisions of learning in separate chapters; poetry, grammar, oratory, history, philosophy, medicine, jurisprudence, and the arts; he gives an account of the principal libraries, and of the great patrons of learning. Although he does not profess to write biography, properly speaking, yet he gives biographical notices of the more illustrious writers and of their productions. The third volume comprises the literary history of Italy during the dark ages, as they are commonly called, from the 5th to the 12th century. The author has very diligently sought the learned and obscure records of those times, and brings to light much curious information concerning the intellectual state of Italy under the Goths, the Longobards, and the Franks. The ecclesiastical writers come in for a great share of this part of the work. The fourth volume includes the period from 1183 to the year 1300. The revival of studies, the formation of the Italian language, the foundation of universities, notices of the civilians and canonists who flourished in that age, an account of the Italian troubadours, of the earliest Italian poets, and of the Italian Latinists, and a view of the splendid architectural works of Arnolfo di Lapo, of Niccolò and Giovanni of Pisa, and other artists, impart a cheering aspect to this period. The fifth volume embraces the 14th century, the age of Dante, Petrarca, and Boccaccio. The author is particularly diffuse in speaking of Petrarca. The sixth volume concerns the 15th century, an age of classical studies, the age of Cosmo and Lorenzo de' Medici, of Poggio, Filelfo, Niccoli, Pulci Strozzi, Colluccio, Salutati, Paolo Manetti, Cardinal Bessarion, and other collectors of manuscripts, founders of libraries, and encouragers of learning, and the age also of distinguished jurists and ecclesiastical writers. This volume is very large, and is divided into three parts, whilst the preceding volumes are divided each into two parts, each part being subdivided into books and chapters. We cannot help thinking that this mode of division is too formal and cumbersome, and that it might have been simplified and made clearer.

The seventh volume of Tiraboschi's history treats of the 16th century, the age of Leo X., the Augustan age, as it is sometimes called, of Italian literature. This volume, which is still more bulky than the one preceding, is divided into four parts. After giving a sketch of the general condition of Italy during that period, of the encouragement to learning afforded by the various princes, of the universities, academies, libraries, and museums, the author treats first of the theological polemics which arose with the Reformation, then of the philosophical and mathematical studies, of natural history and medicine, of civil and ecclesiastical jurisprudence, of historical writing, and of the Italian Hellenists and Orientalists. He passes next in review the Italian poets, among whom Ariosto and Tasso hold a conspicuous place, and afterwards the Latin poets, the grammarians, rhetoricians, and pulpit orators, and lastly the artists, among whom Michel Angelo, Raffaelle, Tiziano, and Correggio stand prominent. It is impossible to peruse this long list of illustrious names without being struck with the seemingly inexhaustible fertility of the Italian mind in almost every branch of knowledge.

The eighth volume embraces the 17th century, which in Italy is scornfully styled the age of the "secentisti," or the age of bad taste, a reproach however which applies mainly to the poets, and not even to the whole of them. The department of history is filled with good names, as well as that of the mathematical sciences, in which Galileo holds the first rank. With the 17th century Tiraboschi concludes his work. Various reasons prevented his entering the field of contemporary history. This however has been done of late years by Lombardi, in his continuation of Tiraboschi's work: 'Storia della Letteratura Italiana nel Secolo xviii.'

Tiraboschi's work was highly esteemed, and went through numerous editions in various parts of Italy. The author himself superintended the second edition of 'Modena,' 1787-94, in which he made corrections and additions, chiefly in the shape of notes to the text. Antonio Lombardi gave an abridgment of the work in French, which was published at Paris, and at Bern, in 1784; and J. Retzer made a similar abridgment of it in the German language. When the work of Tiraboschi appeared, no other country in Europe had a general history of its national literature. The learned Benedictines of St. Maur began a work of this kind concerning the literature of France, which however they left imperfect. The work of Tiraboschi does not give all the information that one might wish, but contains probably as much information as could be collected and compressed together by any one man undertaking the subject. It has also the defect of prolixity, and in the analysis of conspicuous works, of which he has not given extracts; but this, as he says in his preface, did not form part of his plan, which was already extensive enough, or the work would have had no end. His accuracy and conscientiousness are undisputed. The tone of his sentiments, especially on religious matters, is perhaps as temperate as could be expected from a man of his profession, times, and country, who was a sincere believer in the tenets of his church, though not a bigot. For a proof of this we might refer the reader to Tiraboschi's letter to Father Mamachi, a Dominican, who edited at Rome an edition of Tiraboschi's great work with corrections and notes to those passages which were not consonant with his own high notions of Papal prerogative and Roman supremacy, both spiritual and temporal. Tiraboschi's letter was published at Modena in 1785, and was afterwards inserted at the end of the last volume of the second Modena edition of the 'History of Italian Literature.' A tone of refined cutting irony, half veiled, under a most courteous style of language, pervades the whole of the letter. The French writer Ginguené has followed closely in Tiraboschi's footsteps in his 'Histoire Littéraire d'Italie,' which however contains only the modern part, or the history of the literature of the Italian language. [GINGUENÉ.]

The Duke of Modena, Ercole III. of Este, in consideration of Tiraboschi's useful labours, made him a knight, and appointed him member of his council in 1786. By the suppression of the order of Jesuits, Tiraboschi had become a secular priest. In 1781 he began to publish another work of bibliography and biography: 'Biblioteca Modenese, o Notizia della Vita e delle Opere degli Scrittori nati degli Stati del Serenissimo Signore Duca di Modena,' Modena, 1781-86; to which he afterwards added a seventh volume, containing notices of the artists who were born in the dominions of the house of Este. Having thus illustrated the literary history of Modena, and of the other territories of the house of Este, he afterwards wrote the political history of the latter country, in his 'Memorie Storiche Modenesi, con Codice diplomatico, illustrato con note,' 3 vols. 4to, Modena, 1793. He also published the history of the ancient monastery and abbey of Nonantola in the duchy of Modena, founded about the middle of the 8th century by Anselmus, Duke of Friuli, and afterwards greatly enriched by Charlemagne and other princes, and which became a powerful community during the Middle Ages; 'Storia dell' augusta Badia di S. Silvestro di Nonantola, aggiuntovi il codice diplomatico della medesima, illustrato con note,' 2 vols. folio, Modena, 1784. The other works of Tiraboschi are: 1, 'Vita del Conte D. Fulvio Testi.' Testi was a lyric poet of the 17th century, and enjoyed for a time a high office at the court of Modena, but ended his days in prison for state reasons; 2, 'Lettere intorno ai viaggi del Sign. Bruce,' inserted in the 'Notizie Letterarie' of Cesena, 1792; 3, 'Memoria delle scoperte che si avevano delle sorgenti del Nilo prima del Viaggio del Sign. Jacopo Bruce,' inserted in the 1st vol. of the 'Memorie dell' Accademia dello Scienze di Mantova;' 4, Two memoirs on Galileo, his discoveries, and his condemnation by the Inquisition, inserted in the last vol. of the second Modena edition of the 'History of Italian Literature;' 5, 'Notizie della Confraternità di S Pietro Martire;' 6, 'Vita di Suor' Olimpia, Vedova e Disconessa della Chiesa di Costan-

tioopoli;' 7, 'Elogio Storico di Rambaldo de Conti Azzoni Avogaro;' besides other minor writings, especially in answer to the critics of his 'History of Italian Literature'. He left unpublished: 1, 'Dizionario Topografico degli Stati Estensi,' published since at Modena, 1824-5; 2, 'Catalogo ragionato dei Libri del già Collegio dei Gesuiti di Brera;' 3, 'Lettera sulla Venuta di Gustavo Adolfo in Italia;' 4, 'Vita di Giannandrea Barotti Ferrarese;' 5, 'Notizie sulla Zecca di Brescello, sopra alcuni Luoghi del Modenese, ed Albero della casa Montecuccoli;' besides several dissertations and orations. His voluminous correspondence is preserved in the Modena Library.

Tiraboschi died at Modena, June 3, 1794, of a disease brought on by sedentary life and constant application. He was buried in the church of SS. Faustino e Giovita, outside of the city, and a Latin inscription placed on his tomb, written by Father Fossetti, who succeeded him as librarian, commemorative of his labours and his virtues, among which modesty and charity were most conspicuous.

(*Elogio di Girolamo Tiraboschi*, by Pozzetti, prefixed to the later editions of the 'Histoire d'Italian Literature;' Ugoni, *Storia della Letteratura Italiana nella seconda metà del Secolo XVIII.*; Lombardi, *Storia della Letteratura Italiana nel Secolo XVIII.*)

TIRIDATES, prince of Media, and afterwards king of Armenia, was the brother of Vologeses, king of the Parthians, that is, of Media. He first appears in history in A.D. 53, in the first war of Corbulo against Vologeses (Tacitus, 'Hist.,' xii, 50). The war was compelled to desist from his schemes upon Armenia in 54. In 58 however the Parthians again overran Armenia, having been invited by the inhabitants of that country, and Vologeses ceded his conquest to his brother Tiridates, who thus became king of Armenia. As the Romans could not allow this country to become a possession of the Parthians, Corbulo directed his forces against the royal brothers, knowing that Vologeses was prevented from employing his army against him in consequence of an insurrection of the province of Hyrcania. Corbulo therefore soon persuaded Tiridates to submit to the emperor Nero, and to prefer a moderate dependence to an uncertain and dangerous independence. When they were about to meet, in order to settle the conditions of the peace, Tiridates suddenly became afraid of some treacherous design on the part of the Romans, and he therefore broke off the negociations and renewed the war. Corbulo however defeated him at Artaxata on the Araxes, took and destroyed this old capital of Armenia, and forced the new capital, Tigranocerta, to surrender after a short siege. (Tacitus, 'Hist.,' xiv. 24; Frontinus, 'Strataj.,' ii. 5, exempl. 5.)

Tiridates fled to his brother, who had taken the field against the Hyrcanians, and who entrusted him with the command of a new army, with which Tiridates hoped to expel the Romans from Armenia. He attacked them on the side of Mesopotamia, but the strong position which the Romans kept at Tigranocerta, and the care which they showed in watching the passages of the Euphrates, prevented him from either penetrating into the valley of the Upper Tigris, or from invading Syria, a manœuvre by which Corbulo would have been obliged to hasten to the relief of this province, and to leave Armenia to the incursions of Vologeses. Tiridates therefore listened once more to the pacific proposals of the Romans, who were anxious to avoid any war with the Parthians if they could do so on conditions which would secure their influence in Armenia. Their intention was not to make a Roman province of Armenia. Ambassadors from Tiridates arrived in the camp of Corbulo, and they declared, in the name of Tiridates and his brother Vologeses, that Tiridates was ready to submit to Nero, as a vassal-king, and that Vologeses would keep in future a better understanding with the Romans than before. In order to settle the peace, a day was fixed on which Tiridates was to appear in the camp of Corbulo, who sent Tiberius Alexander [Tiberius Alexander] and his son-in-law Virianus Annius as hostages into the camp of Tiridates (A.D. 63). When Tiridates entered the tent of Corbulo, he took off his royal diadem, and placed it at the foot of a portrait of the emperor Nero, taking an oath that he would not exercise any right of sovereignty in Armenia till he had again received the same diadem from the hands of the emperor in Rome. (Tacitus, 'Hist.,' xv. 28, 29.) Tiridates arrived in Rome in 66, and when he approached the city a great number of people came out from the gates to behold the entrance of an oriental king descended from the mighty sovereigns of the Parthians. In Zumpt, 'Annales veterum Regnorum et Populorum, inprimis Romanorum,' the Armenian king who entered Rome is called Tigranes, but this is a typographical error. (Tacitus, 'Hist.,' xvi. 23.) The latter circumstances of the life of Tiridates are unknown.

TISCHBEIN, JOHN HENRY, called the Elder, one of the most celebrated painters of the 18th century, was the fifth son of a baker of Hayna, near Gotha, where he was born in 1722. He was first apprenticed to an uncle on the mother's side, who was a locksmith; but he displayed so much talent in drawing, that an elder brother, John Valentine, took him away from his uncle and placed him, in his fourteenth year, with a paper-stainer and decorator in Cassel of the name of Zimmermann. He received also some instruction from Van Freese, the court painter at Cassel, and soon gave proof of his ability. Tischbein met with an early and a valuable patron in Count Stadion, through whose assistance he was enabled, in 1743, to visit Paris, where he remained five years with Charles Vanloo, and acquired his style of painting. From Paris he went to Venice, and there studied eight months with Piazzetta. From Venice he went to Rome, where he remained two years. He again visited Piazzetta in Venice, and after a short time, in 1751, he returned to Cassel, where, in 1752, he was appointed cabinet painter to the landgrave.

Tischbein excelled in historical and mythological subjects, in which lines are his best pictures, painted from about 1762 until 1785. He died in 1789, as director of the Academy of Cassel, and a member of the Academy of Bologna. A biographical notice of Tischbein, with criticisms upon his works, was published in Nürnberg in 1797, eight years after his death, by J. F. Engelschall, entitled 'J. H. Tischbein, als Mensch und Künstler dargestellt.' In that work there is a list of 144 historical pieces by Tischbein, of which the following have been considered the best:—the Resurrection of Christ, very large figures, painted in 1763, for the altar of St. Michael's church at Hamburg; the Transfiguration, in the Lutheran church at Cassel, 1765; Hermann's Trophies after his Victory over Varus in the year 9, in the palace of Pyrmont, 1768; ten pictures of the life of Cleopatra, painted in the palace of Weissenstein, 1769-70; sixteen from the life of Telemachus, in the palace of Wilhelmsthal; an Ecce Homo, in the Roman Catholic chapel at Cassel, 1778; a Deposition from the Cross, and an Ascension, altar-pieces in the principal church of Stralsund, 1787; Christ on the Mount of Olives, an altar-piece presented by him to the church of his native place, Hayna, 1788; the Death of Alcestis, 1780; and the Restoration of Alcestis to her Husband by Hercules, 1777.

Tischbein painted many pictures from the ancient poets, and some from Tasso, several of which are now in the Picture-Gallery at Cassel. He painted also a collection of female portraits, selected chiefly for their beauty, which is now at the palace of Wilhelmsthal near Cassel. He also frequently copied his own pictures. Nearly all his works were painted for his own country, on which account he is little known out of it. It is remarkable that of all the great painters of Germany, Munich is the only one that possesses a specimen of his works, and that is only a portrait.

Tischbein painted very slowly, but he was very industrious: he was generally at his easel by five in the morning in the summer time, and he painted until four in the afternoon. He painted in the French style; his colouring was a mixture of the French and the Venetian, and in large compositions very gaudy, but his drawing and chiaro'oscuro were very good; in costume however he was incorrect, and, according to the critics, he generally contrived in his abstract piece to make his actors look much more like Frenchmen and Germans than Greeks or Romans. In his religious pieces he was more successful: he was no follower of Lessing's theory of beauty; he considered beauty of little consequence. His most several pictures after his own pictures:—Venus and Cupid, Women Bathing, Hercules and Omphale, Menelaus and Paris, Thetis and Achilles, and his great picture of the Resurrection of Christ, at Hamburg.

Tischbein's elder daughter Amalia was a clever painter: she was elected, at the 1780, a member of the Academy of Cassel; she used to sit to her father for many of the females in his historical works. After Tischbein's death, the Landgrave of Cassel purchased all the works that were in his house, and placed them together in the palace of Wilhelmsthal.

(Meusel, *Miscellaneen Artistischen Inhalts*; Füssli, *Allgemeines Künstler Lexicon*; *&c.*)

TISCHBEIN, JOHN HENRY WILLIAM, called the Younger, the youngest son of John Conrad Tischbein, and nephew of the preceding, with whom he frequently associated, was born at Hayna in 1751. He was instructed by his uncle John Henry at Cassel in historical painting, and he afterwards studied landscape painting three years with his uncle John Jacob at Hamburg; in 1770 he went to Holland, where he remained two years, and in 1772 returned to Cassel and painted portraits and landscapes; he visited also Hanover and Berlin, and painted many portraits in both places. In 1779 he left Cassel, by the desire of the Landgrave, for Italy, but he spent about two years in Zürich, where he painted many portraits and made the design of his celebrated picture of 'Goethe in the Campagna,' which, by his sentence to death, a game at draughts with Frederick of Austria.' In 1781 Tischbein arrived in Rome, and his first studies were some copies in oil after Raffaelle and Guercino, and some drawings after Fiselle, Buonsignibio, and Leonardo da Vinci. His first original picture was 'Hercules choosing between Vice and Virtue, after which he painted his picture of Couradin of Suabia, now in the palace of Pyrmont. In 1787 he went to Naples, and the next year painted the portrait of the crown-prince for the queen, who presented Tischbein with a valuable snuff-box and 300 ducats, expressing her complete satisfaction with the picture. In Naples he appears to have acquired laurels rapidly, for in 1790 he was appointed director of the Academy with a salary of 600 ducats per annum, which however he lost again in 1799, at the breaking out of the revolution at Naples, but he found no difficulty in obtaining permission from the French authorities to return to Germany with what property he chose to take with him. He accordingly embarked, with the painter Hackert and another, for Leghorn, taking with him the plates of his illustrations to Homer, his designs for Sir W. Hamilton's second collection of vases, and some other works of art; but the ship was driven by a storm upon the

Digitized by Google

coast of Corsica, and was captured by a French ship of war; it was however set at liberty again, and after a troublesome journey of four months Tischbein at last reached Cassel in safety. During his residence in Naples he published there in 1796, a remarkable work upon animals, in two parts, folio, entitled 'Têtes des différents Animaux, dessinés d'après Nature, pour donner une idée plus exacte de leurs caractères.' The first part contains sixteen designs of animals, and the first plate of this part is the celebrated design called in Italy Tischbein's Leocoon; it represents a large snake attacking and destroying a lioness and her young in their den: the second part contains eight plates only, consisting of characteristic heads of men and gods, as—Correggio, Salvator Rosa, Michel Angelo, Raffaelle, Scipio Africanus, Caracalla, Jupiter, and Apollo. Tischbein after his return to Germany lived principally at Hamburg and at Eutin in Oldenburg near Lübeck; the majority of his works are in the possession of the grand-duke of Oldenburg: the following paintings are three of his most celebrated works:—Ajax and Cassandra, painted in 1805; 'Suffer the Little Children to come unto me,' painted in 1806, for the altar of the church of St. Angari at Bremen; and Hector taking leave of Andromache, painted in 1810. He painted also the portraits of Klopstock, of Heyne, and of Blücher.

In Göttingen in 1804 he published in royal folio his favourite work on Homer, with explanations by Heyne—'Homer, nach Antiken gezeichnet von Heinrich Tischbein, Direktor, &c., mit erläuterungen von Chr. Gottl. Heyne,' i.-vi., each number containing six plates: the portraits of the Homeric heroes were engraved by R. Morghen. Tischbein's drawings for Sir W. Hamilton's second collection of vases, published at Naples from 1791, in 4 vols. folio, amount to 214: the work is entitled 'A Collection of Engravings from Ancient Vases, mostly of pure Greek workmanship, discovered in Sepulchres in the Kingdom of the Two Sicilies, but principally in the environs of Naples, during the years 1789 and 1790; now in the possession of Sir W. Hamilton, published by William Tischbein, director of the Royal Academy of Painting at Naples.' The text, which is in French and English, is by Italinsky. Tischbein published other works, and etched also several plates, after Paul Potter, Roos, Berghem, Trivoli, Rembrandt, &c. As a painter his drawing was correct, and his expression and colouring good, and he excelled in drawing animals. He died in 1829. There were many other artists of this family, of various degrees of merit, but they are unknown beyond their own circles.

TISSOT, SIMON ANDREW, an eminent Swiss physician, was born at Lausanne, in the canton de Vaud, in 1728. He studied first at Geneva, and then at Montpellier, from 1746 to 1749, where he took his degree of Doctor of Medicine. He then returned to his native place, and settled at Lausanne, where he joined to an extensive practice a considerable degree of theoretical knowledge. His reputation spread rapidly through Europe in consequence of his medical publications, and caused him to be consulted from all parts. He was also offered at various times several important situations at different foreign courts and universities, all of which he declined, and remained satisfied with the respect and comfort which he enjoyed at home, and with the office of professor of medicine at the college of Lausanne. However in 1780, he could not resist the same solicitation of the Emperor Joseph II., who conferred on him the professorship of clinical medicine at the university of Pavia. Being thrown thus late in life into so difficult a post, and being naturally of a modest and shy disposition, he did not at first answer the expectations formed of him. However there soon after broke out in the province an epidemic putrid fever, as to the treatment of which the physicians of the place were not agreed. On this occasion the Count de Firmian, the celebrated minister under the archduke, gave orders that Tissot's directions should be followed, as he had treated a similar disorder with great success in the canton of Le Valais in 1755. His system was again successful, and the students not only celebrated his triumph with fêtes, but, wishing to render the memory of it more durable, they caused a marble inscription, beginning with the words 'Immortali Praceptori,' to be placed under the portico of the school. After holding his professorship for three years, Tissot obtained permission to retire from office. During his stay in Italy he had made use of the vacations to travel through the finest parts of that country, and was everywhere received with the most marked and flattering attention. Pope Pius VI. signified his desire of seeing so estimable and eminent a man; he accordingly received him with much kindness, excused him (as being a Protestant) from the ceremonial customary at presentations at the Papal court, and made him a present of a set of the gold medals struck during his pontificate.

Having always lived economically and without any display, Tissot had saved while in Italy a sum of money sufficient for the purchase of a country-seat, which he intended to be the retreat of his old age. He had only engaged himself in the Austrian service for a very limited period; he had now finished the medical education of a favourite nephew; and, lastly, as he himself with characteristic playfulness expressed it, having received the title of 'Immortal,' he thought it prudent not to run any risk of descending from such a height, and of outliving (as he might easily do) his apotheosis. He was succeeded in his professorship at Pavia by the celebrated J. P. Frank, and died unmarried, on the 15th of June 1797, in his native land, at the age of sixty-nine. A complete list of his works is given in the 'Biographie Médicale,' from which work the above account is taken: of these the following are the most interesting: 'Tentamen de Morbis ex Manustupratione Ortis,' 8vo, Louvain, 1760; which was translated into French, and has been frequently republished. 'Dissertatio de Febribus Biliosis, seu Historia Epidemiæ Lausanensis anni 1755,' 8vo, Lausanne, 1758. 'Avis au Peuple sur sa Santé,' 12mo, Lausanne, 1761, which was translated into no less than seven different languages, and in less than six years reached the tenth edition. It has since been frequently reprinted, and contributed more than any of his other works to make the author's name known throughout Europe. It served also as the model and foundation for many similar popular works in more recent times. 'Le Valetudinaire Littéraire,' 8vo, Lausanne, 1766, which was translated into French, and frequently reprinted, and of which the latest and best edition is that by F. G. Boisseau, 18mo, Paris, 1826, with notes by the editor, and a memoir of the author. 'Essai sur les Maladies des Gens du Monde,' which has also gone through several editions. There is a complete edition of his works by J. N. Hallé, in 11 vols. 8vo, Paris, 1811, with notes by the editor and a memoir of the author. Besides these original works Tissot edited at Yverdun, 1779, in three volumes 4to, the treatise of Morgagni, 'De Sedibus et Causis Morborum per Anatomen Indagatis,' to which he prefixed a history of the Life and Works of the author.

* TITE, WILLIAM, M.P., F.R.S., &c., architect, was born in London in 1802, and studied under Mr. Laing. Although possessing an extensive city connection, and carrying on a large business, Mr. Tite had not had opportunities of making his name very generally known by any important public work prior to the erection of the new Royal Exchange. His chief work perhaps was the Scotch Church, Regent-square, London, erected in 1828. In the first open competition of designs for the Royal Exchange, Mr. Tite was not among the successful competitors; but it having been decided that neither of the three designs to which prizes were awarded was suitable for the purpose contemplated, the committee resolved to abandon the principle of public competition, and to name five architects whose plans were requested to send in designs. Three of these—Sir R. Smirke, Mr. (now Sir Charles) Barry, and Mr. Gwilt—declined to compete, leaving the field to the other two, Mr. Tite and Mr. Cockerell; and ultimately the committee decided in favour of Mr. Tite. The building was commenced on the short space of time allowed, was commenced near the close of 1841, at a cost within the estimate of 150,000*l.*, and opened in state by her Majesty, October 28, 1844. On so well known a structure it is unnecessary to offer any remarks: it may suffice to say that the Corinthian chief architectural feature, the peristyle portico columns at the western end, is undoubtedly one of the very finest porticoes in the metropolis. The work placed the architect in the foremost rank of his profession, but it remains his only grand work.

His subsequent works have been artistically of a comparatively unimportant character. They include the Londonderry and Hardwicke bank, Lothbury, executed by him in conjunction with Mr. Cockerell; the Vauxhall (original) terminus of the London and South-Western railway, the terminus at Southampton, and the stations along the line of the Southampton railway; the Merstham terminus of the London and Blackwall railway; and termini and stations on the Caledonian, Scottish Central, and various other railways; the London station of the Woking Cemetery Company, and other buildings for commercial purposes. Mr. Tite has been himself a good deal connected with commercial undertakings, and early with political matters. He is chairman of the North-Devon railway; a director (having first been for ten years deputy-chairman and managing director) of the Globe Assurance Company, &c. He was also for awhile vice-president of the Administrative Reform Association, under whose auspices he unsuccessfully contested the borough of Barnstaple, and in August 1854 was returned as member for Bath, for which place he was re-elected in April 1857. He is (1867) President of the Institute of British Architects; he was elected a Fellow of the Royal Society in 1835, and a Fellow of the Society of Antiquaries and of the Geological Society. Mr. Tite is the author of a 'Report of a Visit to the Estates of the Hon. Irish Society in Londonderry and Coleraine in the year 1834;' and of the Introduction to a 'Catalogue of Roman Antiquities found in the site of the Royal Exchange.'

TITI, SANTI DI, an Italian painter and architect, was born of a noble family at Borgo San Sepolero in Tuscany in 1533. He was a scholar of Bronzino, and, according to Lanzi, also studied under Cellini. While at Rome he was employed upon some subjects in the chapel of the Palazzo Salviati, and painted a St. Jerome in San Giovanni de' Fiorentini, besides executing several works in the Belvedere of the Vatican. He returned to Florence in 1566, with a reputation for great ability in design; nor was his reputation at all diminished by the works he there produced, for among them are some of his best, including his Resurrection and Supper at Emmaus, in Santa Croce; of which, and of his other performances, a full account is given by Borghini, in his 'Reposo.' It was also at Florence that he chiefly exercised his profession of architect. The Casa Dardanelli, the Villa Spini at Pericoli, and his own house at Florence, are enumerated among his works of that class, but without much commendation. He is said however to have displayed much taste in some of his archi-

Digitized by Google

tectural backgrounds in painting, in which he also showed great knowledge of perspective. His pencil was frequently employed on merely temporary decorations, either on occasions of solemn funeral obsequies or splendid festivities, of which latter kind were those which he painted on the celebration of the nuptials of the Duke of Ferrara. Santi died in 1603, leaving a son named Tiberio, who was also an artist, and who did not long survive him.

TITIAN. TIZIA'NO VECE'LLIO, commonly called TITIAN, one of the greatest painters of modern times, was born at Capo del Cadore, a small place on the river Piave in the Venetian state, in 1477, (the common accounts say 1480). He was of the ancient family of Vecellio, of which was San Tiziano, bishop of Uderzo. At the age of about ten yeong Titian was sent by his father to Venice to an uncle, to be placed with some competent painter. He was first placed with Sebastiano Zuccati, and shortly afterwards with Gentile Bellini, whom however he also soon left for Giovanni his brother, the most eminent painter of his time at Venice. Titian soon surpassed his master. His early works, in themselves extraordinary, are infinitely more so when compared with the works of the leading artists of Venice of his time. His early portraits are finished with remarkable care, drawn in excellent taste, and some of his pictures rival the works of the Dutch and old German artists in finish: there is in the gallery of Dresden a picture of the Tribute Money of this description. The great improvement in the works of Titian upon those of Giovanni Bellini and his school has been considered to be in a great degree derived from the works of Giorgione di Castel Franco who had appropriated much of the style of Lionardo da Vinci. [GIORGIONE.] Giorgione was two years the senior of Titian, and their works were so much alike that they could not always be distinguished; it is the merit of introducing the new style into Venice belongs to Giorgione. These two painters were fellow-pupils, and for some time friends, until, upon an occasion when Titian was appointed, or Giorgione employed him, to assist him in some painting for the new fondaco de' Tedeschi (German warehouse), the portion executed by Titian was preferred to that of Giorgione by some of his own friends, and a jealousy arose between them.

At the death of Giovanni Bellini in 1512, Titian was employed by the state to complete a work in the Sala del Gran Consiglio of the Homage of Frederic Barbarossa to Pope Alexander III., which he had left unfinished. Titian completed the picture, but he made many alterations in it; the senate was however so well satisfied with the work, that they presented him with the office of La Senseria, with a salary of about 300 crowns per annum, by which he was obliged to paint for eight crowns the portrait of every doge created in his time, to be placed in the palace of St. Mark. He painted by virtue of this place the portraits of Pietro Lando, Francesco Donato, Marcantonio Trevisano, and the Vendramin: he was in the same year the portraits of the last two doges of his time on account of the infirmities of age.

In 1514 Titian painted his Bacchus and Ariadne, and other Bacchanalian and similar works in the palace of Alfonso I., duke of Ferrara, which display his extraordinary power of seeing and imitating nature to a remarkable degree. He was at this time in apartments in the palace that he painted his celebrated picture of the Tribute Money noticed above: it represents a Pharisee showing Christ a piece of money, who appears to be asking him the question, "Whose is this image and superscription?" The figures are half-length and of the natural size. He painted also at the same time the portrait of the duke with his hand resting upon a cannon, and one of the Signora Laura, who afterwards was married to the duke. All these pictures are amongst Titian's finest works; and Michel Angelo, when he first saw the duke's portrait, is said to have exclaimed, "Titian alone is worthy of the name of a painter." Titian became acquainted at Ferrara with Ariosto, and painted his portrait. The poet compliments the painter in his 'Orlando Furioso' (c. xxxiii. 2):—

> "Bastiano, Rafael, Tizian, eh'onora
> Non men Cadore, che quei Venezia e Urbino."

In 1516, shortly after he returned from Ferrara to Venice, he painted in oil his famous picture of the Assumption of the Virgin, for the great altar of the church of Santa Maria gloriosa de' Frari: it is now in the Academy of the Fine Arts at Venice. This picture is very large, and the figures are larger than life: in the highest part is God the Father between two angels; in the middle the Virgin ascending, accompanied by angels; and on the ground are the twelve apostles witnessing the miracle. It is certainly one of the finest pictures in the world, grand in composition and design, and in colouring wonderful. Titian never surpassed it in these respects by any of his later works.

This and the works Titian painted at Ferrara so spread his reputation, that he was invited by Leo X. to Rome. Raffaelle also entreated him to make the journey; the deaths however of the pope and Raffaelle in 1520, put an end for a time to the project. He was invited likewise about the same time by Francis I., whose portrait he painted, to France; an invitation which he showed no disposition to accept.

In 1523 he painted his celebrated picture of St. Peter Martyr, for the chapel of that saint, in the church of SS. Giovanni e Paolo. This work has been extravagantly praised by many critics, both for its arrangement and execution; the landscape is particularly excellent. Algarotti calls it a picture without a fault: its general truth and appearance of reality are not its least remarkable properties. This picture, as well as the Assumption already mentioned are painted in a much freer style than Titian's earlier works. Aretin wrote in 1536 a letter to Tribolo, the sculptor, in praise of the St. Peter Martyr, by which we learn that this sculptor and Benvenuto Cellini were strongly impressed with its extraordinary excellence. It was full 16½ feet high, by nearly 10 wide, was painted upon wood, but was transferred to canvas by M. Haquin, at Paris, in 1799. This noble picture was unhappily burnt in a fire which destroyed the church, in August, 1867.

In consequence of the St. Peter Martyr, Titian received a commission to paint the Victory of the Venetians over the Janissaries in the great council-chamber at Venice, which was considered the best picture there: it perished by fire, but there is a print of it by Fontana. Another celebrated picture which Titian painted about the same time was his St. Sebastian, for the church of San Nicolo de' Frari, at Venice, but now in the Vatican at Rome. This work also has been the subject of much eulogy, especially for its colouring: it has been engraved by Lefevre.

Notwithstanding Titian's great reputation, he lived in a very humble way until he obtained, through his friend Aretin, the notice and the patronage of the emperor Charles V. In 1530 Charles sent for him to Bologna to paint his portrait: he painted that of Ippolito de' Medici at the same time, besides portraits of many other distinguished personages; and he received also several other commissions from the emperor. Titian went from Bologna to Mantua with the Duke Frederico Gonzaga, for whom he executed many works; amongst them eleven of the twelve Cæsars. Domitian was painted by Bernardino Campi: they were lost in 1630 at the plundering of Mantua, but they have been often copied. In 1532 Titian went again to Bologna, and painted the emperor a second time: about this time also he appears to have accompanied Charles into Spain, and remained there three months, during which time he executed many celebrated works; but there will be occasion to mention this subject lower down. In 1536 also Titian appears to have met Charles at Asti, after his return from Africa.

In 1537 he painted for the church of Santa Maria degl' Angeli, at Murano, an Annunciation, which was rejected on account of the price, 500 crowns (short 100 guineas); and he presented the picture to Charles V., who sent him 2000 crowns in return. In 1541 he painted the Descent of the Holy Ghost upon the Apostles for the altar of the church of Santo Spirito; and three others, in oil, for the ceiling, the Sacrifice of Abraham, David and Goliah, and the Death of Abel. Copies were afterwards substituted for these works, which were removed to Santa Maria della Salute; and in 1543 he painted a picture of the Virgin and San Tiziano for his native place, in which he introduced his own portrait. In the same year he was invited by Pope Paul III. to Bologna, and painted his portrait there, a celebrated picture, with which the pope was so much pleased, that he requested Titian to go with him to Rome; but the painter was obliged to decline, on account of an engagement with the Duke of Urbino, for whom he painted several pictures.

A letter from Aretin to Titian, of the year 1545, shows in what great favour Titian stood with the government of Venice: it speaks of his large pension, and the many imposts from which he was exempted. In the same year there was a false report of his death, which appears to have distressed the emperor, from a letter which Titian himself wrote to Charles to contradict it. In this year also Titian visited Rome, and painted Paul III. again, with the Cardinal Farnese and Duke Octavio Farnese in one group. Northcote terms this picture one of the finest examples of portrait in the world; and he relates that he and Fuseli saw it together at Capo di Monte, at Naples, and the latter exclaimed upon seeing it, "That is true history."

Aretin wrote several letters to Titian whilst he was at Rome, one of which, dated October, 1545, he finishes by requesting Titian not to be lost in contemplation of the Last Judgment, in the Sistine chapel, as to forget to make haste back, and be absent from him and Sansovino all the winter. Michel Angelo visited Titian with Vasari in the Belvedere, whilst he was painting a picture of Jupiter and Danaë, and Vasari says he praised the picture very much in the presence of Titian: and he afterwards spoke very highly of his colouring and execution; but he observed that it was a pity that the Venetian painters had not a better mode of study, and were not early initiated in sound principles of drawing: and he added, that if Titian had been as much assisted by art as he was by nature, nothing could surpass him.

Titian appears to have left Rome in May 1546; and he visited Florence on his return to Venice. Vasari however says that after the death of Sebastian del Piombo, in 1547, Paul III. offered his office of keeper of the seals of lead to Titian, which however Titian declined, and this has led some writers to suppose that Titian must have been then in Rome, but it is most probable that the offer, if made, was forwarded to Titian after his return to Venice. Late in 1547 he was invited by the emperor to Augsburg, whither he went in the beginning of 1548. In 1550 he went again to Charles to Augsburg and in 1553 is said to have accompanied him into Spain, where according to some accounts, he remained three years, but this is certainly incorrect. It was at Barcelona that Charles created Titian count

Digitized by Google

palatine of the empire and made him knight of the order of St. Iago. In the patent of nobility given at Barcelona, as Ridolfi says, in 1553, which ought probably to be 1535, Titian is styled besides count palatine, knight, and count of the sacred Lateran palace, and of the Imperial court and consistory. Charles left Barcelona in 1542, and did not return until 1556: for this reason Bermudez concludes that 1553 in Ridolfi has originated from an error of the copyist for 1535. Bermudez supposes that Titian left Spain in May 1535, when Charles went to Africa, and that he was to that country in 1552, after he painted Charles for a second time at Bologna. Titian painted several works in Spain; but of those which were in the royal galleries it is not exactly known which were painted in Spain, or which were sent there from Italy, both to Charles and to Philip, or which were purchased after the death of Titian. There are however in Spain several of Titian's masterpieces: a Sleeping Venus, "a matchless deity," as Cumberland terms it, which was saved from the conflagration of the Prado, in the time of Philip IV., by which several of Titian's and other valuable pictures were destroyed; also two celebrated groups from the Ludovisi palace at Rome, one of Bacchanals, the other of Cupids; a Last Supper in the refectory of the Escurial, painted for Philip II.; Christ in the Garden, and St. Margaret with the Dragon. The Last Supper was sent by Titian to Philip in 1554; and in an accompanying letter he states that he had been occupied seven years over it, during which time, to use his own words, he had laboured almost continually upon it: this is another testimony that Titian was not in Spain so late as 1553 and the following years. In this letter Titian complains of the irregularity with which two grants made to him by the emperor, in 1541 and 1545, were commuted up to 400 crowns per annum. Philip answered it in 1558, and gave peremptory orders that the sums should be duly paid, with the following admonition, in his own handwriting, to the governor of Milan: "You know how I am interested in this order, as it affects Titian; comply with it therefore in such a manner as to give me no occasion to repeat it." These 400 crowns, together with the 300 granted by the state were alone sufficient to support Titian in a comfortable manner; and the income derived from his works enabled him to live in great affluence; his house was a place of resort to the nobility of Venice. He painted many pictures for Philip. In a letter addressed by Titian to Philip, shortly after Philip married Queen Mary of England, Titian mentions a Venus and Adonis, which he sent him at the same time, also a Danaë, which he had previously sent, and a Perseus and Andromeda, and a Medea and Jason, which he was about to send. He likewise a religious piece, which he had had ten years in hand. He does not name this religious piece; but about this time he painted his celebrated picture of the Martyrdom of San Lorenzo for Philip II.; it is a night scene, and the whole light of the picture is from the fire of the martyrdom and a ray of light from heaven. In this picture, though he was then old, Titian has displayed a power of composition and design equal to his colouring, and has much surpassed every other master who has painted this subject: he repeated the picture, with some slight alterations in the background, for the church of the Jesuits at Venice. Titian often repeated his pictures; but the principal part of the copies were painted by his scholars: he finished them only, but he generally introduced some alterations in the backgrounds.

In 1566 Vasari visited Titian, and, although he was then eighty-nine years of age, he found him with his pencil in his hand, and derived great pleasure from his conversation. The pencil of Titian however was active for still ten years, although the pictures he produced at this time were not calculated to add to his reputation: they are extremely careless and slight in their execution. He died of the plague on August 27th, 1576, with the reputation of the greatest colourist and one of the greatest painters that ever lived; and having himself enjoyed a European fame for upwards of seventy years. He was buried, by express permission of the senate (which, as he died of the plague, was necessary), without pomp in the church of the Frari, the glorious de' Frari, where his famous picture of the Assumption of the Virgin stood before it was removed to the Academy; but no monument has yet been raised to him, though a splendid one was projected in Canova's time.

Much has been said by the Florentines, and some recent critics of different schools, in disparagement of the design of Titian; yet, as far as regards propriety of design, there can be no comparison between the earlier and best works of Titian and those of the anatomical school of Florence in the latter half of the sixteenth century. In the works of Titian there is no ostentation of any kind whatever; no artifice. In composition, in design, in chiar'oscuro, and in colouring, he sought truth only, and that according to his own perception of it. It is generally allowed that the pictorial imitation of nature, without any addition or selection, Titian has surpassed all the other great painters of Italy; but in invention, composition, and design he was inferior to many of the great painters of Rome and of Florence; yet in design he has had no superior in the Venetian school. His works are purely historical, or simple pictures of recorded facts, and he is said to have always painted from nature. It is in colouring that Titian is pre-eminent: the same grandeur of colour and effect characterise everything that he painted—whether in the figure, in the landscape, in the draperies, or in other accessories. His chiar'oscuro is true, because in his works it is a part of the colouring, but it never constitutes, as in some of the works of Correggio, an independent object. Titian's object appears, from his works, to have been to produce a faithful imitation of every appearance of nature in what he represented—thus we find in all his best pictures that infinite variety of local tone which appear in nature. He was one of the first who commenced the practice of glazing. He excelled in women and in children: his numerous Venuses, as they are called, are well known: of these perhaps the most richly and transparently coloured is that at Dresden; there is a duplicate of this picture in the Fitzwilliam Museum at Cambridge. In his naked men he was not so successful: perhaps of these the best is his John the Baptist, in the Academy at Venice, formerly in the church of Santa Maria Maggiore. There are two other remarkable pictures by Titian in the collection of the Venetian Academy which have not been mentioned—a Presentation in the Temple and a Deposition from the Cross. The former, originally belonging to the old church della Carità, is an admirable example of Titian's simple and natural style of composition; it contains many portraits: the latter is a remarkable specimen of the surprising boldness of touch, yet truth and brilliancy of colouring, which distinguish the best of his latest works.

There is no list of the works of Titian, and it would not be an easy task to make one. His portraits are extremely numerous, and in this department he is almost universally considered to have surpassed all other painters, not excepting Vandyck. There is at Windsor a picture said to be the portrait of Titian and Aretin, or some senator, by Titian, which cannot be too highly praised: it is certainly, for colouring, one of the first pictures in the world. There are several other admirable pieces by Titian in England: two in the Bridgewater Gallery, of Actæon and Calisto; the Princess Eboli with Philip II., at Cambridge, from the Orleans Gallery, the repetition of the Dresden Venus mentioned above; and the Cornaro Family, at Northumberland House. There is also in the Louvre at Paris a remarkably fine picture for the composition and colouring representing the Entombment of Christ: it is a repetition of the picture of the same subject in the Manfrini palace at Venice. The National Gallery contains eight pictures attributed to Titian, of which the Bacchus and Ariadne, and the Nymphs and Adonis are brilliant examples of his manner of painting mythological subjects, and the 'Aristo,' of his style of portraiture.

Titian, Aretin, and Sansovino the architect, were great friends, and were almost inseparable when at Venice. Titian painted Aretin several times; he is also said to have painted several portraits of Sansovino, who was likewise his friend: there is one in the Manfrini palace at Venice. Considering Titian's great reputation, little is known concerning his private life, but he appears to have been of an amiable disposition and agreeable conversation: he seems however to have been particularly sparing of praise. He is said to have been even of a jealous of his own brother Francesco Vecellio, that he induced him to give up painting and to follow the occupation of a merchant; his reputed jealousy of Tintoretto as a boy has been mentioned. [TINTORETTO.]

His biographers Ridolfi and others relate several anecdotes showing his intimacy with Charles V., and the respect that the emperor had for him. Upon one occasion, when Charles was present, whilst he was painting, Titian let his brush fall, and the emperor immediately picked it up and gave it to Titian, saying, "Titian is worthy of being served by Cæsar" ("Titiano è degno essere servito da Cesare"). Northcote the painter wrote a Life of Titian, or, as some say, got Hazlitt to write it for him: 'The Life of Titian, with Anecdotes of the Distinguished Persons of his Time,' 2 vols. 8vo, London, 1830. Dr. Waagen, in 1854, 784 pages in a mass of matter thrown together without judgment or arrangement, and it contains several inaccuracies and some contradictions. It consists of two reviews of Titian's life, which are distinct lives; the second review, 'from Ridolfi, Tiozzi, and others,' beginning with ch. xxviii. or page 73 of the second volume, is the better portion of the work, but does not appear to have been written by the same hand that wrote the other portion.

To be enabled to appreciate fully the powers of Titian it is necessary to examine his works at Venice; after Venice he is seen to most advantage in Madrid. Bermudez has given a list of his public works in Spain, in his 'Dictionary of Spanish Artists;' he enumerates about eighty. Titian's scholars were not very numerous: the best were Paris Bordone, Bonifazio Veneziano, Girolamo di Tisiano, and his son Orazio Vecellio. His imitators were more so, for they include to a certain extent all the great painters of Venice of his time, who acquired a reputation subsequently to his own. Titian is said to have engraved on copper and on wood.

There were several other painters of the family of the Vecelli, for whom see VECELLIO.

TITSINGH, ISAAC, one of the most able civilians in the Dutch East Indian service during the last century, was born at Amsterdam in 1740. He entered the service of the East India Company of Holland at an early age, and rose to the rank of counsellor. His naturally vigorous constitution defied the pestilential effects of the climate of Batavia, where in the course of seventeen years he saw the entire body of his colleagues twice renewed. He was sent as supercargo to Japan in 1778. The war which then raged prevented the despatch of the ship sent annually from Batavia to the Dutch factory at Desima, and Titsingh was in consequence detained there for several years. He did

Digitized by Google

not quit Japan till 1784. After his return to Batavia he was appointed governor of the Dutch factory in the vicinity of Chandernagore: how long he filled this office is uncertain.

In 1794 Titsingh was appointed by the government at Batavia chief of the embassy which Van Braam, hoping to be himself appointed ambassador, had persuaded them to send to the court of Pekin. The mission left Canton on the 22nd of November 1794, and reached that city on its return on the 11th of May 1795. The ill-health of Titsingh during the greater part of his residence at Pekin caused the discharge of the functions of ambassador to devolve in great measure on Van Braam. Not long after the termination of this mission Titsingh returned to Holland, after a residence of about thirty-one years in the East. An involuntary relinquishment of his residence at Japan had enabled him to obtain a greater amount of information relative to those islands than his predecessors, and the friendships he had contracted with several of the nobles enabled him to procure, at a later date, by their good offices, material additions to the collections he had made himself. He was acknowledged both by the Japanese and Chinese to possess a knowledge of their customs and manners rare in a European. He was esteemed by his colleagues for his business talents; and the literati of Europe who had applied to him for information had ever found him as courteous and liberal as he was intelligent: consequently great additions to our knowledge of Japan were anticipated on his return to Europe. These expectations were however in a great measure disappointed. With the exception of information which he supplied to Marsden, De Guignes and others, nothing appeared during his life; and after his death, by a fever which he neglected, in February 1812, his collections were dispersed; only a portion of his manuscripts, maps, and curiosities were ultimately recovered. M. Nepveu, who had become the purchaser of the fragments, published in 1819, in two vols. 8vo, a 'Description historique du Japon pour les Mariages et les Funérailles, suivies de Détails sur la Poudre Doxia, et de la Préface d'un livre de Confoutsée sur la Piété Filiale, traduit du Japonais par feu M. Titsingh.' In the introduction to the Memoirs the author states that many of the most distinguished Japanese are fully aware of the advantage their country would derive from an extended intercourse with foreigners. In 1820 M. Abel Rémusat published in 8vo, from the manuscripts of Titsingh, Mémoires et Anecdotes de la Dynastie régnante des Djogouns, souverains du Japon, avec la Description des Fêtes et Cérémonies observées aux différentes époques de l'année à la cour de ces Princes, et un Appendice contenant des Détails sur la Poésie des Japonais, leur Manière de diviser l'Année, &c.' An English translation of these two works, by Frederic Shobert, was published in 1822. The volumes edited by M. Rémusat, and the English translation, contain a description of the books, printed and in manuscript, the maps, plans, coins, &c., collected by Titsingh. Among the manuscripts are his journal of travels from Canton to Pekin; copies of letters addressed by him to various persons during the years 1790 to 1797; forty-six autograph letters addressed to him by Japanese functionaries and Roman Catholic missionaries; thirty-five autograph letters addressed to him by Volney, De Guignes, senior, and other eminent literary characters; and an exposition of the official conduct of M. Titsingh. The twenty-fourth volume of the 'Annales des Voyages' contains an account of Ireland of Yesso, translated from the Japanese by Titsingh, and a 'Notice sur Japon,' in Charpentier Cossigny's 'Journey to Bengal,' contains a rather inaccurate report of the substance of conversations with him respecting that country. The important work the 'Japanese Encyclopedia,' in the 'Bibliothèque du Roi,' at Paris, was obtained from Titsingh.

TITTMANN, JOHANN AUGUST HEINRICH, one of the most distinguished German theologians of modern times, was born on the 1st of August 1773, at Langensalza, where his father, Carl Christian Tittmann, was then preacher. Young Tittmann was originally of a very weakly constitution, but he gained strength as he grew older, especially from the time that he lived at Wittenberg, where his father was appointed prepositus and professor in the year 1775. His extraordinary talents enabled him to enter upon the study of theology and philosophy at Wittenberg as early as 1788, after he had the year before published a Latin essay, 'De Virgilio Homerum imitante,' Wittenberg 1787. On completing his studies there, he went to Leipzig in 1792, where he began his career as academical teacher in the 19th of May 1793. His talents and the extensive knowledge he possessed at this early age would have made him the first theologian of his time, if he had not been frequently drawn away from his regular studies, and occupied with different subjects. Nevertheless he distinguished himself so much, that in 1795 he was appointed morning preacher (Frühprediger) to the university, and the year after professor extraordinary of philosophy, and in 1800 professor of theology. In 1805 he was made a doctor of divinity, and obtained the fourth ordinary professorship of theology, and in 1818 he became first professor of theology in the university of Leipzig. During the last year of his life he was dean of the cathedral of Meissen. He died, in consequence of a cold he took in 1823, and of which he never recovered, on the 31st of December 1831.

As an academical teacher Tittmann distinguished himself by his acuteness, sound judgment, and by the simplicity and clearness with which he treated his subject. It was perhaps owing to the variety of subjects on which he had tried his strength, that in his later years he was competent to undertake the most varied business in which he was employed by his government. At the congress of Vienna, which he attended for some time, he spoke with great frankness, and particularly exerted himself to realise his favourite plan of uniting the German Protestants, and giving to their body a new ecclesiastical constitution. But his object was not attained. During the last years of his life he was a member of the first chamber of the Saxon deputies, in which he represented the university of Leipzig, and often exercised great influence by his ability and his powers as a speaker.

The numerous writings of Tittmann are distinguished by great clearness of style, those written in German, as well as those in Latin. The following are the most important for the theological student:—'Encyclopädie der Theologischen Wissenschaften,' Leipzig, 8vo, 1798; 'Theocles, ein Gespräch über den Glauben an Gott,' Leipzig, 8vo, 1799; 'Ideen zu einer Apologie des Glaubens,' Leipzig, 8vo, 1799; 'Theon, oder über unsere Hoffnungen nach dem Tode,' Leipzig, 1801; 'Lehrbuch der Homiletik,' Breslau, 8vo, 1804; 'Pragmatische Geschichte der Theologie und Religion in der Protestantischen Kirche während der zweiten Hälfte des 18ten Jahrhunderts' (of this excellent work only the first volume appeared, Breslau, 8vo, 1805); 'Ueber Supranaturalismus, Rationalismus, und Athenismus,' 8vo, Leipzig, 1816; 'Ueber Vereinigung der Evangelischen Kirchen,' Leipzig, 1818; 'Die Evangelische Kirche im Jahre 1530 und 1830,' Leipzig, 8vo, 1830. Tittmann also edited the Greek text of the New Testament, Leipzig, 2 vols. 8vo, 1824, which has often been reprinted, and Zonaras and Photius's Greek Lexicon, Leipzig, 4to, 1808; but of this work only two volumes appeared, which contain the Lexicon of Zonaras. He also wrote a great number of Latin dissertations in programmes and on other occasions, which were edited after his death by Hahn, under the title, 'Opuscula Theologica, argumenti maximam partem dogmatici, apologetici, et moralis,' Leipzig, 8vo, 1833. Another Latin work, 'De Synonymia in Novo Testamento,' was edited by Becher, Leipzig, 8vo, 1832.

TITUS, FLA'VIUS VESPASIA'NUS, the son of the Emperor Vespasian, was born on the 29th of Decembers, A.D. 40. He received his education together with young Britannicus, who was poisoned by Nero in A.D. 55, and as Titus fell dangerously ill after the death of his unfortunate friend, it was said and believed that he had drunk a part of that deadly potion by which Britannicus perished. Titus afterwards preserved a grateful memory of the companion of his youth. Possessed of uncommon beauty and vigour, and extraordinary talents, Titus distinguished himself at an early age. The first campaigns which he made as tribunus militum were in Britannia and Germania. He first married Arricidia Tertulla, the daughter of a Roman knight, and after her death, Marcia Furnilla, who was of a noble family, but from whom he was divorced some time after she had borne him a daughter. Titus became afterwards quæstor. The Jews, having been oppressed by Gessius Florus, revolted in A.D. 66, and defeated Cestius Gallus, the proconsul of Syria, but they were beaten by M. Licinius Mucianus, the new proconsul of Syria, and T. Vespasianus, the father of Titus, who was the commander of the Roman army, which consisted of three legions. One of these legions was commanded by Titus, who showed as much military skill as personal courage, especially in the siege and capture of the towns of Gadchem and Gamala (A.D. 67). During his sojourn in Palestine he fell in love with Berenice, the daughter of Herod Agrippa. [BERENICE (6).]

In the mean time the Emperor Nero was murdered, and Galba succeeded (A.D. 69). In consequence of this event, T. Vespasianus sent his son Titus to Rome, in order to gain the favour of the new emperor. Perhaps also Vespasianus wished to be informed of Galba's intention with regard to the war in Palestine, the command of the forces employed there being an office to which Vespasianus had acquired great influence in the East. (Tacitus, 'Hist.,' ii. 1, and the note to this passage in the edition of Grunovius, ii., p. 127.) The people said that Titus had some hope of being adopted by Galba, who was old and without issue; but although this motive of his going to Rome is reported by Tacitus, the mere existence of such a rumour proves that Titus had already attracted the public attention. When Titus arrived at Corinth he was informed that Galba had been murdered (15th of January, 69), and that the imperial power was disputed by Vitellius and Otho. This event perplexed him. His commission being to congratulate Galba, he could not expect to be well received by Vitellius, by whose instigation Galba had been massacred; nor did he deem it prudent to adhere to either of the imperial rivals before he had taken the advice of his father. He therefore returned to Judæa. There was a rumour, however, that his love for Berenice was the secret cause of his return; but however strong his passion was, it never prevented him from doing his duty. On his way from Greece to Syria he landed on Cyprus, and there consulted the oracle in the temple of Venus of Paphos. The answer was favourable with regard to his voyage, and highly flattering to his ambition: Sostratus, the priest of the temple and the reporter of the oracle, promised him the empire. (Tacitus, 'Hist.,' ii. 2-4; Suetonius, 'Titus,' c. 5.)

Titus was one of the leaders of the new revolution by which Vitellius lost his power a short time after his victory over his competitor Otho at Brixellum. Full of filial admiration for the character of his father, Titus endeavoured to remove the only obstacle to his succession, which might have frustrated their plans, notwithstanding

Digitized by Google

Vespasianus was at the head of three legions and a strong body of auxiliaries. This obstacle was a serious misunderstanding which existed between Vespasianus and Mucianus, the proconsul of Syria. Titus succeeded in reconciling them. Their difference had chiefly a political character, yet Titus, by the mildness of his manner and by the modesty of his personalon, brought together two highly-gifted men who were divided by the most lutractable of passions. Supported by Mucianus, by Tiberius Alexander, and by Titus, Vespasianus was proclaimed emperor by the army in the East, while his brother Flavius Sabinus occupied for him the Capitol in Rome, and compelled Vitellius to lay down the imperial diadem. [VESPASIANUS; TIBERIUS ALEXANDER; VITELLIUS.] Vespasianus left Judæa for Rome, and the command of the army of Judæa and the continuation of the war devolved upon Titus. Domitianus, the younger brother of Titus, having incurred the displeasure of his father, Titus interceded for him with brotherly affection. (Tacitus, 'Hist.,' iv. 51, 52.)

The army in Judæa, of which Titus was now the commander, consisted of six legions, twenty cohorts of allies, eight corps of cavalry, the troops of the Kings Agrippa and Sohemus, the auxiliaries of King Antiochus of Commagene, and a small body of Arabs. After a long siege, Jerusalem was taken by storm; the whole population, more than 600,000 men, was massacred, and the remainder of the Jews were dispersed over the world (2nd of September, A.D. 70). In this memorable siege Titus distinguished himself both as a general and as a soldier, and it is said that he killed twelve men of the garrison with his own hand. In the same year Titus was created Consul with Vespasianus, whose colleague he was in his first consulship; and he was again consul in the years 72, 74, 75, 76, 77, and 79. Vespasianus however recalled his son from Judæa. A rumour was spread that Titus secretly aimed at making himself master of the East, and this rumour had reached Vespasianus.

So universally was Titus beloved, that the army implored him either to stay with them, or at least not to go without them; but he obeyed the command of his father, and by his speedy return proved that those rumours were entirely unfounded. He celebrated a triumph together with Vespasianus, for their victories over the Jews, in commemoration of which a triumphal arch was erected, which is still one of the finest monuments of that kind existing in Rome. Titus was likewise tribune with his father, who esteemed him so much, that he allowed him not only to write letters in his name, but also to draw up the imperial edicts. (Suetonius 'Titus,' 6.) During the reign of Vespasianus, various high functions were successively confirred upon Titus, whose character however seems to have been somewhat altered by the influence of the general corruption of the capital. He was charged with acting rashly: he subjected himself to the reproach of having ordered the murder of Crecilus, which was an act of cruelty, for though Cæsina was guilty of treason, he had not been legally sentenced (Suetonius, 'Titus,' 6); and he was generally reproached for taking money from those who solicited his intercession with the emperor. On the other side however he remonstrated with his father on those measures which this very economical prince adopted for the purpose of improving the finances, which were exhausted by the dissipation of Vitellius. He was also charged with love of women. But he ordered Berenice, who had followed him to Rome, to go back to Judæa, and he thus proved once more that his passion for her did not prevent him from doing his duty. The consequence of this was, that the Romans, who, by the example of Tiberius, Caligula, and Nero, knew that the virtue of exalted men is exposed to great temptations and strange changes, feared that Titus would become a new proof of the truth of their experience.

But no sooner did Titus become emperor by the death of Vespasianus (A.D. 79, than he showed that all those fears were unfounded. His virtuous conduct was the subject of general admiration. During his short reign the empire was visited by great calamities. An eruption of Vesuvius destroyed the towns of Herculaneum, Stabiæ, and Pompeii, and carried ruin over the fertile coast of Campania (August, 79) [PLINY]: in the year 80 a conflagration broke out in Rome, which lasted three days, and destroyed a great part of this city; the buildings on the Campus Martius, the Capitol, the library of Octavianus, were laid in ruins, and the Pantheon was damaged; and no sooner had this people recovered from their consternation than the plague broke out, of which 10,000 persons died every day. Titus assisted by his unhappy subjects with the greatest liberality; he exhausted his treasures, and he ordered the property and estates of those who had perished without leaving heirs, to be distributed among the sufferers, although the property of right belonged to the fisc, or, in fact, the emperor's private purse. His liberality was so great that his friends reproached him for it; he answered, that it was not just that anybody should leave the emperor with a sorrowful eye. He punished severely and exiled to the small barren islands in the Mediterranean those who followed the profession of false accusers [TIBERIUS CLAUDIUS NERO]; and he disliked the punishment of death so much, that he used to say that he would rather die than cause the death of others. Two patricians conspired against him, but he did not punish them: he only said, "Do not do it again; Providence alone distributes crowns" (Suetonius, 'Titus,' 9); and he then invited them to accompany him to the amphitheatre. He acted with the same generosity towards his brother Domitianus, who was guilty of more than one conspiracy against his brother. He gained all hearts by his extreme affability, which however was always accompanied by dignity; and he delighted the Roman people with splendid entertainments, giving them amongst others the spectacle of five thousand wild beasts fighting with each other in the Colosseum, or Flavian amphitheatre, which was finished by his order, the construction of it having been commenced under Vespasianus.

During the reign of Titus, Agricola restored tranquillity to Britain, and penetrated as far as the Frith of Tay. (A.D. 80.) In the following year he constructed the wall between the rivers Glota and Bodotria (the Frith of Clyde and the Frith of Forth), in order to protect Britain against the invasions of the Caledonians.

In order to recover his broken health Titus retired, in A.D. 81, to a villa in the neighbourhood of Reate, which belonged to his family, and where Vespasianus had died. Here he was attacked by acute fever, and died on the 13th of September 81. It was said that his brother Domitianus, who had accompanied him to Reate, had been the cause of his death by advising the use of improper remedies. On his death-bed Titus exclaimed that he died without regret, except for one act, which however he did not specify. The news of his death reached Rome in the evening, and the senators assembled in the same night, anxious to know each other's hopes and fears with regard to the unworthy successor of Titus, Domitianus. The consternation of the people was general, for they had lost him to whom they had given the name of "the delight of the human race."

(Josephus, *Jewish War*, vi. 6, &c.; Dion Cassius, lxvi. 18, &c.; Aurelius Victor, *De Cæsaribus*, 10; Eutropius, vii. 14.)

Coin of Titus.
British Museum. Actual size. Copper. Weight 238·7 grains.

TITUS. Little is known of the personal history of Titus, to whom the epistle of St. Paul is addressed. His name is not even mentioned in the Acts of the Apostles, and all authentic information about him is derived from the Epistles of St. Paul. From these it appears that Titus was converted by St. Paul, by whom he is called "his own son after the common faith" (i. 4), but when and where is not recorded. Accordingly there are various conjectures on this subject. This we know for certain, that Titus was (Acts, xv.; Gal., ii.) with St. Paul in Antioch before the first Council was holden at Jerusalem, and that he was one of the party sent by the Church at Antioch to consult the Apostles at Jerusalem, on the question whether it was necessary for the Gentile converts to submit to circumcision "after the manner of Moses." To this rite the Judaising Christians at Jerusalem were anxious that Titus should submit; but St. Paul (Gal., ii.) informs us that he firmly refused to do so. After the Council it would seem that Titus returned with St. Paul to Antioch, and subsequently accompanied him on some of his travels.

At any rate, from the expression in 2 Cor., viii. 23, it appears almost certain that Titus assisted St. Paul in preaching the Gospel at Corinth. From 1 Cor., xvi. 8, compared with 2 Cor., vii., it is not improbable that Titus was also with St. Paul during his long residence at Ephesus (Acts, xix. 10), and that he was selected to be the bearer of the first Epistle to the Corinthians, which was written by St. Paul at Ephesus. On his return from Corinth, whatever might be the occasion of the visit alluded to in 2 Cor. vii., Titus met St. Paul in Macedonia, and gave him such an account of the Corinthian Church, and of the effect produced by his first letter to it, as gave him the highest satisfaction. (2 Cor., vii. 6–13.) Titus also appears to have been the bearer of the apostle's second letter to the Corinthians, when he was charged to excite them to finish their collections for the poor converts in Judæa, which they had begun during his former visit. From 58, when we suppose him to have been the bearer of St. Paul's second epistle to the Corinthians, to 62, we hear nothing of him; in the latter year, in all probability, he was left by St. Paul in Crete, "to set in order the things that were wanting, and to ordain elders in every city." (Titus, i. 4.) This year was the date of St. Paul's release from his first confinement at Rome, when he is supposed to have touched at Crete, and made some converts there, on his way from Italy to Judæa. Subsequently to this, Titus was requested by St. Paul (iii. 12) to visit him at Nicopolis in Epirus, and it seems that he was also with him during his second residance at Rome. (2 Timothy, iv. 10.) We have no certain information as to the time and place of Titus's death; but according to an ancient tradition, he lived to the age of ninety-four years, and died and was buried in Crete. The date of the epistle has

Digitized by Google

been a subject of much controversy, some placing it as early as 52, and others as late as 65. From the striking verbal resemblances between it and the first epistle to Timothy, it is not improbable that they were written about the same time, and while the same ideas and phrases were present to the author's mind. The genuineness and authenticity of the epistle have never been disputed.

St. Paul's design in writing it was to instruct Titus in the discharge of the duties of his ministry as head of the church in Crete. Accordingly, in chap. i. he gives Titus instructions concerning the ordination of elders, who were to be appointed for every city, and describes what qualifications they should possess, and also directs him to expose the Judaising teachers of Christianity, who seem to have been numerous in the island. In chap. ii. St. Paul informs Titus what precepts he was to inculcate, according to the age and circumstances of those whom he had to teach, and admonishes him how to show himself a pattern of all good works, and an example of the doctrines which he taught. In chap. iii. he teaches Titus to inculcate obedience to principalities and powers, in opposition to the Jews, who thought it an indignity to submit to idolatrous magistrates; and also that he should enforce gentleness and meekness towards all men. He then concludes with a request that Titus would inculcate the necessity of good works, and avoid foolish questions; an injunction of the same kind as St. Paul gave to Timothy.

For the undesigned coincidences between this epistle and the Acts of the Apostles, see Paley, 'Horæ Paulinæ,' pp. 357-367. See also Horne's 'Introduction to the Critical Study of the Scriptures,' vol. iv., p. 387; Macknight on the New Testament, vol. iii.; Collyer's 'Sacred Interpreter.'

TOALDO, GIUSEPPE, a celebrated Italian geographer and meteorologist, was born in 1719 at a small village near Vicenza. After having received the usual rudiments of education, he was sent to the University of Padua, in order to qualify himself for the priesthood by the study of literature and theology; and while there, his taste for natural philosophy, and particularly for astronomy, induced him to devote a considerable portion of his time to the pursuit of these branches of science; this pursuit he continued, during the intervals which his pastoral duties afforded, after he had quitted the university and become the curate of a village in the neighbourhood.

In 1762 he was appointed professor of physical geography and astronomy in the same university, and he immediately availed himself of the influence which his appointment gave him to obtain the grant of a building which might be occupied as an observatory; this he succeeded, and being allowed the use of an ancient tower, he placed in it all the instruments which he could collect. In this building he made a series of astronomical observations, in continuation of those which had been made about forty years previously by Poleni; and the first thunder-rod erected in the Venetian states was one which Toaldo applied to the same building.

He died suddenly at Padua, December 11, 1793, in consequence of a fit of apoplexy, which was supposed to have been brought on by a domestic calamity.

The Abbé Toaldo applied himself to the study of mathematics only as far as that branch of science is applicable to geography. In 1769 he published at Padua a treatise on plane and spherical trigonometry, with a collection of tables; and at Venice, in 1773, a tract entitled 'Compendio della Sfera e di Geographia.' In 1782 he published his 'Saggio di Studi Veneti nell' Astronomia e nella Marina;' and two years afterwards, his method of finding the longitude of a place by an observed transit of the moon. In 1789 appeared his 'Trattato di Gnomonica,' and in 1791 a work entitled 'Sebeclasmata Astronomica.' In 1776 he gave, in a letter to Mr. Strange, the British resident at Venice, an account of the tides in the Adriatic, which he drew from the observations of Signior Temansa, an Italian architect and engineer. ('Phil. Trans.,' vol. lxvii.)

The attention of Toaldo was strongly directed to meteorology at a time when this branch of natural philosophy was but little studied; and he is the first who took notice of the supposed connection of atmospherical phenomena with the movement of the moon in her orbit. Having observed that those phenomena return in nearly the same order at the end of every eighteen years, he drew up tables exhibiting the state of the weather during three such periods; and an account of his system was given in a paper entitled 'Le Saros Météorologique,' &c., which is contained in the 'Journal de Rosier' for 1782. In 1770 Toaldo published a tract entitled 'Saggio Meteorologico sulla vera Influenza degli Astri;' and two years afterwards, a tract concerning the method of protecting buildings from the effects of lightning. He also published, in 1775, a work on the application of meteorology to agriculture.

Toaldo wrote a life of the Abbé Conti, which was prefixed to an edition of the works of that philosopher and poet, who had been his instructor.

TOBIN, JOHN. The author of one play which still holds possession of the stage—a play of considerable merit, although displaying little of what may be termed original genius—would scarcely be entitled to notice in a work which does not profess to include the minor adventurers in literature, were it not for the peculiar circumstances under which he devoted a life to dramatic writing. John Tobin was born at Salisbury in 1770. His father had property in the Isle of Nevis, and from the political circumstances of the period, thinking his presence necessary upon his plantation, he took up his residence there, leaving three sons under the care of their maternal grandfather. They were placed at the free-school at Southampton, where John discovered some precocious talents. His father, returning to England, settled at Bristol in a mercantile employment, where his sons became pupils of the Rev. Mr. Lee. John, who was the third son, was in 1785 placed in the house of a London solicitor, in which house he eventually became a partner. His ambition was however early directed to dramatic composition, and for fifteen years he persevered in offering to the theatres play after play, each of which was uniformly rejected by the managers. Tobin had perhaps more real talent than the greater number of those who had possession of the stage, at a period when a successful dramatic performance was not only highly paid, according to any conventional estimate of literary merit, but was very often a little fortune to its author. But the stage was then also in the hands of three or four writers, who perfectly understood the taste of the town, and especially adapted themselves to the peculiarities of the actors who were to represent their characters. It was a necessary consequence of this system that whilst no drama was composed upon a principle of art—whilst no attempt was made to sustain a plot by consistent and natural character, wit or humour, pathos or poetry—whilst the author modelled his jokes according to his conception of the Quakerism of Bensdian's flexibility of face, and his sentiment with due reverence for that tragedian's stride and intonation,—there was still something produced which was perfect in its way, through the power of the machinery by which it was worked; a thing to move laughter or tears upon the stage, but singularly provocative of sleep in the study. Such was the day when the drama existed upon slang and clap-trap, miscalled comedy. Tragedy had died out in its dullness; and farce—not legitimate farce—demanded the five acts of Reynolds, Morton, and George Colman the younger. At this period Tobin essayed to become a writer of comedy. He produced 'The Faro-Table,' 'The Undertaker,' and 'The School for Authors:' these were all rejected. He then tried his hand at the romantic drama, and wrote, with equal ill success, 'The Curfew' and 'The Indians.' The latter piece was called forth by the success of Sheridan's melo-drama of 'Pizarro.' Some one, it is said, proposed this question to Tobin at a social meeting where the state of the drama was a subject of discussion: "Would a revival of the dramatic spirit which produced the plays of Shakspere and Fletcher be relished by the public?" Tobin replied that it would, and he wrote 'The Honeymoon.' This play was presented to the managers of Covent Garden, and refused. It was finally accepted at Drury Lane, and it was acted with a success which has attended very few dramatic compositions. In the meantime its author, who had a tendency to consumption, was obliged to leave London, seeking the recovery in his native air. He had cared for many years at his profession by day, and at his dramatic compositions by night. He died on the 8th of December 1804; and 'The Honeymoon' was produced at Drury Lane on the 31st of January 1805. Those who can enter for the public taste have often a liberty in discovering the merits of a man when he is dead; and so Tobin's rejected pieces were eventually brought upon the stage. They are forgotten. 'The Honeymoon' is exactly such a piece as might have been calculated upon, looking at the theory which is said to have suggested it. It is throughout an imitation of the old dramatists; clever indeed—but as an automaton compared to a man, for the breath of poetical life has not been breathed into what moves before us in the attitudes of humanity. The dialogue is skilful, the chief situations are interesting, there is a pretty quantity of point and other embroidery which looks like poetry. But the high art with which the old dramatists worked is not there. Tobin did the best he could as an imitator; but the Shaksperian drama is not a thing for imitation. The great and essential spirit of poetry is ever the same; but it always becomes original as it puts on new forms. A volume of which are to be found in the aggregate thought of its own age. The memoirs of John Tobin, with several of his unacted dramas, were published by Miss Benger in 1820.

TOCQUEVILLE, HENRI ALEXIS, COUNT DE, French statesman and philosophical historian, was born in 1805, and received a careful education. In 1831 he went on a government mission to North America, along with M. Gustave de Beaumont; and the fruit of this visit was his well-known work 'De la Democratie en Amérique,' published in 1835, in which the political institutions of the United States were described in a masterly manner, and their bearings philosophically investigated. The work immediately attracted attention, and translations of it were executed in England and America. In 1839, M. de Tocqueville began active political life as a member of the Chamber of Deputies, and attached himself to the ranks of the opposition. In the same year a 'Report' on the subject of slavery came from his pen. But it is since 1848 that M. de Tocqueville has been most heard of as a politician. He was one of the ministry which Count Molé proposed to form during the revolution of February, before it had gone the length of the declaration of the republic. In the early days of the republic he figured as a moderate liberal opposed to extreme views. He wrote and spoke against the Right to Labour and other measures of the socialists and vehement republicans. In 1848 he was elected vice-president of the Assembly, and from June to October he

Digitized by Google

was one of the ministers under the presidency of Louis-Napoleon. His conduct in relation to the French expedition to Rome was the theme of much reprobation on the part of the Italian patriots. Since the *coup-d'état*, which made Louis-Napoleon emperor, he has been one of that band of French constitutionalists and men of letters, who, "divested of all authority, yet still not unattended by reverence, have been permitted to the power which has triumphed over them to record their implied protest against its supremacy, and to found on their cherished remembrances aspirations for better days." Before the revolution of 1848 M. de Tocqueville had given to the world his second important historical work, entitled 'Histoire philosophique du Règne de Louis XV.,' 2 vols., 1847; this was followed in 1850 by a sequel entitled 'Coup-d'œil sur le Règne de Louis XVI. depuis son avénement à la Couronne jusqu'à la séance Royale du 23 Juin 1789;' and in 1856 by 'L'Ancien Régime et la Révolution,' 1856. His views of the state of society in France prior to the great revolution are the result of laborious and minute investigations into a great variety of materials, and are, in some respects, novel and peculiar. These views are now accessible to the English reader in Mr. Henry Reeve's translation, entitled 'On the State of Society in France before the Revolution of 1789, and on the causes which led to that event" M. de Tocqueville is still devoting his powers of historical research and speculation to this great topic. He is a member of the French Academy. [See SUPPLEMENT.]

TOD, JAMES, Lieutenant-Colonel in the service of the East India Company, was born in England in 1782, but educated in Scotland. He went out to India in 1800, and obtained a commission in the 2nd Bengal European regiment; thence he volunteered for the Moluccas, was transferred to the marines, served as a marine on board the Mornington, and in 1805, when in the subsidiary force at Gwalior, in Hindustan, was attached, under his friend Mr. Graeme Mercer, to the embassy sent at the close of the Mahratta war to the prince of Sindia in Mewar, where the embassy arrived in the spring of 1806. Rajpootana, of which Mewar is one of the states, thenceforward became the scene of his official labours, as well as of the geographical, historical, and antiquarian investigations by which he distinguished himself. He began to make surveys of Rajpootana soon after his arrival in the country, and the result of those surveys was the magnificent map which is given at the commencement of his 'Annals of Rajast'han.' The map was completed in 1815, and was presented to the Marquis of Hastings, then governor-general of India, and it was of great use in forming the plan of operations in 1817, the previous maps of the country having been very imperfect and erroneous. In 1817 he was appointed political agent, with the entire control of five of the states which had just then placed themselves under British protection—Mewar, Marwar, Jessulmeer, Kotah, and Boondee. The results of his investigations into the geography, history, and antiquities of Rajpootana are given in his 'Annals of Rajast'han.'

In 1822 the impaired state of his health rendered it necessary that he should retire to the more congenial climate of his native country. Previously however to his departure from India he made a circuit of nearly the whole of Rajpootana, including Gujerat, which he completed at the close of 1822, and in the beginning of 1823 he sailed from Bombay, and arrived safely in England.

After his return to England he was chiefly devoted to literary pursuits. He officiated for awhile as librarian to the Royal Asiatic Society. In 1834 he went to the Continent for the relief of a complaint in the chest, and remained abroad twelve months. He returned to England in September 1835. While at Rome he was occupied with the work to be entitled 'Travels in Western India,' the result of the journey which he made previous to his return to England, and especially his observations in Gujerat. The last chapters of the work were written in October 1835, while residing with his mother in Hampshire, and the manuscript was then nearly fit for publication. On the 16th of November, while transacting business with his bankers in London, he had an attack of apoplexy, and lay without consciousness for twenty-seven hours. He died November 17, 1835, at the age of fifty-three. He left a widow, the daughter of Dr. Clutterbuck, and a young family.

Bishop Heber, who travelled through Mewar and the adjoining Rajpoot states in 1825, on his way to Gujerat, bears testimony to the affection and respect borne to Colonel Tod by the upper and middling classes of society in various towns through which the bishop passed. He says—"Here and in our subsequent stages we continually were asked by the cutwals, &c. after 'Tod Sahib' (Captain Tod), whether his health was better since he returned to England, and whether there was any chance of seeing him again. On being told it was not likely, they all expressed much regret, saying that the country had never known quiet till he came among them, and that everybody, whether rich or poor, except thieves and Pindarees, loved him. He, in fact, Dr. Smith told me, loved the people of the country, and understood their language and manners in a very unusual degree." Bheelwars, a commercial town which had contained 12,000 families, had been entirely ruined by the depredations of the Mahrattas at the time when Colonel Tod was appointed political agent. He set himself to restore it, and in less than a year there were 700 prosperous and peaceful families in it. Colonel Tod, in a letter to a friend, says—"Regarding Bhilwarra, the work of my hands, in February 1818 there was not a dog in it; in 1822 I left 3000 houses, of which 1200 were bankers and merchants. An entire street, arcaded, was built under my directions and with my means. The merchants from Calcutta, Jessulmér, Delhi, Surat, from every mart in India, had their correspondents, and in fact it was becoming the chief mart of Rajast'han. The affection of these people a thousand times repaid my cares." Bishop Heber, after describing the prosperous state in which he found the town in 1825, says, "The place had been entirely ruined by Jumahead Khan, and deserted by all its inhabitants, when Captain Tod persuaded the Rana to adopt measures for encouraging the owners of land to return, and foreign merchants to settle. He himself drew up a code of regulations for them, and obtained them an immunity from taxes for a certain number of years, and sent them patterns of different articles of English manufacture for their imitation. He also gave money liberally to the rebuilding of their town. In short, every one of the merchants who called on me said, 'It ought to be called Todgunge, but there is no need, for we shall never forget him.'"

The 'Annals of Rajast'han' were published in London in 2 vols. royal 4to, vol. i. in 1829, and vol. ii. in 1832. The 'Travels in Western India, embracing a Visit to the Sacred Mounts of the Jains and the most celebrated Shrines of Hindu faith between Rajpootana and the Indus, with an Account of the ancient city of Nehrwalla,' was published in 1839 in a handsome 4to volume.

TODD, REV. HENRY JOHN, was born in 1763, and educated at Hertford College, Oxford, where he proceeded M.A. in 1786. He became a minor canon of Canterbury Cathedral soon after being ordained. In 1792 he was presented by the Dean and Chapter of Canterbury to the vicarage of Milton, near that city; and some years after, in the same body, to the rectory of Allhallows, Lombard-street, London, on which he fixed his residence in the metropolis. In November 1803, he was appointed, by the archbishop, Keeper of the Manuscripts at Lambeth. In 1820 he was withdrawn from London, having been presented by the Earl of Effingham to the rectory of Settrington, in Yorkshire, of the value of 1045*l.*; in 1830 he was collated by the Archbishop of York to the prebend of Husthwaite, in that cathedral church; and, finally, in 1832 he was appointed Archdeacon of Cleveland.

Mr. Todd's first publication was 'Some Account of the Deans of Canterbury, from the new foundation of the Church by Henry VIII.,' 8vo, 1793. This was followed by an edition of Milton's 'Masque of Comus,' with notes and illustrations, from a manuscript belonging to the Duke of Bridgewater, 1798; 'The Poetical Works of John Milton,' with notes and a life, 6 vols. 8vo, 1801, for which he received 200*l.* from the booksellers, and of which there was a second edition in 1809, a third in 1826, and a fourth in 1843, and the portion of which consisting of the Life and the Verbal Index has also been published separately; 'A Catalogue of the Library of Christ Church, Canterbury,' 8vo, 1802; 'The Works of Edmund Spenser,' with notes and a Life, 8 vols. 8vo, 1805, reprinted in 1845; 'Illustrations of the Lives and Writings of John Gower and Geoffrey Chaucer,' 8vo, 1810; 'A Catalogue of the Manuscripts preserved in the Library at Lambeth Palace,' fol., 1812 (100 copies privately printed); a new edition of 'Dr. Johnson's Dictionary of the English Language, with corrections and additions,' 4 vols. 4to, 1814, &c., and again in 3 vols. 4to. 1827; 'The History of the College of Bonhommes, at Ashridge,' folio, 1823 (printed for the Roxburgh Club of Bridgewater); 'Original Sin, Free Will, Regeneration, Faith, Good Works, and Universal Redemption, as misstated in certain Declarations of our Reformers,' &c., 8vo, 1818; 'A Vindication of our Authorised Translation and Translators of the Bible' (in reference to Dellaney's publication), 8vo, 1819; 'Observations on the Metrical Version of the Psalms, by Sternhold, Hopkins, and others,' 8vo, 1819; 'Memoirs of the Life and Writings of the Right Rev. Brian Walton, Bishop of Chester,' 2 vols. 8vo, 1821; 'An Account of Greek Manuscripts of the late Professor Carlyle, now at Lambeth,' 8vo, 1823 (privately printed); a new edition of 'Archbishop Cranmer's Defence of the Doctrine of the Sacrament,' 8vo, 1825, with a Vindication of Cranmer, reprinted in 12mo in 1826; 'A Letter to the Archbishop of Canterbury, concerning the Authorship of Icon Basilikè,' 8vo, 1825 (assigning the work to Bishop Gauden); 'A Reply to Dr. Lingard's Vindication of his History of England, as far as respects Archbishop Cranmer,' 8vo, 1827; 'Bishop Gauden the Author of Icon Basilikè further shown, in answer to Dr. Wordsworth,' 8vo, 1829; 'Life of Archbishop Cranmer,' 2 vols. 8vo, 1831 (an enlargement of the 'Vindication'); 'An Authentic Account of our Authorised Version of the Bible,' 12mo, Malton, 1834. We have omitted a few theological pieces of inferior importance. He was also, in the early part of his literary career, a frequent contributor to the 'Gentleman's Magazine;' and he is stated, in Husted's History of Kent, to have assisted largely in the preparation of that work.

Archdeacon Todd, who was a Chaplain in Ordinary to her Majesty, died at Settrington, on the 24th of December 1845. From his will, an abstract of which is given in the 'Gentleman's Magazine' for June 1846, he appears to have left several daughters.

Archdeacon Todd, though the editor of Milton and Spenser, had no pretensions to either poetical talent or poetical taste; nor was even his acquaintance with our old poetry, or with our old literature in general, very extensive or intimate. His annotations, accordingly, are rather dry. At the same time, if they do not overflow with much variety of knowledge, and rarely display any remarkable ingenuity,

Digitized by Google

they do not annoy the reader by any kind of superfluous disquisition. He is certainly not a very animated narrator; but his facts may generally be depended upon. His most useful services, perhaps, have been rendered in the field of bibliography.

TODD, ROBERT BENTLEY, M.D., F.R.S., an eminent physician and physiologist, was born and educated in Ireland. On the opening of King's College, London, he was appointed Professor of Physiology. He is a Fellow of the Royal College of Surgeons of Dublin, and a graduate in medicine of the University of Oxford. On settling in London he became a licentiate and afterwards a fellow of the Royal College of Physicians. On the opening of King's College Hospital he was appointed to physician to that institution, a post which he holds at the present day. In 1836, in conjunction with Dr. Grant, he became editor of the 'Cyclopedia of Anatomy and Physiology,' an extensive work which is only just completed. Latterly Dr. Todd was the sole editor, and he has himself contributed several articles, more especially those on the Heart, Brain, and Nervous System. He has besides published many works, which have given him a wide reputation as a practical physician. One of his earliest works was 'On Gout, Rheumatic Fever, and Chronic Rheumatism of the Joints.' His clinical lectures on various subjects have been published in the 'Medical Gazette' and 'Medical Times.' Two volumes of these lectures on diseases of the nervous system and urinary organs were published in 1857. In conjunction with Mr. Bowman, who was for many years joint professor of physiology with Dr. Todd in King's College, he published the 'Physiological Anatomy and Physiology of Man.' He has also published a work on the 'Anatomy of the Brain, Spinal Cord, and Ganglions.' In addition to these works he has published many separate papers in the 'Medico-Chirurgical Transactions,' and in the medical journals. He has now resigned his professorship in King's College, and is enjoying the fruit of his numerous labours. [*See* SUPPLEMENT.]

*TODLEBEN, FRANCIS EDWARD, Russian General of Engineers, was born May 25, 1818, at Mitau, in the Russian province of Courland. He studied at Riga, and was afterwards admitted into the College of Engineers at St. Petersburg. When the Russian army entered the Danubian Principalities in 1853 he was 2nd captain in the corps of engineers, and he served under General Schilders in the campaign on the Danube. In August 1854 the Russian armies crossed the Pruth on their retreat from the Principalities, and on the 14th of September the French and English troops were landed in the Crimea. Having gained the victory of the Alma, the allies made a flank march round the head of the harbour of Sebastopol, and occupied the heights on the south side of the city. An extensive ridge with considerable eminence and deep ravines covered the city and docks; and the position was thus eminently defensible, but little had then been done to improve it by art, for an attack on that side was quite unexpected. Prince Menschikoff, by sinking some of his great ships at the mouth of the harbour, having effectually prevented the allied fleet from entering, the allied armies were at the same time prevented from taking advantage of the undefended state of the city, and carrying it by a sudden attack; for they would then have been exposed to the batteries of the ships in the harbour, far more powerful than any artillery which they then possessed, and would have gained the loss of their own position on the southern plateau. A siege was therefore resolved upon; but no sooner did the allies begin to cut their trenches and prepare for a bombardment, than earth-works and massive ramparts armed with formidable batteries began to rise in opposition with astonishing rapidity. The genius of Todleben seems to have been early discovered, and the fortifications were placed under his direction. When the city was ultimately taken, the defences, interior as well as exterior, were found to be far above as well as different from the works of ordinary engineering. The extent, completeness, and strength of the Flagstaff, the Malakhoff, the Redan, and other batteries smaller but connected, which had so long protracted the siege and rendered the capture so difficult, filled the spectators with astonishment and admiration. Todleben was advanced rapidly in the grades of his profession, till at the termination of the war he had attained the rank of General of Engineers, and was decorated with the clasps of the order of St. George. At the latter part of the siege he was wounded in the leg, but all his great works of defence had then been completed.

TOGRAI, or TOGHRAI, the surname of Abu Ismail Hosein Ben 'Ali Ben Mohammed Mowayyed ed-Din al-Isefahani, and the name by which he is commonly known. He was descended from Abu'l-Aswad ad-Doioli, one of the most celebrated of the companions of Mohammed, and was born at Ispahan on the 1st day of the Rejeb, or the 11th of the Christian era, and gained great reputation as a poet. He was at first in the service of the celebrated Melek Shah (A.H. 465-485; A.D. 1073-92) and his son Mohammed, the third and fifth sultans of Persia of the Seljukian dynasty; and he subsequently became vizier to Mas'oud, the son of Mohammed, and sultan of Mosul. When this prince revolted from his brother Mahmud, the seventh Seljukian Sultan of Persia, and was conquered in the battle at Esterabad near Hamadan, A.H. 514 (A.D. 1120), Tograi was taken prisoner, and was at first kindly treated by the conqueror. This however excited the jealousy of his vizir, Abu Talib 'Ali Ben Ahmed as-Semiremi, who caused Tograi to be secretly put to death, A.H. 515 (A.D. 1121), under the pretence of his being a heretic who believed the doctrines of the Molaheds or Ismaelites, but in reality from fear of his talents. This is the account of his death given by Abulfeda ('Annal. Moslem.,' vol. iii., p. 417) and Ibn Khallekan ('Vit. Illustr. Viror.,' § 196, ed. Wüstenf.); that given by Leo Africanus ('De Vir. Illustr. Arab.,' cap. 13) is somewhat different. He was rather more than sixty lunar, or fifty-eight solar, years old at the time of his death. He appears to have enjoyed a great reputation, and was distinguished by several titles or surnames. The word 'Tograi' is the name given to the person employed by the sultan to write on all the imperial decrees and proclamations his name and titles in a peculiarly large and flourishing character, which is called, from a Persian work, the 'tozra;' and from Tograi's skill in writing this, or perhaps from his celebrity as an author, he derived the title of 'Fakhr al Cottab,' or the Glory of Writers. His surname 'Al-monshi' signifies a person employed to draw up the letters written in the name of the prince; and that of 'Alostad' means the master or doctor.

The most celebrated of his poems, and the only one which has been published, is that entitled 'Lamiato 'l-'Ajam,' which he composed in Arabic at Baghdad, A.H. 505 (A.D. 1111-12). It derives its name 'Lamiat' from the circumstance that all the verses end with the letter lam, or 'l; and 'al-'Ajam,' that is, 'of the Persians,' is added to distinguish it from a celebrated Arabic poem written by Shanfara, and entitled 'Lamiato 'l-'Arab.' It is a poem of the elegiac kind, written in a plaintive style, and composed of distichs; and has been frequently published and translated. The first edition is that by the elder Pococke, 8vo, Oxford, 1661, with a Latin translation, and copious elementary notes. At the end of the volume is a treatise on Arabic prosody by Samuel Clerk, the University printer. There is an edition by Matthias Anchersen, with an unedited Latin translation by Golius, published in 1707, Utrecht, which is now exceedingly scarce, as almost all the copies were lost at sea. Tograi's poem was also published in Arabic, together with that by Shanfara, by H. A. Frähn, 8vo, Casan, 1814. It was translated into English by Leon Chappilow, 4to, Cambridge, 1758; into French by Pierre Vattier, 8vo, Paris, 1660; into German by Ileiske, Friedrichstadt, 4to, (Dresden), 1756. A fuller account of the editions and translations of this poem may be found in Schnurrer's 'Bibliotheca Arabica,' and Zenker's 'Bibliotheca Orientalis,' 8vo, Leipsig, 1840. Tograi also wrote a work on alchemy, entitled 'Directio in Usum Filiorum,' which title has been the occasion of D'Herbelot's making a great mistake as to the contents of the book. (Schnurrer, *Biblioth. Arab.*; De Sacy's article on *Tograi* in the *Biograph. Univers.*; Wüstenfeld, *Geschichte der Arabischen Aerzte und Naturforscher*, Göttingen, 1840, § 151, p. 87.)

TOLAND, JOHN, was born on the 30th of November 1669 or 1670 (it is not certain which), in the most northern part of the county of Londonderry, in the peninsula called Inis-Eogan, whence in one of his works, published with a Latin title, he called himself 'Eoganesius.' Though it is not known who his parents were, it is known that they were Roman Catholics. He tells us of himself, "Being educated from my cradle in the grossest superstition and idolatry, God was pleased to make my own reason, and such as made use of theirs, the happy instruments of my conversion." ('Christianity not Mysterious,' Preface, p. xvii.) And again, alluding, in his 'Apology' (p. 16), to a charge made against him that he was a Jesuit, he says that "he was not sixteen years old, when he became as zealous against Popery as he has ever since continued. . . . Yet in Ireland that malicious report gained upon some few, because his relations were Papists, and that he was supposed to be so brought up himself in his childhood." He was sent first to a school at Redcastle near Loudonderry, where, we are told, that, having been christened Janus Junius, he was laughed out of this name by the boys, and took the name of John, which he ever after bore. He went in 1687 to the University of Glasgow, and after being there three years, to the University of Edinburgh, where he got a diploma as Master of Arts, in June 1690. Shortly after this he went into England, where managing to gain the favour of some influential dissenters, he was sent by them to the University of Leyden to study, and prepare himself for the duties of a minister.

He stayed at Leyden about two years, and made the friendship of Le Clerc, Leibnitz, and other learned men, with whom he afterwards corresponded. On his return to England he went for some time to Oxford, where he employed himself chiefly in collecting materials on various subjects in the Bodleian library. The vanity of his character, and the ostentatious avowal of free-thinking on religion, appear to have made him conspicuous at Oxford, as they did everywhere else through the whole of his life. But in a reply to a letter of advice which he received here, he denied his being either an atheist or a deist. ('Collections of Several Pieces of Mr. John Toland, &c.,' vol. ii. p. 302.)

At Oxford he began his 'Christianity not Mysterious,' which was published in London in 1696, the year after his leaving Oxford. The remainder of the title, viz., 'A Treatise showing that there is nothing in the Gospel contrary to reason nor above it, and that no Christian doctrine can be called a Mystery,' more fully explained the object of the publication. The work created a very considerable sensation, and elicited much attack and some persecution.

In 1697 Toland returned to his native country. Mr. Molyneux wrote to Locke, April 6th, 1697, from Dublin: "In my last to you, there was a passage relating to the author of 'Christianity not Mysterious.' I did not then think that he was so near me as within the bounds of this city; but I find since that he is come over hither, and

Digitized by Google

have had the favour of a visit from him. I now understand, as I intimated to you, that he was born in this country, but that he hath been a great while abroad, and his education was for some time under the great Le Clerc. But that for which I can never honour him too much is his acquaintance and friendship to you, and the respect which on all occasions he expresses for you. I propose a great deal of satisfaction in his conversation—I take him to be a candid free-thinker, and a good scholar. But there is a violent sort of spirit that reigns here, which begins already to show itself against him, and I believe will increase daily; for I find the clergy alarmed to a mighty degree against him; and last Sunday he had his welcome to this city, in hearing himself harangued against out of the pulpit by a prelate of this county." (Locke's 'Works,' vol. viii. p. 405, 8vo, ed. 1799.) Toland appears to have become acquainted with Locke; and this acquaintance he made the boast of in conversation at Dublin. In Locke's reply to the Bishop of Worcester, who, in defending the doctrine of the Trinity against Toland, had connected Locke with him, he showed that he did not reciprocate in an equal degree Toland's friendship and esteem for him. Mr. Molyneux wrote of him afterwards, May 27, 1697: "Truly, to be free, I do not think his management, since he came into this city, has been so prudent. He has raised against him the clamour of all parties, and this not so much by his difference in opinion, as by his unreasonable way of discoursing, propagating, and maintaining it. . . . Mr. Toland also takes here a great liberty on all occasions, to vouch your patronage and friendship, which makes many that rail at him rail also at you. I believe you will not approve of this, as far as I am able to judge, by your shaking him off in your letter to the Bishop of Worcester" (p. 421). And Locke, on June 15, wrote what is worth quoting for itself, as well as for the opinion implied of Toland: "As to the gentleman to whom you think my friendly admonishments may be of advantage for his conduct hereafter, I must tell you that he is a man to whom I never wrote in my life, and I think I shall not now begin; and as to his conduct in what I never so much as spoke to him of: that is a liberty to be taken only with friends and intimates, for whose conduct one is mightily concerned, and in whose affairs one interests himself. I cannot but wish well to all men of parts and learning, and be ready to afford them all the civilities and good offices in my power; but there must be other qualities to bring me to a friendship, and unite me in those stricter ties of concern; for I put a great deal of difference between those whom I thus receive into my heart and affection and those whom I receive into my house, or at most bring to my table as perfect strangeness" (p. 425). Pecuniary difficulties and persecutions together obliged Toland to leave Ireland in a very short time. The parliament at Dublin voted that the book should be burnt by the common hangman. Mr. Molyneux gives an account of his departure in another letter written to Locke.

He went to London, and, nothing daunted, published 'An Apology for Mr. Toland, in a Letter from himself to a Member of the House of Commons in Ireland, written the day before his book was received to be burnt by the Committee of Religion: to which is prefixed a Narrative containing the occasion of his said letter.' He now devoted himself very vigorously to book-making of all sorts, in politics, theology, literature: showing always, even in the pamphlets which the mere passing occasions called forth, a degree of genius and erudition deserving of a better fate than its very scanty and precarious earnings. He published in 1698 a pamphlet, just after the Peace of Ryswick, when there arose the question what forces should be kept on foot, entitled, 'The Militia Reformed, or an easy scheme of furnishing England with a constant Land Force, capable to prevent or to subdue any foreign power, and to maintain perpetual quiet at home, without endangering the public liberty;' and in the same year his 'Life of Milton,' which was prefixed to 'Milton's Prose Works,' in 3 vols. folio. Then came, in 1699, the 'Amyntor, or a Defence of Milton's Life,' in answer to a book of Dr. Blackall, bishop of Exeter, on some incidental remarks made by him in his 'Life of Milton' on the genuineness of some parts of Scripture. There followed in rapid succession his editions of Holles's 'Memoirs,' and of Harrington's Works, with a life of Harrington prefixed; 'Clito,' a poem on the force of eloquence; 'Anglia Libera, or the Limitation and Succession of the Crown of England explained and asserted,' and other political pamphlets. The 'Anglia Libera' was published in 1701, on the passing of the act which settled the crown on the Princess Sophia of Hanover and her heirs, after the death of William, and of Anne without issue; and Toland went over to Hanover and managed to get presented to the electress by the Earl of Macclesfield, who had been sent on a special mission to carry the act to the electress, and then presented his 'Anglia Libera' to her with his own hands. He afterwards stayed in Hanover for some short time, and went from thence to the court of Berlin, acting at these courts apparently as a sort of political agent, and making the most of the recommendations which he carried from the English government to extend his reputation for literature and learning. He won the good opinion both of the Princess Sophia and of the Queen of Prussia; they both courted his conversation, and afterwards his correspondence. On the occasion of his first visit to Berlin he held a theological discussion with Beausobre in the presence of the queen, who acted as a sort of moderator, and closed it, on observing that the disputants were beginning to lose their temper. His letters to Serena, published in 1704, were addressed to the queen of Prussia.

In 1702, in an interval of his residence abroad, he published 'Vindicius Liberius, or Mr. Toland's Defence of himself against the Lower House of Convocation and others.' In this work his opinions have assumed a very subdued tone, which is perhaps to be accounted for in a great measure by the prospect of political advancement which seemed to be opening for him. "Being now arrived to years that will not wholly excuse inconsiderateness in resolving, or precipitance in acting, I firmly hope that my persuasion and practice will show me to be a true Christian, that my due conformity to the public worship may prove me to be a good churchman, and that my untainted loyalty to King William will argue me to be a staunch commonwealth's man." Subsequent theological work showed this to have been a moderation merely assumed for the time.

The mask of orthodoxy was thrown off in a pamphlet which he published in 1705, in the title of which he did not scruple to designate himself a Pantheist: 'Socinianism truly stated, being an example of fair dealing in theological controversies: to which is prefixed Indifference in disputes recommended by a Pantheist to an orthodox friend.' But he was now enjoying the zealous patronage of Harley, afterwards earl of Oxford, who had in the previous year become secretary of state, and he probably thought he could again afford to be a free thinker. Harley employed him to write several political pamphlets, and sent him abroad again in 1707, to Germany and Holland. The nature of his connection with Harley may be gathered from the following extract from one of his 'Memorials to the Earl of Oxford,' which are printed in a posthumous collection of his pieces written at a time when the zeal of his patron had cooled:—"I did not undertake any journey for my country, your lordship, and myself; for seeing it was neither convenient for you nor a thing at all desired by me, that I should appear in any public post, I sincerely proposed, as occasions should offer, to communicate to your lordship such observations as to the temper of the ministry, the dispositions of the people, the condition of our enemies or allies abroad, and what I might think most expedient in every conjuncture; which advice you were to follow in whole, or in part, or not at all, as your own superior wisdom should direct. . . . As much as I thought myself fit, or thought it to be my duty, for such general observations, so much have I ever abhorred, my lord, those particular observers we call spies; but I despise the calumny no less than I detest the thing." (vol. ii. p. 223.) Toland was abroad on this occasion for about three years, acting as a sort of political spy for Harley, though he disavowed the name, and aking out his subsistence by his pen, and apparently in any way that presented itself. He made a trip from Holland to Vienna, commissioned by a wealthy banker to procure for him from the imperial ministers the rank of a count of the empire: but he did not succeed in obtaining the object of his mission. He managed in Holland to ingratiate himself with Prince Eugene, who was very attentive and liberal to him. In the 'Memorial' to the Earl of Oxford, which has been before quoted, Toland mysteriously connects this prince with his mission to Vienna, and accordingly refers to it as the foolish journey a character of great parts and honour. "My impenetrable negociation at Vienna, hid under the pretence of curiosity, was not only applauded by the prince that employed me, but also proportionably rewarded" (p. 225). In due time he quarrelled with Harley, and then wrote pamphlets against him. As a Whig pamphleteer, he had the honour of Swift's notice in 'Tolond's Letter to Dismal.'

The principal publications of Toland which remain to be mentioned are the following, with the dates of their appearance:—a volume published at the Hague in 1709, containing two Latin essays, with the titles 'Adeisidemon, sue Titus Livius, à Superstitione Vindicatus,' and 'Origines Judaicæ, seu Strabonis de Moyse et Religione Judaica Historia breviter illustrata;' 'The Art of Restoring, or the Piety and Probity of Monks,' published in London about the last Restoration, evidenced from his own Authentic Letters, with a just account of Sir Roger, who runs the parallel as far as he can' (by Sir Roger was meant the Earl of Oxford, his former patron, who was then plotting the restoration of the Pretender); and 'A Collection of Letters by several hands, relating to the Restoration of the Royal Family,' both published in 1714: 'Reasons for Naturalising the Jews in Great Britain and Ireland, on the same footing with all other nations, with a Defence of the Jews against all Vulgar Prejudices in all Countries,' published in 1714; 'The State Anatomy of Great Britain, containing a particular account of its several Interests and Parties, their bents and genius, and what each of them, with all the rest of Europe, may hope or fear from the reign and family of King George,' which work called forth several answers, that led Toland to publish a second part; 'Nazarenus, or Jewish Gentile and Mahometan Christianity, containing the History of the Antient Gospel of Barnabas, and the Modern Gospel of the Mahometans, attributed to the same Apostle, this last gospel being now first made known among Christians: also the original plan of Christianity, occasionally explained in the Nazarenus, whereby divers controversies about this divine (but highly perverted) institution may be happily terminated; with the relation of an Irish manuscript of the four gospels, as likewise a summary of the antient Irish Christianity, and the reality of the Keldees (an order of lay religious), against the two last bishops of Worcester,' which appeared

Digitized by Google

in 1718; 'Pantheisticon, sive Formula celebrandæ Sodalitatis Socratice, in tres partes divisa, quæ Pantheistarum sive sodalium continent, I, Mores et axiomata; 2, Numen et philosophiam; 3, Libertatem et non falientem legem neque fallendam: Præmittitur de antiquis et novis eruditorum sodalitatibus, ut et de universo infinito et æterno, diatriba. Subjicitur de duplici Pantheistarum philosophia sequenda, ac de viri optimi et ornatissimi idea, dissertatiuncula,' published in 1720; and in the same year, 'Tetradymus;' and in 1721, 'Letters from the Right Honourable the late Earl of Shaftesbury to Robert Molesworth, Esq., now Lord Viscount of that name; with two letters written by the late Sir John Cropley.'

Some of these titles show at once the learning and the fantastical pedantry of Toland. The 'Tetradymus' consists of four treatises, which bear the names Hodegus, Clydophus, Hypatia, and Mangonetus, and have for their respective subjects the pillar of cloud and fire which led the Israelites, and which Toland argues was no miracle; the exoteric and esoteric philosophy of the ancients; an account of the female philosopher Hypatia, 'who was murdered at Alexandria, as was supposed, at the instigation of the clergy;' and an answer to Dr. Mangey, who had attacked his 'Nazarenus.' The 'Nazarenus' and the 'Pantheisticon' had again evoked the anger of the church. Dr. Hare, dean of Worcester, in a treatise against Hoadley, spoke of Toland as often quoting Locke to support notions he never dreamed of. Toland published an advertisement to the effect that he had never quoted or even named Locke in his writings. Hare issued a counter-advertisement, in which he directs "makes great use of Mr. Locke's principles" to be read instead of "is often quoted to support notions he never dreamed of." Toland then published a pamphlet, with the title 'A Short Essay upon Lying, or a Defence of a Reverend Dignitary, who suffers under the Persecution of Mr. Toland, for *a lapsus calami*.' This pamphlet, with Hare's advertisement, was reprinted at the end of the 'Tetradymus.' Hare returned to the charge, and, in the preface to a new edition of his work, speaks of "downright Atheists," such as the impious author of the 'Pantheisticon.'

Towards the close of his life, Toland, whom all his literary industry could not keep from pecuniary difficulties, found a benefactor in Lord Molesworth. Mr. Dilworth, who dedicated a chapter to Toland's life to 'Calamities of Authors,' mentions from Toland's papers which he has seen, the paltry sums which he generally received for his writings. "For his description of Epsom he was to receive only four guineas in case 1000 were sold. He received ten guineas for his pamphlet on Natural Love to the Jews, and ten guineas more in case Edmund Lintott sold 2000." And in another place, in the 'Quarrels of Authors,' in the chapter headed 'Lintott's Account-Book,' he says, "It appears that Toland never got above 5*l*., 10*l*., or 20*l*. for his publications. . . . All this must seem to have reduced a life devoted to literature, enterprise, and philosophy, and patriotism, appears not to have exceeded 200*l*." This last statement must be a great exaggeration. Further details as to Toland's literary gains, derived also from Lintott's Account-Book, are to be found in Nichols's 'Literary Anecdotes,' vol. v. p. 302.

Toland died at Putney, where he had lodged for about four years previous, choosing that place on account of its convenient distance from London, on the 11th of March 1722. "Never," says Mr. Disraeli, "has author died more in debt than Toland: he sent his books to have died with a busy pen in his hand. Having suffered from an unskilful physician, he avenged himself in his own way; for there was found on his table an 'Essay on Physic without Physicians.' The dying patriot trader was also writing a preface for a political pamphlet on the danger of increasing parliaments, and the 'Life' which he was composing his own epitaph, one more proof of the ruling passion predominating in death; but why should a Pantheist be solicitous to perpetuate his genius and his fame?"

Toland's posthumous works were published in 1726, in 2 vols. 8vo, with a Life by Des Maizeaux prefixed, and were republished in 1747. The contents of these two volumes are an additional proof of the versatility of his powers: they contain, together with many other essays, the Memorials to the Earl of Oxford which have been referred to, and several private letters; an account of Giordano Bruno; the Secret History of the South-Sea Scheme, in which Toland had been concerned; a Plan for a National Bank; and a proposal, in Latin, for a new complete edition of Cicero. 'An Historical Account of the Life and Writings of the late eminently famous Mr. John Toland, by one of his most intimate friends, in a letter to the Lord ——,' was published in 1722; and is attributed to Curll. This is not so minute a biography as Des Maizeaux's and is rather a sketch of his writings and opinions. There is appended to it a complete list of Toland's works, many of the smaller of which are not named in this article.

Toland's works have never been collected, and the notoriety which attended him during his life having soon died away, they are now little known. But they are almost all of some worth, and his political writings may throw some little light on the history of the times.

TOLEDO, DON PEDRO DE, a younger son of Frederic of Toledo, duke of Alba, was born at Alba de Tormes, near Salamanca, in 1484. After going through his early studies he was placed as a page in the court of King Ferdinand the Catholic, who took him into particular favour; and it was by the king's influence that young Pedro obtained the hand of Donna Maria Osorio, heiress of the house of Villafranca, in consequence of which he took the title of Marquis of Villafranca, and the possession of the rich estates attached to it. He afterwards served with distinction in the expedition against Jean d'Albret, king of Navarre, and after King Ferdinand's death he continued in the service of his successor Charles I. of Spain, afterwards Charles V. of Germany. He served against the revolted communeros of Castile, and afterwards followed the court of Charles V., whom he accompanied in his journeys through Flanders, Germany, and Italy. In 1532, being at Ratisbon with the emperor, the news arrived of the death of Cardinal Colonna, viceroy of Naples, when Charles V. appointed for his successor Don Pedro de Toledo, marquis of Villafranca, who immediately set out to take possession of his government. He found the kingdom suffering from the consequences of the preceding foreign and civil wars, and especially of the recent French invasion (1527-29), and the revolt of many of the barons and the subsequent confiscation of their property; of the plague, which, originating in the French camp, had desolated the city of Naples; and the state of confusion, bordering upon anarchy, which prevailed in the provinces. The first care of the new viceroy was to enforce the rigorous administration of justice without respect for persons, and he sent to the scaffold the commendator Pignatelli, the count of Policastro, and other noblemen, who had been guilty of oppression and other crimes. He pulled down the old dark arcades and other places which were the resort of thieves and murderers; he abolished the abuse of making the palaces of the barons a place of asylum for criminals; forbade the use of weapons, except the aldo sword, then worn by gentlemen; he sentenced duellists to death, prescribed regulations for restraining the disorders that took place at funerals and marriages; and, lastly, by a 'bando,' or public edict, he inflicted the penalty of death on any one found in the night with ladders scaling the windows of houses, a practice which had become frequent among dissolute men, who thus introduced themselves into ladies' apartments. Don Pedro reformed the courts of justice, increased the number of judges, and made several regulations for the more humane treatment of prisoners and debtors; and also for the prevention of bribery and perjury. He raised an extensive building near Porta Capuana, where he placed all the high courts of justice, civil and criminal.

When Charles V., on his return from the Tunis expedition in 1535, visited Naples, where he remained till March, 1536, amidst the festivals and rejoicings with which he was greeted, he received hints and suggestions from several of the nobility against Toledo, but Charles stood firm in his good opinion of the viceroy, especially after having heard the deputies of the people, who explained to him that the nobility disliked Don Pedro because he would not permit them to oppress the lower orders, and to put themselves above the law, as they had been wont to do. It is remarkable that Charles, when he lauded at Naples, on meeting the viceroy, said to him, "Welcome, marquis; I find that you are not become so large as I was told you were;" to which Toledo replied, smiling, "Sire, I am aware that you have been told that I was grown a monster, which I am not."

Toledo greatly embellished Naples; he enlarged the city, extended the walls, cleared, widened, and paved the streets, and made new drains and sewers; he built the royal palace near Castel Nuovo, which is now called 'Palazzo Vecchio,' and constructed the handsome street which still bears his name. He repaired the Castel Nuovo, enlarged the dockyard, fortified the castle of S. Elmo, built new hospitals and churches, and, in short, he quite altered the appearance of Naples. He also drained the marshes by opening the wide canal called del Lagno, which carries the superfluous waters into the sea.

In 1538 the Turks having landed in Calabria and other places of the province of Otranto, Toledo summoned the barons with their militia, and marched with them and the regular Spanish troops against the enemy, who, finding the country prepared for defence, took again to their ships and sailed away. Toledo fortified the maritime towns of Apulia, built towers of defence along the coast, reoccupied Ischia, which was nearly depopulated in consequence of the earthquakes and volcanic eruptions, and enlarged the 'Grotta,' which leads to it from Naples. For all these and other services to the Neapolitans, as well as to the Spanish though severe head of the general administration, Don Pedro de Toledo had become very popular, until the year 1547, when his ill-judged attempt to establish the tribunal of the Inquisition after the fashion of his own country, Spain, rendered him universally obnoxious. The cause of this attempt was that the doctrines of the Reformation had found their way to Naples, and made many converts, even among priests and monks. Charles V., who was at that time struggling in Germany with the religious and political dissensions arising out of the Reformation, dreaded a similar explosion in his Italian dominions, and the viceroy Toledo wished to save his master the additional trouble. Pope Paul III. was anxious to assist them in repressing the spread of heresy to Italy: but the Neapolitans, a lively, communicative people, had conceived a great horror of that gloomy and arbitrary court and its secret proceedings; they had heard of its deeds in Spain, and they determined to resist its introduction into their country, even by force of arms if necessary. The tumult began about the middle of May, when the people tore down the placards containing the edict which sanctioned the establishment of the Inquisition, from the gates of the archbishop's palace. A cry of "To arms!" resounded through the streets and squares; most of the nobles, who

hated Toledo for their own reasons, joined the citizens in their resistance. The people turned out some of their municipal magistrates whom they suspected of being for the viceroy, and elected others without the viceroy's sanction; and Toledo having resented this proceeding, the people took up arms, and attacked the Spanish soldiers who garrisoned the castles. The Spaniards fired with cannon into the city, and the people cut down all Spaniards whom they found straggling. The viceroy, having seized some of the head rioters, caused them to be summarily executed, which added fuel to the flame, and the citizens and nobles formed themselves into a union or patriotic convention, taking for their motto, "For the service of God, the emperor, and the city of Naples," stigmatising as traitors all their country those who did not join the union. The union sent as envoys to Charles V. the prince Sanseverino and another nobleman, refusing meantime obedience to the viceroy, who remained in the castle with his Spanish soldiers and a few Neapolitan adherents, and the town was without any regular government. Frequent skirmishes took place in the streets between the viceroy's men and the people; many individuals were killed, and houses were plundered. At last the answer came from Charles V., commanding the citizens to lay down their arms, with secret instructions to the viceroy to proceed leniently and prudently in the matter.

On the 12th of August Toledo signified to the deputies of the city the will of the emperor that the Inquisition should not be established in Naples; that the pact should be forgotten, except as to some of the principal leaders of the insurrection, who were obliged to emigrate; and that the city should pay one hundred thousand crowns as a fine. And thus this serious affair was hushed up, but the Neapolitans gained their point, and the tribunal of the Inquisition was never established at Naples, though persons accused of heresy were tried before the common ecclesiastical court, and several of them were put to death by the concurrence of the lay power. The prince Sanseverino, who had displeased Charles V., thought it prudent to emigrate to France, and was outlawed. [PASO, BERNARDO.]

In July, 1552, a large Turkish fleet under Dragut Rais and Sinan Pasha, anchored near Procida, at the entrance of the Bay of Naples, when the emigrant prince Sanseverino of Salerno was to have joined them with a French squadron; but the viceroy, it is said, by means of a large bribe, induced the Turkish commanders to leave the coast before the arrival of the French.

Toward the end of the same year the viceroy, although old and infirm, was desired by Charles V. to march to Siena in Tuscany, which republic had thrown off the protection of the emperor and admitted a French garrison. Pedro having sent most of the troops by land, embarked with the rest for Leghorn. On arriving there he fell seriously ill, and was removed to Florence. The duke Cosmo de Medici had married his daughter Eleonora. He expired at Florence, in February, 1553, after having administered the kingdom of Naples for more than twenty years. He is by far the most distinguished in the long list of the Spanish governors of Naples, and one of the few who are still remembered with feelings of respect by the Neapolitans.

(Giannone, *Storia Civile del Regno di Napoli*; Botta, *Storia d'Italia*.)

TOLETA'NUS, RODERI'CUS, or RODRI'GO DE TOLE'DO, an eminent ecclesiastic and historian, was born at Rada, in Navarre, about 1170. His name was Rodrigo Simonis, commonly Ximenes; but he is better known as Roderico Toletanus. On his return from Paris, where his parents sent him to complete his education, he attached himself to Sancho V., king of Navarre, by whom he was employed to negociate a peace with Alfonso VIII. of Castile. The manner in which he discharged this mission procured him the favour of Alfonso, by whom, in 1192, he was appointed bishop of Siguenza, and on the death of Don Martin, archbishop of Toledo, he was raised to the vacant see. He showed great zeal in the frequent wars with the Moors, and at the battle of Las Navas, where the Almohades, under Mohammed An nasir, were defeated by Alfonso, his person was the first that entered the dense ranks of the enemy. Indeed such were his courage and martial disposition, that even when the king was at peace with the Moors, he would, at the head of his own vassals, make frequent inroads into the Mohammedan territory. He enjoyed so much favour with the kings of his time, especially with San Fernando, that nothing was undertaken without consulting him. His zeal for learning was no less ardent than his hatred of the infidel. He persuaded Alfonso to found the university of Palencia, and thereby avoid the necessity of sending youths to be educated in foreign countries. At the Lateran council he also obtained leave to have harangued the fathers in elegant Latin, but to have gained over the secular nobles and ambassadors by conversing with each of them in his mother tongue. He died in France, in 1247, after attending the council of Lyon, convoked by Innocent IV. His body was carried to Castile, and interred in the Cistercian monastery of Huerta. To him the history of his native country is more indebted than to any other man. He wrote several historical works, most of which are still inedited. His 'Rerum in Hispania Gesterum Chronicon,' which contains a history of the Peninsula from the most remote period to his own time, is an invaluable production. It was printed for the first time at Granada, in 1545, together with the chronicle of Antonius Nebrissensis, and was subsequently published in the collection entitled 'Hispania Illustrata,' by Andreas Schott, 4 vols. fol., Frankfurt, 1603-8. His 'Historia Arabum,' or history of the western Arabs from the birth of the Mohammedan prophet to the invasion of Spain by the Almoravides, shows him to have been well versed in the language and history of the Arabs. This valuable work was first published, in 1603, in the second volume of Andreas Schott, 'Hispania Illustrata,' and subsequently, in 1625, by Erpenius, as an appendix to his 'Historia Sarracenica' of Georgius Elmacin. There is a third edition. He also wrote a history of the Ostro-Goths, another of the Huns, Vandals, Suevi, Alans, and Silingi, which were first published by Robert Bell in the collection entitled 'Rerum Hispanarum Scriptores aliquot,' 3 vols. fol., Frankfurt, 1579, and subsequently by Schott; a history of the Old and New Testament, entitled 'Breviarium Ecclesiæ Catholicæ,' still inedited, and other works, the list of which may be seen in Nicolas Antonio.

(Mariana, *Hist. Gen. de España*, lib. ii., cap. 22; Zurita, *Anales de Aragon*, lib. ii., cap. 67; Nicolas Antonio, *Bibl. Hist. Vetus*, ii. 50.)

TOLLENS, HENDRIK CORNELISZOON, long the most popular living poet of Holland, was born at Rotterdam on the 24th of September 1780. His father carried on a thriving business, founded by his grandfather, as a dealer in colours, and Hendrik was taken from school at the age of fourteen to assist behind the counter. The year after was that of the French entry into Holland, when many of the Dutch were disposed to look on them as deliverers, and young Tollens became the friend of Mr. Van Lennep, secretary of a "Vaderlandsche Bijeenkomst," or Patriotic Society, to whose purposes he soon contributed some songs, which had a run of success. His father, who had at first been pleased at his son's reputation, soon grew alarmed that poetry would lead him away from business, though that alarm might surely have been spared in Holland. Van Lennep, and then Tollens, at his age, made the acquaintance of two poets, one of them, Helmers [HELMERS], was a merchant, the other, Loots, a book-keeper in a counting-house, and Uylenbroek, a third, to whom they introduced him, a respectable bookseller. Tollens had learned some French at school, by Uylenbroek's advice he now studied English and German, and thus enlarged his ideas; but he followed Uylenbroek's example in occupying himself with rendering French tragedies into Dutch verse. He afterwards ventured on original dramas, and his 'Lucretia,' written in 1805, had, at all events, sufficient merit to be prohibited by the censorship. Another tragedy, 'De Hoekschen en Kabeljaauwschen' (The Hooks and the Codfish), had at least the merit of a national subject, being founded on the quarrels of the rival factions of these names, the Guelphs and Ghibelines of Dutch mediæval history, whose hostilities, which lasted a century and a half, are said to have arisen in 1350 from a jocose dispute between some nobles at a banquet as to whether the codfish could be said to take the hook, or the hook the codfish. Tollens's powers however did not lie in tragedy. In two contests with his friend Loots on subjects entirely alien, one on the theme Hugo Grotius, and the other the death of Egmont and Hoorn, he won the second prize on the first occasion, and the first on the second; and in 1807 a short poem by him 'To a Fallen Girl,' attracted attention by its simple pathos. From that time his subjects were almost universally taken from national history and from domestic life, and though even his admirers did not place him on a level in point of genius with Bilderdijk, he became decidedly the most popular poet of his country, and had the honour of forming a school of poets—"the school of Rotterdam." In 1817 the third edition of his poems had 10,000 subscribers; not long afterwards his fellow-townsmen proposed to erect his bust in a public place, and it was only the reluctance of Tollens himself which prevented the intention from being carried out when the subscription was already full. This popularity continued as he grew more advanced in life. On his seventieth birthday, the 24th of September 1850, the minister of justice Mr. Nedermeijer van Rosenthal waited on him at his house at Rijswijk to bring him the congratulations of the King of Holland, and present to him the insignia of commander of the order of the Dutch Lion, a very unusual honour for a literary man. A committee waited on him the same day to offer him a gold medal struck in his honour, with the inscription "Nederland zijnen geliefden Volksdichter" (Netherland to its beloved national poet), and to inform him that a subscription had been organised, without his knowledge, for the formation of a "Tollens Fund,' to commemorate his name by a charitable institution, the nature of which was to be left to his own choice. He died in 1856, surrounded by universal respect.

The shorter poems of Tollens, lyrical and narrative, are his chief title to remembrance. One narrative poem, 'De Overwintering der Hollanders op Nova Zembla' (The Wintering of the Hollanders at Nova Zembla), commemorative of the celebrated voyage of Barends in 1596-97, is very popular and has often been reprinted, on one occasion in an illustrated edition. His 'Vierdaagsche Zeeslag,' or 'Four Days' Sea-Fight,' commemorative of one of the desperate contests between the Dutch and English in the reign of Charles II., may be compared for spirit to his friend Loots's 'Overwinning bij Chattam' (Victory at Chatham), a favourite subject of allusion with the Dutch poets. Tollens is a fertile author of ballads on subjects of Dutch history, among which his 'Jan Van Schaffelaar,' 'Kenau Hasselaar,' &c., are conspicuous. His 'Wapenkreet' (Call to Arms), written on occasion of Napoleon's return from Elba, is one of his best productions.

Digitized by Google

Tollens translated much from the German and English as well as the French, but often adapted the pieces he borrowed to Dutch subjects or history. An English reader would hardly suspect before reading it that his 'Jonker van 't Sticht' was taken from Scott's 'Young Lochinvar,' which has also been done into Dutch by Van Leuneep, under the title of 'De Heer van Colmenkoy.' Tollens's works, of which a new edition has been published, are of some extent; his shorter poems alone occupy about ten 8vo volumes, not very closely printed.

TOLLIUS, CORNELIUS, a Dutch philologer, was born at Utrecht about 1625. His father, who had two other sons, Jacob and Alexander, possessed no means of giving his children a good education, but he had in G. J. Vossius a friend who gratuitously supplied the want. After Cornelius had for some years enjoyed the private instructions of Vossius, he entered the academy of Amsterdam, and continued his philological studies under the auspices of his benefactor, who had formed a strong attachment to him, and made him his private secretary (famulus). In 1648 Tollius obtained the professorship of eloquence and of the Greek language at the academy of Harderwyk. The year after this event Vossius died, and Tollius delivered on the occasion the customary eulogy, which was printed under the title 'Oratio in orbitum G. J. Vossii,' 4to, Amsterdam, 1649. During his stay at Harderwyk Tollius exercised great influence on the affairs of the academy, for the curators are said to have had such confidence in him that they never appointed a professor without his previous sanction. The year of his death is not certain, but it appears to have been soon after 1652; this year at least is the last in which any work of his appeared.

The works of Tollius are not numerous, but he had formed the plane for an edition of Valerius Maximus and Phurnutus, which his early death prevented him from executing. There is an edition of the work of J. P. Valerianus, 'De Infelicitate Literatorum,' 12mo, Amsterdam, 1647, with supplements by Tollius, which give some interesting accounts of literary men in his time and in the previous age. The Supplements were translated into French by Coupé, and inserted in his 'Soirées Littéraires,' vol. xvi. p. 56, &c. He also edited Palephatus, 'De Incredibilibus,' 12mo, Amsterdam, 1649, with notes and a Latin translation; Joannes Cinnamus, 'De Rebus Joannis et Manuelis Comnenorum Libri iv.,' with emendations and a Latin translation, 4to, Amsterdam, 1652.

Tollius has been charged by his biographers with having appropriated numerous remarks and emendations on ancient authors which he found among the papers of his benefactor Vossius, but how far this is true cannot now be ascertained.

(Casp. Burmann, *Trajectum Eruditum*, p. 367, &c.; Saxius, *Onomasticum Literarium*, vol. iv., p. 523.)

TOLLIUS, JACOB, a brother of Cornelius, was born about 1630, at Utrecht. He received his first education at Deventer, and afterwards studied under G. J. Vossius, who showed him the same kindness which he had before shown to his brother Cornelius. The younger Tollius is charged, and apparently with justice, with having been very ungrateful towards his benefactor, inasmuch as he appropriated to himself many which Vossius had written in illustration of the ancient writers. After the death of Vossius, Tollius returned to Utrecht, and became a corrector of the press in the printing establishment of J. Blaeuw, at Amsterdam. He gave perfect satisfaction to his employer, both by his great knowledge and by the conscientious discharge of his duties. In the meantime D. Heinsius, who was staying at Stockholm, and preparing for a journey to Italy under a commission from Queen Christina, offered to Tollius the place of secretary to the commission. Tollius accepted the offer, and set out for Stockholm in 1662.

Being entrusted with the various papers and manuscripts of Heinsius, his old piratical inclination revived; when Heinsius discovered this, and, it would seem, some additional and more serious offences, Tollius was dismissed, and returned to Holland, where after a short time the influence of his friends procured him the office of rector of the gymnasium at Gouda. Here he devoted all his leisure hours to the study of medicine, and in 1669 he obtained the degree of Doctor of Physic. Some dispute between him and the curators of the gymnasium, and his free and unreserved mode of dealing with them, became the cause of his being deprived of his office at Gouda in 1673. After this he for some time practised medicine, and gave private lessons in Latin and Greek at Nordwyk. Finding that he could not gain a subsistence, he again obtained an appointment as teacher at Leyden, but in 1679 he gave up his place for that of professor of history and eloquence in the University of Duisburg. His reputation as a mineralogist was also great; and in the year 1687 the elector of Brandenburg commissioned him to travel through Germany and Italy for the purpose of examining the mines of those countries. It appears that he faithfully discharged this commission; Italy he was not allowed to visit, entirely received by Cardinal Barberini; and Tollius, who had hitherto not been promoted in his own country as he thought he deserved, secretly embraced the Roman Catholic religion. His long stay in Italy created in Germany some suspicion of his having renounced Protestantism; and on hearing this he hastened, in 1690, from Rome to Berlin. His reception by the elector however was of such a nature that he thought it advisable to leave Berlin and return to Holland. Tollius, being now again without means and employment, opened a school at Utrecht, but it was closed by order of the city authorities.

His friends were displeased with his conduct, and forsook him one after another; he sank into deep poverty, and died June 22, 1696.

The works of Tollius are rather numerous, and are partly philological, partly alchymistical, and partly on his travels. Among his alchymistical works are his 'Fortuita, in quibus praeter critica nonnulla, tota fabularis historia, Graeca, Phoenicia, Aegyptiaca, ad chemiam pertinere asseritur,' Amsterdam, 8vo, 1688. He published an edition of Ausonius, Amsterdam, 1671, which is the Variorum edition of Ausonius, and is still very useful; and also an edition of Longinus, Utrecht, 4to, 1694, with notes and a Latin translation. Tollius translated into Latin the Italian work of Bacchini, 'De Bistris,' Utrecht, 1696, and the account of ancient Rome, by Nardini, both of which are incorporated in Gravius, 'Thesaurus Antiquitatum Romanarum,' vols iv. and vi. He is also the author of 'Gustus Animadversionum Criticarum ad Longinum cum Observatis in Ciceronis Orationem pro Archia,' Leyden, 8vo, 1697. The works relating to his travels are:—'Insignia Itinerarii Italici, quibus continentur Antiquitates Sacrae,' Utrecht, 4to, 1696, and 'Epistolae Itinerariae, observationibus et figuris adornatae.' This work was edited, after the author's death, by H. C. Hennin, Amsterdam, 4to, 1700, and is of greater use and interest than the former. There are also some dissertations on ancient poets, by Tollius, in Berkellius, 'Dissertationes selectae criticae de Poetis,' Leyden, 8vo, 1704.

TOLOMEI, CLAUDIO, born at Siena, of a noble family, in 1492, studied the law in his native town, and afterwards went to Rome, where he founded an academy called 'Della Virtù,' of which Caro, Molza, Flaminio, and other learned men of Rome became members, and one of the purposes of which was the illustration of Vitruvius and the encouragement of architecture. Tolomei afterwards advocated the idea of introducing into the Italian poetry the Latin metre of the hexameters and pentameters, and he published rules and specimens for the purpose: 'Versi e Regole della nuova Poesia Toscana,' Rome, 1539. This innovation, which had been already attempted by Leone Battista Alberti, did not succeed, and the Italian hexameters and pentameters soon fell into oblivion.

Tolomei was for a time in the service of the Cardinal Ippolito d'Este, who sent him on a mission to Vienna in 1532. He afterwards attached himself to the court of Pier Luigi Farnese, son of Pope Paul III., and duke of Castro, and followed him to Piacenza, when Pier Luigi was created duke of Parma and Piacenza. After the tragical death of Pier Luigi, in 1547, Tolomei returned to Rome, where he lived in straitened circumstances, until his countrymen of Siena chose him, in 1552, for their ambassador to Henri II. of France, who protected the independence of that republic, threatened by the Medici and by Charles V. Tolomei repaired to Compiègne, where he delivered an oration to the king in presence of his court, which was afterwards printed. He published: 'Orazione recitata al Re Henrico Enrico II. à Compiègne,' Paris, 1553. He died soon after his return, on March 23, 1555. He wrote several other orations in Italian, one of which, entitled 'Orazione della Pace,' Rome, 1534, has been most praised; a dialogue upon the Italian language; and several volumes of letters, which are the most interesting part of his works—'Lettere di Claudio Tolomei, libri vii.,' 4to, Venice, 1547, afterwards repeatedly reprinted. He is one of the best letter-writers in the Italian language; his letters embrace a variety of subjects, scientific and philosophical, and his style is comprehensive and full of meaning. His correspondence was choice, and yet extensive. The edition of 1547 contains an important letter to his friend Gabriele Cesano, about the manner of making the government of a state durable and permanent, which letter has been left out in the subsequent editions. In another letter, addressed to Bernardo Tasso, he suggests the plan of several philological and archæological works for the illustration of Vitruvius. (Corniani, *Secoli della Letteratura Italiana*; Tiraboschi, *Storia della Letteratura Italiana.*)

TOMLIN, [THOMASIN.]

TOMLINE, GEORGE, eldest son of George and Susan Pretyman, was born on the 9th of October 1750, at Bury St. Edmund's, Suffolk, and was educated at the grammar school in that town, which was the place of education at that time of most of the gentlemen's families in Suffolk. At the age of eighteen he was sent to Pembroke Hall, Cambridge. He took his degree of A.B. in January 1772, and obtained the high honour of senior wrangler, and at the same time the first of Dr. Smith's mathematical prizes. In the year 1773 he was elected Fellow of his college, and was immediately appointed tutor to Mr. Pitt. He was ordained deacon by Dr. Yonge, bishop of Norwich, and priest by Dr. Hinchliffe, bishop of Peterborough. In 1775 he proceeded M.A., and in 1781 was moderator in the university. He resided in college till 1782, when he left it for the purpose of acting as private secretary to Mr. Pitt, on his appointment to the chancellorship of the exchequer. When Mr. Pitt was made first lord of the treasury, Tomline became his secretary, and he continued with him till he became bishop of Lincoln and dean of St. Paul's. Dr. Pretyman's first preferment was a sinecure rectory of Corwen in Merionethshire, to which he was collated in 1782; and in 1784 he was appointed to a prebendal stall in Westminster, the first preferment of which Mr. Pitt had the disposal. In 1785 he was presented by the king to the rectory of Sudbourn-cum-Offord, in his native county of Suffolk. In January 1787 he was advanced to the bishopric of Lincoln and the deanery of

Digitized by Google

St. Paul's, which were vacated by the promotion of Dr. Thurlow to the see of Durham, the first bishopric which became vacant after Mr. Pitt was minister. In 1813 he refused the see of London, and continued bishop of Lincoln 32½ years, in which time he performed the visitation of that most extensive diocese in the kingdom eleven times, at the regular interval of three years, which was never done by any of his predecessors. In July 1820 he was translated to the see of Winchester, in which he continued till Nov. 14, 1827, the time of his death. His publications, besides single sermons, are 'The Elements of Christian Theology,' in 2 vols, now a standard work; 'A Refutation of Calvinism,' in 1 vol.; and 'Memoirs of Mr. Pitt,' in 3 vols. 8vo. Bishop Pretyman in 1803 assumed the name of Tomline, Marmaduke Tomline, Esq., having, without any relationship or connection, left him the valuable estate of Riby Grove in Lincolnshire.

*TOMMASEO, NICCOLO, was born at Sebenico, in Dalmatia, but was educated in Italy. He became early an author, and for several years resided at Florence, where he was one of the most able contributors to the 'Antologia.' In 1833, in consequence of having taken an active part in the revolutionary movements, he was forced to quit Italy, and resided for several years in France, chiefly in Paris, but also in several provincial towns, and in Corsica. In 1838, under an amnesty granted by the Austrian government, he returned to Italy, where he lived chiefly at Venice, occasionally visiting his birthplace. Towards the end of 1847, when another movement was commenced for the freedom of Italy, Tommaseo, in conjunction with Manin, presented a petition to the Emperor of Austria for a milder exercise of the censorship of the press. For this act he and Manin were committed to prison on the 18th of January 1848, but were lib-rated on the 17th of March, when the inhabitants of Venice rose against the Austrian government. A few days subsequently he was elected a member of the provisional government, but resigned in June on account of a difference of opinion respecting the proposed union of Lombardy with Piedmont. In August however he rejoined the government, as minister of religious affairs and education, in order to resist the hostilities of the Austrians. To obtain assistance he visited Paris twice, but returned in January 1849 with the conviction that no help was to be looked for in that quarter. The comparative moderation of Tommaseo lost him much of his influence during the investment of Venice; but when the city was forced to capitulate he was one of those who were obliged to quit Italy, and he has since resided at Corfu. Notwithstanding the deep interest he has taken in the political affairs of Italy, his life has been one of great literary activity; and since his youthful ardour has become moderated in expression, his opinions and statements have become more philosophical and more truly patriotic, uniting a frank liberalism with devout Roman Catholicism. The following list of his works, though incomplete, will serve to show the variety of subjects of which he has treated, and the variety of subjects of which he has treated, are remarkable. Of his numerous productions, perhaps the most noticeable are—' Nuovo dizionario dei sinonimi,' 1832, a work remarkable for its learning, sound sense, and critical accuracy; 'Dalla educazione,' 1834; 'Nuovi scritti,' in 4 vols., 1839-40, the contents of which are philosophical and æsthetic; 'Studj critici,' 2 vols., 1843; and his Commentary on Dante contains many happy explanatory references to the Scriptures and the writings of the early fathers of the Church. He has also written 'Il Duca d'Atene,' 1838, a romantic history, portraying in very dazzling colours that Grecian sovereignty; a history of France during the 16th century, from materials furnished by the despatches of the Venetian ambassadors, published at Paris in 1838; and 'Lettere di Pasquale de' Paoli,' with an excellent introductory account of the war for independence in Corsica. In 1839 he published in 4 vols. a collection of popular poetry, which includes specimens of Tuscan, Corsican, Dalmatian, and Grecian productions, with historical introductions. Most of his works have gone through several editions. He has also written some original poetry, which never rises above the level of mediocrity, and commenced the publication of a 'Dizionario della lingua Italiana.'

TOMMASI, GIUSEPPE MARI'A, was born of a noble family at Alicata in Sicily, in 1649, and entered the congregation of the Teatini at Palermo in 1664. He was sent to finish his studies at Rome, where he became acquainted with Cardinal Francesco Barberini, who, perceiving in him a particular disposition for the study of ecclesiastical history and antiquities, encouraged him in this pursuit, and obtained for him access to the archives of the Vatican and other repositories of church history. In 1680 Tommasi published the collection 'Codices Sacramentorum nongentis Annis Vetustiores,' which he illustrated with introductory notices. In 1683 he published an edition of the 'Psalterium,' and in 1686 a collection of 'Antiphonaries' and 'Responsiales' of the Latin Church, illustrated with learned comments and valuable documents. He afterwards edited the ancient mass-books, a Latin version of the Greek ritual for Good-Friday, a new edition of the 'Psaltorium,' a collection of minor works of the fathers in three volumes, to serve as an introduction to theological studies, and another book also to assist the students of divinity, entitled 'Indicnius Institutionum Thcologicarum.' Tommasi and his contemporary Cardinal Bona of Mondovi, author of Rerum Liturgicarum Libri duo,' and 'De Divina Psalmodia,' are among the principal illustrators and expounders of the liturgy and ceremonies of the Church of Rome. In 1712 Tommasi was made a cardinal, a dignity which he at first declined, until the pope expressly commanded him to accept it. He died at Rome, January 1, 1713.

TONSTALL, or TUNSTALL, CUTHBERT, was born at Hatchford, in Yorkshire, in 1474 or 1475. It has been commonly stated that he was a natural son of a gentleman of ancient family, who, according to one account, was Sir Richard Tonstall. His mother is said to have been a lady of the Conyers family. It has been doubted however whether there be any foundation for this story. About 1491 he was sent to the University of Oxford, where, according to some authorities, he was entered a student of Balliol College; but the plague soon drove him to Cambridge, where he is known to have eventually become a Fellow of King's Hall (now incorporated with Trinity College). After this he went abroad and studied at Padua, and having taken the degree of Doctor of Laws, returned to England with the highest reputation for classical, legal, and scientific, as well as theological learning. His first patron was Warham, archbishop of Canterbury, who, in 1511, made him his vicar-general, collated him to the rectory of Harrow-on-the-Hill, and also introduced him at court. In 1514 he was promoted to a prebend in the cathedral of Lincoln; in 1515 he was admitted archdeacon of Chester; and in May 1516, he was appointed master of the rolls, an office at this date often held by clergymen.

Towards the close of this same year he was sent to France as chief commissioner to Charles, the young king of Spain and the Low Countries (afterwards the Emperor Charles V.), with whom he concluded two treaties of alliance and commerce; and here he made the acquaintance of Erasmus, who describes him, in one of his letters, as not only the most eminent Greek and Latin scholar among his countrymen, but also a person of the most comprehensive judgment and the nicest taste, and withal of remarkable modesty and the most agreeable and cheerful manners, yet without going beyond the bounds of a becoming gravity. Erasmus adds that, much to his delight, he boarded with the same table with him. Hall, however, says that after his return home, he was sent on a second embassy to Charles. In 1519 he was collated to a prebend in the cathedral of York; and in 1521 to another in that of Salisbury, of which diocese he was also at the same time elected dean. The next year he was promoted to the bishopric of London: his consecration took place on the 9th of October, his enthronization on the 22nd. He now resigned his office as master of the rolls; but in May 1523, he was introduced into the government by being made lord privy seal. After this he was employed in various important diplomatic missions. He was chosen as one an embassy to the emperor in 1525; having accompanied Cardinal Wolsey in his embassy to France in 1527; and having along with Sir Thomas More represented the English king at the negociation of the treaty of Cambray in 1529. At Antwerp, on his return from Cambray, Tonstall, says Hall, "bought the whole impression of Tyndall's pestilent and from an English merchant named Packington all the copies that remained unsold of Tyndal's translation of the New Testament, and bringing them home with him, made a tonfire of them in Cheapside—the effect of which was to enable Tyndal to publish next year a second and more correct edition with this bishop's money.

In 1530 Tonstall was translated to the bishopric of Durham; and now, or soon after this, he appears to have resigned the privy seal. In the religious changes that now began to be enforced by the royal authority, his mild and cautious character led him early as far as Henry himself went; he supported the divorce of Queen Catherine (although it has been supposed that he latterly somewhat changed his opinion on that question); he preached and wrote in favour of the king's assumption of ecclesiastical supremacy; and, along with Heath, bishop of Rochester, he revised the English translation of the Bible which was published by authority in 1541. But, from habit, conscientious belief, or love of quiet, he appears to have retained to the last an attachment to most of the doctrinal theology of the ancient church. Yet, like the generality of the bishops, he acquiesced in the additional innovations of all kinds that were made in religion on the accession of Edward VI., in 1547; and accordingly he not only preserved his seat in the privy council, but was also made a member of the king's council in the north. In May 1551, however, he was accused before the council of being privy to the design of an insurrection in the north; upon which he was in the first instance commanded to keep his house; and afterwards, on a letter in his handwriting, deemed to be confirmatory of the charge, being found among the papers of the Duke of Northumberland, which were seized in December of that year, he was committed to the Tower, and a bill was brought into the House of Lords to deprive him of his bishopric. But, although the bill was passed by that House, all the influence of the new head of the government, the Duke of Northumberland, proved insufficient to satisfy the objections of the Commons, and they refused to proceed with it. The precise nature of the charge is not known; and it seems highly improbable, from Tonstall's character, that he should have involved himself in any insurrectionary or other treasonable scheme. In the Lords the bill was strongly opposed by Cranmer, who "spoke so freely against it," says Burnet, "that the Duke of Northumberland and he were never after that in friendship together." The duke however was not to be cheated of his prey: the parliament was dissolved in April 1552; but on the 21st of September thereafter a commission was issued to the chief justice of the King's Bench and seven others, empowering them to call Tonstall before them, to examine him touching all manner of conspiracies, &c., and, if they found him guilty, to

Digitized by Google

deprive him of his bishopric; and by this tribunal he was in fact deprived on the 14th of October.

He remained a prisoner in the Tower for the remainder of King Edward's reign; and the bishopric of Durham having been dissolved by act of parliament, in April 1553, Northumberland obtained a grant of the greater part of its jurisdiction and revenues, with the title and dignity of Count Palatine. In a few months however the accession of Mary again changed everything; and Tonstall, released from prison, was reinstated in his bishopric, which the queen erected anew by letters-patent. His own sufferings had not given Tonstall any taste for persecution; and he principally distinguished himself throughout this reign by the moderation of his conduct and the aversion he showed to the violent courses urged by the court and followed with little reluctance by most of his ecclesiastical brethren. No burning of heretics took place in his diocese; and, suspected on this account to be half a Protestant at heart, he lived under a cloud in so far as regarded the favour of the court. Nevertheless when Elizabeth came to the throne he refused to take the oath of supremacy; and he was deprived on that account in July 1559. Being committed to the charge of his friend Parker, already nominated, though not admitted, archbishop of Canterbury, and in possession of Lambeth, Tonstall "lived there," says Lloyd (in his 'State Worthies'), "in sweet chambers, warm beds, by warm fires, with plentiful and wholesome diet, at the archbishop's own table: differing nothing from his former grandeur, save that that was at his own charges, and this at another's; and that he had not his former suite of superfluous servants—that long train, that doth not warm, but weary the wearer thereof." Tonstall only enjoyed Parker's hospitality for a few months: he died on the 18th of November 1559.

The character of Tonstall may be collected from this sketch of his history. He will scarcely be allowed the credit of principle by the more severe class of moralists: but although not made to be a martyr, he had evidently many excellent moral qualities. Intellectually he was rated very high in his own day: Erasmus, More, Warham, Cranmer, and Parker, were all among his admirers and attached friends. Besides various scattered letters, speeches, and other short compositions, some in print, some in manuscript, a list of which we must refer to the 'Biographia Britannica,' Bishop Tonstall is the author of the following works, published by himself:—1, 'In Laudem Matrimonii,' &c. (a Latin Oration pronounced at the betrothment of the Princess Mary and Francis, eldest son of the king of France), 4to, London, 1516; 2, Artis Supputandi Libri Quatuor' (a treatise on Arithmetic), 4to, London, 1522, and frequently reprinted at Paris, Strasburg, and elsewhere on the Continent, as well as in England. The writer of 'Notices of English Mathematical and Astronomical Writers between the Norman Conquest and the year 1600,' in the 'Companion to the Almanac for 1837,' says, "In point of simplicity this work stands alone in its age, and is perfectly free from all the extraneous matter which was often introduced into the scientific works of the day." 3, A Sermon preached on Palm Sunday, 1538, before King Henry VIII. on Philippians, ii. 5-12 (in support of the royal supremacy), 4to, London, 1539, and again 1633; 4, 'De Veritate Corporis et Sanguinis Domini Nostri Jesu Christi in Eucharistia' (in defence of Transubstantiation), 4to, Paris, 1554; 5, 'Compendium et Synopsis,' &c., an abridgement of Aristotle's Ethics, Paris, 1554; 6, 'Contra Impias Blasphemias,' &c., a defence of Predestination, 4to, Antwerp, 1555; 7, 'Godly and Devout Prayers in English and Latin,' 8vo, 1558.

TOOKE, JOHN HORNE, was the son of John Horne, a poulterer in Newport-street, Westminster, where he was born on the 25th of June, 1736. The name of Tooke he assumed afterwards for reasons mentioned below. He was educated at Westminster and Eton schools, at the former of which he remained two, and at the latter five years. In 1755 he went to St. John's College, Cambridge, and took his degree of B.A. in 1758. After leaving Cambridge he officiated for a short time as usher in a school at Blackheath, and in 1760 took priest's orders, and obtained a curacy in Kent. He entered the church through the wishes of his father, but against his own inclinations. He had wished himself to study for the bar, and with this view had entered his name at the Inner Temple in 1756. In 1760 he received priest's orders; and in the course of the same year was inducted to the chapelry of New Brentford, which his father had purchased for him. He was however never happy in discharging the duties of his profession, and gladly embraced the opportunity of leaving New Brentford for more than a year upon two different occasions, in order to travel on the Continent as tutor to the sons of gentlemen in his neighbourhood. What he thought of his profession may be seen from a letter of his to Wilkes, whose acquaintance he made in Paris in 1765, and to whom he thus writes: "You are now entering into correspondence with a person, who I am greatly apprehensive lest that title should disgust: but give me leave to assure you, I am not ordained a hypocrite. It is true I have suffered the infectious hand of a bishop to be waved over me; whose imposition, like the sop given to Judas, is only a signal for the devil to enter. I hope I have escaped the contagion; and, if I have not, if you should at any time discover the black spot under the tongue, pray kindly assist me to conquer the prejudices of education and profession." Yet he continued for eight years longer to hold the benefice he thus coarsely acknowledged himself unfitly unjustified in holding.

On his second return from the continent in 1767, Horne took an active part in the political contests of the day, and it was greatly owing to his exertions that Wilkes was returned as member for the county of Middlesex in 1768. Horne's opposition to the ministry was unceasing, and he soon became one of the most popular men of the day. He was the founder of the 'Society for supporting the Bill of Rights,' in 1769, in which he was closely associated with Wilkes: but in the following year a quarrel took place between them, which led to an angry paper war, in consequence of which Horne lost much of his popularity.

In 1771 he took his degree of M.A., which was granted to him, notwithstanding the opposition of many of the members of the university, and among others of Dr. Paley. His quarrel with Wilkes drew upon him in the same year the attack of Junius, whom he answered with considerable success.

His occupations were now so entirely opposed to the clerical profession, and his dislike to it, as well as the gross inconsistency of remaining in it with his avowed principles, had become so great, that he resigned his living in 1773 with the view of studying for the bar. That he might not waste the means of doing so, four of his friends presented him with joint bonds to the amount of 400*l.* a year, which were to continue in force till he was called to the bar. While prosecuting his legal studies, he afforded great assistance to Mr. William Tooke, an old friend of his, in resisting an inclosure bill, which would have greatly deteriorated the value of some property which Tooke had purchased at Purley, near Croydon, in Surrey. In return for his services Mr. William Tooke made him his heir; and it was upon this occasion or shortly afterwards that he assumed the name of Tooke, by which he is commonly known.

On the breaking out of the American War, Tooke vehemently attacked the conduct of the ministry, and opened a subscription for the widows and orphans of the Americans, "murdered," as he said, "by the king's troops at Lexington and Concord." The ministry prosecuted him for a libel in 1777; he was found guilty, condemned to pay a fine of 200*l.*, and to be imprisoned for twelve months. While in prison he published his letter to Mr. Dunning, which is occupied with a critical examination of the case of 'The King and Lawley,' which has been often quoted as a precedent by him in his trial: this examination leads him to explain the conjunctions and prepositions of the English language. This letter formed the basis of a considerable part of the first volume of the 'Diversions of Purley.'

Shortly after his release from prison, he applied in 1779 to be called to the bar, but he was rejected by the benchers on the ground of his being a clergyman. This blighted all his prospects in life, and he soon afterwards retired from London to a farm in Huntingdonshire. He had however previously published, in conjunction with Mr. Pitt, a pamphlet against the American war, entitled 'Facts' addressed to the landholders, stockholders, &c. of Great Britain. Tooke did not remain long in Huntingdonshire, and on his return to London he took an active part in advocating the cause of parliamentary reform, which Mr. Pitt then espoused. He published a letter in favour of it in 1782, addressed to his friend Mr. Dunning, then Lord Ashburton. He continued to advocate Mr. Pitt's party steadily for some years, and when Mr. Fox came into power by the coalition ministry, as it was called, he published his celebrated 'Two Pairs of Portraits' in 1783, in which he contrasts the character and conduct of Lord Chatham and Lord Holland, and of Mr. Pitt and Mr. Fox respectively. Two years previously to this he published the first volume of his '*Επεα Πτεροεντα*,' or the 'Diversions of Purley,' in octavo, the latter of which names was given to the work in consequence of the residence of his friend Mr. William Tooke.

In 1790 Tooke became a candidate to represent the city of Westminster in parliament; and though he spent nothing upon the contest, he polled nearly 1700 votes. In 1794 he was arrested on a charge of high treason, mainly as it appears on account of his connexion with the 'Constitutional Society.' Nothing, however, of a treasonable nature could be proved against him, and he was accordingly acquitted after a trial which lasted six days, during which he distinguished himself by his calmness, intrepidity, and presence of mind. His domestic affairs having become very much embarrassed, his friends came forward to his assistance and settled on him a pension of 600*l.* a year. In 1796 he again offered himself as a candidate for Westminster, and polled on this occasion upwards of 2800 votes. His desire of obtaining a seat in parliament was at length gratified, though not exactly in a way which best accorded with the principles of a person who had been such a strenuous advocate of parliamentary reform. He was returned in 1801 for the borough of Old Sarum by Lord Camelford. He retained his seat till the dissolution of parliament in the following year, but was disqualified from sitting again in consequence of an act of parliament, which was passed while he was in the house, enacting that in future no one in priest's orders should be a member of the House of Commons.

Mr. Tooke now retired into private life, and passed the remainder of his life at Wimbledon, where he had already resided for some years. He had published a second edition of the 'Diversions of Purley' in 1798, in one volume, quarto, and this was now followed by the second volume in 1805. He died on the 18th of March, 1812, in the seventy-seventh year of his age. He was never married, but had several illegitimate children, to one of whom he left his property.

Digitized by Google

Mr. Tooke was a man of great powers and considerable attainments. He was well read in English, French, and Italian literature, possessed a tolerable knowledge of Latin and Greek, and had studied Anglo-Saxon with some diligence. In private he was much beloved, and his conversational powers are particularly celebrated by all who knew him. He is however principally known in the present day by the 'Diversions of Purley,' a work which has exercised considerable influence upon the works on the English language published since its appearance. It is written in the form of a dialogue: the principal speakers in the first volume are Mr. Tooke himself, and his friend Dr. Beadon, the Master of Jesus College, Cambridge; Mr. William Tooke is occasionally admitted to take part in the dialogue: in the second volume the only speakers are the author and Sir Francis Burdett. The first volume is divided into ten chapters: the first treats 'Of the Division and Distribution of Language;' the second contains 'Some Considerations of Mr. Locke's Essay on the Human Understanding;' the third treats 'Of the Parts of Speech,' in which all words necessary for the great purposes of speech are resolved into "words necessary for the communication of our thoughts," and "abbreviations employed for the sake of dexterity," in respect to the former we are told that in English and in all languages there are only two sets of words necessary for the communication of our thoughts, and that these are nouns and verbs. The fourth chapter treats 'Of the Noun,' and the fifth 'Of the Article and Interjection.' The substance of the three next chapters, 'the word That,' 'Of Conjunctions,' and 'Etymology of English Conjunctions,' had been previously given in the letter to Mr. Dunning. The tenth chapter speaks 'Of Adverbs.' In the second volume, the first chapter treats 'Of the Rights of Man;' the second, third, fourth, and fifth, 'Of Abstraction;' and the sixth, seventh, and eighth, 'Of Adjectives and Participles.' It is impossible to read this work without deriving information from it. It contains many happy explanations and conjectures, but the young student cannot be cautioned too strongly against receiving all the conclusions of the author. The great fault of the book is the love of hypothesis, and the absence to a great extent of that historical mode of investigation without which etymological studies are worse than useless. A useful edition of the work has been published by Richard Taylor, with notes. London, 1840.

TOOKE, REV. WILLIAM, F.R.S., was born on the 18th of January 1744, and educated at a private academy at Islington, kept by Mr. Shield, where he had for school-fellows the indefatigable and amiable antiquarian Mr. John Nichols, and Dr. Ed. Gray, of the British Museum. Sec. R.S., with each of whom he kept up a friendly intimacy during their lives. He was ordained a clergyman of the Church of England in 1771, by the then Bishop of London, and shortly afterwards obtained the situation of minister of the English church at Cronstadt, the naval arsenal and commercial port of St. Petersburg. In 1774 he was appointed chaplain to the factory of the Czaina Company at St. Petersburg, in which situation he remained for eighteen years. He often preached in the chapel of the French Protestants at St. Petersburg in the French language, of which he was a complete master; and preached for London hospitals on several occasions in that language on behalf of the French Protestant School and Workhouse in London. He returned to England in 1792, in consequence of succeeding to a considerable property by the death of his maternal uncle, which enabled him to dispense with all professional exertion. He died in London, November 17, 1820, in his seventy-seventh year, much esteemed by a large circle of literary friends. By his wife Elizabeth, daughter of Thomas Eyton, Esq., of Llangynhavil in Denbighshire, he had a daughter and two sons, who survived him.

Mr. Tooke was the author of several works, of which the most important are those relating to Russia, namely, a 'Life of Catherine II.,' 3 vols. 8vo; 'A View of the Russian Empire,' 3 vols.; and 'A History of Russia, from the Foundation of the Empire to the Accession of Catherine II.' Mr. Tooke was also a joint-editor with Arch-dracon Nares and Mr. Belse, of the 'General Biographical Dictionary,' in 15 vols. 8vo, 1798; his portion of the work was the first five volumes. Besides this he published, early in life, 'Othniel and Acheah,' an Oriental tale from the Chaldee, in 2 vols., and long afterwards four volumes of miscellaneous essays under the title of 'Various Varieties of Literature,' and 'Selections from various Foreign Literary Journals.' He translated Zollikofer's sermons from the German, in 10 vols. 8vo, and Lucian's works, in 2 vols. 4to, with the notes of Wieland. The Lucian of Wieland is not a translation from the original Greek, but from Wieland's version; and where the latter did not give the meaning of the Greek, recourse was had to the original.

(Nichols's *Literary Anecdotes;* and *Gentleman's Magazine* for May, 1816; November 1820; and December 1839.)

TOOKE, THOMAS, one of the sons of the Rev. William Tooke, published in 1838 'A History of Prices and of the State of the Circulation from 1793 to 1837, preceded by a brief Sketch of the State of the Corn-Trade in the last Two Centuries,' 2 vols. 8vo. The treatise comprised in these two volumes, though apparently an enlargement and continuation of one published about fifteen years previously under the title of 'Thoughts and Details on the High and Low Prices of the last Thirty Years,' embracing, as it does, the same line of argument and establishing the same conclusions, is yet essentially different both in its arrangement and details, and is in fact, with slight exceptions, entirely new. It forms the first two volumes of the valuable work now well known to political economists as the 'History of Prices,' perhaps the first really scientific attempt to elucidate by inferences legitimately deduced from actual experience the complicated facts of this branch of political economy. The first two volumes were follow-d in 1840 by another volume, in continuation of the two former, to which were added 'Remarks on the Corn Laws and on some of the Alterations proposed in our Banking System.' The fourth volume was entitled 'A History of Prices and the State of the Circulation from 1839 to 1847 inclusive: with a General Review of the Currency Question, and Remarks on the Operation of the Act 7 & 8 Vict., c. 32,' 8vo, 1848. Mr. Tooke afterwards published a tract, in which he was assisted by Mr. Newmarch, 'On the Bank Charter of 1844, its Principles and Operation, with Suggestions for an Improved Administration of the Bank of England,' 8vo. The last two volumes of his great work are entitled 'A History of Prices and the State of the Circulation during the Nine Years 1848-1856, in Two Volumes, forming the Fifth and Sixth Volumes of the History of Prices from 1792 to the Present Time, by Thomas Tooke, F.R.S., Corresponding Member of the Institute of France, and William Newmarch,' 8vo, 1857. The 5th and 6th volumes, besides being a continuation and completion of the work, arranged under the heads Prices of Corn, Prices of Produce other than Corn, and the State of the Circulation, contains discussions on the connected topics of Railways and the Railway System, the Origin and Progress of the Free-Trade Movement, the State of Finance and Banking in France, and the New Discoveries of Gold. [SUP.]

TOOKE, WILLIAM, F.R.S., the younger son of the Rev. William Tooke, was born in 1777, at St. Petersburg. He was bred to the law, and continued many years in practice as a solicitor in London. He published in 1804 anonymously 'The Poetical Works of Charles Churchill, with explanatory Notes and an authentic Account of his Life,' 2 vols. 8vo, which was republished in 1844, with his name, as one of the 'Aldine Poets,' under the title of 'The Poetical Works of Charles Churchill, with copious Notes and a Life of the Author,' 3 vols. Mr. William Tooke was influential in the establishment of the Society for the Diffusion of Useful Knowledge, of which he became the Treasurer. He has since published 'The Monarchy of France, its Rise, Progress, and Fall,' 8vo, 1855. [SEE SUPPLEMENT.]

TORDENSKIOLD, Vice-Admiral in the Danish navy. His name was Peter Wessel before he was ennobled by King Frederick IV. Born on the 28th of October 1691, at Trondheim in Norway, of obscure parentage, he was at an early age apprenticed to a barber, but his strong desire for a seafaring life induced him to leave his master and go to Copenhagen as cabin-boy. There he entered the service of the East India Company as a common sailor, and in his third voyage distinguished himself so much, that by the recommendation of his captain he obtained a subaltern's midshipman's in the royal navy. In the year 1709, immediately after the battle of Pultawa, Denmark declared war against Sweden, and from that time Wessel's brilliant career commenced. From 1709 to 1711 he commanded a small privateer, and made many prizes. He was promoted to the rank of lieutenant in 1712, and shortly afterwards had the command of a small frigate, in which he cruised against the Swedish traders with such effect, that it is said that the Gothenburg and Calmar merchants offered him a hundred thousand crowns if he would resign his command. On the 5th of June 1712 he met a Swedish frigate of nearly double the size of his own, under English colours. Tordenskiold hoisted the Dutch flag, and by a skilful manœuvre laid alongside the enemy within hailing distance, and the Swedish captain, still believing him to be Dutch, hailed him. The answer was a destructive broadside. A most obstinate engagement ensued, in which Tordenskiold had decidedly the advantage, when he unfortunately found that his ammunition was exhausted. Upon this he hailed the Swedish captain, telling him the roughness of the sea alone prevented him from boarding the frigate and taking her; but that if he would send a lead him some powder or pledge his word to await his return within three days off the Drammen, he would promise to carry him as a prize to Copenhagen. Both proposals were declined, but the Swedish captain expressing a lively wish to become personally acquainted with his gallant adversary, Tordenskiold went on board to take the word of the king of Sweden's health. Upon his return to Copenhagen he was tried by a court-martial, but honourably acquitted; and King Frederick, pleased with his chivalrous conduct, promoted him to the rank of captain. During his stay in Copenhagen, he submitted to the king personally a plan for attacking the Swedish ocoan, which the Admiralty however, being annoyed at the young man's rapid promotion and increasing favour, rejected with great disdain. He left Copenhagen on the 24th of April 1715, his frigate being then attached to the fleet under Admiral Gabel, who detached him for the purpose of reconnoitring the Swedish fleet, commanded by Admiral Wachtmeister, on the coast of Norway. Here, by his extraordinary seamanship and boldness, he was principally instrumental in destroying four ships of the line and three frigates, besides a large frigate which he captured, and in which, as a due reward for his eminent services, he was sent to Copenhagen as bearer of the glorious tidings. For this exploit he was raised to the rank of commodore, and a short time afterwards he was appointed to the command of a squadron destined to cruise in

the Baltic for the purpose of intercepting transports with fresh supplies of troops for Charles XII., then in Pomerania.

On the 7th of August 1716, off the island of Rügen, he came in sight of the Swedish fleet commanded by Wachtmeister. Charles XII. himself stood on an eminence on the island to see the victory of his flag, as to which there could scarcely be a doubt, as the Swedish fleet amounted to more than double the number of ships of Tordenskiold's squadron. But better acquainted with the bearings and the ground he was on, and much more skilful in seamanship, Tordenskiold soon gained the weather-side of the enemy, and then kept up his fire with such precision and rapidity, that in an hour three of the Swedish ships of the line and two frigates had struck; and the Swedish loss in killed and wounded, besides one admiral, amounted to more than three times that of the Danes. A gold medal was struck in commemoration of this victory, which the king permitted him to wear suspended by the blue ribbon of the Order of the Elephant, a distinction only twice granted before.

In the battle of Dynekilin, July 17, 1717, and in that of Stroemstaedt, he fought with the same gallantry and success. In December 1717 the king raised him to noble rank by the name of Tordenskiold (shield against thunder). The immediate cause of this new honour was characteristic. On a very cold day Tordenskiold went on shore with a party of officers to dine with the king. By a sudden pitch of the boat he lost a golden snuff-box, with the king's portrait set in diamonds, and presented to him by his majesty. His immediately exclaimed, "Rather die than lose that which my sovereign has given me!" and before his friends could prevent it, threw himself overboard, and dived several times after it, till he at last was taken up senseless.

On the 26th of July 1717 he took Marstrand, one of the most important Swedish fortifications in the Kattegat. The peace of Fredriksborg having been signed (July 23, 1720), Tordenskiold had a great desire to visit foreign countries. King Frederick gave his consent very reluctantly. At Hamburg, where he was received with princely honours, his travelling companion, a wealthy young man from Copenhagen, lost large sums at play to a Swedish colonel, De Stahl; and after his ready cash was exhausted, gave drafts upon his father to the amount of 30,000 crowns. Tordenskiold, upon being informed of it, declared his intention to call the gambler to a strict account; but the colonel having left Hamburg, Tordenskiold went to Hanover to be presented to George II. There, the day after his arrival, he met Colonel Stahl at a dinner-party with one of the ministers. His immediately expressed his indignation and reluctance to dine at the same table with him. A violent quarrel ensued, and a hostile meeting was appointed for the following day at a place some miles distant from the capital. Tordenskiold went without a second, and only armed with a light dress-sword. Colonel Stahl used a heavy sword, with which he shivered his adversary's blade at the first onset, and then ran him through the heart. Tordenskiold expired in a few minutes, recommending his soul to Heaven, and charging his faithful valet to take his body to Copenhagen, where it was deposited in the chapel of the navy church (Holmens Kirks): the king himself attended the funeral. The general impression in Denmark at the time was that foul play had been practised by instigation from a higher quarter. He died November 29, 1720.

(*Peter Tordenskiolds Liv, og Levned*, 3 vols. 4to, Kiöbenhavn, 1747; Peter Suhm's *Historie af Dannemark, Norge*, &c., 1 vol. 8vo, Kiöbenhavn, 1787; *Historie de Dannemarc*, par M. P. H. Mallet, 9 vols. 8vo, Paris and Geneva, 1788.)

TORELLI, GIUSEPPE, an Italian mathematician, was born at Verona, in 1721. Having received the rudiments of education in that city, he was sent to the University of Padua, where he distinguished himself by his assiduity in cultivating both literature and science, and where he obtained a Doctor's degree. Engaging in no profession, he prosecuted the study of the ancient and modern languages, and at the same time he applied himself particularly to the writings of the Greek geometers. He is chiefly distinguished by his edition in Greek and Latin of all the works of Archimedes, in the preparation of which he was engaged during the greater part of his life, and for which, the talents as a mathematician, as well as the extent of his classical attainments, particularly qualified him: he had not however the satisfaction of enjoying the fruits of his labours, for he died in 1781, almost at the moment of the completion of the work. The manuscript was sold after his death to the University of Oxford, and, under the superintendence of Dr. Abram Robertson, the work was published in 1792 by the curators of the Clarendon Press. This splendid edition contains the notes of the ancient commentators, and the observations of Torelli himself on the tract 'De Conoidibus et Sphæroidibus;' and to these are added the various readings which occur in the manuscript copies of Archimedes in Paris and Florence, together with a commentary by the Oxford editor on the tract relating to floating bodies.

TORELLI, LAELIO, was born at Fano, on the 28th of October 1459. His family was noble, and had settled in that town about the beginning of the 14th century. While yet a mere boy he was entrusted to the care of his maternal uncle, Jacopo Costanzi, a professor in the University of Ferrara, under whom he made a respectable progress in the Greek and Latin languages. He subsequently studied law in the University of Perugia, and obtained the degree of Doctor in his twenty-second year.

From 1511 to 1531 Torelli remained in the civil service of the Roman government. Soon after taking his degree he was appointed podestà of Fossombrone, and in a short time chief magistrate of his native town. Scanderbeg Comneno, who had lost his hereditary state by becoming a convert to the Romish faith, received from the pope by way of compensation the seignorage of Fano. By his insolent abuse of power he rendered himself odious to his new subjects, and was expelled by a conspiracy, of which Laelio Torelli was the chief. Clement VIII. was at first much irritated, regarding the rebellion as directed against the papal government; but Laelio, by explaining its real object, succeeded in pacifying him, and was soon after appointed governor of Benevento. This post he occupied for eighteen months, to the end of which, returning to Fano, he became involved in the contest between that town and the Malatesti family; and about 1527 or 1528, found it advisable to seek an asylum in Florence.

In 1531 he was appointed one of the five auditors of the Rota of Florence, and he continued from that time till his death in the service of the Medici family. During far the greater part of this time he was attached to Cosmo, the first grand-duke of Tuscany, who became Duke of Florence six years after the first appointment of Torelli, and died only two years before him (in 1574). From being a member of the Rota, Torelli rose to be podestà of Florence; he was subsequently appointed chancellor by the grand-duke, and in 1546 his principal secretary. His official duties did not entirely withdraw him from literary pursuits. He was an active member of the Florentine Academy, and in 1557 was elected into its council. His reputation as a statesman and man of letters procured for him the honour of being elected a senator: his name was inscribed in the register of the patricians of Florence in 1576. He died in the same year, on the 17th of March, having survived all his children.

Torelli published, in 1545, three legal tracts, entitled 'Laelii Taurelli Jurisconsulti Fanensis, ad Gallum et Legem Velleam, ad Catonem at Paulum Enarrationes; ejusdem de Militiis ex casu, ad Ant. Augustinum epistola,' dedicated to his son Francesco. They were printed at Lyon; the Antonius Augustinus (bishop of Tarragona), to whom the third is addressed, printed the first and last in his appendix to his 'Emendationes;' and Zilettus included them in his great collection, 'Tractatus Tractatnum' (1633-42). A Latin eulogium of Duke Alexander de' Medici, delivered by Laelio in 1536, and a panegyric of Count Ugo, the founder of an abbey at Florence, in Italian, are said to have been printed. But the work which has preserved the name of Laelio Torelli is his edition of the Florentine manuscript of the Pandects. It was printed at Florence by Lorenzo Torrentino, printer to the grand-duke, in 1553. From the dedication to Cosmo I., which is written by Francesco Torelli, we learn that the preparation of the transcript and the supervision of the press had occupied all his own and his father's leisure hours for the ten preceding years. Francesco claims for his father the honour of projecting the edition, and gives Cosmo the credit of defraying the expense of the sumptuous publication. All the orthography and all the peculiarities of the manuscript are said to have been strictly adhered to. The Greek passages were revised by Peter Victor. The translations of these passages are taken from Antonius Augustus Halouder, and Hermogius. This edition is a fine specimen of typography, and worthy of the important monument it was the object of rendering more accessible to the public. The pope, the emperor, and the king of France gave the printer letters of protection against any piracy of the work for ten years, and Edward VI., the king of England, for seven. With regard to the Florentine (or Pisan) manuscript, the inquiries of Savigny, Blume, and others have established this to be the oldest copy of the entire Pandects of Justinian that exists. Leaving out of view the story of its discovery at Amalfi, the assertion of Odofredus that it was transmitted to Pisa by Justinian, and the statement of Bartolus that it was "always" at Pisa (semper enim fuit totum volumen Pandectarum Pisis et adhuc est), established for this manuscript of the Pandects an antiquity beyond what can be claimed for any other. Borgo dal Borgo has produced evidence to the extraordinary care taken for its preservation by the government of Pisa; and the government of Florence has watched no less anxiously for its safety since it was transferred to that city in 1406, after the capture of Pisa by the Florentines under Gino Caponi. The Florentine manuscript must always remain one of the most important authorities for the text of this portion of the Corpus Juris, and Torelli appears to have discharged the office of editor with a full sense of the importance of his task.

The contemporaries of Laelio Torelli are unanimous in their testimony to the integrity and disinterestedness of his character.

Torelli*; Savigny, *Geschichte des Römischen Rechts im Mittelalter*; Laelii Taurelli *Jurisconsulti Fanensis, ad Gallum et Legem Velleam, ad Catonem et Paulum Enarrationes; ejusdem de Militiis ex casu*, Lugduni, 1545; *Digestorum, seu Pandectarum Libri Quinquaginta ex Pandectis Florentinis repræsentati: Florentiæ in officina Laurentii Torrentini Ducalis Typographi*, 1553.)

TORENO, DON JOSÉ MARIA QUEIPO DE LLANO, COUNT OF, a Spanish statesman and writer, was born at Oviedo on the 26th of November 1786, of one of the first families of the Asturias. In 1797 his parents, of whom he was the only son, fixed their residence at Madrid, where he received an excellent education of a character

Digitized by Google

uncommon at that time in Spain, as it included the study of English and even German as well as French and Italian. After the national insurrection of the 2nd of May 1808, in which he took a part, he returned to Oviedo where, as Viscount of Matarrosa, he held an hereditary seat in the Junta, and when the city rose against Napoleon he was selected, from his knowledge of English, to make his way to London to ask the assistance of England. In company with Don Angel de la Vega he got on board of a Jersey privateer, and was received at London with open arms by Canning. After spending some months in England, where he made the acquaintance of Wilberforce, Windham, and Sheridan, he returned to Spain in December, and, having lost his father in the interval, he succeeded to the title of Count of Toreno. He was sent to the Cortes as a member for the Asturias when a year too young to be able legally to take his seat, but by a vote of the Cortes on the 11th February 1811 he enjoyed the distinction of being specially exempted from the operation of the law. Young as he was he took a prominent part in the discussions on the constitution of 1812, and advocated with success two of the measures which most contributed to its subsequent downfall—one, that the Cortes should consist of a single chamber instead of two, and the other that the power of the king should be se restricted that all legislation should depend on the decision of the Cortes only. On the return of Ferdinand he was a marked man; when the celebrated decree of Valencia came forth, by which the Cortes was dissolved and many of its members thrown into prison, he was fortunately on his estates in the country and had time to escape to Portugal. Here he found there was no hope of resistance in Spain, he came to London where he was the first emigrant from the tyranny of Ferdinand, as he had been the herald of resistance to Napoleon I. He received in London the intelligence that his estates had been confiscated and himself condemned to death. His brother-in-law Porlier (who had married one of his four sisters, made an ineffectual attempt at insurrection, and was taken and executed. Toreno, who in 1816 was living in France, was thrown into prison for a time on suspicion by the Decazes ministry, who intercepted him if he was not in habits of intercourse with the Duke of Wellington and General Alava, two gentlemen whom it appears that the king of Spain then regarded as enemies. The Spanish revolution of 1820 recalled Toreno to Madrid, but he was now older and cooler than he had been, and saw with disapprobation many of the measures of the liberal party. His life was in consequence threatened in the Cortes, his house in which his sister, the widow of Porlier, resided, was attacked and, says Cueto his biographer, "levelled to the ground." The king, on the other hand, pressed him to become prime-minister, and when he declined named his friend Martinez de la Rosa who had recommended. Finding matters which the second French invasion had re-established the absolute king, Toreno found himself again a banished man, in favour with neither party, and this time his exile lasted nearly ten years. Most of it was passed in France and England, some in Germany and Switzerland, in the execution of a plan he had conceived of writing the history of the war of independence, for which he had begun collecting materials during his first emigration. He commenced the composition in 1827 at Paris, and finished the tenth book in the same city on the night of the 28th of July 1830, in the midst of the insurrection which raged around.

The amnesty of 1832 restored him to Spain, but he was not permitted to reside in Madrid till after the death of King Ferdinand. In 1834, on the promulgation of the "Estatuto Real" by Queen Christina, on the recommendation of his friend Martinez de la Rosa, he was named minister of finance. The measures he proposed for liquidating the foreign debt occupied his attention almost exclusively for some time, and prevented his sharing the unpopularity of his chief, so that, when in 1835 Martinez de la Rosa was compelled to resign, Toreno succeeded to his place as minister of foreign affairs and president of the council. Unfortunately for himself he admitted to his own post of minister of finance Mendizabal, who, with his dazzling schemes, soon threw him into the shade. Toreno, who was now decidedly a "Moderado," grew more and more unpopular; insurrections burst forth, which he wished to repress by forcible means, but his colleague thwarted him, and the country was not with him. In September 1835 he was driven to resign, and Mendizabal succeeded as head of the cabinet. On a dissolution of the Cortes, Mendizabal was returned by the electors of seven different places, and Toreno and Martinez de la Rosa were left without a seat. The disgraceful revolution of La Granja followed, the constitution of 1812 was proclaimed, and Toreno, now his declared opponent, found it expedient to resume his historical studies in Paris and London, where he brought his history to a conclusion, at the time that in Madrid he was sentenced to forfeit all his honours and estates. In a few months however he was again allowed to return to Spain, and in the Cortes of subsequent years he vindicated his character against an accusation of corruption brought against him by General Seoane. The revolution of Barcelona drove him into banishment yet another time, and it was the last. Toreno, after a tour in Germany and Italy, was in Paris, on his return, it is said, to Spain, when seized with an cerebral disease which carried him off in a few days. He died at Paris on the 16th of September 1843; but his remains were conveyed to his country and deposited in the church of St. Isidro at Madrid.

Toreno's 'History of the Insurrection, War, and Revolution of Spain' ('Historia del Levantamiento Guerra y Revolucion de España'), is the great Spanish work on that interesting subject. That it is a model of Spanish composition is affirmed by the best critics of that country. Its merits as a narrative are more liable to question, for there appears a languor and general want of spirit in its details, which surprise the reader who is aware that its author was not only an eye-witness of many of the events he describes, but also an actor in some of them. The editor of the edition of 1843, published after the author's death, speaks of the "carefulness and preciseness" of the history "in which," he remarks, "the most insignificant French detachment is never mentioned without specifying the name of the chief who commanded it." A merit of more importance which Toreno's history possesses is that of a calm judicial tone, which favourably contrasts with the arrogant impetuosity of some English historians of that memorable contest. On the whole, it can only be considered like Southey's 'History of the Peninsular War,' as a temporary substitute and a collection of materials for the great work on the subject, with which it may be hoped that some future historian will enrich the literature of his country. The 'Historia del Levantamiento' has been translated into French and German, and a Spanish edition of it was printed by Bandry of Paris in his collection of the Spanish classics. The best edition of it is that published in four octavo volumes at Madrid in 1843, after the author's death, with his additions and corrections.

TORFAEUS, or TORMODUS, the assumed literary name of, after having been introduced to the learned world as a Latin author, of THORMOD THORVESON. Little or nothing is known about his early life. He was born at Engoe, a small island on the southern coast of Iceland, of poor parents, who however were in sufficiently good circumstances to give him an outfit (for the institution, like all public schools in Iceland, was a free school) for the Latin school at Skalholt, where according to Iceland custom, he became a good classical scholar; so much so, that upon his arrival in Copenhagen, his choice and fluent Latin surprised the professors there. In 1654 he was entered as a free student at the university of Copenhagen, where he remained till 1657. In 1659 he was captured and made prisoner by a Swedish privateer on his return from Christiansand in Norway. This circumstance appears to have given him some notoriety, for immediately after his release and return to Copenhagen, king Frederick III. appointed him interpreter of Icelandic manuscripts, and a short time afterwards sent him to Iceland for the purpose of collecting manuscripts, which with the assistance of his warm friend and patron, Brynhjulf Swendson, bishop of Skalholt, he accomplished so well, that the collection which he brought back, and which is still preserved in the Royal Library in Copenhagen, is considered the best in the world for ancient Scandinavian history and literature. The king gave him, shortly after his return, as a reward for his zeal, and to enable him to pursue his studies, a small appointment at Stavanger in Norway. This office however he resigned in 1662, having been appointed keeper of the king's collection of antiquities. He made soon afterwards another voyage to Iceland, for the purpose of taking possession of some little property, to which he had succeeded after the death of his father and of his elder brother; and after his return the same year, he went to Amsterdam for some literary purposes. During his voyage back he was shipwrecked at Skagen; and on his journey by land to Copenhagen, he was insulted and attacked le a small town in Sealand by one of his countrymen, whom, in defending himself, he accidentally killed. This circumstance caused great sensation, and he himself himself immediately, was tried, and sentenced to death. However by an appeal to a superior court, and an "appellatio ad tronum," or appeal to the throne, as it is termed in Danish jurisprudence, his sentence was commuted into a fine, which he paid, and was released; but as it was impossible for the king to retain a man in his service with a blemish on his reputation, he was dismissed, and lost his salary. He then retired to a small farm in Norway, the property of his wife, where he lived without any official employment till the year 1682, when Christian V., having succeeded to the Danish throne, recalled him, and appointed him royal historiographer, and an assessor in the consistory, or board of education, with a salary sufficient to enable him to live independently and to pursue his studies. This appointment he kept till his death. He commenced his most important work in the library of Norway, and finished it at that of the Union of Calmar, when, unfortunately, ill health compelled him to surrender his favourite task to his friend Professor Reitzer. He was married twice: his first wife died in 1695; he married again in 1709; and in 1719 he died, very far advanced in years, without issue. His works, printed, as well as in manuscript, are very numerous, and exhibit deep knowledge and indefatigable research into ancient Scandinavian history. The manuscripts he left are preserved at the Royal Library in Copenhagen: as to his published works, it will be sufficient to mention the most important, which are:—'Historia Rerum Orcadiensium, Iberii i.' fol., Hafniæ, 1715; 'Series Dynastarum et Regum Daniæ à Skialdo ad Gormum Grandovem,' 4to, Hafniæ, 1712; 'Historia Rerum Norvegicarum ad Annum 1387,' 4 vols. fol., Hafniæ, 1711. A very accurate account of his later works, together with a collection of private letters, which show at least that he wrote elegant Latin, is to be found in a work published by the celebrated Danish historian Peter Suhm, under the title, 'In Effigiem Thormodi Torfæi, una cum Torfæanis,' &c.,

4to, Hafniæ, 1777. (Peter Suhm, *Smaae Skrifter og Afhandlinger*, Kiöbenhavn, 1788; Eber, *Bibliographisches Lexicon*, Leipzig, 1819; *Allgemeines Historisches Lexicon*, Leipzig, 1747.)

TORI'NUS, ALBA'NUS, the Latinised name of ALBAN THORER, a Swiss physician, who was born in 1489 at Winterthur, in the canton of Zürich. He studied polite literature at Basel with zeal and assiduity, and, after teaching rhetoric for some years, he at last determined on taking the degree of Doctor of Medicine at Montpellier. Upon his return to Basel, in 1537, he was appointed professor of practical medicine, and soon acquired an extensive practice. He died February 23, 1550, at the age of sixty-one. Like several of his contemporaries, he employed himself in translating the works of the Greek medical writers into Latin, of which he published the following:—'Polybi Opuscula aliquot nunc primum è Græco in Latinum conversa nempe de Tuenda Valetudine, sive de Salubri Victus Sanorum ibi. 1. De Seminis Humani Natura lib. 1., De Morbis, sive Affectibus Corporis liberi ii.,' 4to, Basil., 1544. Alexander Trallianus, Lat., folio, Basil., 1535. The first Latin translation of Paulus Ægineta, folio, Basil., 1532, which was afterwards improved and several times reprinted. This translation was severely criticised by Winther of Andernach ('Guinterus Andernacus'), which drew from Thorer a very angry and somewhat abusive answer entitled 'Epistola Apologetica, qua Calomnias Impudentissimas refellit,' 8vo, Basil., 1539. The first Latin translation of two works of Theophilus Protospatharius, with the title 'Philareti de Pulsuum Scientia Libellus, item Theophili de Exacta Retrimentorum Vesicæ Cognitione Commentariolus,' &c., 8vo, Basil., 1553. In his translation of Theophilus 'De Urinis,' he is charged by Guidot (Not. in Theoph. 'De Urin.,' p. 234; et 'Alliog. ad Lect.') with having altogether omitted the most difficult parts in the work, and with having altered two other passages (in the Preface, and in cap. 5) so as to destroy the acknowledgment of our Lord's Divinity contained in them. Fabricius mentions also ('Biblioth. Græca,' vol. xiii., p. 44, ed. Veh.) a translation of Theophilus's 'Commentary on the Aphorisms of Hippocrates,' but this is probably a mistake. (See Fabric., 'Biblioth. Græca,' vol. xii., p. 649, ed. Vet.; Choulant, 'Handbuch der Bücherkunde für die Aeltere Medicin.') He also retouched the old Latin translation of Yahia Ibn Serapion Ben Ibrahim [SERAPION], and published it with the title 'Jani Damascenonis Interpretatio Medicinalis libri vii., partim Albano Torino, partim Gerardo Cremouensi Metaphraste,' folio, Basil., 1543. He published a Greek edition, in one volume, of several of Hippocrates's works, viz., 'Prognost.,' 'De Nat. Hom.,' 'De Aere, in Hom.,' 'Aphor.,' 'De Morb. Basil., 1536, and prefixed a Life of the author. He inserted a Latin translation of the Letter of Diocles Carystius to King Antiochus, 'De Secunda Valetudine Tuenda,' in the second edition of his translation of Alexander Trallianus, folio, Basil., 1541. He also edited a collection of medical works with the following title:—'De Re Medica Libri Quinque Antiqui, Scraii Sardiani Archiatri Tiberii in Artem Medendi Isagoge hactenus non visa. Oribasii Sardiani Fragmentum de Victus Ratione, quolibet Anni Tempore Utili, antea nunquam editum. C. Plinii Secundi de Re Medica libri v. accuratius Recogniti, et Notitia ac Paradoxologia Secunda, ab Innumeris Mendarum Millibus Fido Vetustissimi Codicis Repurgati. Lo. Apulei Madaurensis, Philosophi Platonici, de Herbarum Virtutibus Historia. Accessit his Libellus Utilissimus de Betonica, quem quidam Antonio Musæ, uonnulli Lo. Apuleje adscribendum autumant, nuper Excusus,' folio, Basil., 1625. Besides these works he edited also Apuleius's 'De Re Culinaria,' 4to, Basil., 1541; S. Epiphanius, 'De Propheturum Vitis,' 4to, Basil., 1529; Agapeti 'Scheda Regia,' Lat., 8vo, Basil., 1541, at the end of Œnesandri 'Strategicus;' and Emmanuel Chrysoloræ, 'Epitome Grammaticæ Græcæ.' (See Fabric., *Bibliotheca Græca*, vol. xiii., p. 44, ed vet.; *Biogr. Méd.*; Choulant, *Handb. der Bücherkunde für die Aeltere Medicin.*)

TORPORLEY, NATHANIËL, was born about 1573, was entered at Christchurch, Oxford, and after taking his degree was in France for several years. Wood says that during that time he is to have been a amanuensis to the celebrated mathematician Francis Vieta. This fact has been mentioned by the French historians, in speaking of Harriot, when hard pressed to defend Des Cartes from the imputation of being Harriot's plagiarist; but the idea seems to be that as Torporley was afterwards under the patronage end in the house of Henry Percy, earl of Northumberland, as also were Harriot and others, he must have been in habits of intimate communication with Harriot, to whom he might have taught what he learnt from Vieta. With regard to the fact itself, it is almost certain, for not only does Wood mention it as notorious, but Sherburne, in the list at the end of his 'Manilius' (1675), published before Wood wrote, says that Torporley was "sometime amanuensis to the famous Vieta." Nothing is more likely than that Harriot learnt from Torporley the principles of Vieta; but Harriot's discoveries in algebra most distinctly bear the mark of a new mind. Torporley afterwards wrote his 'Diclides Colometricæ, seu Valvæ Universales,' &c., London, 1602, and other works which we have never seen. Wood also says he wrote something against Vieta, under the name of Poulterey, a transposition (not, perfect however) of his own name, but which he (Wood) had never seen. In looking through the 'Diclides,' &c., which is mostly on spherical trigonometry, we only found two very slight notices of Vieta's name, which looks as if there had been a coolness between them; but we found, to our surprise, that Torporley had preceded Napier by twelve years in the publication of the greater part of the rule of Circular Parts, not indeed in Napier's convenient form, but with a complete reduction of the six cases to two, and rules, such as they were, by which to assimilate the connected cases. For more account of Torporley's process, which is the greatest burlesque on mnemonics we ever saw, we refer to the 'Philosophical Magazine' for May, 1845. We have only to add that Torporley obtained church preferment, was a member of Sion College (to which he left his books and manuscripts), and died in April, 1632. In the Catalogue of Sion Library it is said he was a chemist who left a large number of chemical and other books; but we cannot find one of his works in the second catalogue, and we have not had the opportunity of examining the first. The fire of London occurred between the publication of the two, and the books which were then consumed are not mentioned in the second.

TORRE, FILIPPO DEL, born at Cividale in the Friuli, in 1657, studied at Padua, and afterwards went to Rome in 1687, where he was employed in several offices, and at last was appointed bishop of Adria by Clement XI., in 1702. He died in 1717. While at Rome he published a work of great research on the antiquities of Antium, 'Monumenta veteris Antii,' which was much esteemed by the learned. He wrote some other works in illustration of ancient medals, and also upon subjects of natural history. Girolamo Lioni wrote a biography of Filippo del Torre.

TORRE, FILOMARINO, DUKE DELLA, a Neapolitan nobleman who lived in the second half of the 18th century, and applied himself strenuously to the study of physics. His name is known in history chiefly for his melancholy end. In the first insurrection of the populace of Naples, who, being forsaken by the king and court and all the principal authorities on the advance of the French invading army, rose tumultuously in January 1799 to defend the town and at the same time to destroy those whom they suspected of being favourably inclined towards the French, the Duke della Torre, who lived in almost retirement and does not appear to have meddled with politics, was denounced to the popular committee by a menial who had seen a letter written to the duke by a noble relative of his at Rome, informing him that he had recommended him to the French general for protection in the event of Naples being stormed by the French army. This was sufficient to persuade the ignorant lazzaroni that the duke was a secret Jacobin, and his doom was fixed at once. The mob went to his palace, pillaged it, destroyed his library, his collection of natural history, and his cabinet of physics, threw the philosophical apparatus out of the window, and dragged after the Cavaliere Clemente Filomarino, known for his poetical talent, and dragged them to the Marina of the Carmine, where they killed both of them. At the same time it must be observed that the leaders of the mob showed some regard for the women and children; they ordered one of the duke's carriages out, put the duke's wife and her children in it, and told them to drive to some friend's or relative's, after which they set fire to the palace. The two brothers Filomarino were the most distinguished victims of the first or Lazzaroni insurrection of 1799. (Colletta, *Storia del Reame di Napoli*; Cuoco, *Saggio Storico sulla Rivoluzione di Napoli*; *Sketches of Popular Tumults*, 1837.)

TORRE, GIAMMARI'A DELLA, was born at Rome of a Genoese family, at the beginning of the 18th century. After studying in the college of Nazareno, he entered the order of the Somaschi, and having shown great aptitude for physical and mathematical studies, was successively professor in several colleges at Rome, Venice, and Naples. At Naples he became known to King Charles V. of Naples (afterwards Charles III. of Spain), who employed him in several scientific experiments, and made him his head librarian and keeper of the museum of Capo di Monte. He published a history of Vesuvius, 'Storia e Fenomeni del Vesuvio esposti dal P. Gio. Maria della Torre, Somasco,' fol., Naples, 1755. He also wrote a 'Course of Physics,' in Italian and Latin, which has gone through several editions; a volume of microscopical observations, and numerous memoirs on physics. He applied himself particularly to improve the microscope. He also contributed to illustrate the newly discovered towns of Herculaneum and Pompeii. He was one of the most distinguished members of the Royal Academy of Sciences of Naples, and was also corresponding member of the Academies of Sciences of Paris and Berlin, and of the Royal Society of London. Father della Torre died at a very advanced age, in March 1782. (Lombardi, *Storia della Letteratura Italiana nel Secolo XVIII.*)

TORRE'NTIUS, LÆVI'NUS, whose original name was VAN DER BEKEN, was born at Ghent in 1525. He studied at Louvain, and was in the town when it was besieged by the celebrated Martin van Rossem. To commemorate the successful defence of the inhabitants, Torrentius composed a Latin poem, which was highly thought of at the time. He subsequently travelled to Italy, and spent some time at Bologna; at Rome however he remained many years, and studied Roman antiquities there with great diligence. He enjoyed the friendship of the Cardinal Baronius, Antonius Augustinus, Fulvius Ursinus, and other celebrated scholars during his residence at Rome; and he also made there a fine collection of ancient coins and works of art. On his return to the Netherlands, Torrentius filled successively various ecclesiastical dignities, and was at length appointed to the bishopric of Antwerp, where he laboured with great zeal in discharging the duties of his office. He is said to have been also employed in

Digitized by Google

various embassies and political negociations. In 1595 he was appointed Archbishop of Mechlin, but before the documents arrived from Rome which were necessary to enable him to enter upon his new dignity, he died at Brussels in the seventieth year of his age. He was buried in the cathedral-church of Antwerp. He left his library and collection of antiquities to the college of Jesuits at Louvain.

Torrentius was an accurate scholar, and well acquainted with Roman antiquities, but he did not write much. The only work of his which was published in his lifetime is a Commentary on Suetonius, which originally appeared at Antwerp in 1578, and was reprinted in 1592: it is also contained in Grævius's edition, published in 1672. This Commentary is also interesting from the many wood-cuts it contains, representing coins of the Roman emperors and their families. Torrentius's Commentary on Horace was not published till after his death: it appeared at Antwerp in 1608, 4to, together with a small treatise of his entitled 'Commentariolus ad Legem Juliam et Papiam de Matrimoniis Ordinandis.' Besides these Commentaries, Torrentius also published in his lifetime several Latin poems, of which a collection appeared at Antwerp in 1576, 8vo, under the title of 'Poemata Sacra.' Torrentius was called by his contemporaries the Christian Horace; and his poems are distinguished by great ease of versification. He also edited the posthumous works of J. Goropius Becanus, Antwerp, 1580, with an apology for Becanus, who had been attacked by Scaliger. (Foppens, *Bibliotheca Belgica*; Saxii, *Onomasticon*.)

TORRICELLI, EVANGELISTA, a learned Italian mathematician and philosopher, was born October 15, 1608, at Faenzadoli in Romagna, and being, probably at an early age, an orphan, he was supported by an uncle who resided at Faenza. At this place, and in a school of the Jesuits, the youth received a mathematical education, and he speedily distinguished himself by the progress which he made in acquiring a knowledge of the sciences.

At twenty years of age his uncle sent him to Rome where he became intimately acquainted with Benedict Castelli, who was then professor of mathematics in that city, and by whom his studies were directed. The Dialogues of Galileo appear to have particularly engaged Torricelli's attention, and he composed two tracts, one on the subject of mechanics, and the other on the motion of fluids, which were published with the rest of his mathematical works in 1643. Torricelli seems to have been the first who established the principle, that when two weights are so connected together, that being placed in any position their common centre of gravity neither ascends nor descends, those weights are in equilibrio; and on this principle he investigated the ratio between two weights when they are in equilibrio on a double inclined plane. He also investigated the motions of falling bodies and projectiles; and among the results of his researches is the remarkable fact, that the paths of any bodies projected obliquely (in a non-resisting medium) when discharged from the same point with equal velocities, but at different angles of elevation, are parabolas situated within one curve which is a tangent to all of them, and is itself a parabola. In the same tract on the motion of fluids he proves that water will flow through an orifice at the bottom of a vessel with a velocity equal to that which would be acquired by a body falling through the height of the fluid in the vessel, and he endeavours to establish the principle by the supposed fact that water so flowing ascends in a vertical tube connected with the vessel to the exterior (the resistance of the air being abstracted) to the level of the upper surface of that which is in the vessel: he hence concludes that the velocities of effluent water must vary with the square-roots of the pressures.

Galileo, having received copies of the tracts above mentioned, was desirous of becoming acquainted with the author, and he pressed the latter to join him at Florence. Torricelli, having formed connections at Rome, at first hesitated, but at length decided to accept the invitation: he was kindly received by Galileo, and it is said that his society and conversation contributed to soothe the last days of the venerable philosopher, who was then infirm and blind, and who died at the end of three months from his arrival. Having been honoured by the grand-duke with the appointment of professor of mathematics in the Accademia, Torricelli became the successor of Galileo in the institution, and he resided at Florence till his death, which happened in 1647, when he was thirty-nine years of age.

About the year 1637 Roberval, in France, discovered a method of determining the area of a cycloid; and seven years later Torricelli published a solution of the problem in an appendix to the collection of his works. As the Italian mathematician appeared to consider himself to be the discoverer of the rule, Roberval's jealousy was excited, and he accused Torricelli of plagiarism; asserting that the latter had taken the solution from some papers which had been sent to Galileo, and which had fallen into his hands on the death of that philosopher: Torricelli however, in a letter to Roberval, denies that assertion, and there seems no reason to doubt that he made the discovery without any knowledge of what had already been done in France. He subsequently gave rules for finding the volumes of the solids formed by the revolution of a cycloid about its base and about its axis; that which is applicable to the first case is correct, but the other is only approximate, so that it may be doubted whether or not Torricelli was in possession of an accurate solution of the problem.

But the discovery which has immortalized the name of Torricelli is that of the barometer. Galileo had occasion, some time previously, to observe that a column of water exceeding 18 cubits (about 33 feet, English) in height could not be raised in a pump; and, though he had already made the discovery of the pressure of the atmosphere, the reason why that limit could not be exceeded remained unknown to him. Torricelli, in 1643, wishing to find, in a more convenient manner, the weight of the quantity of fluid which could be supported above its general level, performed an experiment similar to that which is exhibited when a pump is in action; and, instead of water, he used mercury, which is about fourteen times as heavy. He filled with mercury a glass tube which at one end was hermetically closed, and having inverted it, he brought its open extremity under the surface of mercury in a vessel; when he observed that the top of the column descended till it stood at a height equal to between 29 and 30 inches (English) above the level of the mercury in the vessel, leaving what is considered as a perfect vacuum between the upper extremity of the column and that of the tube. The specific gravity of mercury being known, the weight of the supported column could, of course, be found.

By this experiment the opinion that a vacuum was contrary to a law of nature was immediately proved to be unfounded, but it is uncertain whether or not Torricelli was aware of the true cause of the column of mercury being so supported, and the honour of having been the first to prove decisively that it was the pressure of the atmosphere on the orifice of the mercury in the vessel, is ascribed to Pascal, who, in 1648, on conveying a tube so filled to stations at different heights above the level of the plains, found that the column of mercury diminished in that length as the station was more elevated: that is, as the weight of the column of atmosphere above the vessel diminished.

It may be easily conceived that Torricelli would communicate his ideas to his friends before he actually made the experiment above mentioned; and such a circumstance may account for the pretensions of Valeriano Magnus, Honoratus Fabri, and others, to priority in the discovery of what is called the Torricellian vacuum. It ought to be observed however that in one of the letters of Descartes, dated 1631, that is, twelve years before the experiment of Torricelli was made, this philosopher mentions the support of a column of mercury in a tube, and expressly ascribes the cause to the weight of a column of air extending upwards beyond the clouds.

Torricelli published at Florence, in 1644, a volume in 4to, entitled 'Opera Geometrica.' A paper which he wrote on the course of the Chiana is to be found in the collection of hydraulic works of fluids (Florence, 1768). His discovery of the barometer is given in his own work on mathematical and physical subjects, entitled 'Lezione Accademiche' (Florence, 1715). And his letter to Roberval on the cycloid is in the third volume of the 'Mémoires' of the Academy of Sciences at Paris. He is said to have been the inventor of those simple microscopes of short focus, which consist of a globule of glass melted in the flame of a lamp. His manuscripts are preserved in the Medicean Palace, and in the same edifice there are some object-glasses for telescopes, of considerable magnifying power, by his hand.

TORRIGIA'NO, PIE'TRO, an Italian sculptor, whose name is connected with the history of art in this country, he being one of the foreign artists employed by Henry VIII., was hardly less remarkable for the ferociousness of his temper, the singularity of his conduct, and the strangeness of his fate, than for the ability in his profession. He was a native of Florence, and though the time of his birth is not mentioned, it was probably about the same as that of Michel Angelo (1474), as they studied together from the antiquities in the gardens of Lorenzo de' Medici, il Magnifico; a circumstance which Michel had good cause to remember, for such was Torrigiano's jealousy of and spite towards him, that he one day assaulted him, and inflicted so severe a blow upon his nose as to crush and disfigure it for ever. Being obliged to leave Florence in consequence of this affair, Torrigiano went to Rome, where he was employed by Pope Alexander VI., and afterwards enlisted and served as a soldier, first under the Duke Valentino in Romagna, next under Vitelli and Piero de' Medici. Strange as this change was, he was well suited to his new profession, and that to him; for, as described both by Vasari and Cellini, he was a large, handsome, and powerful man; was gifted with great "audacity, and had more the air of a rough soldier than of an artist." But though he distinguished himself by his prowess, and obtained the rank of ensign, he saw no chance of speedily advancing higher, and therefore returned to his former profession, which he practised for awhile, but only, it would seem, in small bronze figures, executed for some Florentine merchants, whom he afterwards accompanied to England. His talents, and perhaps his personal qualities also, recommended him to the favour of Henry VIII., for whom he executed a variety of things, but his chief work was the tomb of Henry VII. in Westminster Abbey, which he completed in 1519, and for which he received the sum of 1000*l*. The tomb of Margaret, countess of Richmond, in Henry VII.'s chapel, is also supposed to have been by him.

While engaged upon Henry's tomb he returned to Italy, in order to carry back with him other assistants, and endeavoured to persuade Benvenuto Cellini, then only eighteen, to accompany him; but the latter tells us he was so disgusted with Torrigiano, on learning from him how brutally he had treated Michel Angelo, that so far from associating with him in any way, he could not even endure the sight of him.

After finally quitting England in 1519, Torrigiano visited Spain, where he executed several pieces of sculpture for convents, &c., and among others a Virgin and Child, so beautiful that the Duke d'Arcos commissioned him to make a copy of it. The payment promised for it seemed such an immense sum, that the artist fancied he was about to be rendered wealthy for the rest of his days; so great therefore was his indignation on discovering that the vast heap of marvedis sent house to him amounted to no more in value than thirty ducats, that he went and broke the statue to pieces. On this, the duke caused him to be imprisoned in the Inquisition as a sacrilegious heretic who had impiously destroyed a figure of the Holy Virgin. He was accordingly condemned by that tribunal, but avoided the execution of his sentence by refusing to take any food; preferring starving himself to death to the more ignominious end which else awaited him. Thus perished, in 1522, an artist of more than ordinary talent: a victim partly to his own violence and imprudence, and partly to the mercilessness of a most odious and sanguinary tribunal.

TORRIJOS, JOSÉ MARIA, a Spanish general and patriot, was born at Madrid on the 20th of May 1791, and at the age of ten was made one of the pages of King Charles IV., a position which brought him into familiar contact with the young prince, who afterwards became King Ferdinand VII. It was the custom for the royal pages to receive early rank in the army, and Torrijos at the age of sixteen was a captain in the regiment of Ultonia or Ulster in the Irish brigade in the service of Spain. On the great outbreak of the 2nd of May 1808, and in the subsequent war of independence, Torrijos distinguished himself by his bravery; in 1811 he was already colonel of a regiment, he took part in the battle of Vittoria, and at the conclusion of the war he was general of brigade. His early acquaintance with the court had strengthened his aspirations for liberty, he declined the command of a force under Morilla against the South-American insurgents, and in 1817 was thrown into the prison of the Inquisition on a charge of conspiracy against the government. The constitutional outbreak of 1820 liberated him, and as Captain General of Valencia he was ardent in his services to the the constitutional cause. After the French invasion of 1823 he took refuge in England, for which country he always manifested a strong partiality. He found employment himself in translating books into Spanish for the South-American market, among others the 'Memoirs of General Miller,' an Englishman who had been in the Peruvian service. The French revolution of 1830 awakened his hopes for a speedy change in Spain and he set off for Gibraltar to take the lead. Moreno, the governor of Malaga, treacherously enticed him to a landing by false intelligence and promises of support, and he left Gibraltar, at the head of a party of fifty, on the 30th November 1831, with full confidence of success. On the 5th of December the whole of the party were prisoners by Moreno, who sent to Madrid for orders how to act. It was till then believed that King Ferdinand had a special kindness for Torrijos, whom he had known so long, but the only reply received was in the laconic form "Que los fusilen. Yo el Rey." ("Let them be shot. I the King.") Torrijos and his companions, fifty-one in number, were accordingly shot at Malaga on the 11th of December. The subsequent death of Ferdinand changed the whole face of affairs, a little more patience would have brought Torrijos peaceably back to Spain, with his friends in power, and the infamous assassin Moreno ruined by his own career. Queen Christina, the widow of Ferdinand, ennobled the widow of Torrijos with the title of countess, and his bust was erected at Madrid at the house in which he was born in the Calle de Preciados.

TORTI, FRANCIS, an eminent Italian physician, was born at Modena, December 1st 1658. Having finished his preliminary studies in 1675, he was originally intended for the legal profession; this however he soon abandoned, and embraced that of medicine, which he studied under Antonio Frigerio. He took the degree of Doctor of Medicine at Bologna in 1678, and upon his return to Modena, at the early age of twenty-three, he obtained one of the medical professorships founded by the Duke Francis II. Soon afterwards he was chosen to be one of the physicians in ordinary to the duke, an appointment which he owed partly to his achievements in music and literature, as he was the composer of several oratorios, and also wrote a Latin letter under the assumed name of L. A. Cotta, in defence of Tasso against Boulioure. Upon the death of Francis in 1694, his successor continued Torti in the post of physician in ordinary; he was also prevailed upon by his representations to found an anatomical amphitheatre at Modena, in which Torti was entrusted with the office of demonstrator in 1698. He had previously joined with Ramazzini in carrying on some researches concerning the barometer, the results of which were published by the latter under the title 'Epheremeridis Barometricæ Mutinenses,' Modena, 1694; and again 'Dissertatio altera Tricepe circà Mercurii Motiones in Barometro,' Modena, 1698. Bnt Torti's most important and celebrated work did not appear till 1709, under the title 'Therapeutice Specialis ad Febres quasdam Perniciosas, Inopinato ac repente Lethales, una verò China China Peculiari Methodo minist rata.' 8vo, Modena. This work placed him at once in the first rank among practical physicians, and still continues to be highly esteemed. It has been several times reprinted. The publication of this work gained him the friendship and applause of various learned men, and also the title of corresponding member of the Royal Society of London, and of the Academy of Valentia in Spain. It also drew forth some criticisms from Manget and Ramazzini, to whose remarks he replied with some degree of bitterness and warmth. In 1717 he was offered the professorship of Practical Medicine at Turin, and in 1720 he had a similar office at Padua, but he refused them both, and preferred living at Modena, where he had honours and emoluments heaped upon him by the duke. An incurable trembling of the hands having rendered him unable to feel the pulse of his patients with sufficient accuracy, he gave up practice some years before his death, and passed the remainder of his life in honourable repose, often consulted by patients from all parts, and spending much of his leisure time in the pleasures of the chase, to which he had always been much addicted. Having been summoned by the Prince of Parma, in 1731, to attend the Princess of Este, he was, upon his return to Modena, seized while in a church with a sudden attack of hemiplegia, brought on probably by heat and over-exertion. For some time afterwards he lost the use of his right side, but gradually recovered, and lived for ten years after the attack. He latterly became dropsical, and died in March 1741, at the age of eighty-two. He was twice married, but having no children, he left part of his fortune to found another medical professorship at Modena, and directed the rest to be given away in charity.

TOTT, FRANCOIS BARON DE, the son of an Hungarian nobleman, who, obliged to leave his country in consequence of his connections with Prince Rogotsky, had entered the French service, was born at Fert-sous-Jouarre, on the 17th of August 1733. Young De Tott obtained at an early age a commission in the hussar regiment of Berchini, which his father had been instrumental in raising and disciplining. In 1755 the senior De Tott, who spoke the Turkish and Polish languages fluently, and had been more than once employed in missions to the Crimea, was appointed to accompany M. de Vergennes to Constantinople. He took his son with him, intending that he should study the language and render himself familiar with the manners of the Turks. The father died of a fever in September of the year 1757, but M. de Vergennes conferred upon the son an appointment in the embassy, which he continued to hold along with his commission in the regiment of Berchini. De Tott remained at Constantinople till 1763, when he returned to France.

In 1766 the Baron de Tott presented a memorial to the Duc de Choiseul, pointing out the means of concluding a treaty of commerce with the Khan of the Crimea, and extending the commerce of France in the Black Sea. The French consul in the Crimea died about the same time, the Duc de Choiseul appointed the memorialist his successor. De Tott repaired to his post by the way of Poland. He does not appear to have done anything towards realising his projects for adding to the commercial intercourse with the Crimea, nor was a better footing; but he contrived to involve himself so deeply in the intrigues of the court, that the vizir sought and obtained his removal by the French government in 1769.

The baron de Tott returned to Constantinople, entered the service of the Ottoman Porte, and continued in it till the year 1776. If his own account may be believed, he was during that period one of the moving spirits of the Ottoman empire. He presented the sultan with a map of the theatre of war between the Turks and Russians immediately after his arrival at Constantinople, and suggested the advance of the Pasha of Bender into the Ukrain. He proposed an entire reform in the Turkish artillery, and was appointed to carry it into effect. In 1770 he was charged with the defence of the Dardanelles, menaced by the Russian fleet. In 1771 he devised a plan of defence for the Turkish frontiers towards Ocnakow; taught the Turkish artilleriets to make bombs, and brought them to an unprecedented dexterity in working their guns. In 1772 he organised a new cannon-foundry. In 1773 he gave directions for the fortification of the Black Sea mouth of the Dnieper. In 1773, 1774, and 1775 he was busy improving the fortifications and artillery of the Turks. All these statements have some foundation in fact; but the tone of exaggeration which pervades all the baron's account of his own exploits renders it impossible to decide how much of them is to be believed. It is evident that he did not think his services sufficiently appreciated, for in 1776 he tendered his resignation in disgust; and it is equally evident that they were not so highly esteemed by the Turks as by himself, for the resignation was readily accepted, and the baron dismissed with some cold compliments.

He was despatched by the French government in 1777 on a tour of inspection of the consular establishments in the ports of the Mediterranean from the Archipelago to the Barbary States. At the request of Buffon, Sonnini was allowed to accompany the expedition.

With this mission the diplomatic services of the Baron de Tott terminated. On his return to France he had two pensions settled upon him, one from the ministry of the marine, the other from that of foreign affairs, and, retiring from public life, occupied himself with preparing for the press the observations made during upwards of twenty years of active life. The work appeared in 1784 under the title 'Mémoires sur les Turcs et Tartares.' It met with great success: the original French version was frequently reprinted, and translations of it into English, German, Dutch, and Swedish appeared in the course of a few years.

De Tott was raised to the rank of Maréchal-de-Camp in 1781. In

Digitized by Google

1786 or 1787 he was appointed governor of Douai. He held that office till 1790, but opposing himself to the republican fervour of the garrison, was nearly murdered and obliged to fly. He took refuge in Switzerland, where he resided for a year, and then proceeded to Vienna. He died in obscurity at Tatzmansdorf in Hungary, in 1793.

TOULMIN, JOSHUA, D.D., was born in London, on the 11th of May 1740, and was educated at St. Paul's school, whence he was removed to what was then called the Dissenting Academy, the classes constituting which were taught in Wellclose Square, in the house of his relation Dr. Samuel Morton Savage, who was the classical and mathematical tutor; the only other teacher being Dr. David Jennings, who was theological tutor or professor, and presided over the seminary. ('History of Protestant Dissenters,' by Bogue and Bennett, iv. 262.) On being licensed to preach, he was in the first instance settled as minister of a dissenting congregation at Colyton in Devonshire. At this time his principles appear to have been what are commonly called orthodox; but he soon became a convert to the opinions of the Baptists; upon which, in 1765, he transferred himself to Taunton, where, besides having the charge of a Baptist congregation, he taught a school, and also, it is said, kept a bookseller's shop. It was while resident here likewise that he wrote and published most of the literary works which have made his name known. He had not been long at Taunton before his theology underwent a further change; but, although he had previously received invitations from the Unitarians both of Gloucester and Yarmouth, he remained where he was till 1804, when he accepted the situation of one of the pastors of the Unitarian congregation at Birmingham, which he presided over by Dr. Priestley, and then assembling in what was called the New Meeting-House. This appointment he continued to hold, discharging its duties with much acceptance, till his death at Birmingham, after a short illness, on the 23rd of July 1815, leaving five children, out of a family of twelve, by his wife Jane, youngest daughter of Mr. J. Smith, of Taunton, whom he married in 1764.

Dr. Toulmin received his diploma of D.D. from Harvard University, in the United States, in 1794. His first publication appears to have been an octavo volume, entitled 'Sermons addressed to Youth, with a Translation of Isocrates's Oration to Demonicus,' which appeared in 1770, and was reprinted in 1789: this was followed by 'Two Letters on the Address of the Dissenting Ministers on Subscription,' 8vo, 1774; 'Memoirs of Socinus,' 8vo, 1777; 'Letters to Dr. John Sturges on the Church Establishment,' 8vo, 1783; 'Dissertations on the Internal Evidences of Christianity,' 8vo, 1785; 'Essay on Baptism,' 8vo, 1786; a new edition (the third) of 'Mr. William Foot's Account of the Ordinance of Baptism,' 8vo, 1787; 'Review of the Life, Character, and Writings of John Hales, M.A.,' 8vo, 1789; 'History of the Town of Taunton,' 4to, 1791; a new edition of Neal's 'History of the Puritans,' with notes and additions, 5 vols. 8vo, 1794-97, reprinted in 3 vols. 8vo, 1837; 'Biographical Tribute to the Memory of Dr. Priestley,' 8vo, 1804; 'Address to Young Men,' 12mo, 1804; 'Memoirs of the Rev. Samuel Brunsdon' (his colleague in Birmingham), 8vo, 1809; 'Sermons on Devotional Subjects,' 8vo, 1810; 'Historical View of the State of the Protestant Dissenters in England,' 8vo, 1814; besides a number of single sermons and other pamphlets: and he was also an occasional contributor to the 'Theological Repository,' 'The Nonconformists' Memorial,' 'The Monthly Magazine,' and other periodical publications. Dr. Toulmin's writings, without much either of learning or power of thought, display generally an agreeable perspicuity and neatness of style, rising sometimes to considerable energy and animation; and although steady, and even eager, in the defence of his own opinions, he states what he has to say without any bitterness or discourtesy to his opponents.

TOULONGEON, FRANÇOIS E'MANUEL, VISCOUNT OF, a French historian of the last and present century, was born in 1748, at the castle of Champlitte, in La Franche Comté, and belonged to one of the oldest families in that province. He was destined by his parents for the church, and was sent at an early age to the Seminary of St. Sulpice at Paris; but having evinced a decided repugnance to theological studies, he was permitted to follow his own inclination, and to enter the army. He was a great admirer of Voltaire, to whom, in 1776, he paid a visit at Ferney, and whose favour he gained. He was admitted a member of the Académie of Besançon, in 1779, having previously manifested a degree of poetical talent which gained for him some local celebrity. He rose to the rank of colonel of cavalry, and his regiment was remarked for its discipline and good condition; but he quitted the service previous to the wars which arose out of the French revolution. At the commencement of the revolution he embraced the popular side, and defended it against the majority of the nobles of La Franche Comté in the assembly of the states of that province, held at Quingey, in 1788. About this time he published a pamphlet, under the title of 'Principes Naturels et Constitutifs des Assemblées Nationales,' which appears to have been his first publication. It gained him considerable popularity, and led to his appointment as one of the deputies of the nobility of the province in the States-General of 1789. He was one of those nobles who separated themselves from their order to unite with the tiers-état, or commons, in one chamber, which assumed the title of the National Assembly. In the years 1790-91 he acted with the moderate revolutionists; and at the close of the session, presaging the approaching troubles, he quitted public life, and retired to an estate which he possessed in Le Nivernais, the sole remain of his patrimonial inheritance, and which was considerably diminished in value by the loss of the feudal services which had been suppressed by the revolution. His early retirement preserved him from the perils of the reign of terror. His subsequent life was devoted to literary and to agricultural pursuits. He was elected a member of the Institute, in 1797, in the class of the moral sciences (a class suppressed at the reorganisation of the Institute, in 1803); and, in the same year, he brought out a periodical, entitled 'Esprit Public,' with the view of calming the violence of party spirit; but only six numbers of the work appeared. He was chosen, in 1802 and 1809, deputy for the department of Nièvre in the legislative body; and was subsequently made a member of the Legion of Honour. He died suddenly, 23rd December 1812, and was buried in the cemetery of Montmartre, where his children have raised a monument to his memory.

The principal works of Toulongeon are:—'Histoire de France depuis la Révolution de 1789;' 'Manuel du Muséum Français;' 'Manuel Révolutionnaire, ou Pensées Morales sur l'Etat Politique des Peuples en Révolution;' a poem, entitled 'Recherches Historiques et Philosophiques sur l'Amour et le Plaisir;' and a translation of Cæsar's 'Commentaries.' His published some smaller works; and some of his papers read at the Institute were published either in the 'Mémoires de l'Institut,' or separately, by himself. His 'Histoire de France' never appears to have attained a high reputation, and has been superseded by later histories of the same period: but the exactness of its military details gives it some value. The first edition was without date, in 2 vols. 8vo; the second edition (1801-10) was published in 4 vols. 4to, or 7 vols. 8vo, with maps and plans of battles. The 'Manuel du Muséum' is a catalogue raisonné of the paintings of the different masters: it was published in ten volumes 8vo, 1802-1808: the first nine volumes are the initials of Toulongeon on the title-pages; the tenth volume is by another hand. The 'Manuel Révolutionnaire' (1795) went through two editions, and was translated into German. The translation of Cæsar was published after Toulongeon's decease, 2 vols. 12mo, 1813, with plans and military notes on the text. A new edition, interpaged with the original text, was published in 1826: part of a collection (by M. A. Pommier) of the Latin classics, interpaged with French versions.

TOUP, JONATHAN, was born at St. Ives in Cornwall, in December 1713, and was partly educated at a grammar-school in that town. He was afterwards entered at Exeter College, Oxford, where he took his bachelor's degree, but his master of arts degree he took at Cambridge. Toup entered the Church, and obtained successively the rectory of St. Martin's, Exeter, and a prebend's stall in Exeter cathedral. He died on the 19th of January 1785, in his 72nd year, and was buried in St. Martin's church.

Toup was an accurate scholar, and one of the best English critics in the middle of last century. The work by which he is best known is his 'Emendationes of Suidas,' the first volume of which was published in 1760, under the title of 'Emendationes in Suidam, in quibus plurima loca veterum Græcorum, Sophoclis et Aristophanis imprimis, cum explicantur tum emendantur.' This was followed by two volumes more in 1766 and 1768, and by a fourth in 1775, under the title of 'Appendiculum Notarum in Suidam.' This work gained for him the friendship of Bishop Warburton, to whose influence Toup was mainly indebted for his church preferment. In 1767 Toup published his 'Epistola Critica ad virum celeberrimum Gulielmum episcopum Gloucestrensem,' containing various corrections and explanations of many passages in the Greek authors. Toup was also a large contributor to the Oxford edition of Theocritus edited by Wharton, which was published in 1770. A note of his upon the fourteenth Idyl was cancelled by the vice-chancellor on the ground of its indecency, principally, it is said, at the wish of Dr. Lowth. Toup however was highly displeased at this, and published the objectionable note in 1772 in his 'Curæ Posteriores, sive Appendicula Notarum atque emendationum in Theocritum, Oxonii nuperrime publicatum,' in which he attacks the taste and the learning of those who had edited. Toup's last work was an edition of Longinus, published at Oxford in 1778, and reprinted in 1789, which is still one of the best editions we have of this writer. (Nichols's Bowyer.)

TOUR, MAURICE QUENTIN DE LA, an eminent French portrait painter, was born at St. Quentin, September 6, 1704. He was distinguished for his portraits in crayons, which he executed the size of life; he painted very slowly and finished very highly, but gave his pictures the appearance of having been executed with great ease by adding a few bold and effective touches to the already finished work. He painted many portraits, and was much in fashion in the time of Louis XV., with whom he was a favourite, and whose portrait he painted. The following are among his best pictures:—a large full-length of Madame de Pompadour; the portrait of Louis, Dauphin of France; one of Prince Charles, the Pretender; the portraits of Restout, the king's painter, presented to the Academy of Arts of Paris in 1746, when De la Tour was elected a member of the Academy; of Réné Fremin, the king's sculptor; of J. B. S. Chardin, the painter; of the Maréchal de Saxe, and others; and his own portrait, which was engraved by G. F. Schmidt in 1742.

De la Tour was a man of very eccentric habits, and towards the

Digitized by Google

end of his life he spoiled many of his works by painting out the beautiful accessories which he had originally introduced, upon the principle that in portrait everything should be sacrificed to the head—the portrait of Restout was one that suffered in this way; he painted his brilliant silk vest into one of simple brown stuff. He died on February 17th, 1788. He gave 10,000 francs to the Academy of Paris to found an annual prize of 500 francs for the best picture in perspective, aerial and linear alternately; he gave also an equal sum for the foundation of an annual prize for the most useful discovery for the arts, to be awarded by the Academy of Amiens; and he founded a gratuitous school of design in his native place, St. Quentin.

TOURNEFORT, JOSEPH PITTON DE, a celebrated botanist, was born June 5, 1656, of a noble family at Aix, in Provence, in the present department of Bouches du Rhône. Having a great taste for observation, the study of nature soon disgusted him with scholastic philosophy and theology, in which he was engaged, in order to please his relations, who wished him to enter holy orders. The death of his father, in 1677, enabled him to follow his own inclination; and having exhausted the fields of his own country and the garden of an apothecary, he went to the Alps, in order more fully to satisfy his curiosity. At Montpellier, whither he had gone to study medicine, and where he was received by Magnol, and became the friend of Chirac, he found fresh stores of confirmation; and he collected still richer from the Cévennes, the Pyrenees, and from Catalonia, to which places his zeal carried him. In these excursions he was twice robbed by the Spanish miquelets (or foot soldiers), who left him nothing but his plants; he was buried alive for two hours under the ruins of a hut where he was passing the night; and thus he seemed to be inuring himself to the fatigues he was one day to undergo in longer travels. He was already possessed of rich collections and numerous observations, when he repaired to Paris, where Fagon, chief physician to the queen, and curator of the Jardin du Roy, was the sole patron of botanical studies. Fagon knew how to appreciate both knowledge and merit; his character, as well as his rank, placed him above jealousy; and Tournefort found in him a disinterested protector. In 1683 he was appointed assistant professor with Fagon at the Jardin du Roi, whose numerous other occupations allowed him but little time for teaching. The way in which Tournefort fulfilled this office soon made him known, and attracted from all parts a crowd of students to his lectures and herborising excursions. In 1688 he was commissioned to travel through Spain and Portugal, and shortly after through Holland and England, in order to enrich the Jardin du Roi with the plants of these countries. These travels made him acquainted with the most distinguished scientific men of the countries he visited, and gained him their friendship. Being made, in 1692, a member of the Académie des Sciences, he proved by his 'Eléments de Botanique,' which was published shortly afterwards, how well he deserved that honour. The title of Doctor of Medicine was conferred upon him by the Faculty of Paris in 1698. He again left France in 1700, being sent by the king to the East to collect plants and make observations of all kinds. In company with the German botanist Gundelsheimer, and the celebrated artist Aubriet, he spent two years in travelling through the islands of Greece, the borders of the Black Sea, Georgia and the environs of Mount Ararat. Annus Nimrod, Armenia. He was preparing to go to Egypt, when, hearing that the plague was ravaging that country, and that his patron Fagon was dangerously ill, he hastened back to his own country, to which he was called both by gratitude and friendship. Having resumed his duties at the Jardin du Roi, and being also appointed professor to the Faculty, he spent the little spare time he had in arranging his numerous collections and in drawing up different works, especially the account of his travels in the Levant. The fatigues of work and his travels had much weakened his originally robust constitution, and a violent blow which he received on the breast from the axletree of a carriage tended still more to impair it; so that after lingering some months, he ended his laborious life the 28th day of December, 1708. By his will he left to the king the valuable zoological museum which he had formed, and his library to the Abbé Bignon.

A judicious and lively mind, and a natural gaiety of disposition, rendered Tournefort equally fitted to succeed in scientific investigations and to form the charm of his friends in society. His attachment to his own country made him undertake the journey to Leyden, Hermann, who wished to have him for his successor, and offered him, in the name of the states of Holland, the situation of professor of botany at Leyden, with a salary of 4000 francs (160£)

The system of Tournefort was an advance on those of Cesalpino, Morison, Hermann, Ray, and Rivinus, but has since been displaced by those of Jussieu, De Candolle, and others. Authors had previously only employed themselves in grouping plants into classes; the much more important determination of the genera was still almost entirely wanting. It is this subdivision of the subject which Tournefort executed with such admirable acuteness, and which distinguishes his labours from all that had preceded him; and it is this, joined to a classification simple, easy, and almost always natural, which caused his method to be afterwards adopted by the botanists of all countries.

Tournefort adopted the principle that genera should be constructed on characters derived from both the fructification and organs of vegetation. In seeking for order he had the good sense not to pretend to an absolute regularity, which nature nowhere presents; and felt (which has been too often forgotten in our day, and which has introduced into natural history so many useless genera, and so many pretended denominations) that the generic characters must admit of exceptions which are commanded by nature itself. Linnæus, when again reforming the science, adopted the greater part of the genera of Tournefort; but having constructed his genera on characters derived from the fructification alone, he was obliged to reject many of Tournefort's genera. The plates which Tournefort has given characteristic of the genera are, even to the present day, for the most part, among the best means of understanding them: they are well executed, and upon a plan at that time quite new, and are a proof of his taste, as well as of his spirit of order and observation.

Although he did not think that the consideration of the natural relations of plants (of which the first glimpses were to be met with in the works of Lobel and Magnol) could serve as the basis of an easy classification, still he generally observes the most marked of these relations, and the greater part of his classes form one or more large families. The separation of the woody from the herbaceous plants, which nature frequently offers together in the same genus, and which was admitted by the botanists of Tournefort's time, is in his system a defect which an increased knowledge of the structure and functions of plants has long since caused botanists entirely to abandon in their systems of classification, however much advantage may be derived from it for practical purposes.

Tournefort did not do for the species what he had so well accomplished for the genera; as he left confounded with them simple varieties, even those which are evidently only the result of cultivation. Neither did he think of giving them names more convenient than those which were then in use, and which were commonly vague, and often very long and complicated. These inconveniences Linnæus got rid of; and at the same time he arranged the vegetable kingdom according to his celebrated sexual system, in which plants were placed in classes and orders according to the number of their stamens and pistils. But the system of Tournefort was never abandoned in France, and the study of its principles resulted in the labours of Adanson, Jussieu, and De Candolle, to whom we are so greatly indebted for the present position of systematic botany.

The 'Institutiones Rei Herbariæ' is distinguished for its clearness and precision, and for a number of very just observations. The 'Historia' forms part of this work, which is more considerable, displays much solid learning, which has been of great use to those who have since his time written on the history of botanical science. The different travels of Tournefort enriched botany with a great number of species, and a still greater of genera. He brought back from the Levant, in the East, more than thirteen hundred plants, the greater part of which were in the Herbarium of Gundelsheimer, his companion; and have been since examined by Willdenow, who has mentioned them in his 'Species Plantarum.' If the history of the plants in the environs of Paris, by Tournefort, included into six herborisations, is of little importance as to the number of species described (which is only four hundred and twenty-seven), still it is a very valuable work in other respects. By the exactness of the synonymes, and by the skill with which the plants are referred to the descriptions given by the botanists of the ancient botanists, whose errors Tournefort corrects, this work furnishes an excellent model of criticism. There is also to be found in it a faithful description of some rare plants, which are omitted in his other works. Haller however rather over-estimates its value, when he is inclined to regard it as the chief of Tournefort's writings ('præcipium forté Tournefortii opus'). One may judge of Tournefort's reputation, and of the value that was put upon whatever he wrote, from the fact of his lectures on Materia Medica having been collected by one of his pupils, and translated and published in Italian before they appeared in French, which was not till some years after his death. The account of Tournefort's travels was for a long time the source of our most accurate information about the countries which he visited. The simplicity of the style does not lessen the interest of the narrative. To the observation of nature he joins every new idea of men, manners, and customs, and shows an extensive knowledge both of history and antiquity.

Among the manuscripts left by Tournefort was a botanical topography of all the places which he had visited, and a collection of critical and other observations, which has never been published, though it was entrusted to Réné aulme to arrange for that purpose. The genus of American shrubs, to which Plumier, out of honour to his master's memory, gave the name of 'Tournefortia,' derives its chief interest from this celebrated name.

The following is a list of Tournefort's principal works:—' Eléments de Botanique, ou Méthode pour connaître les Plantes,' 3 vols. 8vo, with 451 plates, Paris, 1694. Some imperfections in this work were pointed out by Ray, to whom Tournefort replied in a Latin work, entitled 'De Optima Methodo Instituendâ in Re Herbaria ad Sapientem Virum G. Sherardum Epistola, in quâ respondetur Dissertationi D. Raii de variis Plantarum Methodis,' 8vo, Paris, 1697. In 1700 he published a Latin version of his 'Elements of Botany,' with many additions, and a learned preface, containing the history of the science; it was entitled 'Institutiones Rei Herbariæ, ed. altera, Gallicè longè auctior,' 3 vols. 4to, with 476 plates, Paris. After his expedition to

Digitized by Google

the East he published 'Corollarium Institutionum Rei Herbariæ, in quo Plantæ, 1356 . . . . in Regionibus Orientalibus observatæ, recensentur . . . . et ad sua Genera revocantur,' 4to, with 13 plates, Paris, 1703. This was afterwards added to Ant. de Jussieu's edition of the 'Elements,' in 1719, 3 vols. 8vo, Lyons. 'Histoire des Plantes qui naissent aux Environs de Paris, avec leurs Usages dans la Médecine,' 12mo, Paris, 1698. An improved edition of it was given by Bernard de Jussieu, in 2 vols. 12mo, 1725; and an English translation was published by Martyn, 2 vols. 8vo, London, in 1732. 'Relation d'un Voyage du Levant, fait par Ordre du Roi, contenant l'Histoire Ancienne et Moderne de plusieurs Iles de l'Archipel, les Plans des Villes et des Lieux les plus considérables, la Description de l'Egypte, de la Syrie, de la Grèce, l'Archipel, et d'Observations singulières touchant l'Histoire Naturelle.' The first volume of this work was printed at the Louvre before his death; the second was completed from his manuscripts; and both were published in 1717, in 2 vols. 4to. There have been several French editions, and it has been translated into English, 3 vols. 8vo, London, 1741. 'Traité de la Matière Médicale, ou l'Histoire et l'Usage des Médicamens et leur Analyse Chimique, Ouvrage posthume de M. Tournefort, mis au jour par M. Besnier,' 2 vols. 12mo, Paris, 1717. This work, which was not published in French until after the death of the author, had been already translated and published in English, 8vo, London, 1708 and 1716.

TOURNEMINE, LE PÈRE RENÉ JOSEPH, Jesuit, occupies a subordinate but useful and honourable position in the literary history of France. He belonged to an ancient family in Bretagne, and was born at Rennes on the 26th of April 1661. In 1680, he entered the Society of the Jesuits. His superiors thought that his peculiar talents qualified him for a teacher, and his subsequent career showed the correctness of their opinion. For about twenty years he taught in different colleges of the Order, with eminent success, humanity, rhetoric, philosophy, and theology; and while thus instructing others he was accumulating information in the belles-lettres,—physical, moral, and metaphysical science—theology, history, geography, and numismatics—that was to fit him for the employment of nearly twenty years of his matured intellect.

In 1701 Tournemine was called to Paris to take the management of the 'Journal de Trevoux,' a periodical publication, which, although at times disfigured by the narrow views and unamiable temper of sectarianism, has rendered service to literature that entitle it to a better reputation than the equivocal one in which it is held by the mass of readers who know it only from the sarcasms of Voltaire. Tournemine was the principal editor of this work for nineteen years, from 1701 to 1720. He contributed to the journal during this time a number of curious dissertations and analyses which procured for it a high reputation throughout Europe. Superior to the partisan spirit of many of his brethren, he was sufficiently impartial to combat the systems of Hardouin and Pansa; and free from bigotry, although sincerely religious, he praised highly the 'Mérope' of Voltaire, and even when engaged in controversy with its great author always treated him with respect.

In 1720 he was freed from the laborious task of editorship, but still continued to contribute largely to the pages of the 'Journal de Trevoux.' Indeed the variety of studies to which, as teacher, and editor of a critical journal, he had found it necessary to turn his attention, appears to have produced in him desultory habits of thought, and prevented the concentration of his powers upon any one topic, so as to enable him to exhaust it. The Order, regretting that his time and talents should be thus wasted, appointed him librarian to the residence of professed Jesuits (maison de professe) at Paris, and after the death of Bonami (1725) employed him to continue the literary history of the society from the period to which it had been brought down by Southwell. Tournemine entered with enthusiasm upon his new task. He called upon all the provinces to supply him with memoirs, and instituted researches in the archives of the society at Rome. The habits of thought however which he had contracted led him to undertake the work on a scale beyond what it was possible to accomplish, and unfitted him at the same time for persevering routine labour. The ever-minute investigation of details, and the episodical inquiries into which he was continually seduced, diverted him from the completion of the work he had undertaken, and he failed to perform his engagements.

Tournemine died at Paris on the 16th of May 1739, in the seventy-ninth year of his age, regretted by all who knew him. He has left no work worthy of his talents and opportunities, yet he has not been without influence upon literature. As a teacher and journalist, and in the conversation of private society, he prompted and encouraged many young writers. His knowledge was at the service of every one who asked it, and the information which he did not himself elaborate into any enduring work was yet of material service to others. He belonged to a class of minds which, although they leave little or no permanent trace of their individuality, are indispensable to the creation of a national literature—those who go to form a literary public, animating and instructing writers by its sympathy and subordinate co-operation.

A list of Tournemine's writings is given in the 42nd volume of the 'Mémoires de Niceron,' and in the Dictionary of Chaufpié. They consist chiefly of his contributions to the 'Journal de Trevoux.' He

contributed the chronological tables to the edition of the Bible published by Dubamel in 1706. He published in 1719 an edition of Menochius's 'Scriptural Commentaries,' to which he appended a system of chronology and twelve dissertations on different points of the chronology of the Bible. In 1726 he published an edition of Prideaux's 'History of the Jews,' and added to it a dissertation on the books of Scripture not recognised as canonical by Protestants, and some remarks upon the ruins of Nineveh and the destruction of the Assyrian empire. Tournemine's 'Réflexions sur l'Athéisme' were printed as an introduction to two editions of Fénélon's 'Traité sur l'Existence de Dieu;' and in reply to Voltaire, who had invited him to close controversy by his doubts, he published in the 'Journal de Trevoux' (October 1735) a letter on the immateriality of the soul, which does not appear to have convinced the philosopher. Sketches of the life of Tournemine are contained in the 'Journal de Trevoux' for September 1739, and in Belingan's 'Observations sur les Ecrivains Modernes,' vol. xvii. There is also a well-executed memoir of him by M. Weiss in the 'Biographie Universelle.'

TOURNEUR, PIERRE LE, was born at Valognes in 1736. He studied in the college Des Grassins at Coutances, where he distinguished himself, and appears to have repaired to Paris about the year 1767 or 1768, with a view to earn his subsistence by literary labour. His history from that time till his death, in 1788, is little more than an account of his publications and the reception they met with.

He published in 1768 a thin octavo containing a few prize essays which had been crowned by the academies of Montauban and Besançon in the years 1766 and 1767; and an 'Eloge de Charles V., Roi de France,' which had been unsuccessful in the competition of the French Academy in the latter year. This seems to have been his only attempt at original publication, with the exception of a number of prefaces and some verses in two little volumes, entitled 'Jardins Anglais, ou Variétés tant originales que traduites,' which appeared in 1788. His original composition betraye an entirely common-place mind.

In 1769 Le Tourneur published a collection of tales translated from the English, of no importance in itself, and which attracted little or no attention. Towards the close of the same year, or in the beginning of 1770, he brought out a translation of 'Young's Night Thoughts' and miscellaneous poems, which was more successful. He has taken great liberties with the 'Night Thoughts,' omitting several passages, and altering the whole arrangement of the poem, with a view to render it less startling to French taste. Grimm sneered at the work, but Diderot and Laharpe declared themselves warmly in its favour. The success of the translation of the Night Thoughts appears to have decided Le Tourneur to confine himself in future to that kind of employment. His first undertaking was a complete translation of the dramatic works of Shakspere. In this enterprise he was associated at first with the Comte de Catuelan and Fontaine Malherbe, both of whose names are subscribed along with his in the dedication to the king, prefixed to the first volume. But his associates deserted him after the publication of the second volume, and the remaining eighteen were the unaided work of Le Tourneur. The first volume appeared in 1776; the last in 1782. It is difficult for a Frenchman to do justice to the merits of a translation of Shakspere into any foreign language. He feels the unavoidable defects too strongly. Thus much however may be said of Le Tourneur's, that it honestly aims at giving Shakspere as he is. The translator has evidently benefited by his knowledge of the German translation by Eschenburg (Zürich, 1775-87), and has prefixed the remarke of that critic to several of the plays. The version is in prose, and by a prosaical mind, yet enough of Shakspere remains to impress minds which know him through no other medium with some sense of his greatness. Is is still the best French translation of Shakspere, and as such was revised and republished by M. Guizot in 1824. Some expressions in the prefatory discourse excited the anger of Voltaire, who thought he saw in it an attempt to decry the merits of the great French dramatists. The controversy to which Voltaire's animosity gave rise was of advantage to the work by creating a public interest in it. Le Tourneur seems to have taken no part in the discussion: in an advertisement prefixed to the ninth volume, he quietly observes, "This work has triumphed over the absurd hostility of selected names: at its first appearance, and the extraordinary wrath of a great poet, the most ardent panegyrist of Shakspere so long as he was unknown, his unaccountable enemy since he has been translated." Of the original subscribers to the quarto edition a large proportion were English: the sale have increased as the work advanced; a quarto and an octavo edition were published simultaneously; and Le Tourneur, who seems to have become publisher as well as author, adventured on the speculation of publishing in numbers, by subscription, pictorial illustrations of Shakspere.

The translation of Shakspere was far from being the only employment of its author during the time he was engaged upon it. In 1770 he published a translation of Hervey's 'Meditations among the Tombs;' in 1771 a translation of Johnson's 'Life of Savage,' together with an abridgment of the same author's 'Life of Thomson;' in 1777 he published a translation of Macpherson's 'Ossian;' in the same year a translation of Soame Jenyne's 'View of the Evidences of Christianity;' in 1784-87, a translation of 'Clarissa Harlowe;' in

Digitized by Google

1788, a translation of 'Interesting Memoirs of a Lady;' and his translation of Pennant's 'Description of the Arctic Regions' appeared the year after his death. He also revised the translation of the 'Universal History' begun by Psalmanazar, which some young authors had undertaken at his suggestion.

These are his most important publications. They deserve a place in the history of letters, inasmuch as they contributed to nourish that taste for English literature which was then growing in France, and which has contributed so much to modify not only the taste, but the character of the nation. Diderot, the first to recognise the merits of Le Tourneur as a translator, was the first eminent author of France who really felt the merits of English imaginative writing; his sanction encouraged others to feel, or affect to feel, its beauties. Le Tourneur had the principal share in enabling merely French readers to judge in some measure for themselves. The literary taste of France has not become assimilated to England since the time of Diderot and Le Tourneur, but it has been since their publications entirely revolutionised. Göthe, in his 'Dichtung und Wahrheit,' and in his 'Rameau's Neffe,' has explained the influence which Diderot exercised over the modern literature of Germany, both by his own writings and by directing attention to English authors. It was in part through the medium of French literature that the English literature was made to exercise so strong an influence over that of Germany. The part which Le Tourneur played in this intellectual revolution was an humble but still an important one.

It has been intimated above that Le Tourneur in translating Shakspere was indebted to Eschenburg, and this of itself would imply that he was acquainted with the German as well as with the English language. He published some translations from the German: in 1787 one of Sparmann's 'Journey to the Cape of Good Hope;' in 1788, one of his 'Memoirs of Baron Trenck.' In 1785 he translated and published a selection from the elegies of Ariosto.

The persevering industry displayed in this brief recapitulation of what was accomplished by Le Tourneur in the space of eighteen years, would lead to the inference that he must have secured an independence by his labours. In addition to this source of income, he held for a number of years the appointment of private secretary to Monsieur, afterwards Louis XVIII.; and for a short time before his death that of censeur-royal. An anonymous biography is prefixed to his 'Jardins Anglais;' and M. Weiss has contributed a correct outline of the leading incidents to the 'Biographie Universelle.' Le Tourneur had not the slightest pretension to the character of a man of genius, but he was a respectable and useful labourer in the field of letters. He died at Paris, January 24, 1788.

TOURRETTE, MARC-ANTOINE LOUIS CLARET DE LA, naturalist, was born in August 1729, at Lyon, where his father was commandant of the city, Prévôt des Marchands, and Président à la Cour des Monnaies. He commenced his elementary studies at a college of Jesuits in Lyon, and was afterwards sent to the Collége de Harcourt at Paris. He was early admitted a member of the Academy of Sciences at Lyon, and during the last twenty-five years of his life acted as secretary to that body. On returning to his native city he was appointed a Conseiller à la Cour des Monnaies, but he pursued the study of the belles-lettres with great assiduity. His predilections, however with the tendency of these studies, he engaged in that of natural history. He commenced with zoology and mineralogy, and soon formed a large collection of insects and minerals. The establishment of a school of veterinary medicine, by Hourglat, at Lyon, directed his attention to botany. In conjunction with the Abbé Rozier, he was appointed to superintend the formation of a botanical garden, and the giving instruction to the pupils in botany. The result of these exertions was the publication, in 1766, of an elementary work on botany, entitled 'Démonstrations Élémentaires de Botanique,' 8vo. This work, at first in two volumes, contained a general introduction to a knowledge of the structure of plants and their arrangement, with descriptions of the most useful and curious. In the first edition the introductory matter was entirely drawn up by Tourrette, the description of the plants by Rozier. In a second edition nearly the whole was rewritten by Tourette. This work has since gone through other editions. The fourth consists of four volumes of letter-press in 8vo, and two volumes of engravings in 4to, containing notices of the lives of both Tourrette and Rozier.

In 1770 Tourrette published a voyage to Mount Pilat, giving a geographical account of the district, and a list of the plants which he discovered there. In 1785 he published the 'Chloris Lugdunensis' (8vo), in which he described the plants of the neighbourhood of Lyon, and paid especial attention to those belonging to the class Cryptogamia. He published numerous papers on various departments of natural history, in the Transactions of Societies and Journals. Those most worthy of mention were on the origin of Belemnites, on vegetable monstrosities, and on the Helminthocorton, or Corsican moss. He made numerous excursions for the purpose of collecting plants in various parts of France and Italy. In some of these herborisings he was accompanied by Jean Jacques Rousseau, with whom he was intimate; and in the published correspondence of that philosopher are several letters written to Tourrette. He took great pains in introducing foreign trees and shrubs, which he cultivated in his father's park near Lyon, and at his own residence in the city he had a garden containing 3000 species of plants. He was a correspondent of most of the great botanists of his day, as Linnæus, Adanson, Jussieu, and others. During the siege of Lyon he was exposed to fatigue, anxiety, and hardship, which brought on an attack of inflammation of the lungs that terminated his existence in 1793. Tourrette, like most of the botanists who adopted the system of Linnæus, mistook its object, and made it assume a position and importance of which it was utterly unworthy. The consequence was that in his 'Démonstrations' and other works he sought more anxiously to add to our knowledge of existing species than to elucidate the structure and functions of the vegetable kingdom.

(*Notice sur la Vie de M. Tourrette*, in the fourth edition of the *Démonstrations Élémentaires de Botanique.*)

* TOUSSAINT, ANNA LUIZE GEERTRUIDE, the maiden name of the most popular living authoress of Holland, and that by which she is still most generally known, though she has since 1851 been married to Mr. Bosboom, a painter of some reputation at the Hague, since which she writes her name A. L. G. Bosboom Toussaint. She was born on the 16th of September 1812, at the town of Alkmaar, in North Holland, the daughter of an apothecary, who was descended, as his name suggests, from a family of French refugees. Always of a weakly constitution, she was nevertheless early attached to study, and though her compositions, exclusive of magazine articles, consist entirely of novels and romances, she is said to have expended on the details of one of them no less than two years' research, an amount of investigation which would have qualified her for writing a history. She has always shown a strong predilection for English subjects. Her first romance in 1838 was 'De Graaf van Devonshire,' or 'the Earl of Devonshire,' founded on the adventures of that Courtenay who was supposed to have engaged the affections of the two sisterqueens, Mary and Elizabeth. 'Engelsche Vrouw,' or 'the English at Rome,' succeeded, in locking at which the English reader can hardly forbear a smile to find that the authoress's Scotch highlander swears by St. Patrick, sings ballads beginning with 'From mighty Odin's airy hall,' and bears the singular name of Hugh Mac-o-Daunt. A series of three romances from the time of Dudley earl of Leicester's inglorious career in the Netherlands, runs up to ten volumes in all, and at the conclusion of the last of them, 'Gideon Florensz,' the authoress in 1855 announced her intention of laying down the pen. Though all these works are very popular in the Netherlands, no translation or account of any of them has as yet appeared in English. The only notice of Madame Bosboom Toussaint that we are aware of is an article in the 40th volume of the 'Westminster Review,' on a tale entitled 'Lauernesse House,' in which the controversies of the Roman Catholic faith and the Protestant are endeavoured to be made and heroine. The historical romances of this popular authoress appear to be those of her works which are held in most esteem, but her novel of 'Don Abbondio II.' a delineation of modern Dutch manners, in which one of the characters is nick-named 'Abbondio,' from the well-known curate of that name in Manzoni's 'Betrothed,' is written in a lively vein and would probably be more likely to secure in a translated shape, the interest of the English reader.

TOUSSAINT LOUVERTURE, one of the most extraordinary men known to have been born of the negro race, was born at Breda, a property which then belonged to the Count de Noé, near Cape Town in St. Domingo, in 1743. His father and mother were both African slaves. During the prosperity of Toussaint, a genealogy was compiled, in which, in accordance with his privity, which made his father the younger son of an African king. This may be true or not; it is of little consequence.

The first employment of Toussaint-Breda (so called from the place of his birth) was to take care of the cattle on the estate. He received the elements of education from a negro of the name of Pierre-Baptiste. whom he learned to read and write in the same manner. Assisted by M. Bayon de Libertat, manager of the estate, to be his coachman. He gained the confidence of his master, and was appointed to exercise a kind of superintendance over the other negroes. In this position the Revolution found him. He took no part in the first insurrections, and is said to have expressed himself violently against the perpetrators of the massacres of 1791.

The negroes not unnaturally made attachment to the royal cause the pretext for rising in arms against masters who, with equality and the rights of men in their mouths, still sought to keep them slaves. Toussaint, from 1791 and till the appearance of the proclamation of the 4th of February 1794, which declared all slaves free, was alike conspicuous for his zeal in the cause of the Roman Catholic religion and of royalty. He held at first the title of 'Médecin des Armées du Roi,' in the bands of Jean François, but soon exchanged it for a military appointment. Though pieced under arrest by the chief just named, and delivered by the other negro leader, Biassou, the ferocity of the latter determined Toussaint to ally himself most closely with Jean François. He became his side-de-camp. At this time Toussaint was high in the confidence of the Spanish president, Don Joachim Garcia, and apparently entirely guided by his confessor, the curé of Laxabon. When the negroes rejected the first overtures of the French commissioners, Toussaint assigned as his reason, that they had always been governed by a king; could only be governed by a king; and having lost the king of France, had betaken themselves to the protection of the king of Spain.

Digitized by Google

The proclamation of the 4th of February 1794, emancipating the slaves, worked a change in his sentiments. He opened a communication with General Laveaux; and receiving the assurance that he would be recognised as a general of brigade, occupied the Spanish posts in his neighbourhood, and repaired to the camp of the French general. His defection was followed by the surrender of Marmalade and other strong places, and threw confusion into the Spanish ranks. An exclamation of Laveaux on learning the consequences of Toussaint's joining his standard ("Comment, mais cet homme fait 'ouverture' partout") is said to have been the origin of the name Toussaint subsequently adopted. Laveaux, left by the departure of the commissioners governor of the colony, treated him at first with coldness and distrust; and Toussaint, now past his fiftieth year, reduced to inaction and jealously watched, had reached to all appearance the close of his political career.

In 1795, in consequence of a conspiracy of three of the Mulatto generals, Laveaux was arrested at Cape Town. Toussaint Louverture assembled his negroes; soon found himself, by the support of the partisans of France, at the head of ten thousand men; marched upon the capital, and released the governor. Laveaux in the enthusiasm of his gratitude, proclaimed his deliverer the protector of the whites and the avenger of the constituted authorities. "He is," runs the governor's proclamation, "the black Spartacus, who, Raynal predicted, would arise to avenge his race." Toussaint Louverture was created a general of division, and became in fact the supreme arbiter of the fortunes of the colony. When the peace between France and Spain was concluded, Jean François repaired to Madrid, leaving Toussaint the only powerful negro leader in St. Domingo. He reduced the whole of the northern part of the island to the dominion of France, with the exception of the Mole of St. Nicholas, of which the English retained possession. He was the first who succeeded in establishing discipline among the armed negroes.

The arrival of the commissioners sent by the Directory to proclaim the constitution of the year 3, confirmed the credit of Toussaint. In April 1796, Sonthonax appointed him commander-in-chief of the armies of St. Domingo. In the month of August Toussaint proceeded to the Cape at the head of a large body of cavalry on a visit to Sonthonax. The day after his arrival he proposed, at a meeting of the civil and military chiefs, that the commissioners should be sent back to France. Raymond, a Mulatto, was the only commissioner allowed to remain. The civil administration of the colony was confided to Raymond in the first instance, but he soon resigned the charge into the hands of Toussaint. Finally he had the boldness of the step he had taken, Toussaint hastened to remove any suspicions that might exist in the minds of the Directory. He sent two of his children to receive their education at Paris; and along with them Vincent, a chef de brigade, charged with the task of explaining everything to the Directory's satisfaction. The Directory professed to be perfectly satisfied, and appointed a new commission, at the head of which was placed General Hédouville.

Hédouville, on his arrival at St Domingo showed his suspicions of the negro general by landing within the Spanish territory. Toussaint was at this time engaged in negociations with General Maitland for the surrender of the strong places held by the English. It was generally known that Hédouville's staff spoke openly in the most hostile and insulting terms of Toussaint; nevertheless he visited the commissioner with scarcely any attendants, and professed the utmost devotion to the French government. Hédouville asserted his right as agent of the republic to reserve the power of ratifying or refusing to ratify any convention between Toussaint and the British commanders. The negro chief nevertheless received the capitulation of Port-au-Prince, St. Marc, Jérémie, and the Mole of St. Nicholas without consulting Hédouville. On the day when the British troops marched out, a public exchange of civilities took place between Toussaint Louverture and General Maitland. All this increased the distrust of the commissioner, who showed it by seeking to thwart the St. Domingo chief in everything. Toussaint Louverture persuaded his countrymen to resume their agricultural occupations. Hédouville soon after issued a proclamation denouncing the émigrés and professing to regulate the political relations of whites and negroes. Toussaint immediately issued another proclamation declaring that there were no émigrés among the native of the island; and that the negroes were de facto free, but that it was desirable they should continue during five years to labour for their old masters, receiving one-fourth of the produce. His partisans were in the mean time industriously spreading the opinion that Hédouville was an enemy to the negroes and to the tranquillity of the colony. An insurrection broke out at the Cape, which was suppressed by Toussaint; but the commissioner with all his adherents, to the number of twelve or fifteen hundred men, took refuge on board three French frigates which were lying off the island, and sailed for France.

Their departure was the signal for the breaking out of the animosity between the mulattoes and the negroes into acts of open violence. Rigaud, the mulatto chief, sanctioned the massacres committed by his partisans; Toussaint did all in his power to repress the ferocity of his. One strong place was taken from the mulattoes by the negroes after another, until Rigand was shut up in Cayes, the only hold that remained to him. This was towards the close of 1799, and Bonaparte had already assumed the reins of government in France. One of the first steps of the new ruler was to send a deputation to Toussaint, composed of his personal friends Raymond and Vincent, and General Michel. They brought the intelligence that Toussaint was confirmed in his authority; and Rigaud, seeing himself abandoned even by his own partisans, embarked with a few of his retainers to seek an asylum in France.

Toussaint Louverture was now at the summit of his prosperity. He assumed much state; affected to cast a shade of mystery round the circumstances of his earlier career; and took pride in proclaiming himself the negro deliverer foretold by Raynal. He preserved great simplicity in his own person, but surrounded himself with a brilliant staff. In 1800 he called a meeting of the principal chiefs of St. Domingo, presented to a central meeting of his partisans; a scheme of a colonial constitution, by which he was appointed governor for life, authorised to name his successor, and to nominate to all offices under government. He exercised this authority to the full extent. He quelled an insurrection of the negroes, and did not hesitate to punish with death his own nephew, who was at the head of it. Under his strict but just sway the agriculture and commerce of St. Domingo flourished.

Bonaparte in the meantime preserved an ominous silence towards all Toussaint's overtures of friendship. The mind of the latter, disquieted by the coldness of the First Consul, was not tranquillised by the proclamation issued immediately after the peace with England, declaring that slavery was to continue in Martinique and Cayenne, and St. Domingo to be restored to order. Toussaint met it by a counter-proclamation, issued on the 15th of December 1801, in which he professed obedience to the republic, but at the same time appealed to the soldiers in language which left no doubt as to his resolution to repel force by force. Bonaparte despatched a squadron of fifty-four sail, having 20,000 on board, command of General Le Clerc, his brother-in-law, to reduce St. Domingo.

The first view of this force discouraged Toussaint himself. He soon rallied, but his followers were intimidated and divided. The flattery of the First Consul, and the solicitations of his own children, were long used to bear on the negro chief in vain. He retired to the Mare of Chaos, and entombed his treasures where the enemy might seek for them in vain. On February 17th, 1802, he was proclaimed an outlaw. The negroes who remained in arms were defeated in all parts of the island; but Toussaint continued nevertheless to address himself, making a desert around him to obstruct the progress of the enemy. At last the defection of Christophe and Dessalines obliged him to listen to terms. The sentence of outlawry pronounced against him was reversed. He was received with military honours on paying a visit to Le Clerc, and General Brunet took his advice on the imposition of taxes, and the selection of cantonments.

Brunet invited Toussaint to a conference mid-way between Sancey and Gonaives, on the 10th of June; and when the generals retired to hold a consultation, the negro guards were disarmed, and their chief arrested and sent on board the Créole, which immediately set sail for Cape Town, where he was transferred to the Heros, a vessel of the line. After a voyage of twenty-five days he was landed at Brest, and without delay sent to Paris. He was for a short time lodged in the Temple, but soon after conveyed to the castle of Joux, near Besancon, where he was subjected to a close and severe confinement. His faithful attendant Mars Plaisir was removed from him. After ten months of rigorous imprisonment, he died on the 27th of April 1803.

Toussaint, like all eminent and successful leaders, was marked by a strong inclination and power to conceal his sentiments and intentions. There was a good deal of imagination or romance in his composition. He had strong devotional feelings and a nice sense of domestic morality. His reserved and energetic nature commanded the respect of the negroes, enabled him to restrain them from excesses and keep them to steady labour, and he thus restored confidence to the whites. He loved splendour in his attendants, but was plain in his personal habits. St. Domingo was peaceable and prosperous under his government. These facts are proved by the concurring testimony of friends and enemies; and they entitle him to be classed among great men. More it would be imprudent to say positively, considering how conflicting are the witnesses respecting him, and how biassed by passion their evidence. Of the injustice and selfish meanness of Bonaparte's conduct towards him there can be scarcely two opinions.

After the death of Toussaint Louverture, his family were confined at Brisenne-en-Agen, where one of his sons died. The survivors were set at liberty after the restoration of the Bourbons. The widow died in 1816, in the arms of her sons Placide and Isaac. M. du Broins has published a sketch of the life of Toussaint Louverture.

TOWERS, JOSEPH, LL.D., was born in Southwark, on the 13th of March 1737. His education was much neglected, but being fond of reading, he picked up a good deal of knowledge in a miscellaneous way. He was apprenticed to a printer at Sherborne in Dorsetshire, and returned to London in 1764, where at first he got his living as a journeyman printer, and afterwards set up a bookseller's shop in Fore Street. During this time he was also actively engaged in writing for the press, and, in addition to other publications, wrote the first seven volumes of 'British Biography,' of which the first was published in 1766. As his business did not answer,—a thing not surprising, considering his literary engagements,—he relinquished it in 1774, and became the minister of a Dissenting chapel at Highgate. His theolo-

Digitized by Google

gical opinions were Arian, though he was closely connected with the Unitarian body. In 1778 he was chosen forenoon preacher at a chapel in Newington Green. About this time he was engaged by the proprietors of the 'Biographia Britannica' to write several lives for the new edition of the work edited by Dr. Kippis, of which however only five volumes appeared (1777-83, down to the letter F). Towers received the degree of LL.D. from the University of Edinburgh in 1779. He died on the 20th of May 1799, in his sixty-third year. His pamphlets and smaller works were collected and published in 1780, in 3 vols. 8vo. They are of a miscellaneous nature, but most of them on political subjects. (Lindsay's *Funeral Sermon.*)

TOWNLEY, REV. JAMES, the second son of a merchant, was born in London in 1715. He was educated at Merchant Taylors' School, elected thence to St. John's College, Oxford, and took his degrees. After having held two lectureships in London, he was appointed, through the interest of his wife's family, to the living of St. Bennet, Gracechurch Street. Afterwards he was grammar-master in Christ's Hospital, and in 1759 was appointed head-master of Merchant Tailors' School and held that office till his death, July 15, 1788, shortly after he had been presented to a living in Wales. He is said to have been admired as a preacher: and some single sermons of his are in print. But he is chiefly known on account of his intimacy with Hogarth and Garrick. To the former he and Morell gave material assistance in the composition of his 'Analysis of Beauty;' and he got the credit of having much assisted the latter in his dramatic works. The popular farce of 'High Life Below Stairs,' first played in 1759, was at length owned by him to be entirely the author of two other farces, which were unsuccessful; but one of them, 'False Concord,' contains both characters and dialogue which were borrowed in Garrick and Colman's comedy of 'The Clandestine Marriage.' The closeness of Townley's connection with Garrick is further evidenced by the fact that he received from Garrick, and held for some years, the living of Hendon.

TOWNSHEND, CHARLES, VISCOUNT TOWNSHEND, an eminent statesman in the reigns of George I. and George II., was the second viscount of that name, and was born in the year 1676. The family of the Townshends was a very ancient family in Norfolk, and had been settled at Rainham from the middle of the 15th century. Sir Horatio Townshend, the father of the subject of this article, had been one of the leading members of the Presbyterian party previous to the Restoration, and having zealously co-operated to bring about that event, was rewarded by Charles II. with the title of Baron Townshend in 1661, and was, in 1682, raised to the rank of viscount. He died in 1686, when his son was only ten years old. On the latter's taking his seat in the House of Lords, he became of course in 1697, he first acted with the Tories, but very soon attached himself to the Whigs, and especially to Lord Somers. When William III., just before his death, in the beginning of 1702, was endeavouring to form a Whig administration, Lord Townshend had attained sufficient political consequence to be named for the Lord Privy Seal. (Coxe's 'Memoirs of Sir Robert Walpole,' vol. i. p. 113, 8vo ed.). During the reign of Anne, Lord Townshend was appointed, in 1705, one of the commissioners to treat for the union with Scotland; in 1707, captain of the yeomen of the queen's guard; in 1709, joint plenipotentiary with the Duke of Marlborough in the negociation for peace at Gertruydenberg, and in the same year ambassador extraordinary to the States-General of the United Provinces. In this last capacity he concluded the treaty known by the name of the Barrier treaty, which secured the assistance of the States-General for carrying out the Hanoverian succession, and engaged the endeavours of England to procure in a treaty of peace the Spanish Low Countries as a barrier for the States-General against France. On the dismissal of the Whig and the formation of the Oxford ministry in 1710, Lord Townshend lost his appointment of captain of the yeomen of the queen's guard.

In the session of 1712 the Commons fell violently on the Barrier treaty, and voted that "the Lord Viscount Townshend, and all who negociated and signed, and all who advised the ratifying of the said treaty, are enemies to the queen and kingdom." This vote was followed up by the Representation to the queen, in which the treaty was discussed very severely and at length. The Representation may be read in the 'Parliamentary History,' vol. vi. p. 1095; or in Swift's 'History of the Four last Years of the Queen,' (Works, Scott's edition, vol. v. p. 269.)

With the accession of George I., in 1714, there came a complete change of foreign policy; and the persecuted negociator of the Barrier treaty was now selected to be chief minister of the new king. Lord Townshend had been one of the Lords Justices named by George I., in pursuance of the Act passed in 1706 for securing the succession; and while George was yet at the Hague, on his way to England, he appointed Lord Townshend secretary of state, with the power to name his colleague. On the recommendation of Horace (afterwards Lord) Walpole, his brother-in-law, Lord Townshend named as his colleague General (afterwards Earl) Stanhope. (STANHOPE, JAMES, EARL.) Lord Townshend had been recommended to George by Bothmar, his agent in England, and with Bothmar's recommendation the praises of all the principal statesmen at the Hague had concurred.

Lord Townshend had now been twice married. His first wife was Elizabeth, the second daughter of Thomas, Lord Pelham, and half-sister of the subsequent Duke of Newcastle. After her death he married, in 1713, Dorothy, sister to Sir Robert Walpole.

The administration formed under Lord Townshend was entirely Whig. Charles II. on the Restoration, and William and Anne, on their respective accessions to the throne, had pursued the plan of combining the leading members of opposite parties in the ministry: but during Anne's reign party warfare assumed a more determined character, and her last ministry, that of Lord Oxford, had consisted exclusively of Tories. This monopolizing precedent was now turned to the advantage of the Whigs. Lord Townshend was prime minister, though his name had not yet come to be established; and Walpole, who in a short time approached him in influence in the ministry, held at first only the subordinate post of paymaster of the forces, but after the death of Lord Halifax, in the next year, became chancellor of the exchequer and first lord of the treasury. [WALPOLE, SIR ROBERT.] The principal acts of Lord Townshend's ministry were the impeachments of the principal members of that which had preceded, and the Septennial Bill. The latter measure is a standing reproach against its Whig authors; and though the objection, so often urged, to the power of parliament to prolong the existence of the then sitting House of Commons is on the face of it absurd, the reproach is in other respects deserved. Archdeacon Coxe states that Lord Townshend and Walpole were opposed to the impeachment of Lord Oxford for high treason, and strongly recommended the more judicious course of charging him with high crimes and misdemeanours. ('Memoirs of Sir Robert Walpole,' vol. i. p. 126.)

The Jacobite rebellion took place at the latter end of 1715. When the participation of Sir William Wyndham in the preparatory intrigues was discovered, his relationship to the Duke of Somerset, an influential Whig nobleman, and a member of the cabinet, caused a difficulty about arresting him, which the firmness of Townshend surmounted. The scene in the council on this occasion is minutely described by Archdeacon Coxe. (Id., p. 128.) "As the king retired into his closet he took hold of Lord Townshend's hand, and said, 'You have done me a great service to-day.'"

In the summer of 1716 George visited Hanover, and was accompanied by Stanhope: Lord Townshend remained in England. He had strongly opposed the king's wish of revisiting his native dominions; and even after the repeal of the restraining clause in the Act of Settlement, he entertained his objections to the king's departure from England. While the king was in Hanover matters were combined to estrange him from the minister in whom hitherto his confidence had been unbounded, and the ultimate result was Lord Townshend's dismissal from office. The causes of this event have been considered at some length by Archdeacon Coxe, in his 'Memoirs of Sir Robert Walpole;' and by Lord Mahon, in his 'History of England from the Peace of Utrecht to the Peace of Aix-la-Chapelle' (vol. i., ch. 7, 8). Lord Mahon has made it his object to vindicate the conduct of his ancestor Lord Stanhope in the transactions that led to Lord Townshend's dismissal, and has succeeded in this object, and has also corrected some misstatements in Coxe's account.

Lord Townshend had made himself obnoxious to the king's German mistresses and favourites, whose schemes of avarice and ambition he resisted. His temper was impetuous, and his manner of speaking and writing frank and abrupt, so that if the king was predisposed to take offence, there would be no lack of opportunity. Lord Sunderland, who had aspired to be premier on George's accession, and had deeply resented the precedence given to Townshend in the ministry, joined the king after a time in Hanover, and was too well disposed to join with the German clique in undermining Lord Townshend's influence. Subjects of difference between the king and Lord Townshend occurred after the former's going to Hanover. The king, with Hanoverian objects, was eager to declare war against Peter the Great, which a measure which Townshend vehemently resisted. A negociation was proceeding at the Hague between England, France, and the States-General, for a treaty to secure the successions to the English and French thrones, and for the expulsion of the Pretender from France, which the king and Lord Stanhope in Hanover were anxious to accelerate; and some delays occurred through Lord Townshend, which were attributed to design, owing to disapproval of the way in which the treaty was to be concluded. The king was greatly offended at this, and ordered Stanhope to write a strong reproof to Townshend. He was however appeased by Townshend's reply, in which he fully vindicated himself from the charge of wilful delay. But though this storm blew over, another soon succeeded. The king, anxious to continue in Hanover during the whole winter, had directed Townshend to transmit to him the sentiments of the cabinet on what was to be done in the next session, and on the means of carrying on the business of the country without his own presence. Townshend, to gratify the king's inclination, did not press his return, but strongly urged that a discretionary power should be given to the Prince of Wales. The king's jealousy of his son took fright at this recommendation; and it seemed to him to confirm stories which Sunderland had been assiduously spreading of intrigues carried on by Townshend with the Duke of Argyll and others for placing the Prince of Wales on the throne. The king immediately formed the determination of dismissing Townshend; and it was with much difficulty that Stanhope prevailed upon him to offer the lord-lieutenancy of Ireland by way of breaking

Digitized by Google

the fall. This offer, conveyed by Stanhope, together with the announcement of his dismissal from the secretaryship, was indignantly refused. "I am highly sensible," Lord Townshend wrote to the king, "of the honour which your majesty confers on me by condescending to appoint me lord-lieutenant of Ireland; but as my domestic affairs do not permit me to reside out of England, I should hold myself to be totally unworthy of the choice which your majesty has been pleased to make, if I were capable of enjoying the large appointments annexed to that honourable office without doing the duty." (Coxe's 'Memoirs of Sir R. Walpole,' vol. i., p. 191.) This was irony aimed at Sunderland, who had been lord-lieutenant from George I.'s accession, and had never visited Ireland. Sir Robert Walpole wrote to Stanhope, who had urgently solicited his mediation with Townshend, to prevail on them to accept the lord-lieutenancy—"When you desired me to prevail with my Lord Townshend to acquiesce in what is carved out for him, I cannot but say you desired an impossibility; and 'tis fit you should know that there is not one of the cabinet council with whom you and Lord Sunderland have agreed in all things for so many years, but think that, considering all the circumstances and manner of doing this, nobody could advise him to accept of the lieutenancy of Ireland. . . . . And be assured that whosoever sent over the account of any intrigues or private correspondence with Jewish as out the two brothers, or any management in the least tending to any view or purpose but the service, honour, and interest of the king—I must repeat it, be assured, they will be found, pardon the expression, confounded liars from the beginning to the end." ('Id.,' vol. i., p. 310.) And in another letter to Stanhope, whose conduct on this occasion was misapprehended, not perhaps unnaturally, by Townshend and Walpole, the latter made this pointed appeal:—"What could prevail on you to enter into such a scheme as this, and appear to be the chief actor in it, and undertake to carry it through in all events, without which you would not have been undertaken, is unaccountable. I do swear to you that Lord Townshend has no way deserved it of you. . . . . Believe me, Stanhope, he never thought you could enter into a combination with his enemies." ('Id.,' p. 311.) Stanhope had consented to the king's resentment against Townshend, when he was supposed to be purposely delaying the French treaty, and had showed his feeling by immediately tendering his resignation, which the king refused. But having been satisfied that his suspicions against Townshend on this occasion had been unjust, he now had leave to other pursuit, to transmit the king's commands, and to endeavour to conciliate him towards Townshend, and soften his determination. The king had conceived a disgust, Stanhope wrote in his first letter on the subject to Sir Robert Walpole, at Townshend's temper. "He has been told him of Townshend's intrigues with the prince, of which Stanhope naturally said nothing, but with which there is no evidence to connect him, drove the king into a fury. And the determination which the king had come to under the influence of those violent personal feelings it was impossible to alter. Stanhope wrote to Methuen, who sided with Townshend and Walpole, though he had been destined to succeed Townshend:—"If you have any interest or credit with them, for God's sake make use of it upon this occasion. They may possibly unking their master, or (which, by the bye, God think very possibly make him abdicate England, but they will certainly not force him to make my Lord Townshend secretary." ('Id.') The king's desire to consult the interests of the Whig party had led him, though with some reluctance, to adopt Stanhope's suggestion of offering Townshend the lord-lieutenancy; and now, when he found the degree of resentment felt by Walpole and many of the leading Whigs, led him also to keep the appointment open till his return to England, in the hope that Townshend might yield. Stanhope saw a gleam of Townshend's return to his former post if he would first accept the lord-lieutenancy, and he wrote to Walpole, January 16, 1717:—"Believe me, dear Walpole, when I swear it to you, that I do not think it possible for all the men in England to prevail upon the king to re-admit my Lord Townshend into his service, upon any other terms than of complying with the offer made of Ireland. The king will exact from him this mark of duty and obedience." ('Id.,' p. 319.) It was not unnatural that Townshend and Walpole, at a distance from the scene of the intrigues against them, indignant at the false charges of which they had heard, and astounded at the strong step to which the king had, without giving any notice, had recourse, should attribute to Stanhope a share in the cabal against them; and such was the opinion of the public.

The effect of Lord Townshend's dismissal, when it was made known, on the public mind and on the Whig party, was such, that the king took fright, and on his arrival in England sent Stanhope to entreat Lord Townshend to tell him, that having taken away the seals, though perhaps on false reports and too hastily, he yet could not with due regard to his own character at once restore them to him, and to beg Townshend to accept the lord-lieutenancy as a temporary office, to be exchanged hereafter for another more influential one. Townshend now yielded, and those who had sided with him in the ministry were satisfied. But the union thus effected did not last long. Stanhope and Sunderland had acquired an ascendancy with the king, from which they were not now to be deposed by Townshend and Walpole. These showed their mortification by cold support in parliament of the ministerial measures. On the motions for granting a supply against Sweden, on the 9th of April 1717, almost all Townshend's personal friends voted against the ministry, which narrowly escaped a defeat by a majority of four. The next day Townshend received a dismissal from his office of lord-lieutenant of Ireland. Walpole immediately tendered his resignation, which, it is said, the king received with so much surprise and sorrow, that he returned the seals to him ten times before he would finally accept them. [WALPOLE, SIR ROBERT.] The example of Walpole was followed by Methuen, Pulteney, the secretary at war, Lord Orford, and the Duke of Devonshire.

Lord Townshend now went into opposition, and, like Walpole, is open to the charge of having out of office opposed principles and measures which he had previously supported. In the differences between the king and the Prince of Wales, he and Walpole were now his friends at the head of the latter. A reconciliation had been brought about between the king and Prince of Wales, in April 1720, Lord Townshend was admitted a few days after, with the Duke of Devonshire, Lord Cowper, Walpole, Methuen, and Pulteney, to kiss the king's hands; and received more decided proofs of restoration to the king's favour by being appointed in June one of the lords justices, on the king's going to Hanover, and president of the council. Walpole was appointed at the same time paymaster of the forces. The breaking up of the South Sea scheme and the deaths of Lords Stanhope and Sunderland, led in 1721 to a reconstruction of the ministry, in which Lord Townshend became again secretary of state, and Walpole also resumed his old posts of first lord of the treasury and chancellor of the exchequer. Walpole had now attained to a more influential position in the country, and was considered more powerful.

Townshend and Walpole had now again complete influence with the king. Lord Carteret, who was the other secretary of state, beginning together with Count Bernsdorf, to intrigue against Townshend, did not find success, as Lord Sunderland had done in former days. When the king went again to Hanover, Townshend took care to accompany him, and Lord Carteret accompanied him also. "The superior influence of Townshend and Walpole," says Archdeacon Coxe, "was not solely gained by court intrigues, or by the corruption of German favourites, and was not prostituted by a preference of Hanoverian interests to those of England. In the midst of these cabals, the conduct of the brother ministers was firm and manly, moving in direct opposition to the king's prejudices and the wishes of the German junta. Townshend prevented the adoption of violent measures suggested by Bernsdorf and seconded by Carteret, which, if pursued, must have involved England with the czar; and he exultingly informed Walpole that the king continued true to his resolution of signing no paper relating to British affairs but in his presence." ('Memoirs of Sir R. Walpole,' vol. ii., p. 64.) Lord Carteret was removed from the secretaryship of state in 1724, and made lord-lieutenant of Ireland. The Duke of Newcastle, the brother of Townshend's first wife, succeeded him; and eventually became, what Carteret had been, Townshend's rival. There soon arose also a coolness between Townshend and his other brother-in-law, and old friend and colleague, Walpole, owing, it is supposed, to their altered positions and Townshend's jealousy of Walpole's growing superiority. It was not until 1730 that the breach between the two brother ministers, and Lord Townshend's resignation, took place: but there were symptoms of a rising misunderstanding as early as 1725, two years before the death of George I. Walpole does not appear to have been to blame in the beginning.

On George II.'s accession, in June 1727, Walpole's pre-eminence was fully established. During this year Townshend had a dangerous illness, which was expected to be fatal; and when he was supposed to be dying, Walpole wrote, that he considered him "the bulwark of the constitution," and that he trusted "Providence would interfere to save the nation without whom it would be on the ground." (Coxe's 'Memoirs of Sir R. Walpole,' vol. ii., p. 382.) But Walpole's generous conduct was destined to be fruitless.

In the year 1729 Walpole and Townshend had become determined opponents in the ministry, and Walpole, having the support of Queen Caroline, who was all-powerful with the king, had no difficulty in always gaining the victory over Townshend. Almost every question that arose became a subject of dispute. The Duke of Newcastle and Walpole endeavoured to bring Lord Harrington into the cabinet: Lord Townshend brought forward a rival candidate in Lord Stanhope, afterwards the celebrated Earl of Chesterfield. Lord Townshend's object was defeated. Dr. Maty has related the following anecdote in his 'Memoirs of Lord Chesterfield' (p. 112): "The first time he" (Lord Chesterfield) "appeared at court on his return to London, Sir Robert Walpole said to him aside and loud, 'I fear you are come to be secretary of state.' 'Not I,' said his lordship, 'I have as yet no pretensions, and wish for a place of more ease. But I claim the garter. . . . . I am a man of pleasure, and the blue riband would add two inches to my size.' 'Then I see how it is,' replied Sir Robert, 'it is Townshend's intrigue, in which you have no share; but it will be fruitless, you cannot be secretary of state, nor shall you be beholden for the gratification of your wishes to anybody but myself.'" Disputes arose also between Townshend and Newcastle on an important question of foreign policy. Townshend had advised strong measures against the emperor, and had obtained the consent of the king to a despatch directing an invasion of the Austrian Netherlands. He went out of town to Norfolk for a short time, and

Digitized by Google

in his absence Newcastle, with the aid of Walpole and the queen, had brought the king to approve of a contrary policy. Townshend now determined to resign. Angry words, and even blows, passed between him and Walpole before he did so. A particular account of their quarrel is given by Archdeacon Coxe, in his 'Memoirs of Sir Robert Walpole.'

Lord Townshend's resignation took place on the 15th of May 1730. He retired immediately to his seat at Rainham, and, never again returning to London, devoted himself to agricultural pursuits for the remainder of his life. He introduced the cultivation of the turnip from Germany into this country. Lord Chesterfield visited him in his retirement, to press his coming to London to be present at an important debate, and Lord Townshend refused, saying that he remembered Lord Cowper, though a staunch Whig, had been betrayed by personal pique into voting with the Tories, and he added, "I know I am extremely warm, and I am apprehensive, if I should attend the House of Lords, I also may be hurried away by the impetuosity of my temper to adopt a line of conduct which, in my cooler moments, I may regret." "He left office," says Lord Mahon, "with a most unblemished character, and—what is still less common—a most patriotic moderation. Had he gone into opposition, or even steered a neutral course, he must have caused great embarrassment and difficulty to his triumphant rival. But he must thereby have thwarted a policy of which he approved, and hindered measures which he wished to see adopted. In spite of the most flattering advances from the opposition, who were prepared to receive him with open arms, his noble resolve was kept altogether from public life. He withdrew to his paternal acres at Rainham, where he passed the eight remaining years of his life in well-earned leisure or in agricultural improvements." ('History of England from the Peace of Utrecht,' &c., vol. ii, c. xv.)

Lord Townshend died on the 21st of June 1738, in his sixty-third year. He was an able and honest minister, but his ability and honesty were unfortunately uncontrolled by temper or prudent tact. He was not suspicious as an enemy, and Chesterfield has left a fine description of his speaking which is not altogether flattering. "The late Lord Townshend always spoke materially, with argument and knowledge, but never pleased. Why? His diction was not only inelegant, but frequently ungrammatical, and always vulgar; his sentences false, his voice unharmonious, and his action ungraceful. Nobody heard him with patience; and the young fellows used to joke upon him, and repeat his inaccuracies." ('Letters,' vol. ii., p. 318.)

TOWNSHEND, RIGHT HONOURABLE CHARLES, was the second son of the third Viscount Townshend, by Audrey, only child of Edward Harrison, Esq., governor of Madras, and grandson of the subject of the preceding article. He was born in 1725. He entered the House of Commons in 1747, and very soon gave earnest of his future distinction. His supported the Pelham administration, and was selected to move the address on the opening of the session in November 1749, after the full establishment of peace by the treaty of Aix-la-Chapelle. The Marriage Bill, introduced in 1753, was opposed by Townshend in a speech of singular power and beauty, which, happily combining humour, argument, and eloquence, fixed his reputation as a debater. An excellent report of the speech has been preserved, and is printed in the 'Parliamentary History,' vol. xv., p. 58. Lord Hillsborough, who replied to Townshend, began his speech by remarking, "I am very sensible of the danger I run when I rise to reply to, after the honourable gentleman who spoke last; his manner of speaking is so engaging, there is such a music in his voice, that it pleases the ear, though it does not inform the understanding; at the same time he expresses his sentiments in such beautiful terms, he is so successful in finding out arguments for supporting his opinion, and states those arguments in so strong a light, that he is always most deservedly heard with attention, and even with a sort of prejudice in favour of everything he says." (Id., p. 62.) This is a clear and decisive testimony to the impression which Townshend had now taken in the house, and to that eloquence, of which Flood, comparing Townshend with Barré, Conway, and others, towards the end of his career, observed, "He is the orator; the rest are speakers." ('Charlemont Correspondence,' p. 27.)

Townshend's speech on the Marriage Bill has been commemorated by another contemporary, Horace Walpole, earl of Orford. "A second adversary appeared against the bill. This was Charles Townshend, second son of my lord Townshend, a young man of unbounded ambition, of exceeding application, and, as it now appeared, of abilities capable of satisfying that ambition, and of not wanting that application; yet to such parts and such industry he was fond of associating all the little arts and falsehoods that always depreciate, though so often thought necessary by a genius. He had been an early favourite of Lord Halifax, and had already distinguished himself on affairs of trade, and in drawing plans and papers for that province; but not rising in proportion to his ambition, he comforted himself with employing as many stratagems as had ever been imputed to the most successful statesman. His figure was tall and advantageous, his action vehement, his voice loud, his laugh louder. He had art enough to disguise anything but his vanity. He spoke long, and with much wit, and drew a picture with much humour at least, if not with much humility, of himself and his own situation, as the younger son of a

capricious father, who had already debarred him from an advantageous match. 'Were new shackles to be forged to keep young men of abilities from mounting to a level with their elder brothers?'" Lord Orford proceeds to draw a comparison between Townshend and Conway, who also distinguished himself on this same side in this debate, and to speculate on their future careers. "What will be their fates I know not, but this Mr. Townshend and Mr. Conway seemed marked by nature for leaders, perhaps for rivals, in the government of their country. The quickness of genius is eminently with the first, and a superiority of application; the propriety and amiableness of character with the latter. One grasps at fortune; the other only seems pleased to accept fortune when it advances to him. The one foresees himself equal to everything; the other finds himself so whenever he essays. Charles Townshend seems to have more passion but ambition; Harry Conway not even to have that. The one is impetuous and unsteady; the other cool and determined. Conway is indolent, but can be assiduous; Charles Townshend can only be indefatigable. The latter would govern mankind for his own sake; the former, for theirs." ('Last Ten Years of the Reign of George III,' vol. i., p. 296.)

In the changes in the administration which followed the Duke of Newcastle's death in 1754, Townshend received the appointment of a lord of the Admiralty. On the Duke of Newcastle's resignation in November 1756, and the formation of a ministry by the Duke of Devonshire, with Mr. Pitt as secretary of state, Townshend was appointed to the lucrative post of treasurer of the chamber. There are some letters in the 'Correspondence of Lord Chatham' which show the importance that was attached at that time to Charles Townshend's support, and the trouble taken to secure him (vol. i., pp. 181, seq.). Townshend demanded the place of cofferer, a lucrative post in the household. This was already engaged. The treasurership of the chamber was then offered, and represented as "in every respect exactly equal to the cofferer." Lord Bute went to Townshend, and, not finding him, to Townshend's brother, afterwards Marquis of Townshend, to press his acceptance of this office, and with the aid of the Prince of Wales' name, succeeded in satisfying him. This ministry was but short-lived. Pitt resigned in April of next year, in consequence of the dismissal of Lord Temple, and Townshend resigned also. Townshend refused offers to join the new ministry, which Lord Waldegrave had been commissioned to form. After some months of fruitless negotiations the king was obliged to return to Pitt, and in the ministry formed by him as premier in June 1757, Townshend resumed his post of treasurer of the chamber.

In March 1761, Townshend was appointed secretary-at-war. The next year, Lord Bute's ascendancy having led to the resignations of Pitt and Lord Temple in the first instance, and shortly after of the Dukes of Newcastle and Devonshire, an offer was made to Townshend of the secretaryship of the plantations, which he refused. Mr. Nuthall writes to Lady Chatham, October 14, 1762:—"My countryman the right honourable Charles Townshend was yesterday sent for by the Earl of Bute, who opened to him this new system, and offered him the secretaryship of the plantations and board of trade, which he not only refused, but refused all connection and intercourse whatsoever with the new counsellor, and spoke out freely. He was afterwards three times with the king, to whom he was more explicit, and said things that did not a little alarm. On his coming out of the closet, Mr. Fox met him and gave him joy: he asked, 'For what?' Mr. Fox replied, 'Of your being secretary of state for the plantations.' Mr. Townshend answered, 'Don't believe that, till you hear it from me.' He was struck, and said he was greatly astonished, for he had understood that this had been settled." ('Correspondence of the Earl of Chatham,' vol. iii., p. 183.) Townshend however supported in parliament the preliminaries for the peace, but soon after was among the opposition to Lord Bute's ministry. On Lord Bute's resignation, in 1763, it was rumoured that Townshend was to be offered the place of first lord of the Admiralty. He was afterwards appointed first lord of trade and plantations, and treasurer of the chamber. In the fruitless negociations which took place with Mr. Pitt towards the close of the year Townshend was one of those named by Pitt to the king. ('Chatham Correspondence,' vol. iii., p. 265.)

Mr. Grenville's Stamp Act, introduced early in 1765, was zealously supported by Charles Townshend in a speech which elicited from Colonel Barré, in reply, one of his most successful parliamentary efforts. Townshend had concluded with the words, "And these Americans, children planted by our care, nourished by our indulgence, protected by our arms until they are grown to a good degree of strength and opulence, will they grudge to contribute their mite to relieve us from the heavy load of national expense which we lie under?" "They planted by your care!" cried Colonel Barré: "No, your oppressions planted them in America;" and so he went on, overthrowing each clause of the peroration. Under Lord Rockingham's administration, formed in July 1765, Townshend held the place of paymaster of the forces. It appears from a letter of Mr. Conway's, who was secretary of state and leader of the House of Commons in this administration, that the posts held by him had been offered to Townshend, and refused by him. Afterwards, with a vacillation characteristic of him, and by which he acquired the name of *the weathercock*, he repented his refusal, and was willing to sacrifice the superior profits of paymaster for the greater honour of secretary and

Digitized by Google

leader. "C. T., with all his cordiality, fixes conditions to his good will; 'confidence and the cabinet' were the words a little while ago; now he wishes to be useful, and the way in which he can be so most is as leader of the House. I closed at once, with the addition that he should then be secretary of state too. . . . To-day I have privately heard that he has said in a letter that things were changed since he refused." ('The Companion to the Newspaper,' 1835, p. 365, where there are several extracts from Conway's unpublished letters.) Townshend, who carried his vacillation into his public conduct, and the effect of whose brilliant talents has been lessened, both for his time and for posterity, by the versatility of his politics, now supported the repeal of the Stamp Act, which he had helped the previous session to introduce. Shortly after the formation of the Rockingham administration, he had been detained in the country by illness, which many supposed to be a cloak for dissatisfaction with the new arrangements, and with the position in which he found himself. A pleasant newspaper skit upon this circumstance has been preserved by Lord Chesterfield ('Letters,' vol. iv., p. 263):—"We hear that the Right Honourable Charles Townshend is indisposed, at his house, in Oxfordshire, of a pain in his side; but it is not said in which side."

The Rockingham administration died in July 1766, "having lasted," as Burke has chronicled it, in his 'Short Account of a late Short Administration," "just one year and twenty days." In the new administration formed by Pitt, now created Lord Chatham, Townshend was chancellor of the exchequer and leader of the House of Commons. There had been difficulty, as before, in prevailing upon him to give up his lucrative post of paymaster: he had said he would do so, and then said he would not; but the firmness of Lord Chatham kept him to his first stat-ment. The letters which passed on the subject between Lord Chatham, the Duke of Grafton, the king, and Townshend, may be seen in the 'Chatham Correspondence,' vol. iii., pp. 45-56.

The course of this Chatham administration is well known. Lord Chatham was soon too ill to transact any business or exercise any control over his colleagues, who quarrelled with one another, and among whom Townshend was looked upon as presuming and contumacious. Townshend insisted, as chancellor of the exchequer, on a land tax being laid on the American ports. If this were not done, he declared, the Duke of Grafton wrote to Lord Chatham, March 13, 1767, "he would not remain chancellor of the exchequer." "His behaviour on the whole," adds the duke, "was such as no cabinet will, I am confident, submit to." ('Chatham Correspondence,' vol. iii., p. 232.) And on the same day Lord Shelburne writes to Lord Chatham,—"I was surprised at Mr. Townshend's conduct, which really continues excessive on every occasion, till I afterwards understood in conversation that he declared he knew of Lord North's refusal of the seals. . . . It seems to me quite impossible that Mr. T. can mean to go on in the king's service." (Id., p. 235.) The policy of Townshend prevailed, and on the 2nd of June he introduced into the House of Commons those unfortunate resolutions imposing duties upon glass, paper, tea, and certain other articles imported into America, which rekindled rebellion in the colonies, and eventually led to their separation from the mother-country. This was done under the nominal premiership of Lord Chatham, the determined opponent of American taxation, but who was now kept by illness aloof from business, and had not been consulted. Soon the necessity of constructing a new administration with an efficient head was perceived, and a negociation between the Marquis of Rockingham, the Duke of Bedford, and the Duke of Newcastle having failed, it was understood that Charles Townshend was to be entrusted with the formation of a ministry. When the highest power in the state was then just within his grasp, he was suddenly carried away by a putrid fever, on the 4th of September 1767.

The talents and character of Charles Townshend have been established in a splendid passage in Mr. Burke's celebrated speech on American taxation. The orator had already passed in review Mr. Grenville and his Stamp Act, and the repeal of that act during Lord Rockingham's ministry, and having come to Lord Chatham's administration, and the policy of Charles Townshend, so abhorrent to the tenor of Lord Chatham's principles, he proceeds:—"For even then, sir, even before this splendid orb was entirely set, and while the western horizon was in a blaze with his descending glory, on the opposite quarter of the heavens arose another luminary, and for his hour became lord of the ascendant. This light too is passed and set for ever. You understand, to be sure, that I speak of Charles Townshend, officially the reproducer of the fatal scheme, whom I cannot even now remember without some degree of sensibility. In truth, sir, he was the delight and ornament of this House, and the charm of every private society which he honoured with his presence. Perhaps there never arose in this country, nor in any country, a man of a more pointed and finished wit, and (where his passions were not concerned) of a more refined, exquisite, and penetrating judgment. If he had not as great a stock as some have had, who flourished formerly, of knowledge long treasured up, he knew better by far than any man I ever was acquainted with how to bring together within a short time all that was necessary to establish, to illustrate, and to decorate that side of the question he supported. He stated his matter skilfully and powerfully. He particularly excelled in a most luminous explanation and display of his subject. His style of argument was another trite and vulgar nor subtile and abstruse. His hit the House just between wind and water; and not being troubled with too anxious a zeal for any matter in question, he was never more tedious or more earnest than the preconceived opinions and present temper of his hearers required, to whom he was always in perfect unison. He conformed exactly to the temper of the House; and he seemed to guide, because he was always sure to follow it. . . . There are many young members in the House (such of late has been the rapid succession of public men) who never saw that prodigy Charles Townshend, nor of course know what a ferment he was able to excite in everything by the violent soublition of his mixed virtues and failings,—for failings he had undoubtedly; many of us remember them; we are this day considering the effect of them. But he had no failings which were not owing to a noble cause; to an ardent, generous, perhaps an immoderate admiration for fame; a passion which is the instinct of all great souls. He worshipped that goddess wheresoever she appeared; but he paid his particular devotions to her in her favourite habitation, in her chosen temple, the House of Commons. . . . He was truly the child of the House. He never thought, did, or said anything, but with a view to you. He every day adapted himself to your disposition, and adjusted himself before it as at a looking-glass."

Townshend had married Caroline, the daughter and heiress of John, second Duke of Argyll and Greenwich, and widow of the Earl of Dalkeith, eldest son of the Duke of Buccleuch. Just before his death, while his influence was in the ascendant, he obtained for his wife the title of Baroness Greenwich. Townshend selected Adam Smith as tutor and travelling companion for his step-son the young Duke of Buccleuch. [SMITH, ADAM.] having first led to this choice, we are informed by a letter of Mr. Hume's, by his admiration of the 'Theory of Moral Sentiments.'

TOWNSON, THOMAS, D.D., was the eldest son of the Rev. John Townson, rector of Much Laver, in Essex, where he was born in 1715. After the usual preparatory education, conducted partly at home, partly at school, he was sent to the University of Oxford, where he was entered a commoner of Christchurch in March 1733. In July 1735 he was elected a demy (or scholar) of Magdalen College; in 1736 he was admitted to the degree of B.A.; in 1737 he was elected a Fellow of Magdalen; and in June 1739 he commenced M.A. In December 1741 he was ordained deacon, and in September 1742, priest, by Dr. Secker, bishop of Oxford. Immediately after this he left Oxford, accompanied by Mr. Dawkins, Mr. Drake, and Mr. Holdsworth, on a tour through Italy, Germany, and Holland, from which he did not return till 1745. Having resumed his residence at the university, he was in 1746 presented by his college to the living of Hetfield Peverell, in Essex, which he retained till 1749, when he resigned it on being presented by Sir Walter Wagstaffe Bagot, Bart., to the rectory of Blithfield in Staffordshire. This year he was senior proctor of the university; soon after his quitting which office he was admitted to the degree of B.D. He resigned his fellowship to January 1751, on being instituted to the living of the lower mediety of Maldon, in Cheshire, to which he was presented by his friend Mr. Drake, but which he did not accept without some reluctance, arising principally from his unwillingness to leave Oxford.

In 1758, having received, under the will of the Rev. William Barnard, rector of Fairsted and vicar of Kelvedon in Essex, a bequest of above 8000l., together with his library, he resigned Blithfield, and having now more leisure, he began to apply himself with greater assiduity to literary pursuits in connection with his profession. The first work which he finished was an Exposition of the Apocalypse, which however was never printed. His first publication was an anonymous pamphlet, entitled 'Doubts concerning the Authenticity of the last Publication of the Confessional, addressed to [Dr. Blackburne] the author of that learned Work,' 8vo, 1767. This was followed in 1768 by 'A Defence' of the 'Doubts,' and by another pamphlet entitled 'A Dialogue between Izaac Waltou and Homologistes; in which the Character of Bishop Sanderson is defended against the Author of the Confessional.'

In 1768 he made a second tour to the Continent with Mr. Drake's eldest son, Mr. William Drake, of Braseneose College. In 1778 he published his principal work, his 'Discourses on the Four Gospels,' 4to, which immediately attracted great attention; and in testimony of the merit of which the University of Oxford conferred upon the author in February 1779 the degree of D.D. by diploma. A German translation of this work appeared at Leipzig, in 2 vols. 8vo, in 1783. In 1780 Dr. Porteus, then bishop of Chester, bestowed upon Dr. Townson the archdeaconry of Richmond. In 1783 the divinity chair at Oxford was offered to Dr. Townson by Lord North, the chancellor, but he declined. Ome of life indneed him to decline accepting it. He died April 15, 1792.

Dr. Townson's collected works were published in 2 vols. 8vo in 1810, under the care of Mr. (afterwards Archdeacon) Churton, together with a Memoir of the author, from which the above facts are extracted. In addition to the productions that have been mentioned above, this collection contains some single sermons, and a portion of a treatise on the Resurrection, entitled 'A Discourse on the Evangelical Histories of the Resurrection and First Appearance of our Lord and Saviour Jesus Christ,' a few copies of which, in 4to, had been printed by the author in 1784, and distributed among his friends. Dr. Townson was as highly distinguished by the virtues of his private character as for his professional learning and ability.

TRADESCANT, JOHN, the name of two naturalists, father and son, who lived in England during the seventeenth century. John Tradescant, the elder, is generally supposed to have been a Dutchman, but no record occurs of the time of his birth or of his arrival in England. He does not appear to have been known to Gerarde, who wrote his Herbal in 1597; but in Johnson's edition of this work, published in 1633, he is frequently alluded to: hence Pulteney concludes that he arrived in England between these periods, but various minute circumstances that have come to light render it probable that he was really an English man. A note in that invaluable storehouse of out-of-the-way information, 'Notes and Queries' (in several of the earlier volumes of which a great deal of new matter concerning the Tradescants is collected), shows that he was certainly resident at Meopham in Kent, in 1608, there being in the parish register under August 3a baptism of his son John ('Notes and Queries,' vol. v. 266), and the will of the younger Tradescant mentions the Tradescants of Walberswick in Suffolk, in a way that would imply that they were his kinsmen as well as namesakes. Early in life he had travelled in Europe and Asia, and he occupied some position in the suite of Sir Dudley Diggs, ambassador to Russia in 1618. During a voyage up the Mediterranean, he made collections of plants in Barbary and on the coasts of the Mediterranean. In 1629 he was appointed gardener to Charles I., having previously been gardener to the lord treasurer Salisbury, the Duke of Buckingham, and other noblemen. He died in 1638. He left behind him a large collection of specimens of natural history, coins, medals, and 'rarities,' the first of the kind it is believed formed in this country, and a garden well-stored with the various plants. In the Ashmolean Library at Oxford is preserved a folio manuscript, entitled 'Tradescant's Orchard, illustrated in sixty-five coloured drawings of fruits, exhibiting various kinds of the apple, cherry, damson, date, gooseberry, pears, peaches, plums, nectarines, grape, hazel-nut, quince, strawberry, with the times of their ripening,' which is supposed to be by the elder Tradescant's handwriting.

JOHN TRADESCANT, the Younger, son of the above, was born in August 1608, and inherited his father's taste for natural history. In the early part of his life he made a voyage to Virginia, and brought from that country a collection of dried plants and seeds. In 1656 he published in 12mo a little work entitled 'Museum Tradescantinu,' or 'A Collection of Rarities preserved at South Lambeth near London.' It contains a descriptive catalogue of his father's museum, which he had by his own exertions greatly augmented. This museum contained not only stuffed animals and dried plants, but also minerals, instruments of war and domestic use of various nations, also a collection of coins and medals. This museum is remarkable as containing one of the few specimens ever known of the dodo, a bird now supposed to be extinct. The catalogue of the museum is accompanied with good engravings of the two Tradescants, and is sought after by printcollectors on this account. The younger Tradescant was intimate with most of the celebrated men of his time, and his father's museum or natural objects was visited and aided by the most distinguished persons of the day. In 1650 he became acquainted with Mr. Elias Ashmole, who, with his wife, lived in his house during the summer of 1652. The result of this was so close a friendship, that Tradescant, by a deed of gift, dated December 16, 1659, made over the museum of his natural history to Ashmole, the gift to take effect after his death. He died April 22, 1662; having a will in which his museum was bequeathed to his wife Hester Tradescant during her life, "and after her decease to the Universities of Oxford and Cambridge, to which of them she shall think fit." No mention is made of Ashmole in this will, but that zealous antiquary was little disposed to forego his claim to the "closet of rarities." Accordingly we find this entry in his 'Diary,' about a month after Tradescant's death: "May 16, 1662. This Easter term I preferred a bill in Chancery against Mrs. Tradescant, for the rarities her husband had settled on me." From the documents of this Chancery suit (which Dr. Hamel of St. Petersburg, who had become interested in the history of the Tradescants, and with rare patience investigated the obscure pictures of it, in the Record Office in England succeeded in examining), it appears that Ashmole was unable to produce the deed of gift, which he avers Mrs. Tradescant, to whom he entrusted it, had "burned or otherwise destroyed;" and Mrs. Tradescant on the other hand, without apparently denying that such a deed had been executed, pleaded that by her husband's will, dated May 4, 1661, all previous dispositions of his property were annulled, and the museum left expressly to her alone, with the stipulation already-mentioned, which she intended to fulfil by bequeathing it to the University of Oxford. The Lord Chancellor (Clarendon) in his judgment set aside the bequest, and gave effect to the asserted terms of the deed of gift, adjudging Ashmole to "have and enjoy" the entire contents of the museum, "subject to the trust for the defendant during her life." Mrs. Tradescant was found drowned in the pond in her husband's garden, April 3, 1678. Ashmole considerably increased the museum and added to it his library, and having afterwards bequeathed it to the university of Oxford, it unjustly bears the name of the Ashmolean Museum. [ASHMOLE, ELIAS.] The remains of the garden of the Tradescants were still at Lambeth in 1749, when it was visited by Sir W. Watson and described by him in the 46th volume of the 'Philosophical Transactions.' The widow of the younger Tradescant erected a singular and handsome tomb to the memory of father and son, which is still to be seen in the churchyard at Lambeth: it was restored by subscription two or three years back. The Tradescants introduced a great number of new plants into Great Britain. Amongst others a species of spider-wort thus brought over was called Tradescant's Spider-wort. It has since been formed into the type of a genus with the name Tradescantia, and has a large number of species.

TRAGUS HIERONYMUS (whose German name was Bock, and whom the French call Le Beauq), a German botanist of the sixteenth century. He was born at Heidesbach in 1498. In early life he received a good education, and became well acquainted with the ancient languages. He was appointed master of a school at Zweibrücken; after this he studied medicine, but having embraced the reformed religion, he became a preacher, and was till his death minister at Hornbach. His medical studies directed his attention to the subject of botany, which he pursued with great ardour throughout his life. Up to his time no advances had been made in the science of botany from the times of Pliny and Dioscorides. The Arabian writers had satisfied themselves with copying Greek and Roman writers, and making comments upon them without adding any new observations. Tragus was born at a time when the human mind was beginning to emancipate itself from the thraldom of authority both in science and religion. Instead of taking for granted all that had been written about plants, he commenced observing for himself. The same spirit also manifested itself in his contemporaries, Brunfels, Fuchs, and Gesener; with these great naturalists he was on terms of intimacy, and the first result of his labours was a German herbal published in 1531, in a work entitled 'Herbarium,' by Brunfels, with the name 'Dissertationes de Herbarium Nomenclaturis ad Brunfel-iam.'

In 1539 Tragus published his great work on which his reputation depends. It was written in German, and entitled 'Neu-Kreuterbuch vom Unterschiede, Wirkung und Nahmen der Kreuter so in Deutschland wachsen,' folio, Strasburg. In all previous modern works on botany the plants had been arranged alphabetically, but in this work Tragus adopted a natural classification, which, whatever may be its defects, has the merit of being the first modern attempt at the classification of plants. He divided the vegetable kingdom into three classes:—1, wild plants with odoriferous flowers; 2, trefoils, grains, potherbs, and creeping plants; 3, trees and shrubs. This classification is of course exceedingly imperfect; it however served in the way to better systems. He commences his work with a description of the nettle, and for this two reasons are assigned:—1, That he wished to teach persons engaged in the practice of medicine not to despise the meanest plants; and 2, that the nettle was his family badge. The first edition of this work was published without figures in 1539, the 1546 an edition was published containing upwards of 300 wood-cuts. To Tragus, Fuchs, and Brunfels belongs the merit of having commenced the illustration of works of natural history with woodengravings. Haller says that the word 'icones herbarum,' as in his representation of plants this is made evident by the addition of figures illustrative of their medicinal effects. Thus Pyramus and Thisbe are stationed at the foot of the mulberry-tree; Æsop is demonstrating his innocence under a fig-tree; and Noah surrounded by his three sons is chosen as an illustration of the effects of the vine. Many of the wood-cuts were good, and most of them were copied into the various herbals that were published in the 16th and 17th centuries. The descriptions of the plants are short and somewhat obscure; they were however original, and the structure of plants was not very imperfectly understood in the time of Tragus. He has given the Hebrew and Arabic names of the plants, as well as the Greek and Latin, but in these synonyms he exerted too little care in the identification of the German plants with those of ancient writers. Two editions of the engravings of this work with the names of the plants were published at Strasburg by Trew, in 1550 and 1553, under the title, 'Vivæ atque ad Vivum Expressæ Imagines omnium Herbarum in Book Herbario depictarum Icones solæ,' 4to.

A Latin edition of the Herbarium was published by Kyber in 1552. This edition has a learned preface written by Conrad Gesener. It is sometimes spoken of as a separate work of Tragus. It has for its title, 'Hieronymi Tragi de Stirpium maxime earum quæ in Germania nostra nascuntur, &c. liber tam in Latinam linguam quam in interpretè David Kyber Argentinensi, Argent.,' 4to. Several editions of the German book have been published; the best of these is that of 1695, which was edited by Melchior Sebitz and Nicolas Agerius. Tragus died at Hornbach in 1554.

TRAJA'NUS, MA'RCUS ULPIUS NE'RVA, was most probably born in 52 or 53 A.D., at Italica, the present Alcalá del Rio, on the Guadalquivir, not far from Seville in Spain. He was the son of one Trajan, who was descended from an old Spanish or Iberian family, and who is said to have been a consul (Eutropius, viii. c. 2); but his name is not found in the Fasti Consulares. Eutropius gives to Ulpius Trajanus the surname of 'Crinitus,' perhaps because he wore his hair long, as did his countrymen the Iberians. Trajan the elder having obtained a command in Asia Minor, went there, accompanied by his son, who distinguished himself at an early age in the wars against the Parthians and the Jews. He became consul in A.D. 91, together with Acilius Glabrio. After he had discharged his function he went to Spain, and he afterwards commanded the legions on the Lower Rhine.

His military talents and his amiable character made him popular with the troops: and though we know very little about his early life, we must suppose that his merits were great. This we may conclude from the circumstance that the Emperor Nerva, an old man without issue, adopted him in A.D. 97, and chose him for his successor, although there were several relations of Nerva who had perhaps more claims to the throne than Trajan. But, says Dion Cassius (lxviii. c. 4), Nerva was exclusively led in his choice by his care for the welfare of the empire; and he considered Trajan's Iberian origin as a matter of indifference. Yet Trajan's nomination as Cæsar was a new thing in Roman history, the imperial throne having hitherto been exclusively occupied by members of the old Roman aristocracy, so that Trajan was the first emperor who was born beyond the limits of Italy.

Trajan received the news of his nomination in Cologne, and three months later (Aurelius Victor, 'Epitome,' c. 12) the death of Nerva, which took place on the 27th of January, 98, made him master of the Roman empire. On his arrival at Rome the people received him with great demonstrations of joy, and Trajan soon proved that he deserved his high station. He appointed distinguished and honest men as public functionaries; he curbed the turbulent body of the Prætorians; he issued an edict against false accusers, and banished those who were convicted of this crime to the barren islands of the Mediterranean. Coin being dear in Rome, he allowed the corn to be sold duty-free, and he thus won the hearts of the people, while those whom he honoured with his intercourse were delighted by his affability. Yet the emperor never forgot his dignity. His virtues and eminent qualities became conspicuous in the first years of his reign, as we may see from the panegyric of Trajan, which Pliny the younger read in the senate as early as 100, after he had been made consul. In 103 Pliny, who was a personal friend of the emperor, was appointed proconsul of Bithynia and Pontus; and having inquired into the state of the Christians, he recommended them to the emperor rather than mitigated the persecutions to which they had hitherto been exposed by Pliny himself. The letters that passed between Pliny and Trajan are the best sources with regard to the private character of this emperor.

As early as 100 Trajan was engaged in a war with Decebalus, king of the Dacians; at the head of a numerous army Trajan crossed the Danube, defeated the enemy, and in 101 took their capital, Zermizegethusa (Dion Cassius, lxviii. c. 9), which was most probably situated on the site of the present village of Varhely, not far from the pass of the 'Iron Porte,' in Transylvania. In 102 Decebalus was compelled to purchase peace by the cession of a part of his territory; and on his return to Rome Trajan celebrated his first triumph, and was saluted with the name Dacicus. Lucius Quintus and Hadrianus, afterwards emperor, distinguished themselves in this war. Annoyed at the dependence on Rome, Decebalus violated the peace as early as 104, and Trajan hastened to the Danube, resolved to finish the war by the conquest of Dacia. He ordered a bridge to be constructed over the Danube, which was the largest work of this kind mentioned by the ancients. According to Dion Cassius it consisted of twenty piers, 150 feet high, 60 wide, and 170 feet apart; the piers were united by wooden arches. (Dion Cass., lxviii. c. 13. ed. Reimar, and the note.) The whole length of it has been calculated at 4770 Roman feet. If the statement of Dion Cassius is true, this bridge seems not only to have served for the passage of the river, but the immense height of the pillers, of which scarcely more than seventy feet can have been under water, leads to the supposition that it was at the same time a strong fortification destined to command the navigation. At a height of eighty feet above the water, soldiers were protected against the missiles of the Dacian ships, while the fleet of the enemy in passing that bridge ran the risk of destruction. This bridge was either at Severen in Hungary, or five leagues above the junction of the Alt with the Danube, in Wallachia, not far from Nicopolis, where ruins of the Roman colonies of Romule and Castra Nova, and a Roman road, which is pretty well preserved, still exist. The war proved fatal to Decebalus. Defeated wherever he encountered the Romans, he killed himself in despair (105); and in 106 all Dacia was conquered and made a Roman province by Trajan, who sent there numerous colonists. Trajan returned to Rome in the same year, and celebrated his second Dacian triumph. In memory of his victories over the Dacians a column was erected, in 114, by the architect Apollodorus, on the Forum Trajani, which, having been preserved from ruin, is still admired as one of the finest remnants of ancient art. The column was 144 Roman feet high, according to Eutropius (viii. c. 2). Another column, which is likewise extant, was erected in honour of Trajan by the inhabitants of Beneventum after his victories over the Parthians.

After the conquest of Dacia, eight years of peace elapsed, which Trajan employed in a careful administration, and in adorning Rome with beautiful buildings; he also founded a library, the Bibliotheca Ulpia, and an institution for the education of poor children of Italian parents. (Fr. A. Wolf, 'Von einer milden Stiftung Trajan's,' Berlin, 4to, 1808.) In 114 Trajan left Rome to lead his armies against the Parthians.

In the Asiatic part of the empire peace had already several times been disturbed, principally by the Arabs, who however were subdued by Cornelius Palma, the proconsul of Syria, who, in 105, conquered Arabia Petræa, and made it a Roman province. Some years later Osrhoes, or Khosrow, king of the Parthians, deprived Exedares, king of Armenia, of his dominions, and created his brother Parthamaspes, or Parthamasiris, king of Armenia. The Romans having always been anxious to maintain their influence in Armenia—the independence, or rather dependence of this country on Rome was necessary for the security of the East—Trajan declared war against Khosrow. The Parthians were defeated, and in one campaign Trajan conquered Mesopotamia and delivered Armenia. He took up his winter-quarters at Antioch, relieved the Syrians, who were suffering from the consequences of a violent earthquake, and in the following year, 115, opened a new campaign. He crossed the Tigris, in the province of Adiabene, and the Parthians having again been defeated, he took the towns of Nisibis, Edessa, Ctesiphon, and Seleucia; Babylonia, Assyria, Armenia, and Mesopotamia became Roman provinces; a rebellion of the Jews in Egypt and Cyrenaica was quelled; Khosrow was deposed, and his brother Parthamasiris was put by Trajan on the throne of Parthia. After the conquest of these extensive provinces Trajan sailed with his fleet on the Tigris to the Persian Gulf, and took up his winter quarters in the town of Spasinus. When he had reached the sea, the example of Alexander suggested to him the idea of conquering India, but remembering his advanced age, he renounced that scheme. (Dion Cassius, lxviii. c. 29.) In 117 Trajan made an incursion into Arabia, and ordered a fleet to be kept on the Red Sea. Suffering from dropsy, he set out for Rome, but he died on his way at Selinus, a town in Cilicia, in the month of August 117, at the age of sixty-three years nine months and four days, according to Eutropius (viii. c. 2).

Trajan was one of the greatest emperors of Rome. He is said to have been addicted to women and wine; but his public character was without reproach, except his passion for warfare and conquest. However he undertook no war for frivolous motives. He deserved the title of 'Optimus,' which the senate conferred on him. The memory of his name lasted for centuries, and two hundred years later the senators used to receive the emperors with the acclamation, "Be happier than Augustus, and better than Trajan!"

The body of Trajan was transported to Rome, where it was deposited under the Columna Trajani. His successor was Hadrian.

(Aurelius Victor, *De Cæsaribus*, c. 13; *Epitome*, c. 13; Sextus Rufus, *Breviarium*, c. 8, 14, 20; H. Francke, *Zur Geschichte Trajans und seiner Zeitgenossen*, 1837, is a very valuable book.)

Reverse of Coin of Trajan.
British Museum. Actual Size. Bronze.

TRAPP, JOSEPH, D.D., was born at Cherrigton in Gloucestershire, in November 1679. He was entered at Wadham College, Oxford, in 1695, took his degree of Master of Arts in 1702, and was chosen a Fellow of his college in 1704. In 1708 he was appointed the first professor of poetry at Oxford, and at the expiration of his term of office published the lectures he had delivered on the subject, under the title of 'Prælectiones Poeticæ,' in 3 vols. 8vo, 1718. Dr. Trapp was warmly attached to the Tory party in the government, and took an active part in the political disputes of the time. He acted as manager for Dr. Sacheverell on his trial in 1710, and upon the Tories coming into power in the autumn of the same year he was appointed chaplain to Sir Constantine Phipps, lord chancellor of Ireland. He was afterwards appointed chaplain to Lord Bolingbroke, and wrote several papers in the 'Examiner' in defence of his administration. He obtained the living of Dauntsey in Wiltshire in 1720, but resigned it in the following year upon obtaining the vicarage of the united parishes of Christ Church, Newgate-street, and St. Leonard's,

Forster-lane, London. In 1733 he was presented to the living of Harlington in Middlesex by Lord Bolingbroke, and in the following year was elected one of the joint lecturers of St. Martin's-in-the-Fields. He died November 22, 1747, at the age of sixty-eight, and was buried in Harlington church.

Dr. Trapp was a hard student, and published numerous works, which acquired for him considerable reputation in his own day, but would now scarcely repay the trouble of reading. One of his best works is said to be 'Notes upon the Gospels,' first published in 1747. He published several sermons, which he preached upon various occasions, and also numerous pamphlets against the Whigs, but these generally appeared without his name. His translation of Virgil into blank verse, published in 1717, in 2 vols. 4to, generally succeeds in giving the meaning of the original, but is a complete failure as a work of art. His Latin poetry is said to be better than his English; he published a Latin translation of 'Anacreon' and of Milton's 'Paradise Lost.'

TRAVERS, JOHN. The author of musical compositions so popular, elegant, and charming as 'Haste, my Nanette,' 'I, my dear, was born to day,' 'When Bibo thought fit,' 'Soft Cupid,' is fairly entitled to a few lines in our biographical department, though his life was void of any remarkable incident. He was educated first in St. George's Chapel, Windsor, afterwards under the celebrated Dr. Greene [GREENE]. About the year 1725 he followed Kelway as organist of St. Paul's, Covent Garden, and subsequently filled the same situation also at Fulham. In 1737 he was appointed organist to the Chapels Royal. He died in 1758, and was succeeded in the latter office by Dr. Boyce.

Travers composed much cathedral music, but except an anthem, 'Ascribe unto the Lord,' and e 'Te Deum,' his productions for the church have fallen into disuse. We will only add that Dr. Burney's notice of him is neither discriminating nor just.

TRAVERSA'RI, AMBRO'GIO, called also Ambrosius Camaldulensis, a great scholar and public character of the 15th century, was born in the village of Fatico near Forli, in 1386. Some assert that his family was a branch of the Traversari who once ruled over Ravenna. At fourteen years of age Ambrogio entered the order of the Camaldulenses at Florence. He is said to have studied Greek under Chrysoloras, and afterwards under Demetrius Scarani of Constantinople, who became a Camaldulensian monk at Florence about 1417. Traversari became a good Greek and Latin scholar, and applied himself entirely to classical studies till 1431, when he was made general of his order. He was intimate with Cosmo de' Medici, Niccolo Niccoli, Francesco Barbaro, Leonardo Giustiniani, and other learned men and patrons of learning of that age. When Cosmo and his brother Lorenzo the elder were in banishment at Venice, in 1433, Traversari, who was then in that town, often visited them, and he speaks of them in his letters with esteem and affection. He instructed several pupils, and among others Giannozzo Manetti, who became a distinguished scholar. Traversari travelled much for the affairs of his order, and he collected many materials for his 'Hodeporicon,' which is a description of what he had seen, containing many particulars concerning the literary history of that time, and the various libraries then existing in Italy. The 'Hodeporicon' was first edited at Lucca by Bartolini, in 1681. He also collected valuable manuscripts which helped to form the nucleus of the public library in the convent of St. Marco, together with the collection of Niccolo Niccoli and those of Peruzzi and Salutati. In 1435 Pope Eugenius IV. sent Traversari to the stormy council of Basel, where he exerted himself with much ability in favour of Eugenius, and was instrumental in winning over to the pope's party the learned Cardinal Cesarini, the president of the council, who suddenly left Basel and repaired to Ferrara, whither the pope had transferred the council in January 1438. Traversari was sent from Basel into Germany on a mission from the pope to the Emperor Sigismund, and on returning to Italy he was deputed to Venice to receive the Emperor Palaeologus and the patriarch of Constantinople, and to conduct them to Ferrara, from whence the council was soon after removed to Florence. Traversari acted in that assembly as interpreter between the Greeks and the Latins, and he had the satisfaction of seeing the reunion of the two churches. He soon after died at Florence, in October 1439. He left Latin translations of many Greek works, especially of ecclesiastical writers, such as Chrysostom, Basilius, Athanasius, Epiphanius Syrus, Nilus Cimselitus, and others, all of which, as well as of other inedited works of Traversari, his biographers Mehus, Cateni, Ginanni, and Zeno have given catalogues. His translation of the Lives of Diogenes Laertius, dedicated by him to his friend Cosmo de' Medici, was printed at Venice in 1475. Some of his Orations delivered in the council of Basel are also printed. His numerous letters were collected by Father Canneti, and published, with the addition of learned notes and a biography of Traversari, by Lorenzo Mehus: 'Traversarii Ambrosii Ejusdem Latinae et aliorum ad ipsum, curante P. Canneto, cum Ambrosii Vita, studio L. Mehus,' 2 vols. fol., Florence, 1759, an important work for the literary history of Italy during the 14th and 15th centuries.

TREDGOLD, THOMAS, was born in the little village of Brandon, about three miles west of the city of Durham, on the 22nd of August 1788. At an early age he was sent to a small school in his native village, where he received what must have been a very limited education, as he says in the preface to his first publication that he had written that work "without the advantage of any other education than that of which my own industry had made me master." At the age of fourteen he was apprenticed to a cabinet-maker at Durham for six years, during which period he was particularly noticed for his attention to business and his devoting all his leisure hours to books and mathematical or architectural studies. He informed the writer of this notice that, instead of going to see the races, as apprentices were then allowed to do in the afternoons of the race-days, he taught himself perspective.

Soon after the expiration of his apprenticeship, in 1808, he went to work as a journeyman carpenter and joiner in Scotland, where he remained for five years, in no way distinguished from his fellow-workmen except by his continued life of study. It was during these years that, by depriving himself of the necessary hours of repose, and not taking that relaxation which the human frame requires, he impaired his naturally weak constitution. He rose early, hastily took his meals, and sat up late, in order that every spare moment might be given to the acquirement of knowledge, while the chief hours of the day were spent in laborious manual employment. On leaving Scotland he repaired to London, where he entered the office of his relative William Atkinson, Esq., architect to the Ordnance, in whose house he lived for six years, and remained in his service some years after quitting his house. At this time it may be said that his studies combined all the sciences connected in any degree with architecture and engineering; and in order that he might be able to read the best scientific works on the latter subject, he taught himself the French language. He also paid great attention to chemistry, mineralogy, and geology, and perfected his knowledge of the higher branches of mathematics. Before the publication of his first work he had occasionally contributed articles to several periodical publications, and he continued to do so for some time afterwards. These contributions extend over a wide range of subjects, comprising papers on the elasticity of air; the velocity of sound; the causes, laws, &c., of heat; gases; the nature of curves; the flexure of astronomical instruments; and the principles of beauty in colouring. They are chiefly to be found in Tilloch's 'Philosophical Magazine,' Thomson's 'Annals of Philosophy,' &c., and besides these he was the author of several articles in the 'Encyclopædia Britannica.' In the year 1820 he published his valuable work 'The Elementary Principles of Carpentry, a treatise on the pressure of beams and timber frames, the resistance of timber, the construction of floors, roofs, centres, and bridges.' This work contains many practical rules and useful tables, and is illustrated by 22 plates. It was printed in quarto, and went through a second edition in 1828. His essay on the 'Strength of Cast Iron,' published in 1821, reached a second edition in 1824, and a third in 1831.

Before the appearance of his next work, owing to the great increase of his private business and literary labours, he resigned his situation in Mr. Atkinson's office, and in 1823 commenced practice as a civil engineer and architect, and published his 'Practical Essay on the Principles of Warming and Ventilating Public Buildings, Dwelling-Houses, Manufactories, Hospitals, Hothouses, Conservatories, &c.,' which was so favourably received that a second edition was very soon required. In the course of the following year appeared his 'Practical Treatise on Railroads and Carriages,' which was immediately followed by a pamphlet addressed to Mr. Huskisson, then president of the Board of Trade, and entitled 'Remarks on Steam Navigation, and its Protection, Regulation, and Encouragement.' This latter, which contained many valuable suggestions for the prevention of accidents, has been for some time out of print. The last important work published by Tredgold was a thin quarto volume, with numerous illustrations, entitled 'The Steam-Engine,' containing an account of its invention and progressive improvement, with an investigation of its principles and the proportion of its parts for efficiency, strength, &c. The first edition came out in 1827, and so highly was it appreciated that when it was nearly sold out the copyright was purchased by its present possessor at a very much higher price than the author originally received for it. A posthumous edition, greatly extended by the contributions of several scientific men, especially in the department of steam-navigation, was published in 1838. This beautiful edition is in two large 4to volumes, illustrated by 125 plates and numerous wood-cuts. It was edited by W. S. B. Woolhouse, and a portrait of Tredgold is prefixed to the first volume. Mr. Tredgold died on the 28th of January 1829, in his forty-first year, completely worn out by his devotion to study. He left, besides a widow, three daughters (of whom only one survives) and a son, who was brought up to his own profession, and inherited his father's abilities, as well as, unfortunately, his delicate constitution. He was engineer in the Office of Stamps of the East India Company at Calcutta, where he died in April 1853.

TREDIAKOVSKY, VASSILI KIRILOVICH, a Russian poet of great but unfortunate celebrity, was born February 22nd, 1703. The place of his birth is not stated, but he is said to have received his first education in a school kept by a foreigner at Archangel, where he attracted the notice of Peter the Great, who, visiting the school, and ordering the boys to be drawn up for his inspection, after attentively looking at Trediakovsky, exclaimed, "He will prove a most capital journeyman in his profession, but no master in it!" in allusion to which incident the poet remarks—"The emperor was exceedingly

Digitized by Google

shrewd, but was greatly mistaken in his opinion of myself." On leaving the school at Archangel he studied at Moscow; and then, by the liberality of Prince Alexander Kurskin, was enabled to visit France, England, and Holland, for the purpose of completing his education. While at Paris he attended Rollin's lectures, and made himself master of some of the modern languages. In 1730 he returned to Russia, in 1733 was appointed secretary to the St. Petersburg Academy of Sciences, and in 1745 was made professor of eloquence on that office being first created. He died August 6th, 1769. Without talent for any one department of literature, Trediakovsky attempted all, from idyls and fable to tragedy and epic or heroic poetry. Of the last-mentioned kind is his "Telemachida," which is a versified paraphrase of Fenélon's 'Telemachus,' a production so dull that Catherine II. used to inflict the task of getting a hundred lines of it by heart as a penalty upon those who infringed the rules established for her private parties in the Hermitage. Numerous as they were, his own poetical productions were but the smaller portion of his literary labours; for he translated several historical works, and among others Rollin's 'Ancient History,' in 26 volumes, twice over, the manuscript of the first translation having been destroyed by fire; than which there is not perhaps a more singular instance of literary industry and perseverance upon record.

(Bantiesh-Kamensky, *Slovar Dostopamiatnikh Liudei.*)

TREMBECKI, STANISLAW, one of the best Polish poets of the age of Stanislaus Augustus, was born about 1724, in the district of Cracow. Notwithstanding his eminence as a writer, and that he lived to the greater part of his long life he moved in the higher circles of society, very few particulars have been preserved or collected respecting him. In his youth he spent many years in visiting various parts of Europe, and resided for a considerable time at the court of Louis XV. Afterwards he was for a long time at the court of Stanislaus, where he held the post of chamberlain. Later in life he withdrew almost entirely from society, rarely seeing any strangers, although he resided in the family of Felix Potocki at Tulczyn. At one time he had been remarkably abstemious, never touching either animal food or wine for thirty years, on which account Stanislaus used to call him his Pythagoras. Latterly he abandoned that rigorous system, which however does not seem to have had much influence upon his temperament, for he is said to have been engaged in no fewer than thirty duels, all of them arising out of some affair of gallantry, and in every one of which he came off conqueror. He died Dec. 12, 1812, after very little previous indisposition, at nearly ninety years of age. Among his poetical works, all of which exhibit great mastery of style and beauty of language, is that entitled 'Zofijówka,' his chief claim to fame. This production belongs to a species of poetry now in little esteem, it being a description of the gardens at Zofijowka, an estate in the Ukraine belonging to the Potocki family; but though the subject itself is not of the highest order, it is treated with great ability, and the work abounds with striking beauties; nor is the reader's admiration at all lessened by its having been written when its author was between the age of seventy and eighty. The work however which would probably have most of all contributed to his reputation, namely, his 'History of Poland,' has never seen the light. The manuscript, consisting of two hundred sheets, was given in trust by him to a friend, that it should not be published until after his death; but what became of it has not been ascertained. There is a portrait of Trembecki prefixed to the two volumes of his poems, forming a part of Bohomyn's 'Bibliotek Klassykow Polskich,' from which work the account here given is derived.

TRENCH, REV. RICHARD CHENEVIX, Archbishop of Dublin, is the son of Richard, brother of the first Lord Ashtown, by Maleina, grand-daughter of Dr. Richard Chenevix, formerly Bishop of Waterford. He was born September 9, 1807, and graduated at Trinity College, Cambridge, in 1829, without obtaining honours however either in classics or mathematics. Having taken orders, he served a country curacy. His name first became known as a poet in 1835, whilst holding the incumbency of Curdridge, a chapelry in the parish of Bishop's Waltham in Hants, by the publication of two volumes of poems, written in something of the simple style of Wordsworth. They were respectively entitled 'Sabbation, Honor Neale, and other Poems,' and 'The story of Justin Martyr.' Attending the favourable notice of the press, these volumes were shortly afterwards followed by his 'Genoveva,' 'Elegiac Poems,' and 'Poems from Eastern Sources.' In 1841 Mr. Trench resigned the charge of Curdridge, and became curate to Archdeacon (now Bishop) Wilberforce at Alverstoke, near Gosport; in 1845 he was presented by Lord Ashburton to the rectory of Itchen-Stoke near Alresford; and on Archdeacon Wilberforce's promotion to the see of Oxford, he became his examining chaplain. In 1845 and 1846 he was Hulsean lecturer at Cambridge, and for a short time also one of the select preachers of the University. His chief publications during the last few years are:—'Notes on the Miracles;' 'Notes on the Parables;' 'Lessons in Proverbs;' all of which have been more than once reprinted; 'The Sermon on the Mount, illustrated from St. Augustine;' 'Sacred Latin Poetry;' 'Synonyms of the New Testament;' 'St. Augustine as an Interpreter of Scripture;' and a remarkably useful treatise on the 'Study of Words,' being the substance of some lectures delivered to the Diocesan Training College at Winchester.

In 1847 Mr. Trench was appointed theological professor and examiner at King's College, London, and more recently one of the examiners for engineer and artillery appointments at Woolwich. In 1852, he was an unsuccessful candidate for the representation of the archdeaconry of Winchester in convocation, the revival of which active powers he is understood to advocate. In 1856, on the death of the late Rev. Dr. Buckland [BUCKLAND, REV. WILLIAM], he was nominated by Lord Palmerston to the deanery of Westminster. On the death of Archbishop Whateley, Dean Trench was created Archbishop of Dublin, November 1863.

TRENCHARD, SIR JOHN, Knight, a secretary of state in the reigns of William III., was born in 1650, and was the second son of Thomas Trenchard, Esq., of Wolverton in Dorsetshire, the then head of the ancient and wealthy family of the Trenchards. Anthony à Wood gives the following account of Sir John Trenchard's birth and education: "was borne of puritanical parents in Dorsetshire, became probationary fellow of New College in a civilian's place an. 1665, aged fifteen years or more, entered in the public library as a student in the civil law, 22nd October, 1668, went to the Temple before he took a degree, became barrister and councillour." ('Athenæ Oxonienses,' vol. iv., p. 405, Bliss's edition.) The account characteristically proceeds, "busy to promote Oates his plot, busy against papists, the prerogative, and all that way." Trenchard was elected member for Taunton in Charles II.'s third parliament, which met on the 6th March, 1679, and was dissolved on the 12th of July in the same year. Anthony à Wood erroneously states that he was not elected in the succeeding parliament, which, having been called on the 1st October, 1679, was not allowed to assemble until the same day and month in 1680. In this last-mentioned parliament Trenchard took a prominent part in the discussion of the Exclusion Bill, and was probably a zealous member of the opposition party. He was among those apprehended in 1683, on the suspicion of the Protestant plot, of which Lord Russell and Sydney were made the victims. It was told against him that he had engaged to raise a body of men from Taunton. He denied this on examination, and Lord Russell also denied all knowledge of it; but he was committed to prison. "One part of his guilt," says Burnet, "was well known: he was the first man who had moved the exclusion in the House of Commons; so he was reckoned a lost man" ('History of His Own Time,' vol. ii., p. 327, Oxford, 1823). He was afterwards however discharged from prison for want of a second witness against him. (Evelyn's 'Diary,' vol. iii., p. 106.)

After the accession of James II., Trenchard engaged to support the duke of Monmouth in his foolish invasion, and on the almost immediate failure of the duke's attempt he fled to France. (Chalmers's 'Memoirs of Great Britain and Ireland,' vol. i., p. 173.) He is said to have been dining with his relative, Mr. W. Speke, at Ilminster, when he received intelligence of the defeat of the duke of Monmouth's army at Sedgemoor; whereupon he immediately mounted his horse and advised Mr. Speke to do the same; he succeeded in making his way to Weymouth, where he took ship for France; and the story goes on to say, that at the moment he was embarking, his friend Mr. Speke was hanging before his own door at Ilminster (Burke's 'History of the Commoners,' vol. iv., p. 76). He remained abroad till things had ripened for the Revolution of 1688.

Trenchard was member for Dorchester in the convention parliament which placed William and Mary on the throne. His services to the revolution were rewarded by his name being made first, serjeant, then chief justice of Chester and a knight, and lastly, in the spring of 1693, secretary of state. He received this last appointment at the same time that Somers was elevated from the attorney-generalship to be lord keeper; and these two appointments were held of great importance as being signs of William's desire to return to the Whigs, from whom he had for a time alienated himself. In the spring of the next year Lord Shrewsbury returned to the other secretaryship of state, and the government was made completely Whig. Sir John Trenchard died on the 29th of April, 1695.

Opposite characters have been drawn of him by Anthony à Wood and Bishop Burnet. The former calls him "a man of turbulent and aspiring spirit." Burnet's character of him is as follows: "He had been engaged far with the Duke of Monmouth, as was told formerly. He got out of England, and lived some years beyond sea, and had a right understanding of affairs abroad. He was a calm and sedate man, and was much more moderate than could have been expected, since he was a leading man in a party. He had too great a regard to the stars and too little to religion." The last feature in the character which Burnet has drawn is illustrated by a story of Wood's. "An astrologer told him formerly that he should such a year be imprisoned, such a year like to be hanged, such a year be promoted to a great place in the law, such a year higher, and such a year die, which all came to pass, as he told Dr. Gibbons on his death-bed."

TRENCHARD, JOHN, a political writer of some celebrity in his day, was born in 1662. He was a member of a junior branch of the same family as the subject of the preceding article, and was the eldest son of William Trenchard, Esq., of Cutteridge in Dorsetshire, by Ellen, daughter of Sir George Norton, of Abbots Leigh in Somersetshire. On Sir George Norton's death in 1715, Mr. Trenchard, his grandson, inherited his property.

The writer of the life of Trenchard, in the 'Biographia Britannica'

Digitized by Google

has fallen into the error of making him the son of Sir John Trenchard, to whom he was but distantly related. The actual degree of relationship may be seen in Burke's 'History of the Commoners,' vol. iv., pp. 78, 79. This error has led to others. For instance, the writer represents him as having been born in 1669, instead of 1662, Sir John Trenchard himself having been born in 1650. These mistakes have been copied in Chalmers's 'Biographical Dictionary' and the 'Biographie Universelle.'

Mr. Trenchard was educated for the law, and was called to the bar. But his fortune not requiring that he should follow a profession, he left the bar for what was to him the more congenial pursuit of politics. The author of the 'Life in the 'Biographia Britannica' says, "By the decease of an uncle, and a marriage to a gentlewomen with a considerable fortune, he came into the possession of a genteel estate, and the prospect of a much better, which also fell into his hands on the demise of his father in 1695, whom he succeeded likewise in the House of Commons, being elected a burgess for Taunton in 1695." A great deal of this is incorrect. Sir John Trenchard died in 1695, but Mr. Trenchard's father did not die till 1710. Mr. Trenchard was elected for the parliament that met in 1695, but sat, not for Taunton, but for Wareham. And it is probable that the account of the fortune acquired by marriage, and by the death of an uncle, is a mistake arising out of Mr. Trenchard's inheriting, after his father's death, from his maternal grandfather, Sir George Norton.

In 1698 Mr. Trenchard published, in conjunction with Mr. Moyle, a pamphlet entitled 'An Argument showing that a Standing Army is inconsistent with a Free Government, and absolutely destructive to the Constitution of the English Monarchy.' The question of a standing army being at that time seriously agitated, this pamphlet is said to have produced a considerable effect. It was followed almost immediately by 'A Short History of Standing Armies in England.' In 1699 Mr. Trenchard was chosen by the House of Commons one of seven commissioners for taking an account of the forfeited estates in Ireland; and he was one of the four who signed the report including the private estate, or that which had belonged to James II. in right of the crown, which William had granted to his mistress, Lady Orkney. A warm debate arose on this report in the House of Commons, which is to be read in the 'Parliamentary History.' The report was approved of by the House, but gave great offence to the king.

In 1709 Mr. Trenchard published 'A Natural History of Superstition;' 'Considerations on the Public Debts;' and 'A Comparison of the Proposals of the Bank and South Sea Company.' He published, in 1719, two additional pamphlets entitled 'Thoughts on the Peerage Bill,' and 'Reflections on the Old Whig.' In 1720 he began, in conjunction with Mr. Thomas Gordon, a Scotchman, whom he had known some time before into his house, and employed as an amanuensis, a series of letters on political questions, under the signatures of Cato and Diogenes, which appeared first in the London, and then in the British, Journal; and in the same year, in conjunction with the same gentleman, he began a paper called the 'Independent Whig,' which was devoted to the subjects of religion and church government. [GORDON, THOMAS.] These two series of letters went on till 1723, on the 17th of December in which year, Mr. Trenchard died.

After Mr. Trenchard's death, Mr. Gordon collected Cato's letters, and published them in 4 vols. 12mo. In the preface to the work, he has sketched the character of his friend and benefactor, justifying his eulogy by saying "that he has set him no higher than his own great abilities and many virtues set him; that his failings were small, the talents extraordinary, his probity equal to his talents, and that he was one of the ablest and one of the most useful men that ever any country was blessed withal." Mr. Gordon also published, after Mr. Trenchard's death, the papers which had appeared of the 'Independent Whig,' in 2 vols. 12mo; and at the end of the second volume is printed a long Latin inscription on Mr. Trenchard's tomb, which had proceeded from Mr. Gordon's pen. This inscription is printed also in the notes to the life in the 'Biographia Britannica.' Mr. Gordon continued the 'Independent Whig' after the death of his coadjutor, and made two additional volumes. The four volumes of the 'Independent Whig,' and 'Cato's Letters,' have both passed through several editions. They both excited much interest when they were first published and for some time after; but are now little read or known.

Mr. Trenchard had married a daughter of Sir William Blackett, of Northumberland, but had no children. Of his widow we are told, that, "finding Mr. Gordon very useful in managing her affairs, she continued him in her service, was much pleased with his company, and, having paid a decent tribute of tears to the memory of her deceased husband, entered some time after into a second marriage with this ingenious friend and companion, who had several children by her." (*Biographia Britannica.*)

TRENCK, BARON FRANZ VON, was born at Reggio in Calabria, on the 1st of January 1711. His father was a general in the Austrian service, and took him when only eleven years old to serve in the war against Spain. At this tender age he was present and actually fought at the battle of Malaga. He was afterwards sent to the military academy at Vienna, and having passed his examination with great distinction, he was appointed cornet in the regiment, Palfy. His extraordinary physical strength, united with an uncommon degree of ferocity, manifested itself very early, and brought him into many difficulties. When only seventeen, his father having refused to supply him with more money for his extravagances, he applied to a farmer in the neighbourhood, and upon receiving a refusal there also, he cut the man's head off. This affair was hushed up with great difficulty, and he was sent to Russia, where by his military talents and dauntless courage he soon gained the friendship of Marshal Münnich, and was made captain of hussars. A short time after he had received his commission, he attacked a whole Turkish regiment near Becharest, contrary to the express orders of his colonel, with his small troop, and gained a decided victory. Upon his return the colonel reprimanded him for his disobedience; he answered by a blow, which felled his superior officer to the ground. For this offence he was sentenced by a court-martial to be whipped out of the regiment, a punishment, that period still inflicted in Russia upon commissioned officers. While he was awaiting the execution of this sentence in his tent, he heard that a brisk engagement with the Turks was taking place, and Marshal Münnich being near, he called out to the marshal, and asked him if he would pardon him, provided he brought back within an hour three Turks' heads. The marshal assented, and Trenck immediately leaped upon the first horse he saw, galloped into the midst of the enemy, and returned to the camp within half an hour with four Turks' heads suspended from the pommel of his saddle. But shortly after he was sentenced to death for a still greater violation of discipline, and it was only through Münnich's influence that his sentence was commuted first into banishment to Siberia, and at last to six months' hard labour. This punishment he had to undergo at Kiew, and immediately after his return to his estates in Croatia. The latter were then on the Turkish frontiers being, after the war, infested with numerous and well-organised bands of robbers, Trenck voluntarily levied a force of a thousand men among his own tenants, and succeeded in a very short time in clearing the country of these dangerous enemies. A short time afterwards disturbances breaking out in Hungary on the occasion of Maria Theresa's succession to the throne, Trenck offered his own and the services of his men, his regiment of Pandours, as he called them, to the young empress. This offer was accepted, and Trenck went to Vienna. The disturbances were however soon pacified by Maria Theresa's heroic conduct at Pressburg, and he was sent to the army on the Rhine and in the Netherlands under the command of Prince Charles. Here he again distinguished himself by his bravery and military skill, but at the same time by his rapacity and brutal ferocity. It was principally Trenck who covered Prince Charles's celebrated retreat into Bohemia, and on his march through Bavaria he took five fortified places in less than three weeks. It would lead too far here to relate the well-authenticated acts of plunder and cruelty which he committed, but he and his Pandours were so much dreaded over the whole empire, as Tilly and his men in the Thirty Years' War. In the following year he joined the army against Frederic the Great, and after the battle of Sorau (September 14, 1745) he undertook to take the king by surprise at Grätz, and to carry him off prisoner. In this he failed with great loss of men; but he got a large booty, as he captured Frederic's tent and all that it contained. Upon his return to Vienna a court-martial was held over him, some of his own officers accusing him of having received bribes from the enemy, besides unexampled cruelty and avarice. At his first examination one of the judges used some disrespectful expressions towards Prince Charles; Trenck, with the fury and strength of a tiger, jumped at him, nearly throttled him, and would have thrown him out of a high window if the guard had not hastened to interfere. He was confined at Vienna for upwards of a year, when Baroness Lestock, a lady to whom he was betrothed, effected his escape by large bribes to his jailers, who connived at his feigning to be dead. He was carried out in a coffin to be buried, but as soon as the procession got outside the town gates, he jumped out of it, covered himself with a cloak, mounted a horse which stood prepared, and made his way to Bruges in the Netherlands, where he was however soon arrested again, and was taken, heavily loaded with chains, to Graetz. Here in a fit of despondency he took poison, and died October 4, 1749. Among his great wealth to his cousin Frederic, who however did not derive much benefit from the bequest.

(*Mémoires du Baron Franz de Trenck*, écrits par F. de Trenck, 1 vol. 8vo, Leipzig, 1787; *Leben und Thaten der Trencke*, von Watermann, 2 vols. 8vo, Leipzig, 1837; *Mémoires du Prince de Ligne*, 2 vols. 8vo, Vienne, 1816.)

TRENCK, BARON FREDERIC VON DER, born at Königsberg, February 16, 1726. His mother was a von Dershau, and both parents belonged to the most ancient and wealthy houses in East Prussia. His father had served with distinction as major-general in the Prussian army. The young baron distinguished himself very early by extraordinary precocity; in his thirteenth year he was entered as a student of law and belles lettres at the university of his native place, and passed the usual examination with great distinction. One year later he fought a duel with one of the most celebrated swordsmen at Königsberg, whom he wounded and disarmed. In his sixteenth year Count Lottum, one of his relations, and adjutant-general to Frederic (afterwards the Great), took him to Berlin, where the king immediately appointed him cadet, and soon afterwards, having himself upon one occasion been surprised at the young man's talents, he promoted him

Digitized by Google

to a cornetcy in his body-guard, at that time considered the most splendid and gallant regiment in Europe, in which the rank of every officer was three degrees higher than in other regiments. The king's favour and his own amiable manners procured him many friends at court, but at the same time excited envy and malice. The foundation of his cruel fate is said to have been laid about two years afterwards at a ball given at the royal castle at Stettin, in celebration of the marriage of the Princess Ulrike, the king's eldest sister, with the king of Sweden. The youngest sister, the Princess Amalie, is said to have noticed him, to have invited him to see her at her private apartments, and to have cherished a violent passion for him ever afterwards. In an unguarded moment he is said to have boasted of the favours shown him by his royal mistress. This was reported to the king, who, although he did not think proper to punish his indiscretion, formed a decided dislike to him, and watched every opportunity of visiting him most severely for trifling faults in military discipline. This story, embellished with many romantic incidents, originates principally with French writers, who in many instances contradict themselves as to dates and other matters. That an imprudent attachment between Trenck and the princess existed cannot be doubted; but that Frederic, violent and passionate as he was in all his private concerns, should have pretended blindness in so important a matter, and should even have continued to bestow favours upon the man who had dishonoured his sister's name, is difficult to credit.

During the war between Prussia and Austria he was placed on the king's staff, and distinguished himself on several occasions, particularly when his cousin, Franz Trenck, attempted to take the king prisoner by surprise at Collin. A short time afterwards his cousin addressed him a letter, returning him some of his horses which his Pandours had taken upon one of their foraging expeditions. This circumstance he mentioned in presence of a Colonel Jaschinsky, who owed him a considerable sum of money, and who was at Berlin was known to his secret enemy. This man artfully persuaded him to e correspondence with his cousin, he himself undertaking to forward the letters by means of his mistress, the wife of the Saxon resident, Madame de Brosne. Several letters passed in this way open through Jaschinsky's hands, until he got possession of one in which some highly imprudent expressions were found, which he immediately caused to be laid before the king. The result was, that Trenck was cashiered and sent prisoner to the fortification of Glatz, not by a formal sentence, but by an order from the king, who expressed his intention of his being kept to keep him there for one year; evidence enough it would seem, that he only meant to punish his correspondence with the enemy, and no other or greater crime. At first he was treated according to his rank, and with all possible indulgence; but when it was discovered that he had several times, by bribes, attempted and nearly effected his escape, he was placed in close confinement. On the 24th of December 1746, he nevertheless succeeded in making his escape, by the assistance of and together with Major Schell. With great fatigue and danger he reached his mother's residence in Brandenburg, whence he proceeded to Vienna, amply furnished with money. A strict investigation was ordered by the king, for the purpose of finding out how he had effected his escape; the result of which was the discovery that large sums had been remitted to him by the Princess Amalie. It is highly probable that this was the first time that Frederic knew of his sister's attachment; and from this period must be dated his intense and obdurate hatred of Trenck. In the mean time Trenck had got into fresh troubles at Vienna, which he himself principally attributes to the intrigues of his cousin Franz, notwithstanding he was in prison at the time on a criminal charge. He left Vienna in disgust, and went to Russia, where, through the recommendation of the English ambassador (to whom Frederic himself had introduced him at Berlin, under the flattering title of 'Matador of mamoiselle'), he was well received, and appointed captain of a troop of hussars. Here he might have lived peaceably and content, being in high favour with the empress, and having acquired considerable wealth through a legacy of a Russian princess; but the Prussian ambassador, Count Goltz, left nothing undone to injure him, pretending that he acted like in accordance with instructions from the king his master. His cousin at Vienna, who was now dead, had made him his heir. Upon this he determined to leave Russia; and after having visited Sweden, Denmark, and Holland, he returned to Vienna to take possession of his inheritance. Great difficulties awaited him there. His cousin's estates were under sequestration, and after expensive and vexatious suits, he agreed to a compromise, by which he received 75,000 florins, and the appointment of a captaincy in a regiment of hussars. In 1748 he went to Prussia to visit his family; and at Dantzig, when on the point of embarking for Sweden, owing to some hints of impending danger which he had received, he was arrested by e party of hussars, and taken prisoner to Berlin. He was at first treated well, but his intemperate language, and even threats against the king, hurried on his fate. He was taken to Magdeburg, and confined in a cell under-ground, and almost without light. His sufferings, and his bold, desperate, and almost successful attempts to escape, may be read in his own Memoirs. After two soldiers had suffered death for conniving at his attempts to regain his liberty, and several other plots had been discovered, e prison was at last built on purpose for him, in which he was chained to the walls with fetters of sixty-seven pounds weight. Here he remained above four years more, till at last his relations succeeded in softening Frederic's obduracy; and on the 24th December 1763, he was released upon condition of leaving the kingdom. He went first to Vienna, where he was again arrested on account of his violent language against Frederic. The emperor however having convinced himself by a personal interview that his words were the mere outbreak of unmeaning rage after his dreadful sufferings, set him free, paid him the arrears of his salary as a captain, and advised him to retire in order to recover his health and his spirits. He settled at Aix-la-Chapelle, married a daughter of the burgomaster De Broe, and commenced business as a wine-merchant. He went several times to England upon commercial affairs, but notwithstanding all his exertions his affairs did not prosper, and he became a bankrupt. After this new misfortune he wrote articles against the democratic tendency of several periodical publications; and in 1787, after the death of Frederic the Great, he published his Memoirs, for the copyright of which he received a very large sum. From that time he became for a time a distinguished person in the world. His book was translated into almost all European languages; the ladies at Paris, Berlin, and Vienna wore rings, necklaces, bonnets, and gowns à la Trenck, and not less than seven different theatrical pieces in which he was the hero were brought out on the French stage. The year following he once more visited Berlin; but although he was kindly received by the king, it seems that he was disappointed in his expectations, and he returned to Aix-la Chapelle, where he commenced the publication of a weekly paper, under the title of 'L'Ami des Hommes,' in which he proclaimed himself a champion of the new French principles. Meeting with little encouragement, he went to Paris in 1792, joined a Jacobin club, and was afterwards a zealous adherent to the Mountain party, which nevertheless betrayed, accused him, and brought him to the guillotine on the 25th July 1794. Yet on the scaffold, and in his sixty-eighth year, he gave proof of his unconquerable passions. He harangued the surrounding multitude, and when his head was on the block he once more attempted to give utterance to his vehemence, and the executioner had to hold him by his silver locks to meet the fatal stroke.

TRENTO, ANTONIO DA, supposed to be the same person as Antonio Fantuzzi. He was born at Trente about the commencement of the fourteenth century; and was a pupil of Vasari, the pupil of Parmigiano at Parma. Parmigiano employed Antonio to engrave his works in wood, and he was one of the first and most eminent of the Italian wood-engravers; he appears to have imitated the cuts of Hugo da Carpi. Antonio Fantuzzi lived with Parmigiano, but apparently unwillingly, for about 1530 he deserted from his master, taking with him many of his drawings, plates, and wood-cuts, and went, it is supposed, to France, where he appeared again under the name of Antonio da Trento. He attached himself in France to Primaticcio, who employed him to engrave many of his works in engraving: he executed also etchings after some other masters while in France. Bataeh describes thirty-seven etchings by him, but he is more celebrated for his wood-cuts which he engraved in chiaroscuro. The time of his death is not known, but it happened probably about 1550: the date 1545 is on his print of Orpheus. Some of the wood-cuts of Antonio are printed with three, others with two blocks; they are chiefly after Parmigiano, as The Twelve Apostles; St. John in the Wilderness; the Martyrdom of St. Peter and St. Paul; St. Cecilia; the Tiburtine Sibyl; and Jupiter and Io. Among his etchings is one of Regulus in the Cask, after Giulio Romano.

(Vasari, *Vite de' Pittori, &c.*; Bartsch, *Peintre-Graveur*; Nagler, *Allgemeines Künstler Lexicon.*)

"TRENTOWSKI, BRONISŁAW FERDYNAND, a Polish philosophical writer of high reputation, was born, in 1808, near Warsaw, received his education at the Piarist College of Lukow and at the University of Warsaw, and was appointed in 1829 teacher of the Latin language, of history, and of Polish literature, at the college, or Gymnasium, of Szczuczyn. He took an active part in the insurrection of 1830, he was in consequence obliged to leave Poland, and fixed himself after one or two changes of residence at Freiburg in the Breisgau, where he, in 1836, published an academical dissertation, 'De vita hominis eterna' (On human immortality), and afterwards wrote two works in German, 'Grundlage der universellen Philosophie' (Carlsruhe, 1837 (Basis of universal Philosophy), and 'Vorstudien zur Wissenschaft der Natur,' 2 vols, Leipsig, 1840 (Preliminary Studies to the Science of Nature). In the preface to the 'Grundlage' he mentions that "five years before he understood hardly any German, nay, he could not even dream that ever in his life he should be compelled to speak and to write in German." "But thou, my beloved, my unspeakably beloved country," he continues, "thou the Paradise from which I am banished, be not indignant with thy son that he writes not in thy language. Unhappy, oppressed, and weeping orphan, I could be of more use to thee than to this foreign land, so rich in genius—but who is master of his destiny!" Some Poles who

Digitized by Google

were aroused by this appeal, provided Trentowski with means to follow out his wishes, and he wrote a series of works in Polish, which were published in Posen, and produced a considerable sensation. The first, 'Chowanna czyli System Pedagogiki,' 2 vols., 1842 (Education on a System of Pedagogics), reached a second edition in 1846, but was to have been completed by a third volume which does not seem to have yet appeared. 'Myslini czyli Logika' 2 vols., 1844 (Logic), and 'Stosunek filosofii do Cybernitiki,' 1843 (The Relation of Philosophy to the Science of Government), are two of the most important of the remainder. 'Demonomania,' Posen, 1844, is a collection of narratives of supernatural appearances, with an attempt at explanation connected with a theory of the supernatural. Many essays by Trentowski appeared in the Polish periodicals 'Rok' and 'Oredownik naukowy,' published at Posen. In 1848 Trentowski took advantage of the state of affairs in general to return to Cracow, where he gave public lectures, but he afterwards returned to Freiburg, where he lives in retirement married to a German lady. As a philosopher, he seeks, while still a disciple of Kant, to unite empiricism with speculation, and to introduce a sort of Polish practicality into a philosophy fundamentally German; and as an author, either in German or Polish, he is brilliant and attractive in style, and shows a desire to accompany every step of speculation with illustrations of an intelligible character.

TRESCHOW, NIELS, a Danish philosophical and theological writer, was the son of a shopkeeper or tradesman at Drammen in Norway, where he was born September 25, 1751. From his parents, who were serious and religious persons, he received a careful education, which, seconded by his natural abilities and love of reading, sufficiently prepared him for the university in his fifteenth year, when he was sent to Copenhagen to study theology. Though he did not neglect divinity, he showed a preference for philosophy, history, mathematics, and the physical sciences, in which studies he found companions in Edward Storm [STORM] and Nordal Brun, who were also natives of Norway. After spending five years at Copenhagen, he became corrector or submaster of the classical school at Drontheim; and it was there that he first took up his pen as an author. In 1780 he was appointed to succeed the celebrated Jacob Baden as rector of the academy of Helsingör, at which time he studied Kant's writings, and explained his philosophy in a series of able papers in the 'Minerva.' Not many years afterwards (1789) he obtained the appointment to the head-mastership of the cathedral school at Christiania, which, besides being valuable for its emoluments, brought him into intercourse with many individuals distinguished not only by their wealth and station, but by their patriotism and philanthropy, and their zeal in promoting the spread of intelligence. Encouraged by them, he turned his attention to the improvement of the system of education in Denmark, but, owing to the opposition they met with in other quarters, his plans were only very partially carried into effect. In 1796 his dissertation 'De Anthropomorphismo' obtained for him the degree of doctor of theology from the university of Copenhagen, at which he was afterwards (1803) appointed professor in ordinary of philosophy, an office filled by him with honour to himself and satisfaction and advantage to the students. In 1813 he quitted Copenhagen for Christiania, in order to accept the chair of philosophy in the new Frederick's University, an institution which he had been mainly instrumental in founding. On the union of Norway with Sweden, he was made by the new king superintendent of public instruction and church affairs, which office he held for twelve years, when he retired to a small estate in the neighbourhood of Christiania, and resided there till his death, September 22, 1853. Among his chief works are—'Morality in Connection with the State,' &c.; 'Principles of Legislation;' 'Spirit of Christianity;' 'Translation of the Gospel of St. John;' and the 'Philosophical Testament of God, Nature, and Revelation;' all of which were the productions of his studious retirement after relinquishing public duties in 1826.

TREVIGI, or TREVI'SI, GIRO'LAMO DA, was born at Trevigi in 1497. He was apparently the son of the painter Piermaria Pennacchi, who was doubtless his instructor in painting. Girolamo however, not wholly satisfied with the accuracy of the Venetian painters, became an imitator of the style of Raffaelle, and combined to a considerable extent the qualities of both schools. He lived some time in Bologna, where he painted some excellent works, especially from the story of Sant' Antonio of Padua, in oil, in the cathedral. He left Bologna in consequence of the superior fame of Perino del Vaga, then at Bologna. After painting several works in fresco at Venice, Trent, and some other places, he came to England and entered the service of Henry VIII., who employed him as architect and engineer, with a fixed salary of nearly 100*l.* per annum. He was engaged in the capacity of engineer in the year 1544 before Boulogne, and was there killed by a cannon-shot, in his forty-seventh year.

There are some excellent portraits by Girolamo; they are well coloured and in an elaborate but broad manner, much in the style of the portraits by Raffaelle. There is a fine specimen in the Colonna palace at Rome; it is a half-length of a man in the picturesque costume of the period, holding a ring or signet in his hand. There are, or were, other pictures by Girolamo in this palace. A picture of the Madonna with various saints, which, according to Vasari, was Girolamo's masterpiece, is now in the National Gallery (No. 623). It was originally the altar-piece of the Boccaferri chapel in San Domenico, at Bologna.

There was an earlier painter called Girolamo da Trevigi, by whom there are still works bearing dates from 1470 to 1492: his surname, according to Federici, was Aviano.

TREVISA'NI, A'NGELO, of Venice, was an excellent portrait-painter, and painted also some good historical pieces: he excelled in chiar'oscuro. There is a fine altar-piece by him in the church Della Carità at Venice. Neither the date of his birth nor death is known; accounts differ, but he was living in 1753. There are portraits of both the Trevisani in the painters' portrait gallery at Florence.

TREVISA'NI, FRANCESCO, CAVALIERE, an eminent Italian painter, was born at Capo d'Istria near Trieste, in 1656. He is called by the Venetians, Roman Trevisani, to distinguish him from Angelo Trevisani of Venice. Francesco acquired the first principles of design from his father Antonio Trevisani, an architect, and learnt painting of a Fleming, whose name is not mentioned, who was remarkable for his pictures of spectres, incantations, and such subjects; and young Trevisani executed a very good picture in the same style in his eleventh year. He afterwards became the scholar of Antonio Zanchi at Venice, and painted in his style for some time: he then studied the works of the great Venetian masters, and distinguished himself by several fine pictures in the Venetian manner, which he painted at Venice whilst still young. Being a man of striking personal appearance, and very accomplished in several polite arts, he went much into society, and he won the affections of a noble young Venetian lady, with whom he eloped and married, and he went with her to Rome, to avoid the consequences of the resentment of her family. At Rome, Trevisani was fortunate enough to find a valuable patron in the Cardinal Flavio Chigi, nephew of Pope Alexander VII., for whom he executed several works, and who procured him the title of Knight from the pope. He was much employed also by the Duke of Modena, then Spanish ambassador at the court of Rome, for whom he made several copies after celebrated pictures by Correggio, Parmegiano, and Paul Veronese. After the death of Cardinal Chigi he was much patronised by Cardinal Ottoboni, for whom he painted an excellent picture of the Slaughter of the Innocents. Trevisani's works are numerous in Rome; he painted also for many other cities, and for foreign countries; he executed some pictures for Peter the Great of Russia. He died at Rome, July 30, 1746.

After the arrival in Rome he forsook the Venetian manner of painting, and adopted that which prevailed in Rome at that period, which consisted chiefly in the imitation of Guido, Domenichino, and others of the Carracci school. But Trevisani painted in many styles, and in almost every line—historical pieces, large figures, portraits, animals, sea pieces, landscapes, architecture, and flowers; he could imitate well a picture by any master. His best pictures are a good deal in the style of Guido; his composition is grand, and his chiar'oscuro forcible, his execution free and bold, and his drawing generally correct and graceful; but his chief excellence consisted in purity and brilliancy of colouring. His best pictures are, a Crucifixion, in the church of San Silvestro in Capite; a San Francesco, in the church of San Francesco delle Sagre Stimate; Saint Joseph dying, in the church of the Collegio Reale; and a Pietà, in the church of San Giovanni Laterano; and the cupola of the cathedral of Urbino, painted for Clement XI. The Albicini family at Forlì possessed in the time of Lanzi various specimens of his different styles, amongst them a Crucifixion, in which the figures were very small but elaborately painted, which Trevisani is said to have considered his best picture, and to have offered a large sum for its re-purchase.

TREVOR, SIR JOHN, Knight, a secretary of state in the reign of Charles II., was born in 1626, and was the eldest son of Sir John Trevor, Knight, of Trevallin in Denbighshire, and descended from an ancient Welsh family. Anthony Wood, in recording his appointment as secretary of state, says of him and his father that they were both "halters in the rebellion, and adherers to the usurper." ('Athenæ Oxonienses,' vol. iii., col. 1089.) The father had been a member of the Long Parliament, but supported the measures which led to the Restoration. After this event the son became a gentleman of the bedchamber in Charles II.'s court, and in February 1668 was sent as special envoy to France, to carry out the object of the treaty called the Triple Alliance, namely, a peace between France and Spain. (Dalrymple's 'Memoirs,' Appendix, p. 6.) He negociated the provisional treaty, which was signed at St. Germain-en-Laye, on the 15th of April 1668, and which received its full confirmation and development in the treaty of Aix-la-Chapelle, on the 2nd of May 1668. After his return to England he was knighted, and in September appointed secretary of state in the room of Sir W. Morrice. He obtained this appointment through the influence of the Duke of Buckingham, who had then attained to the chief favour with the king. (Pepys's 'Diary,' vol iv., p. 166.)

Two different stories have been transmitted as to the mode in which Trevor's appointment was brought about; but both equally illustrate the custom of the time. Sir William Temple writes to Lord Arlington, "They will have it that the king lays down eight thousand pounds to bring this about, which is a large present both for him that comes in and him that goes off." ('Temple's Letters to the Earl of Arlington and Sir John Trevor, &c.,' published by D. Jones, Gent., 1699, p. 10.) Pepys however had an informant, "who for news tells me for certain that Trevor do come to be secretary at Michaelmas and that

Digitized by Google

Morrice goes on, and he believes without any compensation." (Pepys's 'Diary.')

Sir John Trevor continued secretary of state until his death in 1672. It was his merit, during the time that he held office, to oppose the French policy which Charles was then pursuing at the instigation of the Duke of York, and with the zealous co-operation of Lord Arlington, the other secretary of state; and to endeavour to moderate the persecution of Protestant nonconformists, which was carried on during that period, under the same advisers, by means of the Conventicle Acts. Having been originally one of the cabinet, he was put out of it in consequence of his opposition to the Duke of York's policy in 1670. "It was remarked," says Hume, "that the committee of council established for foreign affairs was entirely changed; and that Prince Rupert, the Duke of Lennox, secretary Trevor, and lord keeper Bridgeman, men in whose honour the nation had great confidence, were never called to any deliberations." ('History of England,' vol. vii., p. 458, ed. 1791.) Sir William Temple, who returned to England from the Hague in 1670, and grieved to see the rapid progress of a policy directly contrary to that of the Triple Alliance which he had achieved, found Trevor of the same opinion with himself, but unable to do anything, as he was, in Sir W. Temple's phrase, "merely in the skirts of business." ('Temple's Works,' vol. ii. p. 175, ed. 1757.)

Sir John Trevor died, after a short illness, on the 26th of May 1672. He died a year before his father, who, when he died, was succeeded in his estates by Sir John Trevor's eldest son. Sir John Trevor had married Ruth, one of the daughters of the celebrated John Hampden, by whom he left a numerous family. Thomas Trevor, his second son, was bred to the law, and having pursued it with great success, attained to political as well as legal eminence. He was in William III.'s reign successively solicitor and attorney-general, and in 1701 was appointed chief-justice of the Common Pleas. He was created a peer by Queen Anne in 1712, by the title of Lord Trevor of Bromham, in Bedfordshire. In 1726 he was made lord privy seal by George I., and in 1730, but a month before his death, received from George II. the post of president of the council. He died on the 19th of June 1730. His character is briefly sketched by Speaker Onslow in a note on Burnet (vol. iv., p. 334, ed. 1823), where he is described as having the general esteem of all political parties, though, beginning as a Whig, he after a time left the party, and then again rejoined it, and as an able and upright, but reserved, grave, and austere judge.

The third son of this Lord Trevor ultimately inherited his title, being the fourth Lord Trevor. He was a distinguished diplomatist, and having published a volume of poems, is enrolled in Horace Walpole's list of 'Royal and Noble Authors.' Having had the Hampden estates left to him by his cousin, John Hampden, Esq., in 1754, he took to himself, great grandson to the patriot Hampden, and who died unmarried, he took the name and arms of Hampden, and was in 1766 created Viscount Hampden. (Collins's 'Peerage,' by Brydges, vol vi., pp. 291-304.)

TREVOR, SIR JOHN, Knight, a lawyer of eminence, and speaker of the House of Commons in the reigns of James II., and William and Mary, was a member of the same Welsh family as the subject of the previous article, and the second son, but ultimately heir, of John Trevor, Esq., of Brynkinalt, in Denbighshire. By his mother, he was first cousin to the notorious Judge Jefferies. He was born in 1633.

The history of this Sir John Trevor has been sketched by the strong pen of Roger North, in a well-known passage in his 'Life of the Lord Keeper Guildford' (vol. ii., p. 87): "He was a countryman of the lord chief justice Jefferies, and his favourite. . . . He was bred a sort of clerk in old Arthur Trevor's chamber, an eminent and worthy professor of the law in the Inner Temple. A gentleman that visited Mr. Arthur Trevor, at his going out, observed a strange-looking boy in his clerk's seat (for my person ever had a perverse sort of squint then he had), and asked who that youth was? 'A kinsman of mine,' said Arthur Trevor, 'that I have allowed to sit here, to learn the knavish part of the law.' This John Trevor grew up, and took in with the gamesters, among whom he was a great proficient; and being well grounded in the law, proved a critic in resolving gambling cases, and doubts, and had the authority of a judge among them; and his sentence for the most part carried the cause. From this exercise he was recommended by Jefferies to be of the king's council, and then master of the rolls and, like a true gamester, he fell to the work of supplanting his patron and friend; and had certainly done it if King James's affairs had stood right up much longer; for he was advanced so far with him as to vilify and scold with him publicly in Whitehall." Having been solicitor-general in the reign of Charles II., Sir John Trevor was appointed master of the rolls by James II. in 1685, and on the meeting of parliament in May of that year he was elected speaker of the House of Commons. In the beginning of 1688 he was made a privy councillor. After the Revolution Trevor obtained the confidence of William III., and was much consulted by him. There is a paper of his addressed to William, published by Sir John Dalrymple ('Appendix,' part ii., p. 80), in which he counselled the dissolution of the Convention parliament. This parliament having been dissolved, and a new one assembled on the 20th of March 1690, Sir John Trevor was a second time elected speaker. He was also appointed one of the commissioners of the great seal. "The speaker of the House of Commons, Sir John Trevor," says Burnet, "was a bold and dexterous man, and knew the most effectual ways of recommending himself to every government: he had been in great favour in King James's time, and was made master of the rolls by him; and if Lord Jefferies had stuck at anything, he was looked on as the man likeliest to have the great seal. He now got himself to be chosen speaker, and was made first commissioner of the great seal; being a Tory in principle, he undertook to manage that party, provided he was furnished with such sums of money as might purchase some votes; and by him began the practice of buying off men, in which hitherto the king had kept to stricter rules." ('History of his Own Time,' vol. iv., p. 74, ed. 1823.)

In the session of 1695 the corrupter of others was discovered to have been himself corrupted, and was expelled from the speakership and the House. It was proved that he had received a bribe of a thousand guineas from the city of London for his support of a bill in which the city was greatly interested. (Burnet, vol. iv., p. 254.) Being speaker, he had to put the question for his own expulsion. "He sat above six hours," says North, "a predecessor in an assembly that passed that time with calling him all to nought to his face; and at length he was forced, or yielded, to put the question upon himself, as in the form, 'As many as are of opinion that Sir John Trevor is guilty of corrupt bribery by receiving, &c.;' and in declaring the sense of the house declared himself guilty. The house rose, and he went his way, and came there no more." ('Life of the Lord Keeper Guildford,' vol. ii., p. 28.)

Sir John Trevor, though thus expelled from the House of Commons, retained the mastership of the rolls, "to the great encouragement," as North remarks, "of prudent bribery for ever after." He had the character of being a man of great talents, though of no principle. There are some anecdotes of him in Noble's 'Continuation of Granger's Biographical History' (vol. i., p. 172), from whom he is known to have been remarkably mean and avaricious. He died on the 20th of May 1717, in London, at his house in Clement's Lane, and was buried in the Rolls' chapel.

His only daughter married Michael Hill, Esq., a privy councillor and member of parliament, and had two sons. The eldest son was created Viscount Hillsborough, and his son Marquis of Downshire. The second son, succeeding to his grandfather Sir John Trevor's estates, took the name and arms of Trevor, and was created, in 1766, Viscount Dungannon.

TREW, CHRISTOPHER JAMES, a celebrated anatomist and botanist, was born at Lauffen, a small town in Franconia, near Nürnberg, on the 26th of April 1695. His father, who was an apothecary, took charge of his education and taught him the principles of botany and anatomy. Trew went to the University of Jena in order to attend the lectures of the faculty of medicine, and was admitted to the degree of doctor in 1716, after five years' study. On his return to his own country he immediately began to practise, and obtained sufficient support to encourage him to continue. He however never formed the resolution of travelling; and accordingly he went through Germany, Switzerland, France, and Holland, and stayed for a year at Danzig. In 1720 he returned to Lauffen, and became a member of the College of Physicians at Nürnberg. The extensive practice that he soon succeeded in obtaining made him so well known to the world, that the Margrave of Anspach granted him the title of physician-in-ordinary and counsellor to the court (Hofrath). He was admitted in 1742 as a member of the 'Académie des Curieux de la Nature,' and was raised in 1746 to the dignity of comes palatii. At this time he united the titles of count palatine, aulic counsellor, and physician to the emperor. He died on the 18th of June 1769, at the age of seventy-four, without ever having been persuaded to leave Nürnberg, notwithstanding the attractive offers that were made to draw him to Altdorf and elsewhere. Assisted by the excellent painter Ehret, he published the beginning of a magnificent work on botany, which was continued after his death by Vogel. With regard to anatomy he conjectured that the mesaraic veins possessed the faculty of absorption; he proved that the pretended salivary ducts of Conch-wirz are simply veins; and he very well demonstrated the differences which are observed in the human body both before and after birth with regard to the organs of circulation. Besides one hundred and thirty-three observations which are to be met with in the 'Commercium Litterarium,' of Nürnberg, and one hundred and thirty-seven which have been inserted in the 'Acta Curiosum Naturæ,' the following are his principal works in anatomy and botany. In the former science he published 'Dissertatio Epistolica, de Differentiis quibusdam inter Hominem natum et nascendum intercedentibus deque Vestigiis Divini Numinis inde colligendis,' 4to, Nürnberg, 1736, with a great number of plates representing peculiarities of the fœtus; 'Epistola ad Alb. Hallerum de Vasis Linguæ salivalibus atque sanguiferis,' 4to, Nürnberg, 1734; 'Tabulæ Osteologicæ Corporis Humani,' folio, max., fine coloured plates, Nürnberg, 1767. In botany his first publication was the description of a flowering American aloe, 4to, Nürnberg, 1727. In 1750 he began to publish one of the most splendid botanical works that has ever appeared, under the title of 'Plantæ selectæ quarum Imagines ad Exemplaria Naturalia manu pinxit G. Dionysius Ehret, Nominibus Propriis et Notis illustravit, C. J. Trew,' folio, Nürnberg. To the incomparable designs of Ehret, Trew added descriptions and remarks and the work appeared in decades, of which seven were completed.

Digitized by Google

In the same year he commenced a similar publication of garden-flowers, entitled 'Amœnissimæ Florum Imagines,' which was carried on to six decades. In 1757 he published 'Cedrorum Libani Historia et Character Botanicum, cum illis Laricis, Abietis, Pinique comparatus,' 4to, Nürnberg, with plates by Ehret; the second part appeared ten years afterwards. He also published a much improved edition of Blackwell's 'Herbal,' in English and German, with an appendix of new plants. Having made the acquisition of the wooden plates left by Gesner, he gave an impression of two hundred and sixteen figures of plants from them, under the title of 'Icones posthumæ Gesnerianæ,' 1748.

TRIBOLO, NICOLO DI, an able sculptor, born at Florence in 1500, was originally brought up to the trade of a carpenter, but becoming acquainted with Sansovino [SANSOVINO], he studied under him. The first work on which he was employed after quitting that master was two statues of sibyls for the front of San Petronio at Bologna, which figures (represented in Cicognara's work) at once stamped his reputation. For the doors of the same church he also executed some bas-reliefs of great merit. The pestilence at Bologna in 1525 caused him to leave that city, but he soon returned to it, and remained till the death of his patron, Bartolommeo Barbazzi, induced him to remove from it, and to go to Pisa, where he was employed by the sculptor Pietrosanta. While at Pisa he was commissioned by Gio. Batt. della Palla, who was a collector of art for Francis I., to execute a statue of Nature, which on being sent to Fontainebleau, was admired as a choice production of art. He employed his talents less honourably when, on Florence being besieged by Clement VII., in 1529, he treacherously furnished that pope with plans and models of the city and its outworks. His services on that occasion obtained him Clement's patronage, who among other things employed him to assist Michel Angelo in the sculptures intended for the chapel of San Lorenzo; and he had begun two figures intended for the tomb of Giuliano de' Medici, one representing Earth, the other Heaven, when he was disabled from proceeding with them by an attack of ague, and hardly was he recovered when the pope's death put a stop to the work. He was afterwards employed by the grand-duke Cosmo I. in laying out the gardens and designing the fountains and statues of the Villa di Castello, near Florence, of which extensive scheme of embellishment a very minute account is given by his friend and biographer Vasari. But although commenced, it was prosecuted but slowly; which Vasari imputes in some measure to Tribolo's own remissness; nor was it ever completed. On pretence of the Palazzo Pitti, Cosmo engaged Tribolo to improve the gardens and decorate them with statues, &c.; but hardly had he commenced his labours when he was seized with an illness that carried him off on the 7th of September 1550. (Vasari, *Vite*; Cicognara, *Storia di Scultura*.)

TRIBONIANUS, a Roman jurist, mainly instrumental in the compilation of the code of Justinian, was a native of Pamphylia, and his father was from Macedonia. His learning was most extensive: he wrote upon a great variety of subjects, was well versed both in Latin and Greek literature, and had a deeply studied the Roman civil law, of which he had a valuable collection in his library: "his genius," says Gibbon, "like that of Bacon, embraced, as his own, all the business and the knowledge of the age." He practised first at the bar of the prætorian prefects at Constantinople, became afterwards quæstor, master of the imperial household, and consul, and possessed for above twenty years the favour and confidence of Justinian. Owing to a popular tumult, he was disgraced in A.D. 531, but he was shortly restored, and continued in office till his death. Tribonianus was appointed by Justinian, with nine other commissioners, to form the first code named after that emperor; and in 531 he was commissioned with sixteen others to compile the Digest of the decisions of the Roman civilians. The Digest, which by an imperial edict was to supersede all previous text-books, and to have the force of law throughout the empire, was promulgated in December 533. [JUSTINIANUS, FLAVIUS.] The revised edition of the Code, published in December 534, was prepared by Tribonianus. Tribonianus died in 545. His manners are said to have been remarkably mild and conciliating; he was a courtier, and fond of money, but in other respects he appears to have been calumniated by his enemies. He was a superior man, and most valuable to Justinian.

TRIBUNUS (*Τριβούνος*), a celebrated physician, who was born in Palestine, and lived in the 5th century after Christ. He is said by Procopius ('De Bello Goth.,' lib. iv. cap. 10) and Suidas (*in voce Τριβούνος*) to have been one of the most skilful of his profession, and is also described as being wise, temperate, and pious. Chosroes, king of Persia, held him in such estimation, that when he was treating about a peace with the emperor Justinian, in 546, he would not so much as make a truce with him, except on the condition that Tribunus, whose skill in physic he wanted and was acquainted with, should be sent to him for one year; and the historian remarks that as soon as this was done a truce was concluded for five years. ('De Bello Pers.,' lib. ii., cap. 28.) Tribunus had formerly cured Chosroes of an illness, for which he was rewarded with great presents, and returned to his own country. After the truce just mentioned he stayed a whole year with Chosroes, who offered to give him whatever he demanded; instead however of asking for money, he desired that some of the Romans who were captives in Persia might be set at liberty. The king at his request not only released those whom he had particularly named, but three thousand others besides, which made the name of Tribunus famous throughout the whole extent of the empire. (Freind, *Hist. of Physic.*)

* TRICOUPI, or TRIKUPIS, SPIRIDION, the leading Greek historian of the Greek War of Independence. When the unexpected death of Lord Byron at Missolonghi in April 1814 produced a sensation throughout Europe, the name of Tricoupi became at once known as that of the author of a funeral oration on the poet, which was composed and delivered at Missolonghi within two days after his decease, and which was printed by order of the Greek government. It was reported at the time that Tricoupi was connected with England by having received his education at Eton. He has since been three times ambassador extraordinary and minister plenipotentiary from Greece to this country, at first in 1833 and 1839, the second time from 1842 to 1844, and the third from 1852 to the present time (August 1857). His great work the 'Ἱστορία τῆς Ἑλληνικῆς Ἐπαναστάσεως,' or 'History of the Greek Insurrection,' is still in the course of publication from a London press, the first volume having appeared in 1853, and the third in 1856, bringing the history up to 1826, when the war was approaching the decisive blow struck at the battle of Navarino. In the 'Prolegomena' the author informs us that he was encouraged to publish the work by a liberal subscription of the Greeks in England. He modestly claims the value to be attached to contemporary history, and the confidence that may sometimes be placed in the impartiality even of one who has been an actor in its scenes, by a reference to the illustrious example of Thucydides. The language in which the work is composed is peculiar, and may be described as composed entirely of ancient Greek words, but the author has not carried his imitation of ancient Greek so far as to introduce ancient inflections and forms of syntax remote from those of the modern language. The tone of the narrative is dignified and impartial with perhaps a deficiency in warmth. On the whole the history must be regarded as a work of great value, which, if it does not become the standard authority on the subject, will at all events be one of the main sources of the future historian. It is to be regretted however that M. Tricoupi's references to the sources of his own statements are extremely scanty. (See SUPPLEMENT.)

TRIEWALD, MARTIN, an eminent Swedish engineer and mathematician, was born at Stockholm in 1691, and educated in the German school of that city. Being intended for a commercial life, he visited England on the completion of his studies, to improve himself in such knowledge as might prove useful to him in his future career; but having met with some disappointments, and seeing little prospect of success, he determined to embark for some distant part of the world. He was deterred from so doing by forming an intimacy with Baron Hiarne, the Holstein minister, who took him into his service as a secretary, an engagement which led to his becoming better known, and gave him an opportunity of acquiring the friendship of several eminent persons, among whom was Sir Isaac Newton. Triewald was subsequently engaged by the proprietor of some coal-pits near Newcastle to superintend the management of the colliery—a situation for which he was qualified by his studies while in London, where he had attended the lectures of Dr. Desaguliers on natural philosophy. In this situation Triewald devoted his attention principally to mechanics, with the title of director of machinery. He next turned his attention to the improvement of the iron and steel works of Sweden, and endeavoured to introduce superior processes in the manufacture of iron. His zeal and diligence in this and other similar pursuits procured him a commission as captain of engineers and inspector of fortifications; and while acting in that capacity he invented various machines, which are still, or were not many years since, preserved in the Academy of Sciences at Stockholm. Several similar memorials of his talent were also deposited with the Academy of Lund. Among the machines to which the latter is said to have given his attention with a view to the introduction of improvements was the diving-bell, on the use of which he wrote a treatise, which was published at Stockholm in 1741: an account of the diving-bell constructed by him and used for several years on the coasts of the Baltic was published in the 'Philosophical Transactions,' vol. xxxix., p. 377. He invented a ventilator for the expulsion of foul air from ships, &c., for which he received honorary rewards from the King of Sweden and from the King of France; and he attended to agriculture and the naturalisation of foreign plants.

Triewald was one of the earliest members and promoters of the Academy of Stockholm: in 1729 he was elected a member of the Scientific Society at Upsal, and he received similar honours from several other learned bodies, among which was the Royal Society of London. He wrote several papers in the 'Memoirs of the Academy of Stockholm' for 1739, 1740, and 1747; and also made several com-

Digitized by Google

munications to the English 'Philosophical Transactions.' Triewald died suddenly, August 8, 1747.

TRILLER, DANIEL WILLIAM, a learned and laborious German physician, was born at Erfurt, the 10th of February 1695. He received his classical education at Zeitz and Leipsig, at which university he afterwards studied medicine. He took his doctor's degree at Halle in 1718, after which he returned to Leipsig and there delivered lectures. In 1720 the town of Merseburg offered him the situation of public physician, which he accepted; in 1730 he made several journeys into Switzerland in the suite of a German prince. Having obtained his dismission at the end of four years, he settled at Frankfurt-on-the-Main, which place he left in 1746, in order to settle at Dresden, with the title of physician to the king of Poland. At last the University of Wittenberg bestowed on him a professorship in 1749, which he filled with distinction until his death. He died at the age of eighty-seven, on the 22nd of May 1782.

Triller was a very learned physician, which makes one regret that he did not publish the edition of Hippocrates to which he devoted a great part of his life, and of which he published a specimen under the title 'De novâ Hippocratis Editione Adornandâ Commentatio, ... Speciminie Loco Libellum Hippocratis "De Anatome," . . . . Commentario perpetuo Medico-critico illustravit, Lugd. Bat.,' 4to, 1728. Abraham Gronovius inserted his notes upon Celsus's 'History of Animals,' in his Greek and Latin edition of this author, published at London, 4to, 1744. The judgment passed upon him by M. Goulin, quoted in the 'Biographie Médicale,' is rather severe, though substantially just. During forty years, says he, Triller filled four vols. 8vo with Latin poems on Medicine: he published dissertations, programs, and a mediocre treatise on pleurisy; he disfigured the excellent Pharmacopœia of Wittenberg by overloading it with quotations and notes, in which he often quotes his own Latin poems, and shows, amidst many childish jeux de mots, that he was neither a druggist nor a physician. The list of his works (which consist almost entirely of monographs and dissertations) occupies two pages in the 'Biographie Médicale;' of these perhaps the following, relating chiefly to medical antiquities, are some of the most interesting:—'De Mo.y Hermetico detecto, cum Reliquis Argumentis ad Fabulam Græcam pertinentibus,' Leipsig, 4to, 1716; 'Apologia pro Hippocrate, Atheismi falso accusato,' Rudolstadt, 4to, 1719; 'Epistola Medico-Critica ad Jo. Freind supra L et II. Hippocratis Epidemicorum, in qua simul agitur de variis ejus Editionibus,' Rudolstadt, 4to, 1720; 'Conjectanea et Emendationes in Aretæum,' first published in the 'Acta Erudit. Lipsiens,' 1728, p. 101, sq., and afterwards inserted in Boerhaave's edition of that author, Lugd. Bat., folio, 1731, Greek and Latin; 'Suscincta Commentatio de Pleuritide ejusque Curatione,' Frankfurt, 4to, 1740; 'De Veterum Chirurgorum Arundinibus atque Hebenis ad Artus male firmos confirmandos adhibitos,' Wittenberg, 4to, 1749; 'De Fame Lethali ex Celsoni Oria Ventriculi Angustia,' Wittenberg, 4to, 1750; 'De Clysterum Nutrientium Antiquitate et Usu,' Wittenberg, 4to, 1750; 'De Specificorum, sic dictorum, Remediorum Dubia Fide et Ambiguo Effectu,' Wittenberg, 4to, 1751; 'De Hippocratis Studio Anatomico Singulari,' Wittenberg, 4to, 1754; 'De Veritate Paradoxi Hippocratici, Nullam Medicinam interdum esse Optimam Medicinam,' Wittenberg, 4to, 1754; 'De Scarificationis Cesalorum Historia, Antiquitate, et Origine,' Wittenberg, 4to, 1754; 'De Remediis Veterum Cosmeticis, eorumque Noxiis,' Wittenberg, 4to, 1757; 'In Locum Plinii de Morbo per Sapientiam Mori,' Wittenberg, 4to, 1757; 'Dispensatorium Pharmaceuticum,' Frankfurt, 4to, 1764; 'De Morbo Coliaco singulari à Celso descripto,' Wittenberg, 4to, 1765; 'Geprufte Inokulation, sin Gedicht,' Frankfurt, 4to, 1766: 'Opuscula Medica ac Medico-Philologica, antea sparsim edita,' Frankfurt, 3 vols. 4to, 1766-72; 'Gedicht von den Veranderungen in der Arzneykunst,' Wittenberg, 4to, 1768; 'De Semilibra Medicina, diverse Pondera Remedia Mone et Hippocrate descriptis atque in se comparatis,' Wittenberg, 4to, 1771; 'De Variis Veterum Medicorum Ocularium Collyriis,' Wittenberg, 4to, 1772.

TRIMMER, SARAH, one of the most popular English writers for the instruction of youth, was born at Ipswich, January 6, 1741. Her father, Mr. Joshua Kirby, who is known as the author of 'Dr. Brooke Taylor's Method of Perspective made Easy,' and 'The Perspective of Architecture,' was a man of exemplary piety, and from him she imbibed, at a very early age, sentiments of virtue and religion which, as she was about fourteen years old, her parents removed to London, where Mr. Kirby became tutor in perspective to George III., then prince of Wales, and subsequently to Queen Charlotte. Owing to this change of residence, Mrs. Kirby was introduced to the society of several eminent persons, among whom was Dr. Johnson, who was much pleased with her mental attainments, and presented her with a copy of his 'Rambler.' Being at this time separated from the society of her young associates, she devoted much time to reading and drawing, and obtained a prize from the Society of Arts. About the year 1759 Mr. Kirby removed with his family to Kew, upon occasion of his appointment as clerk of the works at the palace at that place; and during his residence there, Miss Kirby became acquainted with Mr. Trimmer, to whom she was married at the age of twenty-one. From what time until the period when she became an author, Mrs. Trimmer was almost entirely occupied with domestic duties and with the education of her numerous family. Her literary labours were commenced about 1780, and were suggested by some of the popular works for the young then recently published by Mrs. Barbauld. A small volume, entitled an 'Easy Introduction to the knowledge of Nature,' was the first of the series of popular works published by Mrs. Trimmer. It was followed, in 1782 and the two following years, by six volumes, issued at various times, of 'Sacred History, selected from the Scriptures, with Annotations and Reflections adapted to the Comprehension of Young Persons.' Among Mrs. Trimmer's subsequent publications is a work entitled 'The Economy of Charity,' addressed to ladies, and intended to assist them in the formation and management of Sunday-schools and other charitable institutions. The first edition appeared in 1786, and it was soon followed by two others. After it had remained out of print for some years, the author revised and enlarged it, adapting it to the altered state of the institutions to which it refers, and republished it in 1801. The 'Family Magazine,' a book of instruction principally for cottagers and servants, was carried on for a time by Mrs. Trimmer, about the period of the original publication of the 'Economy of Charity;' and after the magazine was out of print, the principal original papers were collected, and published as 'Instructive Tales.' The 'Adele et Theodore' of Madame de Genlis suggested to Mrs. Trimmer, about 1787, the idea of publishing prints representing events in history, accompanied by descriptions; and in this way she illustrated ancient history, the Old and New Testaments, and the histories of Rome and England. The great imperfections of the old system of instruction in charity-schools led her to write superior books for their use, to which she obtained the sanction of the Society for Promoting Christian Knowledge. The desire to open the eyes of the public to the mischievous character of various publications for the use of children led to the commencement of a periodical work, called the 'Guardian of Education,' containing essays on Christian education, and reviews of books for the young; but, after it had extended to five octavo volumes, the conversion of Mrs. Trimmer in this matter brought on an illness which compelled her to desist from her labour. After her death, an 'Essay upon Christian Education' was published separately, extracted from this work. In 1806 appeared 'A Comparative View of the New Plan of Education,' &c., a work designed to show the danger of too generalising a system of education for the poor, which led to much useful discussion. The last of Mrs. Trimmer's publications was a volume of sermons, selected from the most eminent divines, and adapted for domestic use, under the title of 'Family Sermons.' On the 15th of December 1810, without any previous illness that could alarm her family, she bowed her head and died in the chair which she usually occupied in her study. In 1814 appeared, in two octavo volumes, an 'Account of the Life and Writings of Mrs. Trimmer,' from which work the materials of this notice are derived.

TRINCAVE'LLIUS, VICTOR (Trincavella or Trincavela), was born of a noble family at Venice in 1496. After a careful general education, he went to study at Padua, and thence proceeded to Bologna, where he remained for seven years, and gained much knowledge of Greek, that, even in his pupilage, his teachers used to consult him on questions of difficulty in interpretation. From Bologna he returned to Padua, where he received the diploma of doctor of medicine; and thence to Venice, where he was appointed to a professorship of philosophy, and obtained the highest reputation, not only in that capacity, but also in the practice of medicine. His fame was greatly increased after his return from the island of Murano, whither he had been sent by the Venetian government to take charge of the sick during an epidemic, and where he showed such skill and courage, that when he came back to Venice he was received with a kind of triumph. In 1551, upon the death of Montanus, he was appointed professor of medicine at Padua, with an unusually large stipend, in consideration of the greater number of private practice which he had resigned. He remained at Padua till 1568, when he was sent by the senate to attend a Venetian nobleman who was ill at Udina. His advice was followed by the recovery of his patient, but the fatigue he suffered and the infirmities of age brought on an illness of which he died at Venice, August 21, 1568.

The knowledge of Greek which Trincavellius acquired in Bologna and by subsequent study, enabled him to contribute greatly by his commentaries and lectures to the introduction of the works of the Greek and Arabian physicians into the universities of Italy, in which before his time, medicine had been taught almost exclusively from the writings of the Arabian physicians. In his practice however he is said to have followed the doctrines of the Arabian school. All his medical works were published, with the title 'Opera Omnia,' in two volumes folio, at Lyon in 1586, and at Venice in 1599. The chief interest of his writings lies in the completeness of the view which they afford of the medical practice of the time and of the principles on which it was founded; for they contain many observations and letters by others as well as by himself, and many cases and discussions upon modes of treatment. The chief of them are: 'Dum Quæstiones Medicæ, altera num in liensi adfectibus scanda sit vena, quæ est ad annularem digitum sinistræ manus; altera, utrum in morborum initiis, solum eum materies turget, purgationibus medicamentis uti liceat,' first published at Padua in 1567; and 'Consilia medica post editionem Venetam et Lugdunensem accessione cxxviii. consiliorum locupletata, etc.,' Basel, 1587. In these editions of the 'Opera Omnia'

Digitized by Google

are also inserted Trincavellius' commentaries on the ancient medical writers, viz.: 'Explanationes in Galeni libros de Differentiis Febrium;' 'in priorem librum Galeni de Arte Curandi;' 'Familiares Exercitationes in primam partem secundi libri Prognosticorum Hippocratis et Galeni;' 'Commentarii in Galeni libros de Compositione Medicamentorum;' 'Explanationes in primam Fen quarti Canonis Avicennæ.' He also in 1534 edited the works of Themistius, translated into Latin by Hermolaus Barbarus, and wrote many notes to them, and translated or edited the commentaries of John the Grammarian on Aristotle, in 4 volumes, folio, in 1535; the 'History of the Expedition of Alexander, by Arrian,' in 1535; the 'Manual of Epictetus,' with the 'Commentary of Arrian,' and the 'Sentences of Stobæus,' in the same year, and the 'Poems of Hesiod' in 1537.

(*Life*, prefixed to the 'Opera omnia,' by Laurentius Marucinus; *Biographie Universelle*; Hallæ, *Bibliotheca Medicinæ Practicæ*, t. ii., p. 46.)

TRIPPEL, ALEXANDER, a sculptor of considerable note, was born at Schaffhausen in Switzerland, in 1747, and, at nine years of age, was sent to a relation in London, where he was put to the trade of a musical-instrument maker; but having a decided inclination for the fine arts, he afterwards accompanied one of his brothers to Copenhagen, and there studied sculpture under Professor Wiedewelt, director of the Academy of Arts in that city. Having so employed eight years in Denmark, he went to Berlin; but being there disappointed in his expectations, returned to Copenhagen, and gained several prize medals. He then visited Paris, where he remained about three years, and distinguished himself by a very fine allegorical group representing Switzerland. In 1777 he went to Rome, where he continued to reside till his death, in 1793, practising his art with great success, and with the reputation of being one of the best sculptors of his time, both on account of the noble simplicity displayed in his productions, and the beauty of their execution. He was more particularly successful in bas-reliefs and busts, among which last he executed one of Göthe for the prince of Waldeck, which is spoken of by the poet himself as being in an excellent style. Another of his works is Solomon Gessner's monument at Zürich. A considerable number of his productions are in Russia. Trippel's portrait is prefixed to the 54th volume of the 'Neue Bibliothek der Schönen Wissenschaften.'

TRISSINO, GIOVANNI GIORGIO, was born at Vicenza, of a noble family, in 1478. He applied himself to classical literature, studied the Greek language under Chalcondylas, and became also an elegant Latin and Italian writer. At a mature age he proceeded to Rome, where Leo X. took him into favour, and employed him in several diplomatic missions. He was afterwards employed by Clement VII., who sent him on a mission to Charles V., with whom also Trissino ingratiated himself. Trissino died at Rome in 1550. He wrote:—1, 'Sofonisba,' the first Italian regular tragedy, which however has little merit, and is now forgotten. It was much praised at the time as a novelty, and was performed at Rome with great splendour. 2, 'L'Italia liberata dai Goti,' an epic poem in blank verse relative to the re-conquest of Italy by Belisarius in the reign of Justinian. The poem is weak and dull, and was considered such from its first appearance. 3, 'La Poetica,' a treatise on the poetical art. This is considered as Trissino's best and most elaborate work. 4, 'Ritratti delle bellissime Donne d'Italia.' 5, a comedy, entitled 'I Simillimi,' in imitation of the 'Menæchmi' of Plautus; besides some minor compositions in Italian and Latin. He attempted to introduce new letters into the Italian alphabet, especially to distinguish the two sounds of the *o* and the *e*, and he wrote a letter on the subject to Pope Clement VII., which was published in 1524; but this innovation met with a great and successful opposition. Firenzuola wrote an invective against Trissino's new alphabetical signs. Zeno however attributes to Trissino's suggestion the custom which has since prevailed among the Italians of writing the *v* and the *j* different from the *u* and the *i*, and of introducing the *z* in such words as 'Venezia,' 'grazia,' 'locusione,' &c., which used to be formerly with a *t*, 'Venetia,' &c.

Trissino was a friend and adviser of his countryman Palladio the architect, to whom he imparted his own classical erudition concerning the works of art of the ancients. (Corniani, *I Secoli della Letteratura Italiana.*)

TRISTAN DA CUNHA, a Portuguese naval commander. In 1505 Emmanuel, king of Portugal, nominated Da Cunha viceroy of the Indies, a post which he was prevented by sickness from accepting. After his recovery he was appointed to the command of a fleet of fifteen vessels, of which Alfonso d'Albuquerque's squadron of five, intended to cruise in the Red Sea, formed a part. Da Cunha sailed, in 1506, with his armament from Lisbon, to which he returned in 1508 (?). On leaving Portugal he steered due south towards till he reached about a latitude so high that some of his men perished from the excessive cold. While steering this course he discovered, in lat. 37° 16′ S., the islands which bear his name. His fleet was dispersed by a violent tempest, and the scattered vessels reassembled at Mozambique. Before reaching this settlement Da Cunha had touched at Madagascar, and, attracted by reports which had been spread of great quantities of spices produced in that island, had examined considerable part of its coasts. Not finding the country answer his expectations, he rejoined his fleet at Mozambique and wintered there. In the spring he undertook an expedition against the chief who held Melinda, and chastised the people of Brava for withholding the tribute they had promised to pay to Portugal. The fleet proceeded from the scene of these actions to the island of Socotra, of which he took possession in the name of Portugal. Here Da Cunha and Albuquerque separated: the latter proceeding to the Red Sea, the former to Cochin, where he concerted with Almeida an expedition against Calicut. The enterprise was successful, and Da Cunha returned to Portugal with five ships richly laden. Soon after his arrival he was made a member of the council of state. He does not however appear to have taken any prominent part in public affairs except when he was sent ambassador to Leo X. in 1514.

In 1536 his son Nune died at sea on his return from India, where he had been superseded in the chief command by Noronha. The new viceroy had refused his predecessor even a passage on board of a king's vessel. Nuno sailed in a merchantman, but chagrin preyed on his spirits to such an extent that he died before reaching the Cape of Good Hope, and his body was, at his own request, committed to the sea. Tristan da Cunha expressed his keen sense of the indignities offered to his son by demanding an audience of the king; and on its being granted, appearing, followed by his grandchildren to offer payment for the cannon-balls which had been attached to his son's body in order to sink it. This is the last we hear of him: he appears to have died soon after. An account of Tristan da Cunha's expedition was compiled from his manuscripts by De Barros, and published by order of the king. A translation of this narrative was published at Leyden, by Pieter van der Aa in 1706.

TRITHEN, FREDERICK HENRY, a distinguished Sanscrit and Slavonic scholar, was born in February 1820 in Switzerland, from which country he was removed when a few years old to Odessa, his father having accepted the situation of professor at a Russian college in that city. At Odessa he received an excellent education and had ample opportunities for making himself acquainted with the modern languages, of which French, English, and German were as familiar to him as Russian. At the university of Berlin, where he continued his studies, and took his degree of doctor of philosophy, he was distinguished for his knowledge of Greek, and he studied Sanscrit under Bopp. After passing some time in Poland, where he made himself master of the Polish, he came to England, where, in 1841, he was teacher of modern languages at Rugby, under Dr. Tait, the present bishop of London. He then began to contribute articles, chiefly on subjects connected with Sanscrit literature, to the 'Penny Cyclopædia' and 'Biographical Dictionary' of the Society for the Diffusion of Useful Knowledge.

In 1844 he was appointed one of the assistants in the Printed Book department in the British Museum, and was partly employed in cataloguing the Sanscrit and Arabic works, and those in the Slavonic languages, of which a large stock had then recently been added to the Museum library. In coming to the Museum he had indulged in expectations that his talents and acquirements would probably attract the notice of the Trustees with the effect of bringing encouragement and promotion, and he was deeply disappointed to find that such expectations were futile. He accepted in 1845 the post of private tutor in the family of Prince Chernichev, the Russian minister of war, and left London for St. Petersburg. He returned to England after an absence of about two years, part of which he passed at Constantinople and Cairo, and in 1848 published at London an edition of the 'Maha Vira Charita,' or History of Rama, a Sanscrit drama, by Bhavabhuti. His friends suggested to him to offer himself as a candidate for the professorship of modern European languages in the College of Fort William at Oxford, which was then on the point being set in action. The professor, it was decided, was to be appointed at first for five years only, but with the capability of being re-elected; his post was to be one of influence and authority, the rest of the officials of the institution being placed under his directions, and his salary was to be 400*l.* a year. Dr. Trithen was elected to this post in 1848 in preference to some very able competitors, and contrary to his own expectations, and entered upon his duties with a lecture 'On the position occupied by the Slavonic dialects among the other languages of the Indo-European family,' which was afterwards printed as an essay in the 'Proceedings of the Philological Society of London,' of which he had been a member since 1843. The career of usefulness and honour which now seemed to lie before him was suddenly cut short about the middle of 1850 by an attack of mental aberration in so violent a form that his friends found it necessary to put him under restraint. It was reported at the time that the immediate cause of the disorder was, that a lady to whom he had paid his addresses had married a rival, but a tinge of eccentricity had on some previous occasions been remarked in his conduct. His father came to England and in 1851 removed him to Odessa, where he remained in a hopeless state till April 1854, when the city was under apprehensions of bombardment from the English. Trithen was then removed to a village at a few miles distance, where an unexpected change in his disorder took place and he recovered his mental powers as suddenly as he had lost them, but this was only a "lightning before death." After expressing a strong desire to return to England, it became evident that his bodily strength was failing and he expired on the 27th of April 1854. He left behind him no adequate monument of the extent

Digitized by Google

of the powers which his friends knew him to possess, but his contributions to biographical literature in the Cyclopædia and Dictionary are of a sound and solid character, and his scholarship was not only accurate but remarkably ready. The power which he possessed of conversing with ease in more than one of the Teutonic, the Romanic, and the Slavonic languages qualified him in an eminent degree for the professorship to which he was chosen.

TRIVET, NICOLAS, whose surname is otherwise found Tryvet, Trevet, Trivith, Treveth (a misprint or misinscription), Triveth, Thriveth, and is latinised Trivetus, Trivettus, Treveton, and, by Leland, Tripus (at least he has Tripodis in the genitive), was born in Norfolk about the year 1258, and was son of Sir Thomas Trivet, who is recorded to have twice ridden as one of the Justices in Eyre in the latter part of the reign of Henry III. Trivet mentions his father in his Annals, under the year 1272, by the name of Thomas Treveth. He himself was sent, when a boy, to be brought up in the Dominican convent at London, and in due time he became a monk of that order. Having completed his education at the universities of Oxford and Paris (his residence for some time at which latter place of study he notices in the beginning of his Annals), he was, on his return to England with the highest reputation in all the branches of learning then cultivated, elected head or prior of the religious house in which he had spent his earliest years. This office he appears to have held till his death in 1328.

Leland, Bale, and Pits give long lists of the writings of Trivet, especially Pits, whose catalogue extends to between thirty and forty articles. Among these are annotations or commentaries on various parts of the Scriptures, on certain of the works of St. Augustin, on the 'Problems' of Aristotle, the 'Metamorphoses' of Ovid, the 'Tragedies' of Seneca, on Boethius, Livy, and Juvenal, some astronomical and other scientific treatises, and a number of tracts on religious and moral subjects, all in Latin. Many of these manuscripts still exist in the libraries at Oxford and Cambridge, and elsewhere. A commentary on the treatise of St. Augustin entitled 'De Civitato Dei,' by Trivet and Thomas Valois, or Walleis, was printed by Schöffer, in the second volume of his edition of St. Augustin's works, fol., Mainz, 1473, and again at Toulouse in 1488, at Venice in 1489, and at Friburg in 1494. But Trivet is now only remembered for his Chronicle or History, principally of English affairs, though it embraces a sketch of those of the other kingdoms of Europe, from A.D. 1136 to 1307, or from the beginning of the reign of Stephen to the end of that of Edward I. This work was first printed by Lucas Achcrius (Father Luc d'Achéri), in the eighth volume of his 'Spicilegium Veterum aliquot Scriptorum,' 4to. Paris, 1671: and it is also contained in the second edition of that collection, fol. Paris, 1723. But the best edition commonly used is that published by Antony Hall, under the title of 'Nicolai Triveti Dominicani Annales Sex Regum Angliæ,' at Oxford in 2 vols. 8vo, in 1719, the second of which however (not published till 1721) is occupied with the Chronicles of Adamus Murimuthensis and his Continuator. This edition is from a better manuscript than that which D'Achery used; but otherwise it has no great reputation, any more than Hall's other publications. Trivet however deserves to be well edited; he is a clear, painstaking, and exact recorder of events, and he is the original authority for many particulars relating to his own times, his accounts of which have sometimes been pillaged without acknowledgment by subsequent compilers. His Annals have different titles in the various manuscripts; and there is also in the Library of Magdalen College, Oxford, the manuscript of another historical work of his in French, entitled 'Les Croniques de Frere Nicholo Tryvet escrit à Dame Marie la file moun seygnour le roy Edward le fils Henry.' Of this the first part is an abridgment of the history of the Old and New Testaments; the second part, entitled 'Les Gestes des Apostoiles (that is, the popes), Empereurs, et Rois,' appears to be, in the latter portion of it, nearly a translation of his Latin Annals.

TRIVULZIO, a Milanese patrician family, several members of which figured in the history of their country in civil and military capacities under the Dukes Visconti and Sforza. After the death of Filippo Maria Visconti, in 1447, the Milanese having proclaimed a republic, Erasmo Trivulzio and several of his brothers were among the most strenuous supporters of the popular cause against Francesco Sforza, who aspired to the ducal throne. Sforza having succeeded in taking possession of Milan, not only forgave Erasmo, but appointed both him and his nephew Antonio Trivulzio to the rank of ducal councillors. Two sons of Antonio distinguished themselves in the next generation; one of them, Renato, commanded the troops of Ludovico Sforza against the Venetians and the Grisons, and defeated the latter in Valtellina, for which he was surnamed Helveticus. During the French invasion, he remained faithful to his prince: he died at Pavia, 1498.

GIAN GIACOMO TRIVULZIO, his brother, who has been styled by some writers 'il Magno,' or 'the Great,' was born in 1447. After serving in his youth under Francesco Sforza and his son Galeazzo Maria, he was appointed on the death of the latter member of the regency during the minority of the young Duke Giovanni Galeazzo. But Ludovico Sforza, the duke's uncle, having assumed the supreme power in 1479, Trivulzio was employed by him in the army, and was sent to assist King Ferdinand of Naples against his revolted barons. Ferdinand out of gratitude made him count of Belcastro. Trivulzio was also employed by Pope Innocent VIII. to reduce the town of Osimo, in the March of Ancona. On his return to Milan he found himself slighted by Ludovico Sforza and the courtiers, who mistrusted him on account of his firmness and pride; and from that time he vowed revenge against Ludovico. He returned to Naples and entered the service of Ferdinand. When Charles VIII. of France invaded Naples and drove away the Arragonese dynasty, Trivulzio took service with the French at the time when Ludovico Sforza, in concert with the other Italian states, was fighting against them. He fought bravely for Charles VIII. at the battle of the Taro against the Italian allies. He then followed Charles in his retreat to France. During the negociations which were entered into about that time to settle amicably the affairs of Italy, Trivulzio supported at first the claims of the youthful Duke Giovanni Maria Sforza to the crown of Milan, but the French insisting upon the rival claims of the Duke of Orleans, afterwards Louis XII., Trivulzio gave way, and from that time he seemed to have renounced his country and to have become altogether French. He was made by Charles VIII. Count of Pezénas in Languedoc, and decorated with the order of St. Michel. In 1499 Louis XII. gave him the command of his army in Italy. Trivulzio defeated the troops of Ludovico Sforza, and entered Milan at the head of the French invading army, in September of the same year. Louis XII. then made him marshal of France, marquis of Vigevano and Melza in Lombardy, and captain-general of the duchy of Milan. When Ludovico Sforza again advanced towards Milan, at the head of his Swiss auxiliaries, Trivulzio betrayed him by supported by the French officers, who were jealous of him for being a foreigner, was obliged to leave the city, but he soon after defeated Ludovico at the battle of Novara, in April, 1500. Ludovico was seized in disguise and taken prisoner before Trivulzio, who treated him ungeneously, and upbraided him with reproaches. Ludovico was sent prisoner to France. Trivulzio again took possession of Milan, but he did not retain the command of the duchy, which was given to Cardinal Rohan. In 1509, war having broken out again in Italy, Trivulzio was again employed in the French armies, and commanded the advanced guard at the battle of Agnadello, in which the Venetians were defeated. In 1511 the French Marshal Chaumont having died, Trivulzio succeeded him pro tempore as command-in-chief of the French, and drove Pope Julius II. from Bologna. Soon after Gaston de Foix, duke of Némours, came to take the command of the French forces in Italy, and Trivulzio served under him in the campaign of 1512 against the pope, the Venetians, and the Spaniards. After the battle of Ravenna and the death of Gaston de Foix, Trivulzio was obliged to evacuate Milan, which was entered by Maximilian Sforza; but in the following year the battle of Novara, on the 6th of November, drove the French and Trivulzio with them out of Italy. In 1515 Francis I., who had succeeded Louis XII., put Marshal Trivulzio at the head of a French army for the conquest of Italy. Trivulzio made a brilliant campaign. He crossed the Alps by a new pass, entered the marquisate of Saluzzo, defeated and took prisoner Prospero Colonna, won the battle of Marignano, called "the battle of the giants," against the Swiss, and in a short time conquered the whole duchy of Milan. The Constable de Bourbon was appointed governor, but being recalled in the following year he was succeeded by Marshal Lautrec, while the veteran Trivulzio was living in splendid repose in his own patrimonial house at Milan, and enjoyed great consideration. Lautrec was harsh and suspicious: he oppressed the people of Milan; and Trivulzio having shown some sympathy for his townsmen, Lautrec accused him of secret practices against King Francis. Trivulzio, being informed of this, set out for France in the depth of winter, although he was then nearly seventy-eight years old, and repaired to the Court of Francis I. who refused him an audience. He then placed himself in the king's passage, and said as the king drew near, he begged him to take a man who had fought eighteen battles in his service and in the service of his predecessors. Francis stared at him, and passed on without saying a word. This was too much for the old man; he fell ill, and died at Chartres, in December 1518. His tomb and those of his two wives are seen in the church of St. Nazario at Milan, with the epitaph:—'J. J. Trivultius, Antonii filius, qui nunquam quievit nisi quiescit. Tace.' His name is not in favour among the Italians for having served foreigners against his own countrymen, of which however he is no singular instance in the history of Italy. (Litta, *Famiglie celebri Italiane*; Rosmini, *Vita di Gian Giacomo Trivulzio detto il Magno.*)

A branch of the Trivulzio family, enjoying considerable property and the title of marquis, has continued to exist at Milan to the present day. The marquis, Gian Jacopo Trivulzio, who died at Milan in 1827, was a great patron of learning. From the manuscripts of his rich library at Milan he edited or caused to be edited several important works, such as the 'Johannidos, seu de Bellis Libycis,' a poem of Cresconius Corippus; the 'Lettere ed altre Prose del Tasso,' the 'Lettere Inedite di A. Caro,' the 'Convito' of Dante, and the 'Life of Gian Giacomo Trivulzio,' already mentioned. The 'hâton,' or French marshal's staff, of old Trivulzio is still preserved among the heir-looms of the family.

TROGUS POMPEIUS, a Roman historian who lived about the time of Augustus. He was descended from a Gallic family of the Vocontii; and his grandfather, who likewise bore the name of Trogus Pompeius,

Digitized by Google

had served in the war against Sertorius, and received the Roman franchise, probably together with the name Pompeius, through the influence of Cn. Pompeius. His father's brother had been commander of a division of the Roman cavalry in the war against Mithridates, and his father had served under Julius Cæsar, by whom he was afterwards employed as private secretary. Besides these general statements furnished by Justin (xliii. 5: compare Justini 'Præfatio'), we know nothing about Trogus Pompeius, except that he is called "a man of antique eloquence and a great grave author."

He was the author of a Universal History from the time of Ninus, king of Assyria, down to the year B.C. 5. It bore the title 'Historiæ Philippicæ et totius mundi origines et terræ situs,' and consisted of 44 books. The original work is now lost, and the only means we have of judging of its merit is an abridgment made by Justinus, which is still extant; and from this it is clear that the author founded his work on the best historical authorities that then existed. The name 'Historiæ Philippicæ' was probably chosen because the great body of the work, from book 7 to book 41, contained the history of Macedonia and of the kingdome that were formed out of the great Macedonian empire, as the founder of which Philip was regarded. The usefulness and convenience of Justinus's abridgment, although it is very unequal in execution, has probably been the cause of the loss of the original work. The geography on which Trogus had treated at some length is entirely lost, as the epitomiser has excluded it from his work. Pliny ('Nat. Hist.' vii. 3; xi. 94) and some other writers mention a work by Trogus on animals, which is entirely lost.

(Vossius, *De Histor. Lat.*, p. 96, &c.; Bähr, *Geschichte der Röm. Lit.*, p. 409.)

TROLLOPE, FRANCES, English novelist, is the daughter of an English clergyman, and was born in 1790. In 1809 she married Anthony Trollope, Esq., barrister-at-law, by whose death at Bruges in 1835, she was left a widow. A considerable period of her married life was spent at Harrow, but in 1829 she went to America, where she resided three years. Her experiences of America were given to the world in a work in two volumes, entitled 'Domestic Life of the Americans,' published in 1832, and which was much read, and caused much criticism both in Britain and in America. Having made her debut as an authoress in this manner, Mrs. Trollope continued to write with such industry and rapidity, that she has become perhaps the most voluminous English authoress of the day. A novel in three volumes, entitled 'The Abbess,' and another, entitled 'The Refugee in America,' appeared immediately after the first work; and the following is a list, very nearly complete, of her subsequent works: 'Belgium and Western Germany in 1833,' 2 vols. 1834; 'The Life and Adventures of Jonathan Jefferson Whitlaw, or Scenes on the Mississippi,' 3 vols., 1836; 'Paris and the Parisians in 1835,' 2 vols., 1836; 'The Vicar of Wrexhill,' 3 vols.; 'Tremorvyn Cliff,' 3 vols., 1838; 'Vienna and the Austrians, with some account of a Journey through Swabia, Bavaria, the Tyrol, and the Salzbourg,' 2 vols., 1838; 'The Widow Barnaby,' 3 vols., 1839; 'Life and Adventures of Michael Armstrong, a Factory Boy,' 3 vols., 1840; 'One fault: a novel,' 3 vols., 1840; 'The Widow Married: a sequel to The Widow Barnaby,' 3 vols., 1840; 'Charles Chesterfield, or the Adventures of a Youth of Genius,' 3 vols., 1841; 'A Visit to Italy,' 2 vols., 1842; 'The Blue Belles of England,' 3 vols., 1842; 'The Ward of Thorpe-Combe,' 3 vols., 1842; 'The Barnabys in America, or Adventures of the Widow Married,' 3 vols., 1843; 'Hargrave, or the Adventures of a Man of Fashion,' 3 vols., 1843; 'Jessie Phillips, a Tale of the present day,' 1844; 'The Laurringtons, or Superior People,' 3 vols., 1844; 'The Attractive Man: a novel,' 3 vols., 1846; 'Travels and Travellers, a series of Sketches,' 2 vols., 1846; 'The Robberies on their Travels,' 3 vols., 1846; 'The Three Cousins: a novel,' 3 vols., 1847; 'Father Eustace, a Tale of the Jesuits,' 3 vols., 1847; 'Town and Country,' 3 vols., 1848; 'The Lottery of Marriage,' 3 vols., 1849; 'The Old World and the New: a novel,' 3 vols., 1849; 'Petticoat-Government: a novel,' 3 vols., 1850; 'Mrs. Matthews, or Family Mysteries,' 3 vols., 1851; 'Second Love, or Beauty and Intellect,' 3 vols., 1851; 'Uncle Walter,' 3 vols., 1852; 'The Young Heiress,' 3 vols., 1853; 'The Life and Adventures of a Clever Woman,' 3 vols., 1854; 'Gertrude, or Family Pride,' 3 vols., 1855; 'Fashionable Life, or Paris and London,' 3 vols., 1856. The subjects in this immense list indicate the nature of Mrs Trollope's talent and style, and also the fact that much of her life has been spent abroad and in travel; of late she has resided in Italy—where also chiefly resides her son, Mr. T. ADOLPHUS TROLLOPE, some of whose writings have maintained the literary reputation of the family. Among these are 'A Summer in Brittany,' in 2 vols., published in 1840 under the editorial care of his mother; 'A Summer in Western France,' 2 vols., published in 1841, also under his mother's care; and more recently, and indicating his more matured literary talent, 'Impressions of a wanderer in Italy, Switzerland, France, and Spain,' 1850, &c. [See SUPPLEMENT.]

TROMP, MARTEN HARPERTZOON, the son of a Dutch naval officer, was born at the Briel in 1597. His father, who commanded a ship in the fleet of Admiral Heemskerk, took the boy to sea with him in 1607; and thus young Tromp was present at the engagement between the Dutch and Spanish fleets under the cannon of Gibraltar on the 25th of April of that year, when the former gained a victory and lost their admiral. Not long after, his father, while cruising off the coast of Guinea, was killed in an engagement with an English cruiser, and his ship captured. Young Tromp was detained two years and a half by his captors, and, it is said, was obliged to serve during that time in the capacity of a cabin-boy. For some years after this adventure his career was obscure: he is said to have made several voyages on board fishing and merchant-vessels, but the accounts of this part of his life are vague and the dates confused. In 1622 we find him a lieutenant on board a ship of the line; and two years later Prince Maurice gave him the command of a frigate.

In 1629 the celebrated admiral Peit Hein hoisted his flag in the vessel commanded by Tromp, who was esteemed the ablest navigator in the fleet placed under the command of that veteran to cruise against the Spaniards off the coast of Flanders. On the 20th of August the admiral fell by the side of Tromp in an engagement in which three Spanish ships were captured. About this time Tromp retired from active service in disgust: he imagined himself ill-used in some misunderstanding regarding passes which arose between him and the civil powers. It does not clearly appear whether he had been before this incident an avowed partisan of the House of Orange, or whether irritation against the opposite party drove him into its arms.

In 1637 the Stadtholder, Frederic Henry, created Tromp lieutenant-admiral, and placed a squadron of eleven ships under his command. With this fleet he in the course of 1637 and 1638 took so many ships from the Spaniards that the States presented him with a gold chain, and the king of France conferred upon him the order of St. Michel. In April, 1639, Tromp again set sail to cruise against the Spaniards off the coasts of France and England. After some affairs with English vessels which had Spanish troops on board, the 15th of September, with only twelve ships in company, he had sight of a large Spanish fleet off the coast of Sussex. On the 16th, Tromp, having been joined by five more ships under Cornelis Van Witt, resolved to attack the Spaniards, although they were still much superior to him in numbers. A good many of the Spanish vessels were not superior to him in action. About four in the afternoon the Spanish admiral made sail for the north, and it was resolved in a council held on board Tromp's ship to endeavour to force him to renew the fight on the morrow. Next day the Spaniards accepted this resolution being offered to them. On both, Tromp, having received in the meantime an accession to his force of fourteen vessels, again engaged the enemy, but without any decisive result. It was the 13th of October before he could again come up with the enemy, and by this time both parties were much strengthened. Tromp had been joined by some ships of war from Zeeland and the Maas and ten from Amsterdam, and the new comers brought with them a considerable number of fireships. The Spanish admiral had been joined by fleets from Portugal and Dunkirk. An English fleet, respecting the intentions of which the Dutch were very uneasy, was also in presence. Tromp, reinforced by Hartebeen and Denis, took up his station over against the Spanish fleet; Van Witt and Bakberts were appointed to keep watch over the motions of the English: Everts was opposed to the Portuguese admiral; Catz to the admiral of Dunkirk; and Swinter Barnaby to the Spanish admiral. After a sharp fight the ship of the Portuguese admiral was blown up, a number of other vessels sunk or driven on shore, and Don d'Oequendo obliged to take refuge off Dunkirk with thirteen ships. Thirteen Spanish galleons fell into the hands of the Dutch.

Tromp also rendered important services to his country in the wars of 1640 and 1641; but it was not till Cromwell had seized the helm of government in England that he was again called upon to put forth all his strength. Blake was appointed sole admiral of England for nine months on the 29th of March, 1652, on the prospect of a war with Holland. The first engagement between Blake and Tromp took place off Dover. War had not been declared between the countries at the time; Tromp had been despatched with a fleet of forty sail to be on the alert, and Blake was cruising in the narrow seas. The two commanders appear to have roused their own and each other's passions by a succession of bravadoes, until, losing all control over themselves, they set to fight in earnest. Each in his despatches represented the other as having first begun the action. Night separated the combatants; the English had their ships much cut up, and lost a good many men; but the Dutch lost two ships. It was galling to Tromp to be worsted by a commander new to the sea; and to add to his annoyance he was superseded by Ruyter and Van Witt. The States however soon found it necessary to reinstate him in his command.

On the 29th of November, 1652, he and Blake were again in presence. The Dutch fleet outnumbered the English, but Blake's pride would not allow him to decline the contest: it was a war of passion between the two proud and stubborn nations, and the commanders had made it a personal quarrel. The fight began about two in the morning and lasted till seven in the evening. The Garland and Bonadventure were taken by the Dutch, who also sunk three English frigates and burnt one. Blake, whose remaining ships were much disabled, retired into the Thames. The Dutch had one ship blown up, and the flag-ships of Tromp and Ruyter were rendered unfit for service till they had been repaired. After this success Tromp sailed up the Channel with a broom at his mast-head. Monk and Deanes were joined in commission with Blake. They sailed from Queensborough with sixty men-of-war in February, 1653, and were joined by

Digitized by Google

twenty from Portsmouth. On the 18th they discovered Tromp in the English Channel, who, with a fleet of seventy men-of-war, was affording convoy to three hundred merchantmen. Blake outsailed his comrades, and, attacking his old enemy, was on the point of being roughly handled by a superior force, when Lawson came up and relieved him. A running fight was kept up from off Portland to the sands of Calais. Tromp anchored his convoy there, in water too shallow for the English men-of-war to venture into, and the merchantships escaped by tiding it home. The Dutch lost more ships than the English, but the loss of men on both sides was about equal.

The States exerted themselves to repair their ships, and Tromp was again appointed to the command, which he accepted with reluctance, not being satisfied with the manner in which the fleet was fitted out. In the beginning of January, 1653, the fleet was off the Texel, ready. An engagement took place on the 3rd, at which Blake was not present, and Deane fell. On the 4th Blake came up, and the action was renewed, but no decided advantage was obtained on either side. Blake's impaired health obliged him to quit the fleet, and in Tromp's last battle he was opposed by Monk. The fleets engaged on the 8th of August. The battle lasted two days: but on the whole, the English had the advantage; and the Dutch suffered an irreparable loss in the person of Tromp. He was entombed with great pomp and solemnity at Delft.

Tromp was a thorough seaman; he had learned his profession in the obscure school of adversity. As a warrior it is sufficient praise for him to say that the struggle between him and his kindred spirit Blake was, in so far as they were personally concerned, a drawn battle. He was famously in his manners, and declined very offer to raise him into the ranks of the nobility. He had a large fund of personal benevolence; was proud of no title so much as that of grandfather of the sailors. He had three sons—Marten Harpertszoon, Cornelis (the subject of the following memoir), and Adrian; and a daughter, born soon after his great victory in 1639, and baptised in honour of it by the formidable name of Anna-Maria-Victoria-Harpensis-Trompensis-Dunensis.

TROMP, CORNELIS VAN, second son of the great admiral Marten Harpertszoon Tromp, was born at Rotterdam on the 9th of September 1629. He was educated for the hereditary profession of his family; and at the early age of twenty-one commanded a ship in the squadron despatched, under Dewildt, in 1650, against the emperor of Morocco.

In 1652 and 1653 he served in Van Galen's fleet in the Mediterranean, and distinguished himself in various engagements. After the action with the English fleet off Livorno, on the 13th March 1653, in which Van Galen fell, Cornelis was promoted to the rank of rear-admiral by the admiralty of Amsterdam. He took part in the short sea-campaign of 1656; but after its termination he retired from the service, and continued to lead a private life till 1662. In that year he was sent with ten ships to the Mediterranean to give convoy to a merchant fleet. While there he inflicted a severe punishment upon the Algerine cruisers. From the Mediterranean he was ordered by the States, who were doubtful of the permanence of the peace with England, and apprehensive for the safety of their merchant vessels, on account of the unceremonious manner in which the English were apt to commence a war by capturing them, to supply convoy to a rich fleet expected from India. Tromp met with the merchantmen at sea, and succeeded in bringing them all safely into port.

In 1665 the war actually broke out. Tromp with his squadron was attached to the fleet commanded by Wassenaer Van Opdam. On the 13th of July they encountered the English fleet under the Duke of York. The Dutch were beat, but Tromp distinguished himself by the skill and courage with which he fought his ship, which suffered severely in the action. The scattered remains of the Dutch fleet sought refuge in the Texel. The States by gigantic efforts soon restored it to a condition to take the sea again. Ruyter was absent on an expedition to the coast of Guinea, and Tromp was the only other commander of sufficient eminence to be trusted with the charge. But the party of the Van Witts, at that time in the ascendant, were jealous of Tromp, who had inherited his father's attachment to the house of Orange. He was ultimately named to the command, but Van Witt, Huygens, and Borcel were appointed commissioners to watch and control him. Tromp had gone on board his vessel when Ruyter returned and was appointed to supersede him. Tromp naturally refused under such circumstances to serve in the fleet.

In 1666 he accepted the command of the Hollandia of 82 guns, and joined the fleet with which Ruyter engaged the English fleet under Albemarle, on the 11th of June. After a severe contest, resumed on four successive days, victory declared for the Dutch. Another engagement took place on the 4th of August, and was renewed on the 5th. Tromp had the advantage over the Vice-admiral Smith who was opposed to him; but Ruyter was worsted and only able by the most daring and skilful manœuvres to bring off his shattered ships. Ruyter attributed his defeat to Tromp, who had affected to act an independent part and neglected to support him, and complained of his misconduct. Tromp recriminated, but the States, by the advice of Van Witt, deprived him of his commission, forbade him to hold any communication with the fleet, and placed him under (provisory arrest at the Hague. He was soon after allowed to retire to a country-house he had built at Gravensand and called Trompenburg. It was a mansion ridiculous enough, so constructed as to resemble a men-of-war.

In 1672 he is accused of having manifested an indecent triumph on hearing of the murder of the brothers, Van Witt. In 1673 his commission was restored to him by the stadtholder, afterwards William III. A formal reconciliation took place between Tromp and Ruyter. The chief command of the fleet was given to the latter. In the engagements of the 7th and 14th of June with the allied fleets of France and England, Tromp displayed the most reckless courage; but on both occasions he was indebted to Ruyter for bringing him off when he had engaged himself too far.

A descent on the coast of France was projected by the States, and Tromp was appointed to carry it into execution. He sailed on this expedition from the Texel on the 17th of May 1674: the land forces were commanded by Count Horn. They were disembarked at Belle-Isle, but returned on board without effecting anything, the fortress having been judged impregnable. They were afterwards landed at Noirmoutier, where they merely levied some contributions. Tromp then proceeded to Cadiz, where he took charge of a merchant fleet, and convoyed it in safety to the Texel.

In 1675 Tromp visited England, and was created a baron by Charles II. In 1676 he was despatched with a fleet to assist the king of Denmark in his war with Sweden. The king, for his services, conferred upon him the order of the Elephant, and the rank of count. Count van Tromp, on his return to Holland, was appointed lieutenant admiral-general of the United Provinces, a post left vacant by the death of Ruyter. In 1691 he accompanied the Prince of Orange in the expedition against St. Omer. After this he retired from public life, and continued in retirement till 1691. He was indnced in that year to accept the command of a fleet destined to act against France, but died at Amsterdam on the 21st (some say the 29th) of May, before its equipments were completed. He was interred at Delft. His professional services are beyond question, though in that point of view he was scarcely equal to his father; while both as a man and citizen he was in worth far inferior to him.

TROCHLIN, THEODORE, was born at Geneva in 1709. His father was of noble family, but was ruined in 1721 by some financial speculations, and in 1727 was obliged to send his son to England, where he was placed under the care of his relative Lord Bolingbroke, who sent him to study at Cambridge. Shortly afterwards, he went to Leyden to study medicine under Boerhaave. In 1731, at the conclusion of his medical studies, he settled as a physician at Amsterdam, where he was appointed inspector of hospitals, and married a grandniece of John de Witt. In 1750 he returned to Geneva, and was appointed to a honorary professorship of medicine. In this, though no duties were necessarily connected with it, he delivered lectures, which were very numerously attended. But he obtained his chief renown by his support of the practice of inoculation for the small-pox, the propriety of which was at that time much discussed. He became the most celebrated inoculator of his day. In 1756 he was called to Paris to inoculate the children of the Duke of Orleans, and in 1765 to Italy to perform the same operation on those of the Duke of Parma, who conferred patrician rank upon him, and made him his first physician. In the same year the Duke of Orleans appointed him his physician, and he went to reside in Paris, where he soon obtained a very extensive practice. He was a man of cultivated mind, and of very pleasing appearance and address, qualities which probably, more than any great amount of medical knowledge, gained for him a very high repute, both during his life and for some years after his death. He was especially celebrated for his success in the medical management of women and children; and his practice, as far as it is recorded, seems to have been guided by good judgment and common sense. He was moreover, a kind-hearted and charitable man, devoting a portion in every day to giving advice and money to the poor. He was a member of the chief learned societies of Europe. He died at Paris in 1781.

The only published works which Trochlin has left are two theses—'De Nympha,' Leyden, 4to, 1736, and 'De Colica Pictonum,' Geneva, 8vo, 1757; some observations on Ophthalmia and Hernia, in the 5th volume of the 'Mémoires de l'Académie de Chirurgie;' and an edition of the works of Baillou.

(Condorcet, *Eloge*, in the *Histoire de l'Académie des Sciences de Paris*, t. ii.)

TROUGHTON, EDWARD, the first astronomical instrument maker of our day, was born October 1753, and died at his house in Fleet-street June 12, 1835. He came of a family of respectable yeomanry, and was educated in the firm of his uncle and brother, who carried on business in London as mathematical instrument makers. In 1782 the Troughtons established themselves in Fleet-street; in 1826 Edward Troughton, then the sole survivor, took Mr. W. Simms into partnership. There is a full memoir of Troughton in the monthly notices of the 'Astronomical Society,' vol. iii., p. 149. A handsome subscription bust, by Chantrey, is in the Observatory at Greenwich. In the last years of his life Mr. Troughton was nearly deaf, only hearing by the help of a powerful trumpet; and he never could distinguish colours otherwise than by their brightness,—a ripe cherry and its leaf were to him of the same colour.

The larger astronomical instruments are not the facsimiles of one another, which the smaller and more usual ones are, any more than

Digitized by Google

the great architectural displays of a large city are of the same resemblance to one another which exist in the houses of one and the same street. Each one has its own difficulties, its own objects, and its own way of overcoming the first to meet the second. The great works of Troughton are as well known in the astronomical world as those of Wren in the architectural; but he also applied himself to all the minor branches of his business, and "of him it may be said with truth that he improved and extended every instrument he touched, and that every astronomical instrument was in its turn the subject of his attention." "The instruments which facilitate navigation were particularly objects of interest to Mr. Troughton; and long after his infirmities were an effectual bar to the application of his most esteemed friends, he exerted himself to supply the seamen with well-adjusted and accurate sextants." The articles on astronomical instruments in this work contain frequent references to Troughton's improvements. He wrote one or two articles in the 'Philosophical Transactions,' and several in Brewster's 'Cyclopædia,' &c., references to which will be found in the memoir cited.

TROWBRIDGE, SIR THOMAS. The date of the birth of this eminent commander is not stated in any account we have met with, but he is said to have been the son of Richard Trowbridge, Esq., of Cavendish-street, or Cavendish-square, London. He was brought up in the naval service under Admiral Sir Edward Hughes, in the East Indies, was made a lieutenant in 1777, a commander and post-captain in 1782. After serving with approbation against the French in India, Trowbridge returned to England in 1785 as captain of the admiral's ship; but he was soon afterwards sent with Commodore (afterwards Admiral) Blankett upon a particular service to the Indian seas. On his return from that expedition, in command of the Castor frigate, of 32 guns, with a convoy of merchantmen in charge, he was taken prisoner by the French; but while he and about fifty of his crew were being taken home in the Sanspareil, of 80 guns, they were recaptured, that vessel being taken by Lord Howe in his glorious victory of the 1st of June 1794. Lord Howe gave the command of the Sanspareil to Trowbridge; and soon afterwards the Admiralty appointed him to the Culloden, of 74 guns, which vessel he commanded in the victory of February 14, 1797, under Earl St. Vincent. Having contributed materially to the success of that day, he was sent with eight ships of the line to support Nelson in the Mediterranean. He was with the fleet which chased Bonaparte to Alexandria, but was prevented from taking an active part in the battle of the Nile, August 1, 1798, by his ship running on a reef of rocks in the afternoon of the day, owing to the circumstance that he had no chart of the bay, although the other captains had. This accident observes Brenton, almost broke the heart of the gallant captain; but Nelson assured him that no man could better afford to lose the laurels of the day, and said, in a letter to Earl St. Vincent that his services merited the highest rewards. "I have experienced," he says, "the ability and activity of his mind and body. It was Trowbridge who equipped the squadron so soon at Syracuse; it was Trowbridge who exerted himself after the action; it was Trowbridge who, on Mahoudeo, discovered that I knew in the service would have attempted it; it is Trowbridge whom I have left as myself at Naples; he is, as a friend and as an officer, a unparell." The circumstances being represented to the Admiralty, the officers of the Culloden were soon actually rewarded for their conduct in the battle. In 1799 Trowbridge resigned the blockade of Alexandria, in which he had been engaged, to Sir Sidney Smith, and he was subsequently engaged about the coast of Italy in co-operating with the Russians and Austrians, and reducing fortresses on the sea-coast. Among his achievements in that year was the capture of the castle of St. Elmo, which the Russians had declared it would require three months to reduce, but which he, with his seamen and marines, and a few Russian and Portuguese troops, took in fourteen days. In November 1799 Trowbridge was made a baronet as a reward for his services. He had for some time previously borne the rank of commodore, and on his return to England in 1801 he was selected by Earl St. Vincent to be his captain of the Channel fleet, and was subsequently made a lord of the Admiralty. In April 1804 he was made an admiral, and in 1805 he was sent to the East Indies in the Blenheim, a 90 gun ship reduced to 74 guns, with a convoy of ten merchant vessels. In 1806 the Blenheim ran aground in the straits of Malacca, and was seriously injured; but after repairing her in a temporary manner at Pulo-Penang, Trowbridge sailed in her first to Madras, where he was urged to leave her because of her dangerous condition. His characteristic love of coping with difficulties led him to disregard these warnings, and on the 12th of January 1807 he set sail for the Cape of Good Hope. The Blenheim was last seen on the 1st of February, near Madagascar, in a violent gale, and exhibiting signals of distress; and nothing was ever discovered respecting the fate of her crew. Trowbridge left a son and a daughter, the former, Sir Edward Thomas Trowbridge, being also a distinguished naval officer.

TROY, FRANCIS DE, was born in 1645, and was the son of Nicholas de Troy, under whom he commenced his studies, but at the age of nineteen became a disciple of Nicholas Loir at Paris. At the beginning of his career as an artist he painted historical subjects, which however he partly abandoned, being more inclined to portrait-painting; but on being appointed professor in the Academy, he had to paint, according to custom, an historical picture, and chose for his subject Mercury and Argus, which was so highly admired that he immediately received commissions to paint several, both sacred and profane subjects, among which was a very fine picture for the church of St. Geneviève. He likewise painted for the Duke of Maine a grand picture containing fifty figures the size of life, representing Æneas relating to Dido and her court the history of his adventures.

Louis XIV. sent him to Münich to paint the portrait of the Princess Anne Maria Christina, who was to be married to the dauphin. He received the greatest encomiums for the beautiful colouring and the delicate finishing of this portrait, and especially for preserving the lively and intelligent expression of the countenance. Both the Italian-tine and French writers agree in recommending the style and colouring of De Troy. He died May 1, 1730.

TROY, JOHN FRANCIS DE, born at Paris in 1679, was instructed in his art by his father Francis. When he had made considerable progress he went to Italy, and having studied at Pisa and Rome, returned to Paris, where he acquired great reputation as an historical painter, so that Louis XIV. conferred on him the order of St. Michael, and afterwards appointed him director of the French academy at Rome, a station which he filled with great honour, setting a bright example to the young students, not only by his own industry and devotedness to his profession, but by his private virtues. He died on the 24th of January, 1752.

The portraits of this artist and of his father, painted by themselves, are placed among those of celebrated painters in the Florence Gallery.

TRUEBA Y COSIO, TELESFORO DE, a Spaniard by birth, but a novelist and dramatic writer in the English language, was born at Santander in the north of Spain in 1799. His parents, who were in good circumstances, fixed her residence at Paris, and the son was educated at a Roman Catholic college in England. In 1828 he made his first appearance as an English author with the three-volume romance of 'Gomez Arias,' a tale of the wars of the Moors and Spaniards, which attracted considerable attention as the production of a foreigner, though the 'Sandoval' and 'Don Estevan' of Llance, and 'Doblado's Letters from Spain,' by Blanco White, had preceded it. It was followed in 1829 by 'The Castilian,' a story of the times of Don Pedro the Cruel, and in 1830 by the 'Romance of History—Spain,' forming part of a set of works in which it was intended to illustrate the history of the different countries of Europe by a series of fictitious narratives. In 1831 the author took fresh ground in a line of modern life, 'The Incognito, or Sins and Peccadilloes,' a delineation of manners at Madrid, which was followed by another satirical novel, 'Paris and London.' A musical farce in one act, 'Call again to-morrow,' which met with some success at the Lyceum in 1832, is certainly remarkable as being written by a Spaniard, the whole tone being that of a cockney. 'The Orphanist,' a more ambitious but less successful attempt at regular comedy followed, then 'Mr. and Mrs. Pringle,' 'The Man of Pleasure,' &c. As a historian Señor de Trueba wrote for Constable's Miscellany a 'Life of Hernan Cortes,' 1829, and a 'History of the Conquest of Peru,' 1830; but in both subjects he had the misfortune to be followed by Prescott, whose finished pictures have caused these sketches to be utterly forgotten. During the production of these works the author resided in England, the prefaces to most of his romances are dated from Richmond in Surrey. In 1834, at the early time of the 'Estafeta' was to be returned, he was chosen a member of the Cortes, and appointed by that body one of its secretaries. Two pieces which he wrote for the Spanish stage, 'El Veleta,' or the 'Weathercock,' and 'Cesarse con 60,000 duros,' which may be rendered 'The Marriage of Money,' had considerable success. Being attacked by illness, he left Spain for Paris in search of advice, and died in that city on the 4th of October 1835.

TRUMAN, REV. JOSEPH, B.D., an English theological writer of the 17th century, whose works have been long neglected and generally forgotten, and of whose personal history very little is known, was born in April 1631, probably at Gedling in Nottinghamshire, though another account says at Stoke in the same county. His family was of respectable station, and his father appears to have at one time filled some public office. He himself, after beginning his school education at Gedling, under the minister of the parish, Mr. Lawrence Palmer, who was a person of considerable learning, was removed to the free-school at Nottingham, and thence proceeded to Cambridge, where he was admitted a pensioner of Clare Hall. All that is known of him after this is, that having finished his studies at the university, he was inducted into the living of Cromwell, that he was ejected for refusing to read the Book of Common Prayer soon after the passing of the Act of Uniformity (in 1662), that he then resided for some years in Mansfield, and that he died after a short illness in the house of a friend at Sutton in Bedfordshire on the 29th of July 1671.

Truman is the author of three small theological treatises: 'The Great Propitiation,' published in 1669; 'An Endeavour to correct some prevailing opinions contrary to the Doctrine of the Church of England,' in 1671; and 'A Discourse of Natural and Moral Impotency,' the same year. All these performances are held by his admirers to display extraordinary powers of ratiocination; but the last is looked upon as his best work. A new edition of it, with a 'Biographical Introduction by Henry Rogers,' was published at London, in small octavo, in 1834; and whatever may be thought of its right to the rank claimed for it by its modern editor, it certainly deserved to be

Digitized by Google

rescued from oblivion, were it only as a contribution to the history of English metaphysical theology. It is described by Mr. Rogers as "being the first systematic and elaborate attempt, not so much to establish the doctrine of man's moral inability (still less the doctrine of moral necessity generally), as to illustrate the wide distinction between that and natural inability, to reconcile the former with the idea of human accountability, and to vindicate it from the pernicious consequences which some of its advocates, and all its opponents, would fain attach to it."

Truman was a hard student, and was distinguished for his profound and varied learning. One of his favourite studies was English law; he is fond of introducing a legal illustration in his metaphysical expositions and deductions. With all his sharpness of intellect however it is admitted that he had very little perception of anything out of the province of mere logic. His style is singularly rugged and inartificial, to the extent of being sometimes nearly inexplicable upon any syntactical principle. Though puritanical in the general complexion of his theology, Truman is said to have regarded many of the points upon which his party took their stand in opposition to the established church as sufficiently insignificant; he evinced his conscientiousness by the sacrifice he made in giving up his living rather than comply with all the demands of the law; but after he thus became what was called a nonconformist, although when opportunity served he was always ready to preach to large crowds in the open way of kindling the affections, we are told, usually to attend the services of the establishment; nor did he drop his intimacy with any of his old friends among the clergy. Among his particular associates are mentioned, besides Baxter, Stillingfleet and Tillotson, the latter of whom had been his predecessor at Clare Hall. Some particulars we are indebted for also to the memoir of Truman by Mr. Rogers, who has collected all that is to be found respecting him in Calamy's 'Account of the Ejected Ministers;' Nelson's 'Life of Bishop Bull;' and other sources of information.

TRUMBULL, JOHN, an American painter, the son of the governor of Connecticut of that name, was born at Lebanon, Connecticut, on the 6th of June 1756, and educated at Harvard University, where he graduated in 1772. He early turned his attention to art, but the revolution occurring, he was led to take an active part in the war of independence, and he became adjutant of the first regiment raised in Connecticut, was afterwards aide-de-camp to Washington, and received the rank of colonel; but fancying his claims slighted, he threw up his commission and quitted the army in 1780 he proceeded to England, with a view of perfecting himself as a painter under West, in order to carry into execution a favourite design of painting a series of pictures of the principal heroes and events of the revolutionary war. West received him kindly; but Trumbull fell under the suspicion of the government, was arrested, and only released on giving security that he would immediately leave the country. He returned to America in 1782. When peace was firmly established he came back to England (November 1783), and renewed his studies under West. He did not return to America till 1786. He completed some of his series of revolutionary pictures, and several of them have been engraved. The first of this series painted by Trumbull was the so-called 'Battle of Bunker's Hill,' in which General Warren was killed; it was engraved by the celebrated J. G. Muller, at Stuttgard, in 1786. The duke of General Montgomery, another of this series, was engraved by the Danish engraver F. Clemens, in London, in 1795: it is considered Clemens's finest plate. G. Kotterlinus, at St. Petersburg, commenced copies of both these plates, but their completion was interrupted by death in 1803. Others of the series are the four large pictures now in the rotunda of the Capitol at Washington—'Signers of the Declaration of Independence,' 'Surrender of Burgoyne,' 'Surrender of Cornwallis,' and 'Washington surrendering his Commission.' Valentine Green scraped in mezzotint a picture by Trumbull of Washington standing on the sea-beach with a black in the back, round holding his horse; and likewise a portrait of Washington. A very fine standing half-length portrait of Washington was engraved by J. Cheesman after Trumbull. There are other plates by other engravers after this painter. But Trumbull did not apply himself solely to painting. For awhile, after completing the studies for his revolutionary pictures (1792), he acted as private secretary to Mr. Jay. Afterwards he was engaged in commercial pursuits in Paris; and between 1796 and 1804 he was employed as a commissioner to the British government for carrying out the provisions of an article in Jay's treaty. He then re-commenced the practice of his profession in New York, but not meeting with the success he anticipated, he again came to England, where he remained till 1815. He then went to America to paint the four pictures for which he had received commissions from the United States government, and on which he was engaged for some years. In 1817 he was elected president of the American Academy of the Arts, an office he held for many years. Before his death he presented his pictures to Yale College, and a building has been erected for them at New Haven called the Trumbull Gallery. He died at New York, on the 10th of November 1843, aged eighty-seven.

TRUMBULL, SIR WILLIAM, a diplomatist and statesman of some eminence, and during the reign of William III. for some time secretary of state, was born in 1636, at Easthampstead in Berkshire. He was the son of William Trumbull, Esq., of Easthampstead, who represented Berkshire in parliament; and his grandfather, who had the same names, was one of the clerks of the privy council in the reign of James I., and envoy to the court of Brussels from that king and from Charles I. He was brought up at a school at Oakingham, and afterwards went to St. John's College, Oxford, but subsequently became a fellow of All Souls' College. He took the degree of LL.B. in 1659, and of LL.D. in 1667. In the interval between these two degrees he had travelled in France and Italy. After taking the degree of LL.D. he practised as an advocate in Doctors' Commons, and enjoyed an extensive practice. In 1671 he was appointed chancellor and vicar-general of the diocese of Rochester, and in 1672 he obtained the reversion of the clerkship of the signet, then held by Sir Philip Warwick, which came to him on the death of the latter in 1682. In 1683 he accompanied Lord Dartmouth to Tangier in the capacity of judge-advocate of the fleet; and on his return to England he was knighted, and in November 1685 sent as envoy extraordinary to the court of France.

"He was sent envoy to Paris," says Burnet, "on Lord Preston's being recalled. He was there when the edict of Nantes was repealed, and saw the violence of the persecution, and acted a great and worthy part in harbouring many, in covering their effects, and in conveying over their jewels and plate to England, which disgusted the court of France, and was not very acceptable to the court of England, though it was not then thought fit to disown or recall him for it. He had orders to put in memorials complaining of the invasion of the principality of Orange, which he did in so high a strain, that the last of them was like a denunciation of war." Trumbull was recalled from Paris in 1689, when James II. had thrown off the mask from his design to establish Popery in England with the aid of France; and he was then sent by James II. as ambassador extraordinary to the Ottoman Porte. He remained at Constantinople until 1691, the revolution having occurred while he was there. On his return to England he was appointed a lord of the Treasury, and in May 1695 secretary of state. He was also governor of the Turkey Company. He resigned the secretaryship of state in December 1697, and retired to Easthampstead to pass the remainder of his days in quiet. At the time of his withdrawal from public life, he represented the University of Oxford in parliament. Lord Hardwicke says, in a note to Burnet's 'History of his Own Times' (vol. iv., p. 366, ed. 1833), "Secretary Trumbull resigned about this time in disgust with the lords of the regency, who, he said, would not used him more like a footman than a secretary." A similar account of the reason of his retirement is given in the 'Shrewsbury Correspondence.'

Sir William Trumbull occupies a place in literary as well as political history, and has the distinction of having aided Dryden with his translation of the Æneid. He was engaged in translating the 'Æneid,' and of having been the first to recommend to Pope the translation of Homer. Dryden thus gracefully mentions him in his 'Postscript to the Æneis:'—"I must also add, that if the last Æneid shine among its fellows, it is owing to the commands of Sir W. Trumbull, one of the principal secretaries of state, who recommended it as his favourite to my care, and for his sake particularly I have made it mine; for who could confess weariness when he enjoined a fresh labour?"

Pope's father lived at Binfield in Windsor Forest, in the immediate neighbourhood of Sir William Trumbull, and there Easthampstead; and here, as is well known, Pope's boyhood and commencing manhood were passed. The old retired statesman and the young poet were constant companions: they read the Greek and Roman authors together, and were in the habit of riding with one another three or four times a week, and latterly every day. The first of Pope's pastorals was addressed to Sir W. Trumbull. When Pope went to London in 1705 he corresponded with "the amiable old statesman." Some of the letters which passed between them are printed in Pope's works (Bowle's edition, vol. viii.). Pope in 1709 published some specimens of translations from Homer, which he had previously communicated in manuscript to Sir William Trumbull. The latter wrote to him (April 9, 1705), "I am confirmed in my former application to you, and give me leave to repeat it upon this occasion, that you would proceed in translating that incomparable poet, to make him speak good English, to dress his admirable characters in your proper, significant, and expressive conceptions, to make his works as useful and instructive to this degenerate age as he was to our friend Horace, when he read him at Prænestæ:

> 'Qui quid sit pulchrum quid turpe, quid utile, quid non.'"
>
> (Pope's 'Works,' Roscoe's edition, vol. viii., p. v.)

When Pope visited Binfield to bid it adieu before taking up his residence at Twickenham, he found Sir William Trumbull dying, and parted from him, as he wrote to his friend Mr. Blount, "as from a venerable prophet, foretelling with lifted hands the miseries to come, from which he is just going to be removed himself." Sir William Trumbull died on the 14th of December 1716, aged eighty years. Burnet says of him, that "he was the eminentest of all our civilians, and was by much the best pleader in those courts, and was a learned, a diligent, and a virtuous man." Pope's laudatory character of him in his 'Epitaph on Sir William Trumbull' is well known.

TRURO, THOMAS WILDE, FIRST LORD, the son of a respectable

Digitized by Google

solicitor in Warwick-square, London, and Saffron Walden, Essex, was born in 1782, and received his early education at St. Paul's School. He was articled as a clerk in his father's office, and having been admitted an attorney in 1805, practised for some years as partner in the firm of Wilde and Knight, in Castle-street, Falcon-square. In 1817 he was called to the bar, and went the Western Circuit. Good fortune attended him: he speedily rose to eminence as an advocate, and became leader of his circuit. In 1824 he was made a serjeant-at-law, and three years later a king's serjeant, and a vast accession of business was the consequence. Under Lords Denman and Brougham and was engaged as a junior in the defence of Queen Caroline, which tended materially to increase his professional reputation, though it retarded his advancement during the reign of George IV. In 1831 he was elected member for Newark, against the influence of the late Duke of Newcastle, and though thrown out in December 1832, he regained his seat in January 1835, and retained it, as colleague with Mr. W. E. Gladstone, until 1841, when he was elected for Worcester. In 1839 he succeeded Sir R. M. Rolfe, now Lord Cranworth, as solicitor-general, and became attorney-general in 1841. In 1846, on the return of the Liberal party to power under Lord John Russell, Sir Thomas Wilde was again nominated attorney-general, but within a week afterwards was raised to the bench as chief-justice of the Common Pleas on the death of Sir N. Tindal. In July 1850 he received the great seal, and at the same time elevated to the peerage as Lord Truro. He resigned the chancellorship on the retirement of his party from office in February 1852. The most memorable causes in which he was professionally engaged before his elevation to the judicial bench were the trial of Queen Caroline, alluded to above, and the trial of the late Mr. O'Connell in 1844, to whom he gave his services without fee or retainer to obtain a reversal of the decision of the law courts of Dublin. In parliament his name is most permanently connected with the great case of Stockdale v. Hansard, which involved the constitutional question whether the House of Commons had the right of publishing its reports without rendering its officers thereby liable to proceedings in the courts of law. On this question Sir Thomas Wilde took the affirmative side, and supported it by a speech of more than three hours' duration, which Dr. Lushington pronounced to be "the most consummate and masterly triumph of legal reasoning ever known." The matter at issue, as is well known, was eventually compromised by the introduction of a bill by Lord John Russell, formally conferring upon the House that power which it had hitherto claimed and exercised. As a judge, the reputation of Sir Thomas Wilde stood high: he was patient, painstaking, and impartial in the highest degree. As lord chancellor, his judgments were regarded with respect; and though most of the cases brought before him were appeals from the vice-chancellors' courts, whose decisions he frequently reversed, yet of his own decisions as a judge only one was reversed on appeal. The chief fault laid to his charge as lord chancellor was an over-anxious and too elaborate dwelling on all the points in an argument, without due regard to their relative importance. Among other important public questions which were decided by him in this capacity was that of the Insolvent Church-rates. Lord Truro was also eminent as a legal reformer. Whilst holding the chancellorship he appointed a commission to inquire into the jurisdiction, pleading, and practice of the court, the result of which was that a bill was introduced and carried for the abolition of the twelve masterships, a step which reduced the annual fees of the court by 20,000*l*. By another act also, mainly promoted by Lord Truro, some other offices were consolidated or abolished, and the practice of receiving fees by various individuals was supposed to such an extent that the estimated saving to suitors is 60,000*l*. a year. Among the other legal reforms effected by Lord Truro was the appointment of the lords-justices to relieve the chancellor of some of his judicial labours, and so to enable him to give his attention to his duties in the House of Lords, and as a member of the Cabinet without interruption to the public. To him also the legal profession owes the reform of the Common Law procedure, the professed object of which is to sweep away the antiquated technicalities upon which legal decisions were too frequently based, and to insure that they shall henceforth be given according to their own respective merits, "according to the very right and justice of each case," as is more fully explained in Finlason's 'Summary of the Common Law Procedure Act,' 1854. Lord Truro was twice married: his second wife, who survives him, was Mademoiselle Augusta Emma d'Este, daughter of H.R.H. the late Duke of Sussex. He died at his seat, Bowes Manor, Southgate, Middlesex, on the 11th of November 1855, and was buried by the side of the late Sir Augustus d'Este, in the Old Minster church at Ramsgate.

TRYPHIODORUS (*Τρυφιόδωρος*), a Greek grammarian and a poet, who was a native of Egypt, and appears to have lived in the 5th century, about the reign of the emperor Anastasius. Particulars about his life are not known. We possess by him an epic poem of 691 verses on the destruction of Troy, which bears the title *Ἰλίου Ἅλωσις* (Excidium Trojæ). The narrative of this poem is exceedingly dull, and so much like a mere chronicle of events, that some critics have thought the work to be only a sketch or outline drawn up by the author with the intention of working it out into a longer poem. But there is no reason for thinking that the author was capable of doing much better things. This poem was first published, together with the works of Q. Smyrnæus and Colluthus, by Aldus, at Venice, without date. The best modern editions are those of J. Merrick, 8vo, Oxford, 1741, which contains a Latin translation in verse, by N. Frischlinus, and notes by various commentators; of Th. Northmore, 8vo, London, 1791; and lastly, that of F. A. Wernicke, 8vo, Leipzig, 1819: this is the best critical edition, and contains most of the notes of former editors.

Besides this poem, which is the only work of Tryphiodorus now extant, he wrote various others, such as on the 'Battle of Marathon,' on the 'Story of Hippodamia,' and on the 'Sufferings of Odysseus.' This last poem, which is called '*Οδύσσεια Παθημάτων*, is a strange specimen of the low state of poetical taste at that time. The author, according to Eustathius ('Ad Odyss.,' p. 1379), contrived to compose this poem without making use of the letter *s*. (Compare Suidas, *s. v. Τρυφιόδωρος.*)

TRYPHONI'NUS, CLAUDIUS, a Roman jurist, who lived under Septimius Severus and his son Antoninus Caracalla. He wrote notes on the works of Cervidius Scævola, and twenty-one books of Disputations, from which there are excerpts in the Digest. There is a rescript of Antoninus to him (Cod. 1, tit. 9, s. 1), but whether in his capacity of governor of Syria or as the agent of the Fiscus is uncertain. He is cited once by Paulus.

TSCHIRNHAUSEN, EHRENFRIED WALTHER VON, a celebrated German mathematician and philosopher of the 17th century, was descended from a noble family, and born at Kieslingswald in Upper Lusatia, April 13, 1651. Having received in his father's house the elements of a scientific education, and evinced considerable inclination for mathematical pursuits, he was sent at seventeen years of age to the University of Leyden in order to complete his studies. Here he became intimately acquainted with the Baron de Renaud, who, being appointed to the command of a regiment in the war which, in 1672, broke out between France and Holland, induced the young Tschirnhausen to accompany him as a volunteer. After serving eighteen months in the Dutch army, his father recommended him to travel, and he spent several years in visiting England, France, Sicily, and Italy, returning to Kieslingswald through Germany, where he passed some time at the court of the Emperor Leopold. During his absence from home he found means to collect much information respecting the subjects of natural philosophy, and it appears to have been then that he investigated the nature of the curves which are called caustics, and which have since borne his name.

Dr. Barrow, in his optical lectures, had previously described the manner in which the rays of light after one reflection from the surface of a reflecting mirror, but M. Tschirnhausen was the first who discovered the curve to which the reflected rays are tangents. In a paper which was read before the Académie des Sciences at Paris in 1682, he showed that the caustic formed by parallel rays when reflected from the concave surface of a hemisphere is an epicycloid, but he fell into a mistake in determining the relation between its abscissæ and ordinates. The properties of this curve were afterwards accurately investigated by M. De la Hire and Bernoulli.

On his return to his native place he formed the project of making burning lenses of great dimensions, but there being at that time in Saxony no establishment for executing works of magnitude in glass, Tschirnhausen obtained from the elector permission to form one, and, after much searching, two others were soon afterwards found. The first lens which he cast and ground was of the kind called double convex. It was more than one foot in diameter, and its focal length was 32 feet. He appears to have used it as a telescope, for he states that, without either a tube or an eye-glass, he had seen through it the whole of a town at the distance of about a mile and a half (about seven English miles). Nearly at the same time he made a double-convex burning-glass, 3 feet in diameter and 12 feet in focal length, which weighed 160 pounds. The diameter of the sun's image in its focus was about 1¼ inch, and by means of a small lens placed between the former and the object the diameter of that image was reduced to about one-tenth of an inch. The effects produced by this mirror are stated in the 'Mémoires de l'Académie' (1699), and from the account it appears that it was capable of burning wood when green, and even when wet; it melted thin plates of iron, and vitrified slate and other stones. This mirror was purchased by the Duke of Orleans, then regent, and given to the academy. Tschirnhausen afterwards made a similar lens, which he presented to the Emperor Leopold, and this prince in return would have created him a baron of the empire. The philosopher however declined the honour, accepting only a portrait of the emperor and a chain of gold. He also made a concave mirror of thin copper, about 4½ feet in diameter and 12 feet in focal length, and the effects produced by it, which were similar to those produced by the glass lens, are described in the 'Acta Eruditorum,' Lipsæ, 1687. It is stated that the rays of the moon, being concentrated by the lens or by the mirror, though they produced a brilliant image, gave no sensible degree of heat; and the like circumstance is related of the lunar rays when concentrated by the great lens which was executed in 1692 by Mr. Parker in London.

The principles of the infinitesimal calculus were, in the time of Tschirnhausen, not generally admitted among mathematicians, and the Saxon philosopher was one who gave the preference to the more elementary processes of the ancient geometry in researches relating to the properties of curves. Entertaining the opinion that the most

Digitized by Google

simple methods are the most correct, he concluded that the modern analysis might be dispensed with; and in 1701 he read in Paris, at a meeting of the Academy, a 'Mémoire' containing rules for finding the tangents to certain curves, together with investigations of their rectifications and quadratures, agreeably to the method followed by the ancients; that is, without the consideration of infinitesimal quantities. At the commencement of the following year he read a second 'Mémoire' on the like subjects, with relation to those curves which are called mechanical, and in this he affirms that the process which he used was applicable to curves of all kinds. The process excited some notice at the time, and the observations made on it by Bernoulli, L'Hôpital, and other mathematicians will be found among the Mémoires which have been inserted in the volumes published by the academy, but it now possesses only an historical interest.

In 1686 and 1687 Tschirnhausen published at Amsterdam two philosophical works, of which the first is entitled 'Medicina Corporis,' and in this rules are delivered for preserving health. The other is called 'Medicina Mentis.' It contains a development of the perceptions of pleasure and pain in the mind, and of external objects by means of the senses, but it constitutes chiefly a course of logic for persons engaged in the study of the mathematical sciences. In this work Tschirnhausen mentions the properties of a curve line which has since borne his name. It is formed by dividing the quadrantal arc of a circle, and the radius passing through the extremities, into a like number of equal parts, and drawing lines through the points of division in each respectively, parallel to one another. The points of intersection are in the curve line.

Tschirnhausen rendered considerable service to his country by the discovery of a method of making porcelain similar to that which is obtained from China. From this discovery arose the manufacture of the Saxon porcelain.

He died in October 1708, and was buried with pomp at one of his own estates in Saxony, the king of Poland (Augustus), from respect to his memory, defraying the expenses of the funeral.

TSCHUDI, GILLES (in Latin *Aegidius Tschudius* or *Tschudius*), is regarded as the father of Swiss history. He was born in 1505, in the town of Glarus, whose his family, which ranked among the nobility of the canton, had been long established. One of his early instructors was Zwinglius, afterwards the eminent reformer; and at a later date he studied at Basel under Glareanus, the poet and scholar of Erasmus. Having accompanied Glareanus to Paris, he remained in that city till 1530, when he returned home; and the rest of his life, with the exception of the space from 1541 to 1549, when he is stated to have been employed in the service of France (but in what capacity is not explained), was spent in filling the successive offices of the magistracy in his native state, which he rose to be Landammann, or governor, in 1558. Tschudi employed the authority of his station and his personal influence in moderating the heats excited among his countrymen by the religious contentions of the time, but remained himself a member of the Roman Catholic Church till the death in 1572. He is the author of numerous works, the greater part of which however still remain in manuscript. In 1538 (not 1530, as stated in the 'Biographie Universelle') appeared in a small quarto volume at Basel, a geographical account of Switzerland, in Latin, by Tschudi, under the title of 'Aegidii Tschudi Claronensis, veteris Helvetiae situm, de prisca ac vera Alpina Rhaetia, cum caetero Alpinarum gentium tractu, nobilis ac erudita ex optimis quibusque ac probatissimis autoribus Descriptio.' But this is only a translation of Tschudi's work, which was probably written in German, and which does not appear to have ever been printed. The translator was Sebastian Münster, who dedicated his performance to Tschudi himself in a very encomiastic address, at the end of which he seems to intimate that he was then a very young man ('nodius est bodie in orbe Munsteri nomen, quam nt ob meam infantiam à studiosis veniam petere anxie contendam'). Perhaps this was a son of Sebastian Münster, the celebrated Hebraist, who himself was nearly fifty by this time. A second edition of the book appeared, also in quarto and at Basel, in 1560, in the title of which (otherwise somewhat varied) we have a peculiar spelling of the author's name—'autore Aegidio Schudo Claronense' (*sic*). Appended to this edition is a table of latitudes and longitudes, by the learned Conrad Lycosthenes, of Ruffach (Rubeaquensis). Another work of Tschudi's, which the 'Biographie Universelle' says was published in his lifetime, but not by himself, is described as 'Carte de la Suisse,' 1560 and 1570, of what being, we suppose, an atlas of Switzerland, but where published, or in what form or language, does not appear. For an account or list of Tschudi's numerous writings still remaining in manuscript, and dispersed in the libraries of Zurich, St. Gall, Glarus, &c., we must refer to his article, by Usteri, in the 'Biographie Universelle,' which professes to be compiled from a German Memoir of Tschudi, by Ildephonse Fuchs, published at St. Gall, in 2 vols. 8vo, in 1805. It is however impossible to make out from that article in what language some of these writings are composed. The most important work of Tschudi's that has been printed is his Chronicle of Switzerland from A.D. 1000 to 1470, which was published at Basel, in 2 vols. folio, in 1734 and 1736, by Dr. Johann Rudolff Iselin (not J. R. Daelin, as in 'Biog. Univ.'), under the title of 'Aegidii Tschudii, gewesenen Landammanns zu Glarus, Chronicon Helveticum.' This work, which is in German, enjoys the highest reputation and authority as one of the main foundations of Swiss history. A sequel, coming down to 1564, is said to be extant in manuscript. Another treatise of Tschudi's, which the 'Biographie Universelle' calls his classic work, is said to have been published at Constance in 1758, by Jacques Gallati, under the title of 'Description de l'ancienne Gallia Comata,' but in what language it is written is not stated.

• TSCHUDI, JOHANN JAKOB VON. [See vol. VI. col. 1028.]

TUCKER, ABRAHAM, a distinguished metaphysician, was descended from a Somersetshire family, and was born on the 2nd of September 1705. His father was an eminent merchant in London, who amassed a large fortune, and died in his son's infancy, leaving him to the guardianship of a maternal uncle, Sir Isaac Tillard. "Of the memory of this relation," says Sir Henry Mildmay, in his biographical sketch prefixed to his edition of the 'Light of Nature Pursued,' "Mr. Tucker to the latest hour of his life never failed to speak with extreme affection and gratitude, frequently observing that he was indebted for every principle of honour, benevolence, and liberality which he possessed to the indefatigable pains and bright example of his uncle." Tucker was sent to a school at Bishop's Stortford, and in 1721 entered as a gentleman commoner at Merton College, Oxford. During his stay at Oxford he devoted himself chiefly to metaphysical and mathematical studies, but found time also to make himself master of the French and Italian languages, and to cultivate a natural taste for music into a considerable skill. About 1723 he went to the Inner Temple, "where for some time," Sir Henry Mildmay informs us, "he applied very closely to the law, in which he acquired such a degree of knowledge as enabled him to conduct with advantage the management of his own affairs, and frequently to render essential service to his friends and neighbours; but his fortune not requiring the aid of a profession, to the pursuit of which neither his constitution nor his inclination was adapted, he was never called to the bar. While he continued at the Temple, he commonly passed the vacations in tours through different parts of England and Scotland, and once made a summer excursion into France and Flanders."

In 1727 Mr. Tucker purchased Betchworth Castle, near Dorking, with an extensive estate attached. He immediately applied himself to the study of agriculture, and, "with his usual industry, he committed to paper a great variety of remarks which he either had made himself, collected from his neighbours and tenants, or selected from different authors, both ancient and modern, who have treated on rural economy." In 1736 he married Dorothy, daughter of Edward Barker, Esq., of East Betchworth, curator baron of the exchequer and receiver of the tenths. He had two daughters by this lady, who died in 1754. The eldest daughter, Judith, survived her father, and died unmarried in 1795. Dorothea Maria, the younger, married, in 1763, Sir Henry Mildmay, 5th bart., and was the mother of Sir H. St. John Mildmay, who assumed the name of Mildmay on a marriage with an heiress of that name, and who edited the 'Light of Nature Pursued,' and wrote the sketch of his grandfather's life, from which we have quoted.

Tucker felt the loss of his wife very severely, and occupied himself for some time in twice transcribing all the letters he had ever received from her. He then applied himself to educate his daughters, and himself taught them French and Italian. In 1755 he put together and published various materials which a friend had sent to him for the purpose, and published them in a pamphlet, with the name 'The Country Gentleman's Advice to his Son on the subject of Party Clubs.' Sir Henry Mildmay says of this pamphlet, which is very scarce, and of which he had with difficulty procured a copy, that it was not a party production, but a general exhortation, addressed chiefly to young men, against strong political feeling. We learn on the same authority that Tucker kept quite aloof from politics, and having been often solicited to be a candidate for the representation of Surrey, invariably refused. "He was however quite only prevailed on to attend a county meeting at Epsom, where party ran very high; and though he took no active part in the proceedings there, he was introduced into a ludicrous ballad, where he is described with several other gentlemen of respectability and talent, as confounded by the superior powers and eloquence of the Whigs of that day, namely, Sir Joseph Mawbey and Sir Harbord Harbord." This circumstance afforded to Mr. Tucker abundant matter for humorous animadversion, and whenever politics were the subject of conversation he seldom failed to advert to the ill success of his only essay in public life; and was so much amused with the figure he made in verse, that he set the ballad to music."

It was about the year 1755, according to Sir Henry Mildmay, that Tucker began his great work 'The Light of Nature Pursued;' at least no papers relating to it were found of an earlier date. From the materials for this work must have been long in course of collection, and it probably contains the results of the observation and reflection of a whole life. "My thoughts," says Tucker of himself, "have taken a turn from my earliest youth towards searching into the foundations and measures of right and wrong; my love for retirement has furnished me with continual leisure, and the exercise of my reason has been my daily employment." When he had determined upon composing his work, we are told by Sir Henry Mildmay that "he made several sketches of the plan for his work (one of which he afterwards printed in the shape of a dialogue,) before he finally decided on the method he should pursue; and after he had intimately arranged and digested

Digitized by Google

his materials, he twice transcribed the whole copy in his own hand." And he endeavoured to improve himself in composition by a study of the principal Greek and Latin authors, and by translating the most admired passages of Cicero. Demosthenes, and others. The first specimen of his work was published in 1763 under the title 'Free Will:' this was a selection from the four octave volumes of the 'Light of Nature Pursued,' which he gave to the world in 1765. In the meantime, a criticism in the 'Monthly Review' on the 'Free Will' led him to publish a reply, under the title 'Man in Quest of Himself; by Cuthbert Comment.' He published the 'Light of Nature Pursued' under the fictitious name of Edward Search. The remaining volumes of the work, the composition of which, together with magisterial duties and the superintendence of his estate, occupied the remainder of his life, were edited after his death by his daughter.

Sir Henry Mildmay gives the following interesting account of Mr. Tucker's habits:—"He always rose early in the morning to pursue his literary labours. During the winter months he commonly burnt a lamp in his chamber for the purpose of lighting his own fire. After breakfast he returned again to his studies for two or three hours, and passed the remainder of the morning in walking, or in some rural exercise. As he was remarkably abstemious, he lost but little time at the table, but usually spent the early part of the evening in summer in walking over his estate, collecting information on all agricultural subjects from his tenants, and committing the result of their practical experience to paper. In winter he completed the regular measure of his exercise by traversing his own apartment, and, after accomplishing the distance he had allotted to himself, he employed the remainder of the afternoon in reading to his daughter." In 1771 blindness overtook him, a few having completed what incessant application had prepared the way for. "His favourite object however was not abandoned in consequence of this calamity, his mechanical ingenuity enabling him to direct the amanuensis with a needle, which guided his hand and helped him to write so legibly that his productions were easily transcribed by an amanuensis." He also received invaluable aid from his elder daughter, whom Sir Henry Mildmay not unjustly compares to Milton's daughter. "She transcribed the whole of his voluminous work for the press; and shortly did she afterwards, at a time, like Milton's daughter, to those pursuits which would make her most useful to her father, that she applied herself to the study of the Greek language, in which she made such proficiency as to be enabled to preserve to her father, during the remainder of his life, an intercourse with his favourite authors, of which his misfortune must otherwise have deprived him." Tucker died November 20, 1774.

Tucker's work is one which for various reasons, its length as well as the nature of the subject, is read by few; but many will know the praise bestowed on it by Paley in the preface to his 'Moral and Political Philosophy:'—"There is however one work to which I owe so much that it would be ungrateful not to confess the obligation: I mean the writings of the late Abraham Tucker, Esq., part of which were published by himself and the remainder since his death, under the title of 'The Light of Nature Pursued, by Edward Search, Esq.' I have found in this writer more original thinking and observation upon the several subjects that he has taken in hand than in any other, not to say than in all others put together. His talents for this species of invention is unrolled. But his thoughts are diffused through a long, various, and irregular work. I shall account it no mean praise if I have been sometimes able to dispose into method, to collect into heads and articles, or to exhibit in more compact and tangible masses, what, in that otherwise excellent performance, is spread over too much surface."

The 'Light of Nature Pursued' is a desultory work, and not a systematic treatise, on mind and morals, and is of a practical rather than a theoretical character. The principles of mental and moral science are but cursorily treated, and with the view of being applied to the business and practical exigencies of man's life. Tucker adopts Hartley's theory of association, with its objectionable material elements; but instead of 'association' he always uses the term 'translation,' a term which has nothing to recommend it in preference to that which he discards. The striking qualities of Tucker's work are ingenuity and fertility of illustration, a rich quiet vein of humour, which has procured for him the title of 'the metaphysical Montaigne,' and a lofty moral aim, which renders the work as useful to the student as its humour and variety of illustration render it generally entertaining.

Tucker was a favourite author with Sir James Mackintosh, who has evidently bestowed great pains upon his sketch of him. "He had many of the qualities which might be expected in an affluent country gentleman, living in a privacy undisturbed by political zeal, and with a leisure unbroken by the calls of a profession, at a time when England had not entirely renounced her old taste for metaphysical speculation. He was naturally endowed, not indeed with more than ordinary acuteness or sensibility, nor with a high degree of reach and range of mind, but with a singular capacity for careful observation and original reflection, and with a fancy perhaps unmatched in producing various and happy illustration. The most observable of his moral qualities appear to have been prudence and cheerfulness, good-nature and easy temper. The influence of his situation and character is visible in his writings. Indulging his own tastes and fancies, like most English squires of his time, he became, like many of them, a sort of humourist. Hence much of his originality and independence; hence the boldness with which he openly employs illustrations from homely subjects. He wrote to please himself more than the public. He had too little regard for readers, either to sacrifice his sincerity to them, or to curb his own prolixity, repetition, and egotism, from the fear of fatiguing them. . . . . He was by early education a believer in Christianity, if not by natural character religious. His calm good sense and accommodating temper led him rather to explain established doctrines in a manner agreeable to his philosophy than to assail them. Hence he was represented as a time-server by freethinkers, and as a heretic by the orthodox. . . . . Had he recast without changing his thoughts, —had he detached those ethical observations, for which he had so peculiar a vocation, from the disorder of his course very much as they are, he might have thrown many of his chapters into their proper form of essays, which might have been compared, though not likened, to those of Hume." ('Dissertation on the progress of Ethical Philosophy,' Whewell's edition, p. 268.)

The best edition of the 'Light of Nature Pursued' is that of Sir Henry Mildmay, in 7 vols. 8vo. There is a reprint of this edition in 2 vols. 8vo, 1837. An abridgment of the work has been published by Mr. Haslitt, which is now out of print, but which is highly commended by competent judges. The tract in reply to the 'Monthly Review,' of which the full title is 'Man in Quest of Himself, or a Defence of the Individuality of the Human Mind or Self,' is printed in Parr's 'Metaphysical Tracts,' published by Lumley, 1837.

TUCKER, JOSIAH, D.D., learned divine and distinguished political writer of the last century, was born at Laugharne in Carmarthenshire in 1711. Some time afterwards his father went to reside on a small estate near Aberystwith in Cardiganshire, which had become his property, and which he cultivated himself, having been brought up as a farmer. Although the means were very slender, he contrived to send his son to Ruthin School in Denbighshire, where he pursued his studies with such success as to be enabled to obtain an exhibition at St. John's College, Oxford. In those days it was a matter of some difficulty to perform the journey between Wales and Oxford, and it is said that young Tucker was obliged to go backwards and forwards on foot, with a stick over his shoulder and a bundle at the end of it. On one occasion his father mounted him upon his own horse, but the young man did not wish to sacrifice the convenience of his father to his own pride, and in future journeys he resumed his stick and his bundle. Shortly after leaving the university he entered into holy orders, and served the cursey of All Saints, Bristol. He next became curate of St. Stephen's Church, Bristol, and was appointed a minor canon in the cathedral of that city. Here he had the good fortune to engage the friendship and esteem of Dr. Butler, the bishop of his diocese, who appointed him as his domestic chaplain, and afterwards obtained for him a prebendal stall in the cathedral of Bristol. To the active friendship of his excellent patron he was also indebted for the rectory of St. Stephen's, to which he succeeded in 1749. To complete at once the history of his ecclesiastical preferments, we will add that in 1758 he became dean of Gloucester, and about the same time took his degree of D.D.

To his residence in the great commercial city of Bristol may, in great measure be ascribed the prevailing character of his political writings, the best of which are those which relate to the interests of trade and commerce. Passing over for the present such of his publications upon other subjects as may intervene in point of time, we shall be the better able to give a connected view of his principal writings upon trade. In 1748 he published his first commercial work, entitled 'A Brief Essay on the Advantages and Disadvantages which respectively attend France and Great Britain with regard to Trade, with some Proposals for removing the Principal Disadvantages of Great Britain, in a new method.' In this essay he condemned the French system of taxation, especially the taille, the duties upon salt, and those laid upon provisions entering their great cities. He objected also to their mode of farming the revenue, to their 'maîtrises' or guilds, and to their monopolies and exclusive charters. Nor did the taxes of this country escape his censure. "The taxes upon the necessaries of life are in fact so many taxes upon trade and industry; and such must be accounted the duties upon soap, coal, candles, salt, and leather. . . . Likewise the duties upon the importation of foreign raw materials, to be employed in our own manufactures, are so many fetters and chains to prevent the progress of labour and the circulation of wealth." He denounced "our monopolies, public companies, and corporate charters," as being "the bane and destruction of a free trade." Amongst the most important of his proposals for improving the trade of Great Britain may be mentioned a union with Ireland in all respects, as to parliament, trade, and taxes; an extension of our inland navigation; and the adoption of a system of warehousing goods on importation, at the option of the merchant. At that time we had very few canals; a prejudice existed against them; and more than twenty years after the publication of this essay we find a canal bill opposed in parliament as tending to injure the coasting-trade, and as being "greatly prejudicial to that most important object, the nursery and increase of seamen." (Cavendish's 'Debates,' 15th Feb., 1769, vol. i., p. 337-9.) A system of warehousing, it is well known, had been proposed by Sir Robert Walpole in 1733, and abandoned on account of

Digitized by Google

the storm of opposition which it encountered. Nor did the ignorance and prejudices of the merchants allow this valuable measure to be carried into effect for more than half a century after the dean of Gloucester had most plainly pointed out its advantages. The arguments and illustrations upon this point are hardly susceptible of improvement after fifty years' experience of the practical effects of this system.

In 1774 he first published a tract which he had written sixteen years before, entitled 'A Solution of the Important Question, whether a Poor Country, where Raw Materials and Provisions are Cheap and Wages Low, can Supplant the Trade of a Rich Manufacturing Country, where Raw Materials and Provisions are Dear and the Price of Labour High.' The subject is very ably treated, and (as is usually the case with the dean) in a plain and practical manner. This tract is well worthy of attention, as the question is still one of great interest. 'The Case of going to War for the Sake of Trade, considered in a new Light,' is another valuable tract, first published in 1763, and republished with the last. It is an enlightened exposition of the evils of war in regard to trade, and of the folly of engaging in the one for the sake of promoting the other. M. Turgot thought so well of this tract that he translated it into the French language, and wrote a very complimentary letter to the author. Some years later he published a work upon a similar plan, namely, 'Cui Bono?' or an Enquiry what Benefits can arise either to the English or the Americans, the French, Spaniards, or Dutch, from the greatest Victories or Successes in the Present War; being a Series of Letters addressed to Monsieur Necker.' It laboured by argument and by familiar illustrations to show the impolicy of war, and to discourage jealousy and exclusiveness in national commerce.

But the most remarkable of all the commercial tracts of Dean Tucker was published in 1785, being 'Reflections on the Present Matters in Dispute between Great Britain and Ireland.' The object of this tract was to point out the advantages that might be derived from the commercial freedom of Ireland, and to suggest to the English merchants a scheme for evading restrictions and monopolies by the use of the free Irish ports for their commercial adventures. The ends proposed to be accomplished by these measures were—1st, 'A free trade for the benefit of both kingdoms, to all the countries beyond the Cape of Good Hope;' in other words, an escape from the commercial monopoly of the East India Company: 2ndly, 'A free trade to Egypt and the Levant,' at that time restricted by the charter of the Turkey Company: 3rdly, 'A free importation of sugars and of other products of the warmer climates, from the cheapest market, wherever it can be found:' 4thly, 'A free navigation, exempted from those clogs and restrictions which are required by the famous Act of Navigation:' and 5thly, 'The free exportation and importation of goods.' It is interesting to observe that the first of these objects was not attained until 1833, nor the second until 1825; and that the third, fourth, and fifth have only been accomplished within the last ten years, and after the most protracted and active political discussions.

Even this brief notice of Dr. Tucker's commercial views will serve to rank him amongst the highest of the political writers of the last century, for it must be recollected that when he commenced his inquiries the genius of Adam Smith had not yet enlightened the world. The 'Wealth of Nations' was not published until 1776, and the course of lectures from which were developed the foundations of that great work did not begin sooner than 1752, or four years after the publication of Dr. Tucker's 'Essay on Trade;' nor are we aware that any of Adam Smith's lectures at Glasgow approached in print before the publication of the 'Wealth of Nations.' The value of Dr. Tucker's smaller tracts and essays upon trade makes it a subject of regret that he did not complete a more methodical and scientific work which he had undertaken when he was commenced as tutor to the sons of Dr. Hayter, bishop of Norwich, and preceptor to the prince of Wales, afterwards George III. The circumstances connected with this work may be best explained in the words of the author:—'His lordship's design was to put into the hands of his royal pupil such a treatise as would convey both clear and comprehensive ideas on the subject of national commerce, freed from the narrow conceptions of ignorant or the sinister views of crafty and designing men.' 'I therefore entered upon the work with all imaginable alacrity, and intended to entitle my performance the Elements of Commerce and Theory of Taxes; but I had not made a great progress before I discovered that such a work was by no means proper to be sheltered under the protection of a royal patronage, on account of the many jealousies to which it was liable, and the cavils which might be raised against it. In fact, I soon found that there was scarcely a step I could take but would bring to light some glaring absurdity which length of time had rendered sacred, and which the multitude would have been taught to contend for as if their all was at stake. Scarce a proposal could I recommend for introducing a free, generous and impartial system of national commerce, but it had such numbers of popular errors to combat with as would have excited loud clamours and fierce opposition.' For these reasons he laid the scheme aside, and, unfortunately for his own fame and for the interests of mankind, he never resumed it.

While the concerns of trade were thus engaging his attention, other measures of public policy aroused his interest and exercised his pen. But we cannot fail to observe, in reading his various publications, that the principles of free trade and the improvement of our commercial laws were never absent from his mind.

In 1751 a bill was brought into the House of Commons for the naturalisation of foreign Protestants, and after passing through its other stages was lost on the third reading. This circumstance gave rise to two very able pamphlets, in which the dean contended strongly for the measure. Three years before, in his 'Essay on Trade,' he had proposed to encourage the settling of foreigners in this country as one of the means of increasing our wealth and advancing our trade and manufactures; and on the rejection of the bill he published 'Reflections on the Expediency of a Law for the Naturalisation of Foreign Protestants,' in two parts. In these he has a most liberal and cosmopolitan historical review of the laws with regard to foreigners from the earliest time; and treated with severity and ridicule the jealous and illiberal conduct of the English with regard to other nations. His arguments in favour of inducing foreigners to give this country the benefit of their skill and capital, and his enlightened analysis of our policy in reference to their exclusion, are among the very best of his writings. He was soon called upon to exert himself again in the same cause. In 1753 a bill was brought into the Lords to permit Jews to be naturalised by parliament, a privilege from which they had been excluded by an act of the 7th James I. (c. 2), chiefly directed against the Papists, and which required all persons applying for naturalisation to have taken the sacrament of the Lord's Supper. This bill was violently opposed in both houses of parliament, and though it passed through the Lords, it was thrown out by the ministers, at length out the country, but being supported by the people, it became the law than the received the royal assent. No sooner had it passed than it was redoubled, and with clamours with which it had been assailed were overstruck the defence of the measure in two 'Letters to a Friend concerning Naturalisations,' and the popular The act was nowhere more unpopular than at Bristol, where, that they have been so enraged at his opposition to the bill that they proceeded to burned him in effigy in full canonicals; and he is said to have narrowly escaped the ceremony from his own garden. The violence of the popular feeling upon the subject at that time may be judged of from the fact that on the last day of the winter session, in the same year, and that of the Naturalisation was forced to move for the repeal of the act, the obnoxious measure was actually repealed.

At the very commencement of the disturbances in the American colonies, the dean took a view of British interests at variance with all parties, and published several tracts previous to the time at which the last proceeded. He showed no sympathy with the American party, but he did acknowledge the justice of their complaints. On the contrary, he vindicated the constitutional right of the mother country to tax her colonies, and accused the Americans of ingratitude in resisting the mild and liberal sway of England. Thus far he agreed with the court party; but while they urged coercion and punishment, as the only means while the opposition were seeking to conciliate and make concessions, Dr. Tucker proposed to abandon the colonies altogether. He did not doubt the power of England to coerce the Americans, but he asked, in 'A Letter from a Merchant in London, to his Nephew in America,' "How are we to be benefited by our victories? And what fruits are to result from making you a conquered people? Not an increase of trade; that is impossible: for a shopkeeper will never get the most custom by beating his customer; and what is true of a shopkeeping nation, is true of a shopkeeping nation." To these opinions he always adhered, and took every occasion to enforce them. Writing so late as 1783, he stated that he had held the opinion for upwards of five and twenty years that the colonies were detrimental to a country, and that he had been "growing every day more and more convinced." These views were consistent with his uniform advocacy of perfect freedom of trade and navigation; and were strengthened by his horror of the needless wars which had been too often undertaken by colonial possessions.

The warmth of the controversy led him to speak with much acrimony of the American people, their leaders and advocates, and some of his statements brought him into collision with Mr. Burke, who treated him with great disrespect. "This Dr. Tucker," he said in his celebrated speech on American taxation (April 19, 1774), "is already a dean, and his earnest endeavours in this vineyard will, I suppose, raise him to a bishopric." In consequence of this reference to himself, the dean addressed his next pamphlet, in the form of a letter, to Mr. Burke, and it contains a very severe castigation of the statesman upon the American question, and again enforced his own opinions.

His views of the American question led him frequently to oppose the doctrines laid down by Mr. Locke, and relied upon by the Americans—that the consent of the governed, given either by themselves or by their representatives chosen by them, is the only foundation of civil government and the only justification of taxes. In many of his pamphlets he combated these principles, and at length devoted an elaborate work to their refutation. In 1781 his 'Treatise concerning Civil Government' appeared. It consists of three parts. In the first he examines the doctrines of Mr. Locke, and of his followers, Dr. Price, Dr. Priestley, and Mr. Molyneux, as to the principles of civil and political liberty. In the second he offers a theory of his own as the true basis of civil government, and suggests alterations in the British constitution. In the last he describes the former Gothic or feudal constitution of England, chiefly in order to show the gradual increase of popular power and the limitation of the influence of the crown. The

Digitized by Google

work evinces much acuteness and learning, but is of a somewhat desultory character. His opinions were decidedly adverse to any extension of popular representation, and he even proposed to raise the qualification of electors and of the members of the House of Commons. He had printed the greater portion of this work some years before, for private circulation amongst his friends, and it was actually quoted and attacked before it was published.

The devotion of his talents with so much ardour to political and commercial inquiries laid him open to many sarcastic imputations of neglecting his spiritual duties. His bishop especially, Dr. Warburton, between whom and the dean there seems to have been much want of cordiality, was alleged to have said that "his trade was his religion, and his religion a trade." The dean took many opportunities of refuting these calumnies, and exposing the injustice of the prejudice with which his labours were regarded. On one occasion he thus expressed himself:—"The bishop affects to consider me with contempt: to which I say nothing. He has sometimes spoken coarsely of me: to which I replied nothing. He has said that religion is my trade, and trade is my religion. Commerce and its connections have, it is true, been favourite objects of my attention; and where is the crime? And as for religion, I have carefully attended to the duties of my parish, nor have I neglected my cathedral. The world knows something of me as a writer on religious subjects; and I will add (which the world does not know), that I have written above three hundred sermons, and preached them all, again and again. My heart is at ease on that score; and my conscience, thank God! does not accuse me." In the preface to 'Reflections on the Expediency of a Law for the Naturalization of Foreign Protestants,' he complains that he had "undergone some censures for engaging in inquiries seemingly beside his profession;" and "he begs leave to offer some reasons for his interfering in those matters, and at the same time to vindicate himself from the supposition of having deserved the ill-treatment he has met with." He states that "in his parish, though he had opinions, he preached none but all the offices of his function himself, according to the best of his abilities;" and therefore "flatters himself that as long as he follows these studies without neglecting his other engagements, and delivers his opinions in an inoffensive manner, he shall be excused in the judgment of all candid persons, though the warmth of party zeal, or the resentment of those whose interest clashes with that of the public, may excite them to vilify and insult him." Three years later, he writes, "Another bill brought against me is that I am extremely ignorant in my peculiar profession; and that, for that reason, I dedicated too much of my time to the study of commerce, I have shamefully neglected to cultivate those sciences which more immediately belong to my clerical profession. To these charges I stand mute; and as my Apology for the Church of England, my Six Sermons, and my Letters to the Rev. Dr. Kippis, are now before the public, let the impartial judge as they please."

It is not surprising that the political works of so able a writer should have attracted more public notice than his ministrations in the church, or even his published sermons and religious treatises; but it would be doing gross injustice to his memory not to mention with praise the zeal and learning displayed by him in the cause of religion. In none of his political writings did he show more ability than in his 'Apology for the present Church of England,' and his 'Letters to Dr. Kippis.' In these he maintained the right and duty of the church to regulate the behaviour of its own members in such things as relate to the ends of its own institution; and thus he supported the practice of enforcing subscription to the Thirty-nine Articles on the part of the clergy. But at the same time he exhibited the fullest indulgence to dissenters, and showed the mistaken policy of penal laws against ecclesiastical nonconformity. He published another valuable tract upon the same subject in 1774, entitled 'Religious Intolerance no Part of the General Plan either of the Mosaic or Christian Dispensation.' At about the same time he published 'Secker no Deist,' in which some of the most important Points of Natural and Revealed Religion.' He proposed also to revise the Book of Common Prayer, to retrench its redundancies and repetitions, and to reduce its length; but he does not appear to have proceeded with his design.

As a political writer Dr. Tucker proved himself a man of uncommon sagacity, judgment, and foresight, with a mind little tainted by prejudice, and very far in advance of his age. As a divine he would unquestionably have enjoyed a higher reputation, if his religious writings had not been eclipsed by the greater celebrity and interest of his political works. His style is clear, simple, and forcible; and his mode of treating a question rather popular than scientific. His principles and maxims, indeed, are always expressed in a concise and logical form, and the arrangement of his subject is methodical; but the freedom of his style and the familiarity of his illustrations impress his writings with a character essentially popular.

His numerous publications have never been collected, and are now extremely scarce. Many of them passed through several editions, and attracted a large share of public interest, both in this country and on the Continent. Their celebrity would most probably have continued until this day with greater lustre, had not Adam Smith since raised a beacon to political economists in his 'Wealth of Nations,' by which all direct their course, and beyond which none care to explore.

In private life Dr. Tucker was an amiable and pious man. In his own parish he was deservedly loved and respected. His income was never large, but his wants were few, and he dispensed his charities with a liberal hand. An anecdote is related of him which reflects great credit upon his heart. His curate at St. Stephen's, Bristol, was much esteemed by Dr. Tucker, and had a large family to support with very limited means. The dean conceived the project of resigning the rectory in his favour, and after much solicitation and interest, he persuaded the chancellor, in whose gift it was, to accept his resignation, and bestow the living upon his friend. He then resided almost entirely at the deanery in Gloucester. Late in life he married Mrs. Crowe, his housekeeper. He died on the 4th of November 1799, at the advanced age of eighty-eight, and was interred in the south transept of the cathedral at Gloucester. (*Gentleman's Magazine*, 1799, vol. lxix.; Seward, *Anecdotes*; Tucker's various tracts and treatises.)

TUDELA, BENJAMIN OF. [BENJAMIN OF TUDELA.]

TUDOR. [HENRY VII.]

TUDWAY, THOMAS, Doctor in Music, a name well known in musical history, but more on account of his connection with the lord high treasurer Harley and of his conversational talents, than for any productions of his pen that have survived him. He was educated in the King's Chapel, under Dr. Blow, and was a fellow-pupil of Purcell. In 1671 he became organist of King's College, Cambridge, and in 1705 was honoured by a Doctor's degree in that university, and also appointed the professor of music, after which Queen Anne named him as her organist and composer extraordinary. He was now much patronised by the Oxford family; and the valuable scores of English church music, in many volumes, in the British Museum, were collected by him for Lord Oxford, and form part of the Harleian collection, No. 7337, *et seq.* There is a tradition that, with Prior, Sir James Thornhill, and other eminent persons, "he formed a weekly society at the house of the lord high treasurer. Thornhill drew all their portraits in pencil, and Prior wrote humorous verses under each. These passed into the possession of Mr. Wood, formerly president of the Royal Society." A portrait of Dr. Tudway is in the music-school at Oxford. He composed anthems and a few other works; but except one of the former, published in Dr. Arnold's 'Collection of Cathedral Music,' he have not met with any of his productions.

TULL, JETHRO, was born about the year 1680. A gentleman of moderate fortune, he zealously devoted a great part of his life to the improvement of agriculture. He possessed a small estate near Hungerford, on the borders of Oxfordshire and Berkshire, which probably has considerably been enhanced in value of the skill and horse-hoeing husbandry. Having observed the good effects of the cultivation of many plants in regular rows, and of frequently stirring the intervals between them, as has been done from time immemorial by gardeners, he attempted to introduce this system into the field, and invented many ingenious implements for diminishing the labour of hand-drilling and hoeing. The success which attended his first experiments, on a good deep loam, confirmed his expectations, and led him to a theory, which was the cause of his own ultimate ruin, and for a time brought discredit on the whole system, while other respects was founded on sound principles. Observing that, by means of assiduous cultivation and stirring of the soil around the roots of growing plants, he produced a greater luxuriance of growth than by the common methods, without any addition of manure for several years, he concluded rashly that the earths very finely divided, together with moisture, constituted the whole of the food of plants, and that, consequently, stirring and pulverizing the soil was a complete substitute for manuring. Having fully established this erroneous principle in his own mind, he exerted all his ingenuity to effect the most complete pulverisation of the soil. In the first place all the seeds were to be sown in rows at such a distance that a plough or other stirring-instrument drawn by a horse might conveniently be used in the intervals. From this circumstance his system was called the horse-hoeing husbandry. The immense advantages which would arise from the cultivation of waste lands in distant parts of the kingdom, if the increased labour of men and horses were a perfect substitute for manure, where it could not well be procured, made many clever men adopt Mr. Tull's system as a most valuable discovery; and the first trials appeared to be so successful, that the 'new husbandry,' as it was called, was strongly recommended for general adoption.

The great reluctance with which any new system is adopted by the mass of practical farmers prevented the new husbandry from becoming universal; and only some men of a theoretical turn fully adopted the notions of Jethro Tull. All those who persevered in the practice of it, neglecting to recruit their lands by a judicious addition of manure, found to their cost that, however good crops they might have for a time, by continually stirring and pulverising the soil, it became totally exhausted at last, so as to produce a barrenness, which required a long course of expensive manuring to remove, and was the cause of serious ultimate loss. Tull himself, who adhered to his principles to the last, like most original inventors, and expended large sums in experiments, and in the construction of a variety of curious and ingenious implements, became so embarrassed that he lost all his property, and, it is said, died in prison, where he had been put by some merciless creditor. ('British Husbandry,' 'Farmer's Series of the Library of Useful Knowledge,' published by the Society for the Diffusion of Useful Knowledge.) He died January 3, 1740.

Digitized by Google

The unhappy fate of the author of the system, and the loss sustained by its principal abettors, threw such a discredit upon it, that for a long time not even the most useful part of it was retained. Had Tull introduced the row culture, as it is practised in Lombardy, from which he borrowed some of his principal operations, and joined judicious manuring with his horse-hoeing, he would have had the merit of originating in England, at least, the greatly-improved system of drill-husbandry which has since been generally adopted wherever it can be conveniently executed; and the sowing of seeds broad-cast would have long since been confined to artificial grasses, which, being intended for pasture, cannot grow too closely together. The cleaning of the soil from weeds, and the exposure of a great part of the surface to the influence of the atmosphere, would have entirely superseded fallows, and a proper application of manure would have kept up the fertility.

Tull published a treatise on his new mode of cultivation in 1731, in which his principles were explained and calculations made, founded on his early experiments, of the immense profit which would accrue in the course of years by adopting his practice. Change of crop would be no longer necessary; rotations useless; the most profitable crops could be raised year after year without diminution; and the soil be kept in a state of perpetual fertility. Such were the visions of a man of considerable abilities, led into error by his own sanguine imagination. Had the soil of Tull's farm been of a poor gravelly or sandy nature, he would soon have discovered his error by a few experiments; but working on a good deep loam, and continually pulverising it, stirred and pulverised, it required a much longer time to exhaust it; but at last it was completely exhausted, and the owner was ruined.

Jethro Tull first published, in 1731, detached essays on his new mode of cultivation, which were afterwards, in 1751, collected into one volume, with copious notes by himself.

In 1822 the late Mr. Cobbett edited a new edition of Tull's works, with an introduction by himself, which, like everything written by that perspicuous writer, is full of useful remarks. Cobbett fully appreciated the value of the practical part of Tull's system, and strongly recommended it in his 'Cottage Economy.' He showed there, by reference to actual experiments in a garden, how greatly the stirring of the soil around the roots of growing plants assisted their growth, and the advantage of allowing a certain space to every plant to admit of this stirring. Tull had cultivated roots with great success according to this system; and as long as the organic matter in the soil was not exhausted, the success fully proved the correctness of his practice. The greatest obstacle which Tull had to contend with was the obstinacy of his labourers, who thought him quite mad when he ordered them to sow only two rows ten inches apart on a stitch of land four feet six inches wide, leaving forty-four inches between each double row for the working of the plough. He was forced indeed to put his hand to the plough himself. Whatever may have been the errors of Tull in hastily adopting an erroneous theory, he has many excuses in the received opinions of his time.

TULLUS HOSTILIUS, the third king of Rome, reigned from B.C. 673 to 641. He is called a grandson of Hostus Hostilius, who fell in a battle against the Latins in the reign of Romulus. His reign is described as the very reverse of that of his predecessor, the pious and peaceable Numa, and he himself as even more warlike than Romulus. After the death of Numa the government was for a short time in the hands of interreges, until Tullus was elected in the comitia of the Populus, and his election confirmed by the senate. The most memorable event of his reign is the war with Alba, which is celebrated in ancient story on account of the single combat between the Horatii and Curiatii, and which was followed by the destruction of Alba, and the establishment of the Roman plebs. The whole detail of this war cannot be regarded as historical, and has all the appearance of a poetical tradition. It is said to have arisen from predatory incursions which the Albans made into the territory of Rome, and the Romans into that of Alba. That a treaty had formerly existed between the two towns before is implied in the statement that the Horatii and Curiatii were related; and even now war might have been avoided, if it had not been for the cunning and the warlike character of Tullus, who forced the Albans to it. The Albans swamped four miles from Rome, and the trench which their king (dictator) Cluilius is said to have formed was the beginning of the Fossa Cluilia. He died during this invasion, and was succeeded by the dictator Mettus Fuffetius. The hostile armies had been arrayed against one another for a long time, when at last the Alban dictator proposed that the war should be decided by a single combat. The fight of the Horatii and Curiatii accordingly brought the war to a close, and Alba recognised the supremacy of Rome, and promised to furnish its contingent to the Roman armies. The formulæ of the Fetial law, and the trial of one of the Horatii for having slain his sister, contain some genuine and important documents of the olden time of Rome. (Livy, i. 24-26.) In the war of Tullus Hostilius against Fidenæ, which was supported by Veii, Mettus Fuffetius, accordiog to the treaty between the two states, joined the Roman army with his troops, but with the design of abandoning his ally, and going over to the enemy at the critical moment. Tullus Hostilius discovered the treachery, and after the Fidenates and Veientines were vanquished, he punished the treacherous dictator by having him torn in pieces by two chariots to which he was fastened, and at the same time he sent out his legions with orders to destroy the town of Alba, which, with the exception of its temples, was accordingly razed to the ground. The inhabitants of Alba were transferred to Rome, where the Cælian hill was assigned to them as their habitation. Several of the noble Alban families were incorporated with the Roman patricians, and the number of Roman equites was likewise doubled, while the great mass of the Alban population were treated as an inferior race, and formed the Roman plebs. When Tullus Hostilius had thus strengthened his kingdom, a war arose between the Romans and the Sabines, in which the Sabines were defeated near the Silva Malitiosa. But after these successful undertakings the gods afflicted Rome with a pestilence, which was preceded by several awful prodigies. The king however continued his warlike pursuits, until at last he was seized with the disease. In order to propitiate the gods, he consulted the Commentarii of Numa, which contained rules about the manner in which the wrath of the gods was to be appeased. He found the formula with which Numa had performed his solemn sacrifices to Jupiter Elicius. Tullus Hostilius attempted to do the same, and to call down the god, but he committed a mistake in his use of the sacred formula, and the god in his anger destroyed the king and his whole house by lightning.

This is the story of Tullus Hostilius as related by Livy (i. 22-32), which bears much more traces of a genuine tradition than the detailed and interpolated account in Dionysius (iii. 1, &c.). Respecting explanations of the story, see Niebuhr, 'Hist. of Rome,' i. 246, &c.; Mahlen, 'Hist. of Rome,' p. 127, &c.

TUNSTALL, JAMES, D.D., was born about 1710, and educated at St. John's College, Cambridge, of which he afterwards became a Fellow and tutor. In 1739 he obtained the rectory of Stanner in Essex, and two years later he was appointed Archdeacon to Potter, archbishop of Canterbury. In 1744 the University of Cambridge conferred upon him the degree of D.D. After having held the office of chaplain for several years, he received from the archbishop the rectory of Great Chart in Kent, and the vicarage of Minster in the Isle of Thanet. He resigned both places in 1757 for the more lucrative vicarage of Rochdale in Lancashire, which was given him by Archbishop Hutton, to whom he was related by marriage. He remained here until his death, on the 28th of March 1772, although he was from the first much disappointed in the expectations which he had entertained concerning his vicarage at Rochdale. This disappointment, together with various troubles in his family, is believed to have hastened his death.

Dr. Tunstall was a man of a most amiable and humble character; when he left the place of chaplain to the Archbishop of Canterbury it was the wish of him, that of all the humble men that had ever held that office, he was the only one that remained humble when he left it. He was a scholar of considerable ability, although he has not done much. But there are some points which he has settled. The work to which we allude is his letter to Dr. Middleton, 'Epistola ad Virum eruditem C. Middleton,' 8vo, Cambridge, 1741. In this letter he questions the genuineness of the collection of the epistles between Cicero and Brutus, entitled 'Epistolæ ad Brutum,' which Middleton had made use of without any doubts as to their genuineness, while, according to the opinion of Dr. Tunstall, he had not paid sufficient attention to Cicero's letters addressed to his brother Quintus and to Atticus. His views respecting the doubtful character of the correspondence between Cicero and Brutus were further developed in an English essay, 'Observations on the pretended Collection of Epistles between Cicero and Brutus.' These two dissertations have so far settled the question respecting the authenticity of those epistles, that all the subsequent editors of Cicero have regarded them at least as very doubtful. The other works of Dr. Tunstall are of a theological or theologico-political character:—1. 'A Sermon before the House of Commons,' May 29, 1746, 4to; 2. 'A Vindication of the Power of the State to prohibit Clandestine Marriages,' 1755, 8vo; 3, 'Marriage in Society;' 4, 'Academica, the first, containing Discourses upon Natural and Revealed Religion, a Concio and a Thesis.' The second part of this work did not appear during the author's lifetime; but it is generally believed that the 'Lectures on Natural and Revealed Religion,' which were edited after his death by his brother-in-law, the Rev. Mr. Dodsworth, were intended by the author to form part the second of his 'Academica.' In the British Museum there exists a collection of letters forming the correspondence between Tunstall and the Earl of Oxford, in the years 1738 and 1739, on the subject of Ducket's subscribed letters.

• TUPPER, MARTIN FARQUHAR, D.C.L., F.R.S., is the eldest son of the late Martin Tupper, Esq., surgeon, of New Burlington-street, London, where he was born in 1810. His family, which was banished from Hesse Cassel in the persecution of the Protestants under Charles V., had been settled for many generations in the island of Guernsey; and his immediate ancestor caused the victory at La Hogue, by giving secret intelligence to the British admiral of the position of the French fleet at great personal risk and danger, and afterwards led the marines at the affair of Bunker's Hill. The subject of this memoir received his education at the Charter House and at Christchurch, Oxford, where he graduated in 1831, and was shortly afterwards called to the bar. His first publication was a small volume of religious poems, given to the world anonymously in 1832.

Digitized by Google

His name first became generally known by the publication in 1839 of 'Proverbial Philosophy.' In spite of the severest and most hostile criticism, this work soon became popular, mainly perhaps on account of its novel and almost Eastern style, and has now (1857) reached a 50th edition in England alone, while upwards of half a million of copies have been sold in America. It was rapidly followed by 'The Crock of Gold;' 'A Modern Pyramid;' 'A Thousand Lines;' 'Heart,' a social novel; 'The Twins,' a domestic novel; and a large number of ballads, songs, and occasional poems, &c., among which, 'The Dirge on Wellington;' 'Ballads for the Times on White Slavery;' and 'American Ballads,' are the most generally known. He has also recently published a work on Christian evidences, entitled 'Probabilities, an aid to Faith,' as well as 'Paterfamilias's Diary of Everybody's Tour;' and a translation into the Anglo-Saxon language of King Alfred's poems, into similar English metres.

TURENNE, HENRI, VICOMTE DE, second son of Henri due de Bouillon and of Elizabeth of Nassau, was born on the 11th of September 1611. His constitution showed symptoms of weakness till he attained his twelfth year. His imagination however had been inflamed by the perusal of the lives of celebrated warriors, and perhaps by the conversation at his father's court, before he was ten years of age; and it is possible that the opposition at first offered to his embracing arms as a profession on account of his indifferent health may have confirmed his wish to become a soldier. The Duc de Bouillon was one of the ablest soldiers bred in the school of Henri IV.; his high rank, love of letters, attachment to the Calvinistic faith, and abilities as a statesman, raised him to the leadership of the Huguenot party after the death of that prince; and his position as sovereign of the small state of Sedan opened a range to his ambitious views, and lent to his character a tone of independence which he could not have acquired as a mere peer of France. The spirit instilled into the young mind of Turenne in a court which took its character from such a warrior was even from the first more the ambition of the statesman and scientific commander than the imaginative chivalry which inspired most boys. He learned slowly and with difficulty; he rebelled against punishment and constraint; but when his ambition was appealed to, he made dogged perseverance a substitute for quick apprehension. His moral character was developed under the control of Tilenus, a moderate Calvinist, by whom he was confirmed in a natural benevolence and sincerity of disposition, and accustomed to subject his naturally strong and excitable passions to the dictates of reason by the still more powerful will. He evinced a taste for athletic exercises, which contributed materially to strengthen his naturally weak constitution.

The Duc de Bouillon died in 1623; but the system of education he had adopted for the young Turenne was perserved in by his widow. Jealousy of the designs supposed to be entertained by Cardinal Richelieu to the prejudice of the Huguenots induced this lady to send Turenne, in 1625, to Holland, to the charge of his uncle Prince Maurice. This statesman and warrior soon detected a large fund of good sense beneath the rowise showy exterior of his nephew, and exerted himself to cultivate the lad's natural talents. He made him commence his apprenticeship to the art of war by carrying a musket as a volunteer, and rendering himself practically familiar with the duties of the private soldier and subaltern officer. Three months after the arrival of Turenne in Holland, Prince Maurice died; but his brother Henry Frederic, who succeeded to his high office, was equally attentive to their young relative. In 1626 Turenne obtained a company of infantry, and continued to serve under his uncle till 1630. He distinguished himself by assiduity to learn the whole theory as well as the practice of war. His company was the best disciplined and accoutred in the army; his own routine duties were performed with unfailing regularity; and his leisure time was spent in taking part in every enterprise where experience was to be acquired. He was naturally of a fearless disposition: in his anxiety to learn he appeared to forget the very existence of danger. Eagerness to do his work thoroughly was apt, when an attack was ordered, to carry him beyond the bounds of prudence. Under Prince Frederic Henry, and opposed to Spinola, he acquired in the course of six years an intimate and extensive knowledge of the kind of war at that time carried on in Holland—a succession of sieges.

In 1630 Richelieu contemplated placing a French garrison in the town of Sedan, and the only means by which the dowager Duchess of Bouillon could avert so dangerous a step for the independent sovereignty of the young duke, yet a minor, was by sending a hostage to the French court. For this purpose her younger son was sent to Paris. Turenne, whose reputation had preceded him, was received with open arms at court, and though only nineteen, appointed to the command of a regiment of infantry. His history for the next four years is a blank. The first opportunity he had of distinguishing himself after entering the service of France was at the siege of La Motte in 1634: his conduct on that occasion procured for him, in his twenty-third year, the appointment of maréchal-du-camp, then the next in rank to that of maréchal de France.

In 1635 the Cardinal de Richelieu sent four armies into the field to attack the Spaniards simultaneously on as many different points. One under Châtillon and Du Brésé marched into the Low Countries; the Maréchal de Créqui led another into the Milanese; the Duc de Rohan a third into the Valteline; the Cardinal de la Valette was placed at the head of the forces destined to co-operate with the Swedes in Germany, and Turenne was attached to him as maréchal-du-camp. La Valette joined the Duke of Weimar at Bingen on the Rhine in August, and the combined forces forced Mansfeld to raise the siege of Mayence. The Imperial general Galas contrived, by a movement from Worms, to cut off their communication with France, and the allied forces, stationed in a country exhausted by war, were thus exposed to famine. Turenne sold his plate to procure provisions for the soldiers under his immediate command. In the disastrous retreat that ensued, while discipline was almost entirely lost and the baggage thrown away by the rest of the army, he retained his troops in their accustomed order, abandoned only so much of the baggage as enabled him to procure waggons for those who were unable to march, and by early being familiarly with the soldiers and sharing his provisions with them kept up their spirits. The duty of protecting the rear devolved mainly upon him, and in the discharge of this arduous task he had occasion to show how he had profited by his education in Holland, in the art of seizing upon defensible posts and maintaining them as long as might be necessary. The disasters of this campaign indisposed La Valette to undertake the command of that projected for the countries on the Upper Rhine in 1636, and Richelieu only overcame his reluctance by consenting that Turenne should again accompany him. The success which attended this division of the French forces, while those on the frontiers of the Netherlands were less fortunate, induced Richelieu in 1637 to give the command of the army against Flanders to La Valette, who again insisted upon having Turenne for one of his maréchaux-de-camp. This was a campaign of sieges, and the conducting of them devolved almost exclusively upon Turenne. With infinite difficulty he took Landrécies; obliged Solre, with a garrison of two thousand men, to surrender at discretion in a few hours; defended Maubeuge successfully against the Cardinal Infant; and being intrusted with the pursuit of the retreating enemy, closed the campaign by driving the Spaniards across the Sambre. In 1638 Richelieu sent two reinforcements to the Duke of Weimar on the Upper Rhine, under Turenne and Guébriant, who were designated maréchaux-de-camp-general, the first of that title in France. After the death of the Duke of Weimar in 1639, Turenne returned to Paris. Richelieu wished to marry the viscount to one of his relations; but Turenne, who foresaw difficulties that might arise on the score of religion, frankly, but respectfully declined the alliance. He was soon after sent to Italy, second in command to the Comte d'Harcourt. In 1640 the French commander adopted the advice of Turenne in opposition to all the rest of his generals, and formed the siege of Turin. He sat down before the city on the 10th of May, and it held out till the 17th of September. The garrison amounted to twelve thousand men, and the enemy were in force in the neighbourhood; but Turenne calculated upon the moral effects of the surrender of the town. He was employed to cover the siege with a strong detachment from the army, a task which he discharged successfully. Still the attack would have been abandoned, but for the excellence of his arrangements for supplying the besieging camp with provisions. After the surrender of Turin, D'Harcourt returned to France, leaving the army under the command of Turenne. The relations in which his brother the Duc de Bouillon stood to the court rendered it inadvisable in the eyes of the minister to intrust Turenne with an army, and D'Harcourt was ordered in 1641 to resume the command. During the remainder of the reign of Louis XIII. the political conduct of the Duc de Bouillon kept Turenne in the background. One of the first acts of Anne of Austria as regent was to send him letters patent appointing him general of the armies of the king in Italy.

Italy was not however destined to be the scene of his exploits as a commander-in-chief. The Duc de Bouillon, who had reconciled himself to the new court, soon quarrelled with it, as will be said, and took refuge at Rome. Mazarin thought it unsafe to leave the brother of this disaffected prince in command of an army so near him, and ordered Turenne to repair to Germany and re-organise the army there, originally raised by the duke of Weimar, but again been left without a leader through the death of Gudriaut and capture of Rantzau by the Imperialists. Turenne took the command of this collection of soldiers of fortune without a country, most of them Germans by birth, in December 1643, and retained it till after the conclusion of the peace of Westphalia in October 1648. During the winter 1643-44 he succeeded, by the most strenuous exertions, and by raising money on his own credit, in re-equipping his army and restoring its discipline. He gave an army to the king, instead of receiving the command of one from him. And in the last campaign preceding the peace of Westphalia it was his judgment and decision that restored this same army to France, after it was on its march to join the enemy on the allegation that the French government had broke faith with it, at a time when he could only pay the mutinous soldiers one month out of a six months' arrear. Yet with such an army, so great was his power of conciliating the affections and keeping up the spirits of the soldiery, he struggled through five campaigns, against leaders of no ordinary ability, to a complete triumph. In conjunction with Condé he kept head against the Imperialists, flushed with recent success in 1644. In 1645 he prevented the bad effects of the defeat at Marienda, incurred through the misconduct of Rosen, by his splendid retreat; and concluded the campaign by reinstating the

Digitized by Google

clector of Trèves in the possession of his territories. In 1647 he put an end to the mischievous custom of separate and independent action on the part of the allied armies of France and Sweden, and commenced the system of combined operations which led in the course of that and the succeeding campaign to the occupation of the Bavarian territory and the emperor's consent to the treaty of Münster.

The peace of Westphalia, which released France from foreign wars, was the signal for the commencement of civil broils. In the commencement of 1649 the regent and cardinal left Paris with the king, and the Prince of Condé commenced a blockade of the city. The duc de Bouillon embraced the party of the Fronde. Turenne was at this time stationed with his army on the frontiers of Champagne. Wholly engrossed with his military duties, he had hitherto taken no part in politics. The Huguenots, among whose party he had been bred and educated, were opposed to the court. He was not a subject of France; his allegiance to that crown could be dissolved at any time by resigning his commission. Thus situated he rejected the overtures of Mazarin, telling him that the blockade of Paris during a minority appeared to be an unwarrantable stretch of power, and he endeavoured to persuade his officers to take part against the cardinal. The court however had gained so many regiments that he soon saw the attempt was vain, and retired to Holland with some of his personal friends. A hollow truce was soon after arranged between the contending factions, and Turenne returned to France. A quarrel between Condé and Mazarin led, after numerous petty intrigues, to the arrest of the former. Condé had not long before reconciled himself to both the Duc de Bouillon and his brother: Turenne was faithful to the prince in adversity. He threw himself into Stenai, and prevented its being taken by the royal troops. He alone rallied the dispirited friends of Condé, and, by calling the Spaniards across the frontiers, procured the release of the prince, the exile of Mazarin, and the conclusion of a peace with Spain.

Turenne returned to Paris, in May 1651. The court offered him favours and advancement; the Prince of Condé sought to enlist him in his party. He intimated to the former that he desired no preferment; to the latter, that having accomplished his release from prison, his duty towards him was fully discharged. A less penetrating mind than Turenne's could have discovered that a Huguenot party existed only in name; that the Fronde was an insurrectionary association of unprincipled intriguers, each of whom sought only his personal aggrandisement; that the age of petty independent sovereignties such as existed in his house had passed; and that the only career of honourable ambition open to him must be sought by becoming a French subject, attaching himself to the only minister capable of organising a strong government in France. With characteristic absence of display or precipitation he declared for the regent and Mazarin, and accepted in 1652 the command of the royal army. It was soon evident that the same mind which alone upheld the Prince of Condé's cause when all else was imprisoned, now struggled to uphold the royal authority, against apparently as fearful odds. The Cardinal Mazarin, the object of popular execration, was again with the court, and all France seemed to unite against the prince. The king had to oppose one army to the Spaniards in Catalonia and another in Flanders; and only 9000 or 10,000 men could be mustered to oppose the rebel nobles. The favouritism of the court, even at so anxious a moment, offered to Turenne the insult of proposing to divide the command between him and Hocquincourt, an officer ten years his junior. Turenne's high spirit must do him justice, he complied with the unreasonable request. But his genius maintained its ascendant, and the plan and execution of the campaign were really his. By the close of the year Condé was obliged to quit France: the king was crowned at Rheims, entered Paris, and consigned the Cardinal de Retz, the only remnant of the Fronde, to a dungeon.

From 1653 till the conclusion of 1659, Turenne's genius for war found ample scope in the wars of the French and Austrian Netherlands. During the whole of this protracted struggle he had to contend against the Prince of Condé, the most brilliant military genius of his age. It was on the part of Turenne intense but regulated energy, sound judgment and sleepless observation, opposed to an almost miraculous quickness of perception on the part of his adversary, and an impetuosity of execution, to which an ardent imagination would have lent irresistible force could the effort have been made continuous. The treaty of the Pyrenees put an end to a struggle more persevering and destructive than any that Europe had previously witnessed, and yet indicative of that growing equality of European states, the full sense of which can alone guarantee permanent peace.

The death of Mazarin in 1661, and the resolution of Louis XIV. to be thenceforth his own prime minister, though it did not raise Turenne to office, gave him a powerful influence in state affairs. He had from the time he embraced the cause of the Prince of Condé necessarily had a political character, but so long as Mazarin lived he was contented to leave it to contribute indirectly to its promotion. Almost the only occasion in which he appears to have laid aside this passive character was in the negociations he commenced with Monk after the death of Cromwell. But his advice was sought and valued by the monarch who boasted that he was his own prime minister. The first sensible effect of the influence of Turenne was the resolution of Louis to protect the independence of Portugal, which Mazarin had made up his mind to sacrifice to the Spaniards. Turenne's credit with De Witt was mainly instrumental in opening the negociations with Holland which led to the treaty of commerce concluded with that power. The instructions of the Count d'Estrades, who negociated the treaty, were drawn up by Turenne. When, in 1665, England and Holland each endeavoured to induce Louis XIV. to assist in the war against the other, it was by the advice of Turenne that the king endeavoured to reconcile the belligerents.

Turenne had married, in 1653, Charlotte, only daughter and heiress of the Duc de la Force, a zealous Protestant. Regard for his wife's feelings appears to have kept him longer in the Protestant communion than his own inclinations. The Protestants had allowed themselves to be made the instruments of political factions; and this circumstance, which had made Sully withdraw from their councils, kept Turenne from entering them. He had been educated by a moderate Calvinist, and, like most active men who are not deeply religious in abstract opinions, but of practical influence, he cared little for doctrinal points. The fierce controversies of the Calvinists and Arminians disgusted him; and the numberless sects which sprung up in Holland and France confused him. Perusing the controversies of the Jansenists and Jesuits, he found the very same controversy that shook the Reformed Church agitating the Roman Catholic, and thus learned to look upon the difference between the two churches as merely formal. The conversation of prelates like the bishop of Meaux, and the silent influence of the conventional tone of the circles in which he moved, all contributed to sap his Protestantism. And although Turenne's mind would have revolted (had revolted in earlier life) from the idea of changing his religion to advance his fortune, the feeling that it kept him in some sort an alien in the court of which he was one of the brightest ornaments could not fail insensibly to influence his mind when he had brought himself to view the difference between the sects as not essential. The death of the viscountess in 1666 removed the last tie that bound him to the Protestants; and he was received into the bosom of the Roman Catholic Church by the archbishop of Paris. This transaction was privately conducted: the change of his creed could not raise Turenne higher in the state than he already stood; his confidential letters for years previous show that his mind was in a state to be easily determined to such a step: his whole subsequent conduct indicates sincerity in his adopted faith.

Although circumstances had obliged France to join the side of the Dutch in their war against England, France took scarcely any active part in the contest, and promoted the peace concluded between the belligerents in 1667. Louis availed himself of the peace to form a powerful coalition against Spain, with a view to make himself master of the Spanish Netherlands. The campaign in Flanders, in which Louis told Turenne he wished to learn the art of war under him, was the consequence. The fears entertained by England, and the partisans of the house of Orange in Holland, of the consequences of French establishment on this side led to the last war of Turenne. The narrative of this war, which commenced in 1672, belongs to history rather than to biography, which confines itself to the illustration of individual character, at least in a sketch like the present, in which the subject is presented merely in outline. The victories gained by Turenne from the year 1672 to the year 1675 serve only, so far as he is concerned, to place in a more brilliant light the qualities which he had amply displayed on former occasions. These victories served to impress Louis XIV., who had before this, with the vain idea that he was invincible; but they taught William of Orange, who suffered by them, to act in future years as became one who really was the scholar of Turenne. In Montecuculi Turenne found an opponent worthy of him, one who, like himself, had passed through every grade of service. The premature death of the vicomte prevented the latter from attaining a personal advantage over the other. Henri, Vicomte de Turenne, fell near Sasbach, on the 27th of July 1675, while preparing to lead his troops into action. The French soldiers cried, "Our father is dead;" the hostile generals declared that a man had fallen who did honour to human nature; and the surviving French leaders, although their troops were marshalled for battle, retired without hazarding an action. The letters of Madame de Sevigné present a lively picture of the effect produced on the public mind at Paris by the intelligence of Turenne's death.

Turenne's victories, his state papers (published by Ramsay at the end of his Memoirs), and his private letters, all bear the impress of a truly great mind. In him clear and comprehensive views were combined with energy in action: both in politics and religion he was superior to the harsh and narrow feelings of the partisan; and his domestic life was eminently pure.

TURGENEV, ALEXANDER IVANOVICH, a Russian historical inquirer, was born in 1784, entered the Russian civil service, held a post in the Ministry of Public Worship under Prince Galitzin, was a prominent supporter of the Russian Bible Society, of which he was president, and when that society was suppressed by imperial ukase in 1826, retired from public employment. This step was also probably occasioned in some degree by the position of his brother, who had become compromised in the conspiracy of 1825. Alexander Turgenev afterwards travelled abroad in search of historical documents relating to the history of Russia, the fruits of which appeared in a work in two volumes quarto, 'Historica Russiæ Monimenta' (Historical Monuments

Digitized by Google

of Russia), published at St. Petersburg in 1841-42 as part of the great series issued by the Imperial Archæological Commission. The volumes were issued under the editorship of Vostokov, who states in the preface that to collect them Turgenev had travelled in Germany, Italy, England, Denmark, and Sweden; but if so, his researches had either been far from industrious or far from successful. The documents that he produces from England are only twenty-three in number, and all taken from the Cottonian and Harleian collections at the British Museum. His acquisitions from other countries are still more scanty, with the exception of the library of the Vatican, which supplied him with the greater part of the materials of his volumes, and in these he had the benefit of the previous researches of the Polish historian Albertrandi. Turgenev died at Moscow on the 17th of December 1845. A supplementary volume to the 'Monimenta' was published in 1848.

*TURGENEV, NIKOLAI IVANOVICH, the younger brother of the preceding, born in 1790, studied at Göttingen, and was associated as Russian Commissioner in 1813 with the Baron von Stein in the provisional government of the German provinces reconquered from France. He returned to Russia deeply impressed with the vigorous line of action of Stein, and with those liberal views in general which were then encouraged by the Emperor Alexander. In 1818 he published the earliest work on political economy in the Russian language, 'Opuit Teorii Nalagov,' or 'Attempt at a Theory of Taxation,' which was so successful as to reach a second edition in the next year. The abolition of the Russian system of serfage afterwards became the leading object of his life; and when the Russian government, towards the close of Alexander's reign, entered on a retrograde policy, he became associated with the secret societies which then sprung up in great profusion. He was abroad on foreign travel at the time that the great outbreak of these associations was suddenly caused by the accession of the Emperor Nicolas in 1825, and terminated in their total defeat and the destruction of the principal conspirators. Turgenev was condemned to death in his absence, and he has since resided abroad, chiefly at Paris, on remnants of property saved to him by his brother Alexander. In 1847 he published at Paris a work in three volumes, in French, entitled 'Russia and the Russians,' and in 1848 a pamphlet entitled 'Russia at the present Crisis.' These works, which are written with much eloquence and spirit, are directed against the line of policy adopted by the Emperor Nicolas, which the author considered as sacrificing the real interests of Russia to a Quixotic defence of legitimist and in particular of Austrian ideas.

*TURGENEV, IVAN, a Russian author of rising reputation, first made himself known by some poems published in 1843 and 1845, and afterwards became a contributor to the 'Sovremennik,' or 'Contemporary,' a leading periodical of St. Petersburg, first established by Pushkin. A series of articles by Turgenev in 1852, entitled 'Zapiski Okhotnika,' or 'Papers of a Sportsman,' attracted so much attention that they were republished separately, have run through several editions, and have since been translated into French, German, and English, the latter however merely from the French version. They are entitled 'Russian Life in Books, or the Experiences and Opinions of a Sportsman, edited by J. D. Meiklejohn,' Edinburgh, 1855. Turgenev's sketches of the Russian serfs, like those of the English peasantry in Miss Mitford's 'Village,' though exceedingly pleasant in themselves, have the defect of only giving the best side of the original.

TURGOT, ANNE-ROBERT-JACQUES, was born in Paris on the 10th of May 1727. He was descended from one of the most ancient families in Normandy: his father, Michel-Etienne Turgot, was Président aux Requêtes du Palais, and afterwards Prevôt des Marchands, councillor of state, and first president of the Great Council; and his great-great-grandfather, Jacques Turgot, was one of the presidents of the noblesse in Normandy in the States of 1614. Being the youngest of three sons, Turgot was destined by his parents for the ecclesiastical profession, for which his taste for study, the modesty and simplicity of his manners, and a sort of timidity which kept him aloof from dissipation, appeared to fit him. But he very early formed a resolution not to be an ecclesiastic. With his passion for science, as well as literature and poetry, it might be supposed that, having obtained his father's consent to his plan of not entering the church, he would have desired no other employment than that of a man of letters. But Turgot resolved, without discarding his favourite pursuits, to adopt a more active employment than that of a mere man of letters or science. Having determined to adopt the profession of the bar, or the robe, as it was called in France before the Revolution, he selected that branch or department, the members of which used to be called Masters of Requests (Maîtres des Requêtes). The maîtres des requêtes seem originally to have been magistrates who laid the written requests or petitions of parties before the king's council presided over by the chancellor. The term afterwards came to signify those members of the profession of the robe, or bar, whose business it was to make a verbal report of cases before the council of state. ('Dictionnaire de l'Académie Française,' art. 'Requête.') It would appear indeed that the business of a maître de requêtes, as followed by Turgot, corresponded in some respects with that of a counsel in England practising before the privy council; with this difference however, that the maîtres des requêtes were not employed by parties or for them, but by and for the court: so that in some respects they resembled rather our masters in Chancery; with this difference again, that the Master in Chancery's report is written; and neither spoken nor yet read by himself.

In 1761 Turgot was appointed intendant of Limoges. The office of intendant of a province in France, before the Revolution, was an administrative office. Turgot had, with a view of preparing himself for the duties of his new office, sedulously studied those branches of science which had most relation to them, particularly such of the physical and mathematical sciences as applied to agriculture, to manufactures, to commerce, and the construction of public works. During the thirteen years that the province of the Limousin was under the administration of Turgot, the more equitable distribution of imposts, the making of roads, the militia, the providing of subsistence for the people, and the protection of commerce, were the principal objects of his labours. He also applied himself to give activity to the Society of Agriculture of Limoges, and to direct the labours towards a useful end; he caused the midwives, who were scattered over the country, to be properly instructed; he secured to the people, during epidemics, the assistance of skilful physicians; and he introduced into his district the cultivation of potatoes, which the people at first looked down upon as a sort of food unfit for man; but Turgot overcame their prejudices by using them at his own table.

Turgot's plans for the 'repartition des Impôts,' and for the removal of the 'corvées,' the old contrivance for the repair of roads and the like, deserve, on account of their importance, a few words of explanation.

The greater part of the lands of Turgot's province of the Limousin was farmed by 'metayers,' whom the owner of the land furnished with the seed, cattle, implements of husbandry, and everything necessary for the cultivation of the farm. Under this form of cultivation, Condorcet says, it was very difficult to distinguish between that portion of the whole produce of the land which was to pay the expenses of cultivation, in other words, the interest, or rather profits, of the capital advanced in the shape of cattle and implements of husbandry, and the seed, as well as the wages of labour, and that portion which remained after such payment in the shape or under the name of 'produit net,' or rent. But it is evident that, according to the above account, the metayers bore only the character of labourers, without any degree partaking of that of capitalists. Consequently whatever part of the produce went to them must be considered simply as the wages of labour; while what went to the proprietors consisted at once of the rent and the profits of capital.

Instead of the impôts or land-tax being raised upon that part of the whole produce which could be justly considered as produit-net or rent, the only part which consistently with justice and with sound principles of public economy can be subjected to taxation, the tax was imposed and levied without reference to that, and a part, probably the principal part of the tax, operated as a tax upon labour and capital. Turgot laboured long and ardently, but in vain, to obtain an adjustment of this matter—a measure which he considered of such paramount importance, that he remarked, that no man who really believed the 'impôt territorial,' or land-tax, properly apportioned, impracticable or unjust, could possess sound views in political economy. Turgot seems to have considered that the best mode of levying the land-tax was to take a certain proportion of the rent. He seems also to have considered that this tax, properly apportioned and levied, would supersede the necessity of all other taxes. He says, 'A fixed law might terminate for ever all disputes between the government and the people, and particularly by fixing one scale for war and another for peace. Arrangements would be made in consequence in purchases and sales, and the part of the rent that bears the tax would no longer be purchased, any more than the share of the curé. At the end of some time it is very true that nobody would pay taxes. But the king would be proprietor of a proportional part of the revenue of all the land. This revenue would increase with the riches of the nation; and if this increase of wealth increased wants there would be a sufficiency to supply them. The riches of the king would be the measure of the riches of the nation; and the administration, always affected by the reaction of its errors, would constantly be instructed by the simple calculation of the produce of the taxes." ('Œuvres de Turgot,' tom. iv., p. 255.)

Another great object of Turgot's labours was to deliver the Limousin from the oppressive burden of the corvées; which consisted in the repair of the highroads by the compulsory labour of the poor inhabitants of the district. This impost pressed directly and exclusively on the poor man, the principle having been adopted of exacting it in kind. The hardship was extreme: men who had only half day's wages to live on were compelled to work without wages; the beasts necessary to the tillage of the ground were taken away from their work without regard to the inconveniences thereby occasioned. Besides this, the roads were made with ill-will. The workmen were ignorant of the art of road-making; so that the frequent repairs of the roads, either made badly or with bad materials, were necessary consequences. Turgot proposed to the 'communautés' adjoining the high-roads to have the work done by contract. By this means the original construction of the roads was at once more substantial and more economical, and they could be kept up afterwards at a less cost. Thus those features of the corvée that implied constraint and personal servitude disappeared. The unjust distribution of the impost for pay-

Digitized by Google

ing the contractor still remained, for it was beyond the power of an intendant to alter it.

On the death of Louis XV. a wider field was opened for the execution of Turgot's enlarged and beneficent policy. The state of France, oppressed and exhausted by an accumulation of abuses, demanded a reforming minister; and the public voice called Turgot to the highest offices, as a man who united to all the knowledge which is the result of study the experience acquired by habits of business. He was at first appointed minister of the marine; but after continuing only a month in this situation, in which he felt that he wanted much of the necessary knowledge, he received the appointment of comptroller-general of finance, an employment to which all the labours of his previous life had prepared him. The comptroller-general of finance was then prime minister of France.

In his letter to the king of the 24th of August 1774, Turgot said, "I confine myself at present, Sire, to remind you of these three words —no bankruptcy, no augmentation of impost, no loans. To fulfil these three conditions," he says, "there is but one means: to reduce the expenditure below the receipt, and sufficiently below it to be able to economise every year twenty millions, in order to clear off the old debts. Without that the first cannon fired will force the state to a bankruptcy." He then explained at some length the means which he considered the best for effecting the saving in question, and thus concluded :—"These are the points which your majesty has permitted me to recall to you. Your majesty will not forget that in accepting the place of comptroller-general, I left all the value of the confidence with which you honoured me. I felt that you intrusted to me the happiness of your people, and, if I may be allowed to say so, the care of rendering your person and your authority beloved; but at the same time I felt all the dangers to which I exposed myself. I foresaw that I should have to contend alone against abuses of every kind, against the efforts of those who gain by those abuses, against the mass of prejudices which are opposed to all reform, and which are so powerful a means in the hands of interested persons to eternalise disorders. I shall even have to struggle against the natural goodness, against the generosity of your majesty, and of the persons who are most dear to you. I shall be feared, even hated, by the greatest part of the court, by all who solicit favours; and they will impute to me all the refusals, they will represent me as a harsh man (dur), because I shall have represented to your majesty that you ought not to enrich even those whom you love at the expense of the substance of your people. That people to whom I shall have sacrificed myself are so easily deceived, that perhaps I shall injure their interest by the very measures which I shall employ in their defence. I shall be calumniated, and perhaps with sufficient appearance of truth to deprive me of the confidence of your majesty. I should not regret the loss of a place to which I never gained my expectations. I am ready to give it up as soon as I can no longer hope to be useful in it; but your esteem, the reputation of integrity, the public good-will, which have determined your choice in my favour, are dearer to me than life. Your majesty will remember that it is on the faith of your promises that I undertake a burden perhaps above my strength; that it is to you personally, to the honest, the just, and good man, rather than to the king, that I give myself up."

One of the first measures of Turgot was the establishment of a free trade in corn in the interior of the kingdom. He threw down those artificial barriers, in the construction of which the most refined and perverted ingenuity, to prevent one province which might chance to labour under a temporary famine arising from a bad harvest from being relieved by the superabundance of a more fortunate district, and thus constantly retain some part of the kingdom in misery and distress, and at the same time cramp the energies and diminish the resources of the whole. He felt at the same time how much perfect freedom in the external trade in corn would add to the security of subsistence, but he knew that the time was not yet arrived when such a measure could be attempted with success. Besides the restrictions on the free passage of corn from one part of the kingdom to another, there were numerous local restrictions and exactions, most of which (such as the exclusive privilege of bakers, the 'banalité' of mills, &c.) were removed during Turgot's administration. He also passed a law abolishing the corvées throughout France, a law which, with the characteristic infatuation of the privileged classes, who would give up nothing till it was too late, was revoked immediately after Turgot's removal from office. By these different laws, the servitude of the inhabitants of the rural districts was nearly destroyed. Turgot also abolished most of the restrictions and exclusive privileges under which the inhabitants of the towns suffered. Freedom of trade was granted to the glass works of Normandy, which, being obliged to supply Paris and Rouen with a certain quantity of glass at a low price, would have derived no advantage from bringing their manufacture to perfection, and had remained in that state of mediocrity to which oppressive laws condemn all the manufactures which have the misfortune to be subjected to them.

In regard to his financial operations, the characteristics of Turgot's administration were exactness in payments, fidelity to engagements, a reduction of expenditure whenever it could be effected without hardship and injustice. Pensions were three years in arrear: Turgot caused two years to be paid at once of all those which did not exceed 400 livres; that is, of all which were necessary for the subsistence of the parties to whom they had been granted. Ten millions due for advances made to the colonies had been payable for five years, and the payment of them had been suspended. Turgot paid at first 1,500,000 livres, and secured a million yearly for the payment of the rest. The finance appointments had been multiplied with the sole object of procuring a temporary supply by the first sale of offices. Most of the offices were double. Turgot proposed to reduce the double offices to a single one; to make the functionary whose office was retained reimburse him whose office was abolished; and when one person held two places, to suppress the salary of one of them.

"Such," observes Condorcet, "had been the operations, such were the views of M. Turgot; and it was thus that, while they caused him of not knowing finance, apparently to console themselves for the superiority which they were obliged to acknowledge in all the important parts of the administration, he had augmented the public revenue without putting on a new impost, and after having suppressed or diminished several; and that without having recourse to new loans, he had made repayments and diminished the debt. All these labours had been the work of twenty months; and two attacks of gout, an hereditary malady in the family of M. Turgot, had hindered him for several months from carrying on his plans. The forced labour to which his zeal for the public good had made him devote himself at the peril of his life had prolonged these attacks, and rendered them dangerous." ('Vie de M. Turgot,' pp. 115, 116.)

In short, those men of all ranks and every profession who subsisted at the expense of the nation without performing any service in return, who lived by abuses—nobles, courtiers, financiers, farmers of the revenue—all united in a powerful confederacy against Turgot, and succeeded in driving him from his office after he had held it not two years.

After his retirement from office he occupied himself less than formerly with political matters, particularly with such as had reference to the government and the laws of France. The sciences to which he now chiefly devoted his attention were the physical and mathematical. He likewise continued to indulge his early taste for literature and poetry. He had never lost the habit of making verses—an amusement very valuable to him in his journeys and during the sleepless nights caused by the gout. But he seldom showed his verses: a few translations, and a few more made public, were related by the critics to Voltaire. All that was known of his lucubrations in that department was a single Latin verse, intended for the portrait of Franklin—

"Eripuit cœlo fulmen, sceptrumque tyrannis."

Among the many points in which Turgot was in advance of the statesmen of his age, there is none that will strike an English reader more than the view he took of the American war as compared with the views even of the most enlightened of the contemporary English statesmen on that subject. Even Burke, who saw further than the others, had not admitted into his calculation the consideration of the most remote possibility of the ultimate independence of the colonies. Turgot's 'Mémoire' on the American war contains views on the nature of colonies that have been recognised since by the soundest thinkers on those subjects as correct ones. His views on the laws against usury contains almost all that is valuable in Bentham's Letters on the usury laws, written many years later: not that Bentham copied Turgot; he probably did not know of his work; but the fact is as stated. His article 'Fondation,' also in the 'Encyclopédie,' contains many ideas which were new at the time, and some, the soundness of which has not yet been overthrown.

The principal fault that was attributed to Turgot as a statesman was want of address, a charge against which he warmly defends himself in his letter to Dr. Price, who had written him on the subject of his 'Observations on Civil Liberty,' in which Price had "suppressed the imputation of want of address, which he had inserted in his 'Additional Observations.'" But as we are informed by his biographers that Turgot could not dissemble his hatred for knaves, his contempt for cowardice or baseness; that those sentiments involuntarily showed themselves on his countenance; even when we take along with this what these friendly biographers add, that as they were only the confidants of his love for mankind, and not of the unjust and blind spirit of injustice nor of vengeance: yet when we consider of what materials that portion of his countrymen were composed with whom he must have come chiefly in contact as prime minister of France, we cannot be surprised that he made himself many enemies; and that want of address was imputed to him even when he was not his enemies. But in whatever degree the charge may derogate from his claim to practical talent in statesmanship, it leaves untouched his character as a statesman for reach of intellectual vision, for purity and benevolence of intention, for undeviating adherence to principle hitherto unrivalled.

Turgot's attacks of gout before his ministry had been painful, but not dangerous. The violent and incessant labour to which he devoted himself in the midst of those attacks during his ministry changed the nature of them; and when he was restored to leisure it was too late for repose to repair the mischief that had been done. The attacks became more and more frequent, and at last he sank under them. His last attack, which was long and severe, did not impair his mind nor even his temper. "He only displayed towards his friends," says

Digitized by Google

Condorcet, "a more lively sense of the attentions they showed him; and his spirit beheld with tranquillity the approach of the moment when, according to the eternal laws of nature, it was about to fill in another sphere the place which those laws had marked out for it." ('Vie de M. Turgot,' p. 206.) He died on the 20th of March 1781.

The following are the principal works of Turgot:—Articles in the Encyc[illegible]pédie—'Etymologie,' 'Existence,' 'Expansibilité,' 'Foires et Marchés,' 'Fondations;' 'Eloge de M. de Gournay;' numerous official letters, memoirs, and projets, lois, édits, &c.: 'Réflexions sur la Formation et la Distribution des Richesses;' 'Lettres à M. le Contrôleur-Général sur le Commerce des Grains:' 'Extension de la Liberté du Commerce des Colonies;' 'Lettre à M. ——, Maire de Rochefort;' 'Lettre à M. l'Abbé Terray sur la Marque des Fers;' 'Sur la Prescription de la Langue Française et la Versification Métrique;' 'A M. de C. sur le Livre de l'Esprit;' a complimentary Letter to Dean Tucker on the occasion of M. Turgot's translating into French Tucker's work, entitled 'The Case of going to War for the Sake of Trade, considered in a New Light.' [TUCKER, JOSIAH.]

Condorcet, in his Life of Turgot, gives a good many opinions and speculations in metaphysics, morals, and legislation, which formed, he says, detached portions of a great work which Turgot had projected, but which he had not even begun to write, and were gathered by Condorcet from his conversations.

(*Vie de Monsieur Turgot* (par Condorcet), Londres, 1786; *Mémoires sur la Vie et les Ouvrages de M. Turgot, Ministre d'Etat*, par Dupont de Némours, Philadelphie, 1788; *Oeuvres de M. Turgot, Ministre d'Etat*, 9 vols. 8vo, Paris, 1808.)

TURNEBUS, ADRIAN, one of the most celebrated French scholars of the 16th century. His French name was Tournebœuf, and some writers, as Dempster and Mackenzie, have maintained that this is only a French translation of the English name Turnbull, and that Turnebus was the son of a Scotchman who had settled in Normandy. The common account however is that he was born in 1512, at Les Andelys in Normandy, and in his eleventh year he was sent to Paris to be educated. His uncommon talents, combined with his indefatigable diligence, soon raised him above all his fellow-students, and he is said on many occasions to have shown more knowledge than his masters. After the completion of his studies he was for some time engaged in teaching the ancient languages at Toulouse, until in 1547 he was appointed professor of Greek at Paris, whither his name and that of A. Muretus attracted students from all parts of Europe. In 1552 he undertook in conjunction with William Morel the management of the Royal Printing Establishment of Paris for Greek books, but after the lapse of three years he resigned this office for that of Royal Professor. Notwithstanding the many brilliant offers that were made to him in several foreign countries, he remained at Paris until his death, on the 12th of June 1565.

Seldom had a scholar in his lifetime enjoyed such a universal and truly European reputation as Turnebus. He was a man of a diffident, modest, and very amiable character, and no one who knew him could help becoming attached to him. Henry Stephens is reported to have said: "Turnebus pleases everybody because he does not please himself." In his learned controversies however with Ramus and Bodinus, he is sometimes as severe as he was naturally gentle. As a scholar he was not inferior to any of his contemporaries: even on the day of his marriage he could not abstain from devoting a few hours to his studies. His works consist of philological dissertations, some of which are polemical, critical commentaries on various ancient authors, and translations of Greek writers into Latin. His criticisms are generally masterly, but, like most great critics, he was too fond of making conjectural emendations. His Latin translations are among the most elegant and correct that have been made. His Greek translation of Cicero's essay 'De Fato' is a proof of his thorough knowledge of the Greek language. Most of his works, all of which appeared separately and at different times, were collected and published after his death by his second son, Stephen Turnebus, under the title, 'Adriani Turnebi Opera,' Strasburg, 3 vols. folio, 1600. Besides the works contained in this collection, he wrote several others, the best of which are his 'Adversaria,' consisting of 3 vols. 4to, the third of which was edited after his death by his son Adrian Turnebus. The first edition of the first two volumes appeared at Paris in 1564. It was several times reprinted, but the best edition is that of 1599, folio.

(Niceron, *Mémoires*, vol. 39; Teissier, *Eloges des Savans*; compare Mackenzie, *Scotch Writers*; Saxius, *Onomast.*)

TURNER, DAWSON, a distinguished botanist, was born in the latter part of the 18th century. He spent the greater portion of his life at Great Yarmouth, in Norfolk. Although he has attended to all departments of botany, he is especially distinguished for his knowledge of cryptogamic plants. His first work was 'A Synopsis of the British Fuci,' which was published in London, in two volumes in 1802. In 1804 he published an account of the mosses of Ireland, under the title 'Muscologia Hibernica Spicilegium.' In 1808 he published a work in folio with illustrations, entitled 'Fuci, or coloured figures and descriptions of the Plants of the genus Fucus.' This work was in three volumes. In 1809 appeared a smaller work in 4to, embracing a history of various forms of sea-weeds, with the title 'History of the Fuci.' He also published an account of 'A Tour in Normandy,' 2 vols, royal 8vo.; 'Treves, and its Architectural Remains;' 'Sepulchral Reminiscences of Yarmouth;' 'Historical Sketches of Caister Castle;' and 'Analyses of English, French, and Roman History.' In many of his labours and travels he was associated with the late Mr. Lewis Weston Dillwyn, of Swansea, and in conjunction with him, 'The Botanist's Guide through England and Wales,' was published in 1816. This work was one of great interest to the botanist, giving the localities in which plants indigenous to England and Wales could be found. Mr. Turner was admitted a Fellow of the Royal Society in 1802, he was also one of the early Fellows of the Linnæan Society, and he has had conferred upon him many foreign honours. He has not now for many years published anything on botany. [SUPP.]

TURNER, EDWARD, a distinguished chemist, was born in Scotland in 1798, and educated in Edinburgh for the medical profession. He took his degree of M.D., in the University of Edinburgh, but devoted himself to the study of chemistry. At the opening of University College, then the London University, in 1828, he was appointed to the chair of chemistry, a position he occupied till his death. He was chiefly known as a writer on the science of chemistry, by his 'Elements of Chemistry,' a book which has gone through seven or eight editions, and is remarkable for the comprehensive and lucid manner in which the whole science of chemistry is treated. Although Dr. Turner did not contribute much to the particular literature of the day, he embodied the results of his labours in the successive editions of his work; and he wrote some mineralogical articles for the 'Penny Cyclopædia.' He chiefly worked at the department known as inorganic chemistry, and more especially employed himself in perfecting the atomic theory, and the laws of combination of elements. It was through his labours that many of the equivalent numbers of the elements were established. He was not less successful as a lecturer than a writer, and few men have exhibited greater power of imparting to others the knowledge they possessed: to which fact testimony was exhibited by Dr. Turner. In early life he was subject to disease of the lungs, and subsequently suffered from intense dyspepsia. In January 1839, he was seized with inflammation of the lungs, and died on the 13th of February following. He was much beloved by the students of his class at University College, and three hundred of them followed him to his grave. A marble bust of him was placed in the library of the college, the cost being defrayed by subscriptions from his pupils.

TURNER, JOSEPH MALLORD WILLIAM, was born at No. 26, Maiden Lane, Covent Garden, where his father carried on business as a hair-dresser. The year, as well as the month of Turner's birth has been differently given; all that is certainly known respecting either is that his baptism is entered on the register of the parish church of St. Paul's, Covent Garden, as having taken place on the 14th of May, 1775. [1] It is now known that he was born on the 23rd of April, 1775.] Of his boyhood and youth little is told. His father, a tradesman in a small way, did not attempt to make his son a scholar, and the great painter never advanced far beyond the rudiments of an ordinary English education. Of his primary training in art, what led him to think of painting as a profession, we have no precise information. Probably his own strong inclination first stimulated him to overcome the initiatory difficulties of the study of drawing, and some casual occurrence or association aroused and directed his ambition. It does not appear that the elder Turner thwarted his son's inclination, though, perhaps from poverty, perhaps from indifference, he did not procure him the instruction which might have smoothed his early path.

Turner was essentially a self-made painter. It is said in a brief notice of him published in 1805—when, though only in his thirtieth year, he was already recognised as the first of living landscape painters—"Turner may be considered as a striking instance of how much may be gained by industry, if accompanied by perseverance, even without the assistance of a master. The way he made his professional powers was by borrowing when he could a drawing or picture to copy; or by making a sketch of any one in the Exhibition early in the morning, and finishing it up at home. By such practices, and by a patient perseverance, he has overcome all the difficulties of the art." ('Daye's 'Professional Sketches of Modern Artists,' Works, p. 352.) This passage was written by one eminent in his day as an instructor of young landscape painters, and the teacher and friend of Girtin, Turner's earliest and closest artistic associate, and it coincides with what other authorities, both written and traditional, have always related of his career. But he was certainly still very young when he had opened to him the means of obtaining professional instruction, he having been admitted as a student in the Royal Academy in 1789, when consequently he was only fourteen years old. It is hardly probable, however, that he received much direct instruction in the Academy schools, or that he followed their prescribed course. If he studied in the antique, or later in the life school, he certainly never acquired mastery over the human form, and no instruction was given the student in landscape drawing or painting. Still it is not to be that a young enthusiast, as he certainly was, would attend the schools and form acquaintance with professors and students, without acquiring from them much technical information, even if he received no systematic instruction. But his best academy, he was accustomed to say, was "the fields and Dr. Monro's parlour." Dr. Monro, who was a warm-hearted patron of young artists, had an excellent collection of water-

Digitized by Google

colour drawings and engravings at his residence in the Adelphi, and he not only gave his two favourite protegés, Turner and Girtin, free access to his treasures, with permission to copy them, but directed their studies, and encouraged them to make coloured sketches of the scenery around London, which he readily purchased at prices satisfactory to the modest students. In these sketching rambles, Turner and Girtin were constant companions, and they formed for themselves a style of water-colour painting very different from that of any of their predecessors—unless indeed it be Cozens, a man of some genius and a friend of Dr. Monro, from whose drawings and conversation much was probably learned by the two young painters. Girtin was Turner's senior by a year or two, and as he was of a more liberally educated artist, it is not unlikely that he was to some extent his companion's tutor; certain it is that their drawings were very similar in style—the chief difference being that Turner made out his details more carefully—and some have fancied that had Girtin lived he would have been as great a painter as his friend. He grew very, however, to intemperance, and died (Nov. 1802) at the early age of twenty-seven. Turner with more self-control and perseverance laboured steadily on and rose in good time to the undisputed supremacy in his branch of art.

Two years before he entered the academy as a student, in 1787, when only twelve years of age (supposing his baptismal year was the year of his birth), Turner made his bow to the public as an exhibitor at the Royal Academy (under the name of W. Turner) of two drawings, 'Dover Castle' and 'Canterbury,' his next appearance being in 1790, the year following his admission as a student, when he sent a 'View of the Archbishop's Palace, Lambeth.' From this time till his death—a period of sixty years—he regularly contributed to every exhibition of the Royal Academy, with the exception of the years 1821, 1824, and 1848, sending in all 259 pictures, a very large proportion of them being paintings of considerable magnitude. But these alone would give a very inadequate notion of his remarkable facility and industry, as during that period he also sent to the British Institution some twenty oil paintings which had not been exhibited at the Academy, and painted a large number, and some of them his chief works, which were never exhibited at all, besides making hundreds of water-colour drawings and designs for engraving.

For some ten or twelve years he painted chiefly, if not exclusively, in water-colours, his pictures—with the exception of two or three fancy subjects, such as 'The Battle of the Nile,' 1799; 'The Fifth Plague of Egypt,' 1800—being confined to the representation of English and Welsh scenery. But already it was felt that there was a degree of brilliancy of colouring and close observation of nature which placed his works quite apart from those of any of his contemporaries, and justified the highest anticipations of his future success. The popular opinion received professional confirmation by his election in 1799 as an associate of the Royal Academy; in 1802 he became an academician. He now visited Scotland, France, Switzerland, and the Rhine; launched boldly into oil painting on canvasses of large size, and began to look into the Greek and Roman poets—or their substitute Lempriere—for subjects for his pencil. This year, 1802, the exhibition afforded a fair illustration of the wide and daring range his pencil was taking, his contributions being 'The Falls of the Clyde;' 'Kilchurn Castle;' 'Edinburgh from the Water of Leith;' 'Ben Lomond Mountains—the Traveller;' 'Jason;' 'The Tenth Plague of Egypt;' 'Fishermen on a Lee-Shore in Squally Weather;' and 'Ships bearing up for Anchorage.' He evidently felt his strength; yet year after year, while showing himself sufficiently conscious that he knew his proper walk, he kept on putting forth strange experiments in subjects and methods; thus one year (1803) saw his 'Holy Family,' another (1807) 'A Country Blacksmith disputing upon the price charged to the Butcher for shoeing his Pony,' another (1808), 'The Unpaid Bill, or the Dentist reproving his Son's Prodigality,' and another (1809), 'The Gasetteer's Petition;' but even from these strange whims he seemed to gather new strength. At this time however he appears to have studied with most earnestness the stormy ocean, and never yet has the sea in its wildest fury been represented on canvas with such wondrous might and majesty as in his noble 'Shipwreck: Fishing-boats endeavouring to rescue the Crew,' now at Marlborough-House; the 'Gale at Sea,' belonging to the Earl of Ellesmere; and the 'Wreck of the Minotaur,' the property of Lord Yarborough. But even alongside of these the poetic treatment of views of places, such as his 'Edinburgh from Calton Hill,' 1806; 'Fall of the Rhine at Schaffhausen,' 1806, and 'Ben Lomond and Loch Voyne' in 1807, no doubt enabled them to hold their place, but obtained for him perhaps even a wider popularity, while with the connoisseurs his 'Narcissus and Echo,' 1814, 'Mercury and Herse,' and 'Apollo and Python,' 1811, his 'Dido and Æneas,' 'Apuleia,' and a long list of other mythological themes, won him fame as a poetic painter, though now, despite their pictorial richness and daring, they are generally felt to be in truth the least poetical of his works, and infinitely inferior to his other and more purely imaginative productions of this period, 'Snow-storm—Hannibal crossing the Alps,' and the like, in which he almost for the first time pourtrayed with some approach to the vastness and sublimity of nature the fierce encounter of the elements, the splendour of the rarer phenomena of the atmosphere, and the beauty and glory of the mountains.

In 1807 Turner was elected professor in perspective to the Royal Academy, and for several years he continued to give courses of lectures to the students, in which he spoke of the systems of pictorial composition adopted by the great landscape painters of earlier times, of their principles of effect and of colour, and compared them though sparingly with the teaching of nature; but the lectures were never printed, and as far as we know no record of them is left. Report has always spoken of them however as ill-arranged and ill-delivered, confused in style, and obscure in illustration. They never succeeded in securing the attention of the students, and for many years before he resigned his professorship he had ceased to deliver any lectures.

An important circumstance in the earlier career of Turner was the publication of his 'Liber Studiorum,' which was commenced in 1808. This now famous work was undertaken in rivalry of the book of sketches known as the 'Liber Veritatis' of Claude, in the possession of the Duke of Devonshire, of which a series of facsimile aqua-tinta engravings was made by Earlom and others. Turner's series, engraved in a similar style, embraced examples of all the principal forms of landscape composition, and displayed a fertility of resource and an intimate observance of nature such as the publication of no previous landscape painter had approached. The work has long been extremely rare, and when brought to sale commands a very high price: two republications of it have been lately announced. From this time to his death Turner remained the most in request with publishers and engravers of any English landscape-painter, both for the landscape illustration of books and for series of engravings; and even where his 'eccentricities of colour,' as they are called, repel, his engraved designs are with few exceptions received with unmitigated delight. Among the most famous of these engraved works may be mentioned the 'Scenery of the Southern Coast,' 'England and Wales,' 'Rivers of England,' 'Rivers of France,' Rogers's 'Italy' and 'Poems,' of all his vignette engravings the most exquisite, the poems of Byron, Scott, &c. From his paintings likewise some very noble line-engravings of large size have been made by Pye, Willmore, Miller, Prior, &c.; while Turner's grand engraving of 'The Shipwreck' is one of the richest specimens of mezzotinto.

We cannot in a sketch like this trace the progress of the painter by the only really important events recorded of his life—the production of his chief pictures. He made his first visit to Italy in 1819, 1829, and 1840, and after each his style underwent a remarkable change. The usual division of his style, and on the whole it is the most convenient one, does not however exactly coincide with his Italian visits. Turner's career, it is said, comprises three distinct periods; the first reaches to about his twenty-seventh year, when he was elected into the Academy, and during which he was chiefly noticeable as a water-colour painter diligently occupied in drawing from nature, and at the same time forming for himself a style, by carefully studying (and imitating) the methods of his English predecessors, Wilson, Loutherbourg, and, in a less degree, Gainsborough, the influence of whose works is very apparent in his earliest oil-paintings: the second period ranges from 1802 to 1820, in which he is seen at first a follower of Claude, and, in a less degree, of Gaspar Poussin, but rapidly disencumbering himself from the trammels of every kind of pupilage to great names, and striking out a style of landscape-painting entirely original and wholly unrivalled for brilliancy of colouring and effect: while the third period, dating from his second visit to Rome in 1830, is one in which everything else is sacrificed in the effort to attain the utmost splendour of light and colour—to make (in the strange language of his own 'MS. Fallacies of Hope') "the sun

> Exhale earth's humid bubbles, and, emulous of light,
> Reflect her forms, each in prismatic guise."

But while such a division is convenient, it must not be regarded as anything more. Like every great artist, his conceptions were always advancing and expanding, and in each period were painted pictures that would seem justly to belong to another. To which period he painted best it is difficult to say, and judges of art pronounce widely different opinions. It is quite certain that up to some ten or twelve years before his death, his knowledge of the phenomena of nature and of the resources of art continued to grow and expand, even when his hand failed to express faithfully his increasing knowledge, and he prevented him setting them forth with due elaboration. Any one who has carefully studied Turner's works chronologically, and who has at the same time diligently studied nature, will sympathise if he cannot entirely concur in the above statement of Turner's most ardent admirer, Ruskin:—"There has been marked and constant progress in his mind; he has not been, like some few artists, without childhood; his course of study has been as evidently as it has been swiftly progressive, and in different stages of the struggle, sometimes one power of truth, sometimes another, has been aimed at or omitted. . . . As he advanced, the previous knowledge or attainment was absorbed in what succeeded, or abandoned only if incompatible, and never abandoned without a gain; and his latest works present the sum and perfection of his accumulated knowledge, delivered with the impetuence and passion of one who feels too much and knows too much, and has too little time to say it in, to pause for expression, or to ponder over his syllables." ('Modern Painters,' i. 407.)

It would be easy to refer to examples illustrative of Turner's

Digitized by Google

different periods, but so large a number of his best works—thanks to his munificence—are now public property, and through the care of Mr. Wornum have been so well arranged, dated, and catalogued, and rendered so easy of reference, that a special mention of any is needless. A cursory examination (with attention to the dates) of that collection, and of the other examples of Turner's power in the public galleries, will sufficiently illustrate what has been said of the progressive and, as it were, tentative character of his mind; and a studious consideration will convince the visitor that even in what seem Turner's wildest aberrations from the sobriety of nature, there is a foundation of truth for the idea he has endeavoured to work out, and that his failures, while they arise sometimes from wilfulness, arise more often from his attempting to represent unusual phenomena by materials utterly inadequate for the purpose. Turner in fact seems never to have understood the limits of his art, and in seeking to accomplish what is impracticable with such means as he possessed, and with such necessarily imperfect skill, he became extravagant and bizarre. Although eccentricity of colour and indefiniteness of form were at all times charged upon his paintings, the extreme development of this fault is chiefly urged against the works executed during the last twenty years of his life, and unquestionably with all there is of unfailing suggestiveness, to an artistic eye, in every one of them, it is upon these works that censure will eventually rest. Yet it is remarkable that to this period belong a number of his most general consent, his unrivalled powers as a landscape-painter are seen in their fullest development, his 'Childe Harold, or Modern Italy,' which was painted in 1832; and to this period also belong some of his most poetic efforts, including 'The Fighting Temeraire tugged to her last Berth' (1839), and also 'Slavers throwing overboard the dead and dying—Typhon coming on' (1840).

Turner died on the 19th of December 1851, in humble lodgings, which he had taken in an assumed name, by the river side at Chelsea. He was buried with some state in the crypt of St. Paul's Cathedral by the side of Reynolds, Wilkie, Fuseli, and others of our eminent painters. Turner was a man of unsocial and reserved manners, and many gossiping stories are related of his coarseness and love of money; but they bear on their face a coloured and exaggerated character. It is certain that he had hoarded his money for no selfish purpose, for many years he had refused to sell some of his best pictures, and when any such, painted and sold in his earlier years, were offered for sale he if possible purchased them. On his death it was found that he had by his will bequeathed to the nation all the pictures and drawings then collected in his residence, No. 47, Queen Anne-street, West, on condition that a suitable gallery was erected for them within ten years; and his funded property to found an asylum at Twickenham for decayed artists. Unfortunately the will was unskilfully drawn, and a suit in chancery ensued, by the compromise of which by the engravings and some other property being transferred to the next of kin who disputed the will, while the paintings and drawings were held by the nation. The oil paintings, one hundred in number, include many of his finest works as well as examples of his pencil from the very outset to the termination of his career; they are for the present exhibited at the National Gallery. The finished drawings, which number several hundreds, and the sketches, which amount to some thousands, have been (or are being) arranged, cleaned, and mounted with rare skill and patience by Mr. Ruskin, who volunteered his services to the government; and a choice selection of them is now hung in the South Kensington Museum. Among those now exhibited are many admirable drawings in colours, and numerous sepia drawings made for the 'Liber Studiorum,' the Rivers, &c., some of which are of an exquisite beauty and delicacy of effect, probably unequalled among drawings of that character. The nation also possesses in the collections presented by Mr. Vernon and Mr. Sheepshanks several other choice examples of Turner's pencil.

There is no need to add anything to what has been said respecting the rank which Turner holds among the landscape painters either of his own or an earlier time. But as his merits are still sometimes contemptuously denied—perhaps in part owing to the indiscriminate eulogy, which has of late years been heaped upon him—and as it is sometimes said that, if he were the great painter so strongly affirmed, foreign artists and writers on art would not be slow to acknowledge his superiority—it may be well to quote the calm judgment of a German writer whose authority is admitted, and whose opinion is the result of a repeated consideration of his works. Dr. Waagen says—"In point of fact no landscape painter has yet appeared with such versatility of talent. His historical landscapes exhibit the most exquisite feeling for beauty of lines and effect of lighting: at the same time he has the power of making them express the most varied moods of nature—a lofty grandeur, a deep and gloomy melancholy, a sunny cheerfulness and peace, or an uproar of all the elements. Buildings he also treats with peculiar felicity; while the sea in its most varied aspect, is equally subservient to his magic brush. His views of certain cities and localities inspire the spectator with poetic feelings such as no other painter ever excited in the same degree, and which is principally attributable to the exceeding picturesqueness of the point of view chosen, and to the beauty of the lighting. Finally, he treats the most common little subjects, such as a group of trees, a meadow, a shaded stream, with such art as to impart to them the most picturesque charm. I should, therefore, not hesitate to recognise Turner as the greatest landscape-painter of all times, but for his deficiency in one indispensable element in every work of art, namely, a sound technical basis."—("Treasures of Art in Great Britain,' 1854, vol. i., p. 383-4.)

TURNER, SAMUEL, author of 'An Account of an Embassy to Tibet,' was a native of Gloucestershire, and born about the year 1759. Having entered the service of the East India Company, he gained the confidence of Warren Hastings, and was sent by him on a congratulatory mission to the new Dalai Lama in 1783. In 1792 Turner distinguished himself at the siege of Seringapatam, and was subsequently sent ambassador to the sultan of Mysore. He returned to England soon afterwards with a large fortune. He was seized with apoplexy on the night of the 21st of December, 1801, in an obscure street in London, and having no papers about him to intimate his name or place of abode, was carried to the workhouse in Holborn. When discovered by his friends, it was deemed unsafe to remove him, and he died in the workhouse on the 2nd of January, 1802, in his 43rd year. Turner was a Fellow of the Royal Society, and a member of the Asiatic Society of Bengal. Besides the account of his embassy to Tibet, published in 1800, which is still a standard work, he contributed to the 'Transactions' of the Asiatic Society an account of his interview with the Teshoo Lama, and on account of Poorungeer's (a native priest in the employment of the company) journey to Tibet in 1785, both in vol. i.; and an account of the Yak of Tartary, in vol. iv. The account of his interview with the Teshoo Lama was reprinted as a pamphlet at Oxford in 1798. The account of the embassy was translated into French by Castéra, and into German by Sprengel.

TURNER, SHARON, was born in London on September 24, 1768. He was educated at Pentonville, at a school kept by the rector of St. James's Clerkenwell, and at the age of fifteen articled to an attorney. On the death of his master, before his clerkship had wholly expired, a connexion formed him in his business. Even during his clerkship he had felt the promptings of a literary taste, and had occupied his leisure by studious reading and composition. While in business for himself he began to collect materials for his 'History of the Anglo-Saxons,' of which the first volume was published in 1799, and the third in 1805. It is on this work that his reputation chiefly rests. He was the first English author who had taken the pains, or had had sufficient knowledge, to investigate the valuable remains left to us in Anglo-Saxon records. He consulted the original manuscripts with great industry and intelligence, and the result has been that, though his views have been more than once assailed, his general accuracy sustained; now that the study of Saxon literature has been more appreciated, and the authenticity of his materials more completely understood. The work soon took a permanent place in the historical literature of the country, and was encouraged by its success, he continued his history from the Norman conquest to the death of Elizabeth, publishing at different times the volumes of a distinct period; the three subdivisions being re-published together under the title of 'The History of England from the earliest period to the Death of Elizabeth,' 6th edit. 2 vols. 8vo, 1839. This portion is equally distinguished by a large amount of industry, and the discovery in consequence of a few hitherto unknown facts, was not equal to the previous portion. Where the field was less new he had no advantage over previous writers; his views had little originality, and his treatment of his subject had no superior merit. In 1829, after suffering from illness for some years, he retired to Winchmore hill, where he prepared and published in 1832 the first volume of his 'Sacred History of the World, as displayed in the Creation, and subsequent events to the Deluge. Attempted to be philosophically considered in a series of Letters to a Son.' Two other volumes completed it, the object being, from temporal history, to establish the principle of minute providential agency or supervision. In 1845 the death of his wife occasioned him much distress, and increased his illness. At length he was compelled to return to London, where, in his old residence in Red Lion-square, he died on February 13, 1847. Besides the works above-mentioned, he published a volume of essays and poems under the title of 'Sacred Meditations, by a Layman;' a 'Profusion on the Greatness of Britain, and other subjects;' 'Richard Hill, a Drama;' and he contributed two or three articles to the 'Quarterly Review.' Some letters which he addressed to the Royal Society of Literature, of which he was an associate, on the affinities of the various languages of the world, have been added to the last edition of his 'Anglo-Saxons.'

The Rev. Sydney Turner, so long the indefatigable chaplain and chief of the Reformatory School of the Philanthropic Society at Red-hill, near Reigate, and so well known as the earnest and zealous advocate of reformatory schools generally, is a son of Mr. Sharon Turner. He has published 'Reformatory Schools. A Letter to C. B. Adderley, Esq., M.P.,' 8vo, 1855; and edited a new edition (1848) of his father's 'Sacred History of the World.' In 1857 he was appointed Inspector of Reformatories in England and Scotland.

TURNER, THOMAS HUDSON, was born in London in 1815. His father was a printer in the employment of Mr. Bulmer in Pall-Mall, but dying young and in difficulties, his family was assisted by Mr. W. Nicol, the nephew and successor of Mr. Bulmer, who placed young Turner at school at Chelsea, where he early distinguished him-

Digitized by Google

self by a love for antiquarian research, and formed a friendship with the two sons of the late Allan Cunningham. With the younger, Peter, his friendship continued until his death. In 1831 he was taken into the printing-office of Mr. W. Nicol to learn the business. While here he employed all his leisure in pursuing his antiquarian and historical studies, and on seeing an advertisement for a young man at the Record Office in the Tower who could read and translate records, he applied for and obtained the situation. He devoted himself with great diligence to the study of the records, and his knowledge increased rapidly. He projected many historical works, but his labours in acquiring constantly fresh information prevented his carrying his many plans into execution. From this employment he was taken by Mr. Tyrrell, the Remembrancer of the City of London, to assist him in collecting materials for a history of London, at which he most assiduously laboured, but the information thus collected remains yet in manuscript. When this was completed he edited with remarkable care a volume of 'Early Household Expenses,' to which he prefixed a valuable introduction; the work being presented to the Roxburghe Club by Mr. Beriah Botfield. After the publication of this volume he was made secretary to the Archæological Institute. While he held this office his readiness in imparting information respecting antiquities was remarkable; he wrote some valuable papers for the 'Journal' of the Society, and communicated several records to the Society of Antiquaries at Newcastle, which are printed in the 'Archæologia Æliana.' On his retirement from his office, he began to arrange his studies, but commenced his work, 'Some Account of Domestic Architecture in England, from the Conquest to the End of the Thirteenth Century, with numerous Illustrations,' which was published in 1851. This work, and his papers in the 'Archæological Journal' published between 1846 and 1851, form his principal claim to his fame. The papers only amount to five, and one of them is on the dining-customs of the Middle Ages, a subject similar to that of his book. This 'Domestic Architecture' is noticeable for the exactitude and wide extent of his knowledge, and is a valuable contribution for the student of English antiquities. It does not confine itself to the mere building, but includes a large amount of subsidiary information and illustration mainly collected from our national records, and comprises an account of the furniture; the implements used in the processes of cooking, brewing, baking, &c.; the state of female culture at the time; with disquisitions on the manufactures connected with the household economy, such as glass, linen, cutlery, &c. Mr. Turner's severe and constant application to his studies had for many years greatly impaired his health, and January 17, 1852, is the date which produced far less than from his great accomplishments could have been wished and might have been expected. His vast store of knowledge was freely scattered in conversation; he had constant applications for information, and few were sent away unsatisfied. His ardour for accumulation prevented his application to composition, so that of his many projected works the one above-named was the only one he executed, and that was in a manner but a fragment: at any rate Mr. Turner promised to carry down the subject to a more recent period, a promise he did not live to fulfil. A second volume has however been prepared and published by Mr. Parker of Oxford.

TURNER, WILLIAM, a physician, naturalist, and divine, was born at Morpeth in Northumberland, about the year 1520. He studied at Cambridge, and having taken a very decided part in the religious questions that were discussed, he made himself obnoxious to the dominant party, and was thrown into prison. After his release from prison he resided on the Continent till the death of Henry VIII., when he returned to his own country. His studies at Cambridge had been more particularly directed to medical divinity, but on the Continent he became acquainted with Conrad Gesner at Zürich and Luc Ghini at Bologna, and acquired a taste for natural history. During the reign of Edward VI. he was made physician to the protector Somerset, and he was also made a prebendary of Wells, and a dean of Wells, and a canon of Windsor. He was however again obliged to fly to the Continent on the accession of Mary, where he remained till the reign of Elizabeth, when he again returned, and was presented with all his original benefices.

Turner is said to have published several works on botany, but his greatest work on this subject, and that on which his reputation rests, is his 'Herbal,' the first book of which was published in black letter, small folio, with wood cuts, in London, in 1551. A second book was published at Cologne in 1562, and the whole work was republished at the same place in 1568. This work is arranged alphabetically, and contains much laborious research and acute criticism with regard to the plants then known. Although he appears to have collected plants himself, he has described but few new ones in this work. The medical properties of the plants are treated of, especially those which were unknown to the ancients. Subjoined to this book is one on baths, in which the author speaks of the properties of various medicinal springs in England, Germany, and Italy. His other writings connected with medicine were, a work on the wines used in England, and another on the properties of treacle. In 1544 Dr. Turner published at Cologne a small octavo volume on the birds mentioned by Pliny and Aristotle, entitled 'Avium præcipuarum, quarum apud Plinium et Aristotelem mentio est, Historia.' In Gesner's great work the 'Historia Animalium,' there is an account of the British fishes by Dr. Turner. These works afford abundant evidence of his powers as a sound critic and accurate observer in the science of zoology.

Dr. Turner published several works on controversial divinity; also a collation of the translation of the Bible into English, with the Hebrew, Greek, and Latin copies. He also translated several works on science and divinity from the Latin into English.

His fondness for plants led him to their cultivation, and he had botanic gardens at Wells and Kew. He died July 7, 1568, leaving a large family. Turner was one of the earliest pioneers of natural science in Great Britain, and had it not been for the stormy period in which he lived, and the shortness of his life, he evidently possessed a genius that could have placed its possessor foremost in the ranks of the cultivators of natural history.

TURPIN or TILPIN, Latinised TURPINUS, was originally a Benedictine monk of the convent of St. Denis near Paris; but Charlemagne raised him, in 773, to the archiepiscopric of Rheims. This dignity he held until his death, in 811, or, according to Rivet, 800. There is a Latin romance in verse containing an account of the expedition of Charlemagne into Spain against the Saracens, of his conquest of the country, and of the heroic death of Roland in the vale of Roncesvalles. This poem, which is entitled 'Historia de Vita Caroli Magni et Rolandi,' was formerly ascribed to Archbishop Turpin, as is stated on the title-page of several manuscripts. But among the many arguments which have been advanced against that opinion, one is sufficient to show its inconsistency. The author of the romance speaks of the death of Charlemagne, although it is an attested fact that Archbishop Turpin died before the emperor. The work was in all probability composed about the end of the 11th or the beginning of the 12th century. Whether the name of the author was really Turpin, and thus gave rise to the confusion, or whether it is a mere forgery, for which the circumstances of those times formerly offered many temptations, cannot be decided. Thus much only seems clear, that the writer's object was to exhibit Charlemagne as the model of a hero in combating paganism and the pagans, and thereby to work upon his contemporaries, so as to rouse them to take part in the Crusades. The tendency of the poem is a religious one, and it bears great marks of being the work of a learned monk, especially in the pubils disputes between the heroes, who fights as much with their tongues as with their swords. Notwithstanding all this, the work is of great interest, being one of the earliest poetical productions of the Middle Ages. It is printed in S. Schardius' and Reuber's collections of 'Scriptores Rerum Germanicarum.' A separate edition was published by Ch. Clampi at Florence, 8vo, 1822, and another at Paris, 1834.

(Vossius, *De Historicis Lat.*, p. 298; Bayle, *Dictionnaire Hist. et Crit.*, under 'Turpin;' Rivet, *Hist. Litt. de la France*, t. IV.)

TURPIN DE CRISSÉ, LANCELOT, Comte de Crissé, a writer on tactics, of no considerable celebrity as a military leader whose biography are, when his reputation is taken into account, astonishingly meagre. He was born in La Besuce, of a noble family, about the year 1715. He entered the army young; obtained a company in 1734, and a regiment of hussars in 1744. He distinguished himself in his charge of colonel in the wars of Italy and Germany, and was promoted to the rank of brigadier-general.

In the midst of a successful career (about 1753 ?) he astonished his friends by renouncing the world, and commencing a noviciate in the Abbey of La Trappe. His flight from the sanctuary of asceticism was as abrupt as his entry into it. Soon after this unsuccessful attempt to make himself a saint, he became a husband, taking in marriage a daughter of the Maréchal de Lavendhal, a lady of literary tastes, called by her contemporaries 'the secretary of the Abbé de Voisenon,' who dominated her his literary adviser, an office which, like some literary executors of a later date, she discharged by publishing all the rubbish of his study.

In 1754 Turpin de Crissé made his début as an author by publishing in conjunction with Castillon, 'Les Amusemens Philosophiques et Littéraires du deux Amis.' The epistle dedicatory to J. J. Rousseau was composed by our author. Rousseau remarked, for his encouragement, that the work was not bad enough to entitle its author to despair of attaining eminence, nor good enough to entitle him to dispense with making a better. In the same year appeared a far more important work by Turpin de Crissé—'The Essay on the Art of War,' upon which his reputation mainly rests. It was translated into German by the express orders of Frederic the Great. Ligonier accepted the dedication of the English translation; by Captain Grose; the Essay was also translated into Russian; and notwithstanding the advance made in the theory and practice of war since the time of its publication, it is still regarded as a work of authority. The work is divided into five books. In the first every possible operation of a campaign (with the exception of sieges) is systematically explained; the second treats of the precautions to be observed in attacking the enemy in the field; the third, of cantonments; the fourth, of attacking the enemy in quarters; the fifth, of partisan warfare and the management of light troops.

In 1757 Turpin de Crissé was recalled to active service; in 1761 he was created Maréchal-de-camp; in 1771 he was made a commander of the Order of St. Louis; in 1780 he was raised to the rank of lieutenant-general, and obtained in the following year the appointment of governor of Fort Scarpe et Donai. His name appears in the list of

Digitized by Google

lieutenants-general in 1792. He was one of the emigration, and is supposed to have died in Germany in such obscurity, that both the time and place of his death are unknown. His wife died before him, in the year 1795: it does not appear that they had any family.

Active service did not withdraw his attention from the literature of his profession. M. Weiss (who alone has endeavoured to throw some light on the personal history of Turpin de Crissé) mentions, in the 'Biographie Universelle,' 'Commentaires sur les Mémoires de Montecuculi,' published in 1769; and 'Commentaires sur les Institutions de Végèce,' published in 1770. M. Weiss says of the former, that Turpin de Crissé confines himself for the most part to the task of explaining his author; of the latter, that the commentator confines himself to the first three books of Végèce, but throws out many suggestions in his notes, which have been adopted without acknowledgment. The 'Commentaires de César, avec des Notes historiques, critiques, et militaires,' mentioned also by M. Weiss as published in 1785, is a reprint of Clarke's text of the 'Commentaries,' with Wailly's translation (altered in a few places by the Count) in opposite columns, numerous notes, and plans of battles. The military remarks of the editor are the most valuable part of this edition.

The only works of Turpin de Crissé we have seen—the 'Essay on the Art of War,' and the 'Cours de Tactique'—indicate extensive reading in the author, and a sobriety of judgment for which the story of his entry and retreat from La Trappe scarcely prepares the reader. The value of his writings, as expositions of military theory, may be inferred from the predilection evinced for them by Frederic the Great of Prussia.

TURSELLI'NUS, HORA'TIUS, a learned Jesuit, whose real name was Torsellino. He was born at Rome in 1545, and belonged to a distinguished family of that city. He devoted himself from early youth with indefatigable zeal to classical studies. In 1562 he entered the order of the Jesuits. He afterwards taught in the institutions of his order at Florence and Loretto, and in 1579 he was appointed rector of the seminary of the Jesuits at Rome, in which office he continued to exercise a very beneficial influence for twenty years, down to his death on the 6th of April 1599.

Tursellinus was one of the best Latin scholars that have ever lived, and his work on the Latin particles is still the best book on that subject. His principal works are: 1, 'De Vita S. Francisci Xaverii Libri Sex,' Rome, 1594, the best edition of which is that of 1596, 4to: the work is of great interest, not only on account of the distinguished man who is the subject of it, but also because it contains much information about the missions of that time. It has been translated into nearly all the modern languages of Europe. 2, 'Historiæ Lauretanæ, libri quinque,' 4to, Rome, 1597. This is a history of the miraculous image of the Virgin Mary at Loretto. 3, 'De Usu Particularum Latini Sermonis,' 12mo, Rome, 1598. This very excellent work was reprinted and edited, with additions and corrections, by J. Thomasius in 1673, and by J. C. Sigius in 1719: it is also translated into the English edition of Facciolati's 'Lexicon totius Latinitatis:' the best edition is that of Hand, 8vo, Leipzig, 1829. 4, 'Epitome Historiarum à Mundo Condito ad annum 1598.' This work is a universal history, in ten books, written in the Italian language. Although it is very brief, it has always been held in high esteem, and has not only been continued by several subsequent editors, but also translated into several other languages.

(For a more detailed account of the Life of Tursellinus, see R. Retelius, who has incorporated his work on the Latin particles in his *Scriptores de elegantiori Latinitate Selecti*; and compare Alegambe, *Bibliotheca Scriptorum Societatis Jesu*; Mandosius, *Bibliotheca Romana*.)

TURTON, WILLIAM, M.D., a distinguished naturalist. He resided at Swansea, in South Wales, where he spent his professional and cultivated with great ardour the pursuit of natural history. One of his earliest works was 'The British Fauna, containing a compendium of the Zoology of the British Islands.' The first volume was published at Swansea in 1807, and contained a description of the families, genera, and species of British animals, in a neat duodecimo volume, and the author intended to publish in subsequent volumes an account of the plants and minerals of Great Britain. The intention seems never to have been fulfilled. In 1819, he published 'A Conchological Dictionary of the British Islands,' in which he gives an account of the structure and localities of the mollusca of Great Britain. He subsequently published at Exeter, in 1822, a larger work with illustrations, in 4to, entitled 'Conchylia Insularum Britannicarum, or the Shells of the British Islands systematically arranged.' In 1830 he published the 'Bivalve Shells of the British Islands, systematically arranged.' In 1831 appeared his 'Manual of the Land and Fresh-Water Shells of the British Islands,' a work so well adapted for the study of the creatures to which it was devoted, that a second edition, edited by Dr. John Edward Gray, of the British Museum, appeared in 1840. Dr. Turton contributed several papers to the 'Magazine of Natural History,' chiefly devoted to the description of new British shells. He became a Fellow of the Linnean Society in 1809.

TUSSER, THOMAS. The amusing poetical autobiography of this quaint writer, although it forms almost the only source of information respecting his personal history, is unfortunately deficient of dates. Warton supposes his birth to have taken place about 1523; but in the biography prefixed to Dr. Mavor's edition of his book it is shown from several circumstances that 1515 is a more probable date. He was born at Rivenhall, near Witham, in Essex, of a family which is recorded as bearing arms in the heralds' visitation in 1570: he was taught singing at an early age, and became a chorister in the collegiate chapel of Wallingford Castle, where he had to endure coarse fare and rough treatment, and from whence he was removed by impressment, according to a barbarous custom formerly existing, by which boys might be forcibly removed from any choir for the service of the royal chapel. After being for some time compelled, as he says, "to serve the choir, now there, now here," he was admitted into St. Paul's, where he profited by the instruction of John Redford, then organist of that cathedral. From St. Paul's he went to Eton, where he experienced some severity from the master, Nicholas Udall. He subsequently removed to Cambridge: after which he returned to court, and appears to have been a retainer in the family of William lord Paget. When he had spent ten years at court, probably engaged in his musical capacity, he married, and became a farmer at Katwade, now Cattiwade, in Suffolk, where he wrote his celebrated work on husbandry, of which the first edition appeared in 1557, entitled 'A Hundreth Good Pointes of Husbandrie.' After several other changes of residence, and marrying a second time, Tusser returned to London, whence, about 1574, he went to Trinity College, Cambridge; in order to escape from the plague. He is supposed to have returned to London, where he died about 1580, or between that year and 1585. After passing through several editions, his work appeared in an enlarged form in 1573, under the following title: 'Five Hundreth Points of Good Husbandry, united to as many of Good Huswiferie,' &c., 'Set forth by Thomas Tusser, gentleman, seruant to the honourable Lord Paget, of Beudesert.' This work was many times reprinted, with various alterations; but most of the early editions are rare, probably on account of the copies having worn out with frequent use. Mavor reprinted it in 1812, together with a list of all the known editions, and such information as he could collect respecting the author. Fuller says of him, in his 'Worthies of Essex,' that he "was successively a musician, schoolmaster, grazing man, husbandman, grazier, poet, more skilful in all than thriving in any vocation. He traded at large in corn, sheep, dairies, grain of all kinds, to no profit. Whether he bought or sold, he lost; and, when a renter, impoverished himself, and ever enriched his landlord." "Yet," he adds, "hath he laid down excellent rules in his husbandry of husbandry and housewifery (as that the observer thereof must be rich) in his own defence." It is written in familiar verse, in numerous detached chapters, and with much variety of measure; and it is, as observed by Warton, who styles Tusser the British Varro, "valuable as a genuine picture of the agriculture, the rural arts, and the domestic economy and customs of our industrious ancestors." The life of the author, which forms by no means the least amusing part of the book, appears to have been first printed with the edition of 1573.

TUTILO, a celebrated monk of the latter part of the 9th century, of the convent of St. Gall in Switzerland. He and Notker, of the same convent, were the most celebrated painters, sculptors, and goldworkers of their time in Germany. Tutilo was a universal genius, and not only an artist: he was musician, poet, orator, and statesman. Ekkehard, junior, an old German Latin writer, thus describes him:—"Erat enim valde eloquens, voce clara et dulci, cælaturæ elegans, picturæ artifex, ac mirificus eurifex, musicus," &c. The emperor Charles the Thick complained that such a man should be shut up in a convent.

Tutilo was contemporary with the abbot Salomo of St. Gall (891-921), who was a great patron of the arts, and he made for him a golden crucifix, richly ornamented with bas-reliefs and precious stones. He made also a celebrated sitting image of the Virgin Mary, in gold, for a church at Metz, by which he acquired great celebrity: it bore the inscription, "Hoc pantheum continet ipsa Maria." One account says painted. This image or painting was venerated at Metz. in the church of St. Otmahr, also at St. Gall, the altar of St. Gall was decorated with some copper plates, on which the life of the saint was engraved or carved by Tutilo. He is said to have died in 912, and this date is twice repeated by Fiorillo; yet he calls him a monk of the 10th century. Other writers also call him a monk of the 10th century. Lessing and some others have supposed that Tutilo, or Tuotilo, as his name is also written, and the Theophilus Presbyter who wrote a treatise in Latin upon oil-painting and other arts in or about the 10th century, were the same person, but there really seems to be no sufficient ground for this opinion. There are manuscripts of the old treatise by the monk Theophilus, more or less complete, at Wolfenbüttel, Leipsig, Paris, in the British Museum, and at Cambridge. An entire copy of the Wolfenbüttel manuscript was printed in 1781 at Brunswick, in the sixth number of Lessing's 'Beitrage zur Geschichte und Litteratur,' and by Comte Ch. de l'Escalopier, Paris, 1843; and (with an English translation and notes) by Mr. R. Hendrie, jun., from the manuscript in the British Museum, London, 1847. The treatise is in three books, and is known under the title 'Theophili Presbyteri Diversarum Artium Schedula;' also 'De omni Scientiâ Artis Pingendi;' but it treats of other arts besides painting. The authenticity of this work has been doubted by some, who have confounded the invention of Van Eyck with that of simply using oil as a vehicle for pigments. This subject has been entered into at length by Raspe, in a 'Critical Treatise on Oil-Painting,' published in London in 1757; by Knirim, in a work entitled 'The Resin-Painting of the Ancients' ('Harzmalerei der

Digitized by Google

Aiten'), Leipsig, 1839; in Cte de l'Escalopier's 'Théophile, Prêtre et Moine, Essai sur divers Arts;' in Mr. Hendrie's translation, noticed above; and in Eastlake's 'Materials for a History of Oil-Painting,' London, 1847. Various old notices of Totilo are printed in the 'Rerum Alemannicarum Scriptores,' &c., of Goldast.

TWEDDELL, JOHN, was born on the 1st of June 1769, at Threepwood, near Hexham, in Northumberland, where his father Francis Tweddel was a much-respected magistrate. His early education was conducted by his mother, who in much praised for her piety and maternal affection. At the age of nine he was sent to a school at Hartford, near Richmond, in Yorkshire, which was then conducted by the Rev. Matthew Raine, who watched and directed the studies of young Tweddell with anxious care. After he had left school, and before entering the University of Cambridge, he studied for some time under Dr. Samuel Parr, who made his pupil familiar with the best writers of antiquity, and at the same time secured his permanent esteem and attachment. Tweddell gained the highest classical honours in the University of Cambridge, and in 1792 he was elected a fellow of Trinity College. His 'Prolusiones Juveniles,' which he published the year after (1793), show the extent and versatility of his powers, and raised at the time great expectations of the young scholar. His own inclination would have led him to devote himself to classical learning, or, as some of his letters suggest, to a diplomatic career; but in deference to his father, who wished that he should study the law—although this profession was altogether against his taste—he entered the Middle Temple. Here he devoted himself to his new pursuits with as much application as his aversion to them would allow him. At last however he seems to have been unable to continue his studies, and made up his mind to travel for some years in order to prepare himself for a different course of life, and to acquire a knowledge of the courts of Europe and their system of politics. Accordingly he embarked for Hamburg on the 24th of September 1795. He travelled through the north of Europe, Switzerland, and thence eastward into Asia, where he visited among other parts the Crimea and the coasts of the Euxine. Thence he proceeded to several islands of the Archipelago, and to Athens, where he took up his residence for some months. With the most ardent zeal he explored and described the remains of ancient art and architecture, and employed a distinguished French artist of the name of Preaux in making drawings for him. But in the midst of these pursuits he died, on the 25th of April 1799, after a short illness, and was buried within the precincts of the temple of Theseus. A monument was erected on his grave, with a Greek inscription, by the Rev. Robert Walpole.

During the whole time of his travels Tweddell kept a diary, in which he recorded everything remarkable he met with, intending on his return to England to publish an account of his travels, together with some of the drawings made by Preanx. After his death his friends accordingly made all possible efforts to get his effects, manuscripts, and drawings, over to England. A great number of manuscripts, together with upwards of 300 highly-finished drawings, were actually forwarded from Athens to Constantinople, and intrusted to the care of the English ambassador there, but nothing ever reached this country, and all investigations that have been made by the friends of Tweddell have remained without any result. The only memorial which remains of his travels is a number of letters addressed to his friends in England, which were published by his brother the Rev. Robert Tweddell, under the title 'Remains of the late John Tweddell, &c., being a Selection of his Letters. . . . Written during part of the Continent, together with a re-publication of his "Prolusiones Juveniles,"' 4to, London, 1815. This collection of letters is preceded by a memoir of the author, by his brother Robert, who has drawn a most charming picture of the amiable, pure, and noble character of his brother, which is perfectly borne out by the spirit that pervades these letters. Respecting the loss of the manuscripts and drawings, send all that was said about the matter at the time, see the 'British Critic,' vol. v.

TWINING, THOMAS, the only son of a tea-merchant by his first wife, was born in 1734. His father wished his son to succeed him in his business, but as Thomas had an invincible desire to devote himself to study, his father gave way to him and sent him to Cambridge, where he entered Sidney College. Here he distinguished himself not only as a scholar, but by his practical as well as theoretical knowledge of music: he was an able performer on the harpsichord, the organ, and the violin, and few persons knew more about the history and science of the art than Twining. In 1760 he took his degree of B.A., and three years later that of M.A. In 1768 he became rector of White Notley in Essex, to which, in 1770, the living of St. Mary, Colchester, was added. To this latter appointment he was presented by Dr. Lowth, then bishop of London, without any other recommendation than that of his personal character. Henceforth he devoted himself without any desire of farther preferment to the faithful discharge of his parochial duties and to the pursuit of study, until his death, on the 6th of August 1804, at the age of seventy.

Twining was a man of considerable learning and of great taste in the arts, especially poetry and music. He had a good knowledge of the ancient languages, and is said to have spoken and written French and Italian with the same correctness and fluency as his mother tongue. In the performance of his clerical duties he was most conscientious, and during the last forty years of his life he scarcely ever allowed himself to be absent from his parishioners more than a fortnight in a year, although his society was very much courted. The only work that Twining ever published is a translation of Aristotle's 'Poetics,' which is reckoned one of the best English translations of ancient writers. It was published under the title 'Aristotle's Treatise on Poetry translated, with Notes on the Translation and on the Original; and two Dissertations on Poetical and Musical Imitation,' London, 4to, 1789. A second edition, with some improvements and additions by the author, was edited by his nephew, Daniel Twining, London, 2 vols. 8vo, 1812. His notes and dissertations are worthy of the attention of every one who studies the theory of poetry and music.

TWINING, WILLIAM, was born in Northumbria, and passed the early part of his life there, serving an apprenticeship to Dr. John Halliburton, a medical practitioner at Halifax. His medical education was completed in London, and, after becoming a member of the College of Surgeons, he entered the medical department of the army in 1812. After being employed for some time in the military hospital at Hilsea, he served for a short time in the Peninsula, and in 1815, after another service at Hilsea, joined the army in the Netherlands, and returned with his regiment in 1818. He remained in England, doing duty at different stations, till 1821, when he went to Ceylon, and after residing there for a short time, accompanied the governor, Sir Edward Paget, to India. In 1823 he was placed, at his own request, on half-pay, and in 1830 he resigned his commission, and entered into the private practice in Calcutta, where he was appointed one of the surgeons to the civil hospital, and died in high reputation and esteem in 1835.

Mr. Twining wrote numerous papers in the 'Transactions of the Medical Society of Calcutta,' of which he was secretary, and one of the most active members, on various other short occasions; but his chief work was his 'Clinical Illustrations of the more important Diseases of Bengal, with the result of an Enquiry into their Pathology and Treatment,' Calcutta and London, 2 vols. 8vo, 1832 and 1835. He was soon requested to undertake this work by the heads of the medical department at Bengal; and it has been, ever since its publication, a book of the highest authority on all the questions of which it treats, and one of the few composing the libraries of the medical officers in the Indian army.

TWISS, RICHARD, an English tourist, born in 1747, and died in London on the 5th of March, 1821. Born to an independent fortune, he indulged his taste for travelling in an extensive tour, which embraced Holland, Belgium (then the Austrian Netherlands), France, Switzerland, Italy, Germany, and Bohemia, which was completed in 1770. Before setting out on his foreign travels he had visited Scotland. In 1772 he undertook a voyage to Spain and Portugal, and in 1775 he went to Ireland. He re-visited France at the time of the Revolution. The subsequent years of his life were devoted to literature and the fine arts, of which, especially of music, he was an admirer. He materially injured his estate by entering into a speculation for making paper from straw. His published works are:—'Travels through Portugal and Spain in 1772 and 1773.4,' London, 1775; 'A Tour in Ireland in 1775,' London, 1776; 'The Game of Chess; being a compilation of Anecdotes and Quotations relative to the game of Chess,' 8vo, London, 1787; 'A trip to Paris in July and August, 1792, 8vo, London, 1793; 'Miscellanies,' 8vo, London, 1805. The Travels through Spain and Portugal have been translated into French and Germans. The tone of the Tour in Ireland provoked great wrath in that country, and elicited 'An heroic Epistle from Donna Teresa Panna y Ruiz, of Mureia, to R. Twiss, with Notes by Himself,' published at Dublin in 1776.

TYCHO BRAHE. [BRAHE, TYCHO.]

TYCHSEN, OLAUS GERHARD, a celebrated Orientalist, was born at Tondern in Schleswig, on the 14th of December 1734. His father was a tailor, in very poor circumstances, but with the assistance of some benevolent friends he was enabled to allow his son, who evinced considerable talent, to devote himself to learned studies. Up to his seventeenth year Olaus attended the grammar-school of his native town, and thence went to the gymnasium at Altona, where the celebrated Materneus de Cila had great influence upon him, especially in directing his attention to Oriental studies. In a short time Tychsen made himself master of the Hebrew language, and with the peculiar dialect spoken by the German Jews of all parts of Germany. Thus prepared he went in 1756 to the University of Göttingen. J. H. Callenberg, professor at Halle, was still actively engaged in his labours for the conversion of Jews and Mohammedans to Christianity, and when Tychsen had finished his studies, he thought him a fit person to engage in these undertakings. Tychsen was accordingly sent by Callenberg, in 1759, on a journey through Germany and Denmark. In 1760 Callenberg died, and Tychsen returned without having converted a single Jew. In this year the University of Rostock was transferred to Bützow, and Tychsen was invited as professor extraordinary of Oriental literature; and three years later he obtained the ordinary professorship in the same department. Here he began his varied literary activity, which soon spread his name over all Europe. A part of the professors had remained at Rostock on the transfer of the university to Bützow; and as this would ultimately have led to the establishment of two universities, a re-union of the two parts was

Digitized by Google

brought about at Rostock in 1789, and Tychsen was appointed chief librarian and keeper of the museum of Rostock, which offices he held until his death. In 1810, after having been employed in the university for fifty years, he celebrated his jubilee, and received various honours and distinctions on that occasion. He died at Rostock on the 30th of December 1815.

Tychsen was a man of extraordinary knowledge in his departments, and with all his singularities and conceits, he promoted the study of Biblical and Eastern literature more than any man of his time. He undertook the laborious task of collecting the various readings of the Old Testament, of comparing the earliest translations with the original, and of making accurate descriptions of the most remarkable editions of the Bible. His controversies with Benjamin Kennicot were among the first writings of the kind which established sound principles of biblical criticism, although his pietistical tendency prevented the unbiased development of his inquiries in theological matters. He wrote several dissertations on the Arabic and Phœnician languages, and on the inscriptions of Persepolis. He also made investigations into the hi-tory of the various Christian sects in Asia: and was the first who directed attention to the curious catechism of the Druses in Syria. All these things combined to procure him a European reputation, and engaged him in an extensive correspondence, but they also produced an immoderate degree of vanity, and the presumption of knowing everything, which led him to many great absurdities, and for which he was now and then severely chastised, as in his controversies with Francis Perez Bayer, archdeacon of Valencia. The most important among Tychsen's works is a journal called 'Butzowsche Nebenstunden' (leisure hours of Bützow), which contains many of his essays. It appeared at Bützow from 1766 till 1769, and consists of six volumes. His library, which was very rich in manuscripts and works on Oriental and Spanish literature, together with his collection of curiosities of all kinds, was purchased by the university of Rostock. It was owing to the fame of Tychsen that the Shah of Oude, Ghazi uddin Hyder Redaet ud Dowlah, sent to the university of Rostock a copy of his splendid dictionary and grammar of the Persian language, in seven volumes folio. For a detailed account of the life and writings of Tychsen, see Hartmann, *Olaf Gerhard Tychsen, oder Wanderungen durch die mannichfaltigsten Gebiete der biblisch-Asiatischen Literatur*, 2 vols. 8vo, Bremen, 1818-40.

TYCHSEN, THOMAS CHRISTIAN, a celebrated Oriental and classical scholar, was born on the 8th of May 1758, at Hornbyl in Schleswig, where his father, who gave him a sound and careful education, was a clergyman. His first studies in theology and philology were at Kiel: he continued them from the year 1779 at Göttingen under Heyne. After the completion of his academical course he was sent, together with Moldenhauer, on a scientific journey, in which he travelled through Germany, Italy, France, and Spain. On his return in 1784 he was appointed professor extraordinary of theology at Göttingen, and, four years later, ordinary professor in the philosophical faculty. He continued there with great activity until his death on the 23rd of October 1834. During the long period of his professorship various honours and distinctions were conferred upon him, and he was made a foreign member of the Asiatic Societies of London and Paris, and of the Danish and Göttingen Academies of Sciences. Of the latter he was elected president in 1797. Tychsen wrote a great number of valuable papers on antiquarian and numismatic subjects, in various scientific periodicals. Among his greater works we may mention his manual of the history of the Jews ('Grundriss einer Geschichte der Hebräer'), 8vo, Göttingen, 1799; his edition of Obadiah Smyrnæus, and his Arabic Grammar ('Grammatik der Arabischen Schriftsprache'), 8vo, Göttingen, 1823.

TYE, CHRISTOPHER, doctor in music, a man who appears prominently in musical biography, both on account of his professional ability and as possessor of some literary talent, was, according to Fuller ('Worthies of England'), born in Westminster, and educated in the King's Chapel. He was especially favoured by Henry VIII., and held the distinguishing appointment of musical instructor to Prince Edward, and most probably the other children of that monarch. He was admitted to the degree of Doctor in Music at Cambridge, in 1545, and, *ad eundem*, at Oxford three years after. In the reign of Queen Elizabeth he held the office of organist to the Chapel-Royal, for which, Fuller tells us, he produced several "without Service-book and Anthems, of four and five parts, which were used many years after his death;" and, we will add, some few of his compositions are still listened to with unfeigned pleasure, by all true lovers of the art who have acquired any knowledge of its principles and are acquainted with its best specimens.

In a play by Rowley, printed in 1613, is a dialogue between Prince Edward, aft-rwards Edward VI., and Dr. Tye, in which the illustrious pupil announces his royal father's opinion of the doctor's merit:—

> "I oft have heard my father merily speake
> In your high praise; and thus his highnesse saith,
> 'England one God, one truth, one doctor hath
> For musicke's art, and that is Doctor Tye.'"

In later days, "One God, one Farinelli!" was said of an Italian eunuch, the fanatical lady who screamed it out from a box at the opera not knowing, most likely, that a similar absurdity, not to call it profaneness, had been uttered three centuries before.

Dr. Tye possessed a considerable knowledge of Italian as well as English literature. He translated in verse the affecting story of 'Theodore and Honoria' from Boccaccio, and published it in 12mo, black letter, under the title of 'A Notable Historye of Nastigio and Traversari, translated out of Italian into English verse, by C. T.—Imprinted at London, in Poule's Churchyarde, by Thomas Purfoote, dwelling at the sign of the Lucrece, anno 1569.' He also commenced a translation of the Acts of the Apostles, in verse, of which he only completed the first fourteen chapters, and these were printed in 1553 by William Seres. The work was begun because, says Warton ('Hist. of Poetry'), Tye "had been taught to believe that rhyme and edification were closely connected, and that every part of scripture would be more instructive and better received, if reduced into verse." Combining the musician and poet, he set "notes to ech chapter to synge, and also to play upon the lute," and dedicated his labours "To the vertuous and godlye learned prince, Edward the Sixth," his crowned pupil, who certainly took a pride in and was fond of displaying the musical skill he had acquired under so scientific and zealous a master. Sir John Hawkins has given a specimen both of the poetry and music of this work in vol. iii. of his 'History.'

Dr. Tye was a constant attendant at court, where his accomplishments rendered him a welcome visitor. In his later days Anthony Wood says that he became rather peevish, in proof whereof he states that "Sometimes playing on the organ in the chapel of Queen Elizabeth [that] which contained much music, but little to delight the ear, she would send the verger to tell him that he played out of tune; whereupon he sent word that her ears were out of tune." This curious anecdote appears, as a note, in the handwriting of Wood, in the Ashmolean Manuscripts, fol. 189.

TYNDALE, or TINDALE, WILLIAM, whose name is one of the greatest in the history of the English reformation, was, according to the most generally received account, born about 1477, at Hunt's Court, in the parish of Nibley, in Gloucestershire, the residence of his father, John Tyndale, son of Hugh, Baron de Tyndale, of Langley Castle, Northumberland, who, having escaped some years before from a battle in which his party (that of the Yorkists) was defeated, had settled in the county of Gloucester, assumed the name of Hytchins, Hitchins, or Hutchins, and married Alicia, daughter and sole heiress of Hunt, of Hunt's Court. William is said to have been the second of three sons. Of all this however, old Foxe, the Martyrologist, Tyndale's earliest biographer, says nothing; and the story appears to rest for the most part on tradition, and to have been put together in its present shape in very recent times. Neither the place nor time of the battle from which Tyndale's grandfather made his escape is specified; nor do the retailers of the story seem to think it necessary to account for the circumstance of a Yorkist nobleman being obliged to keep himself concealed (as this account supposes), or at least to remain divested of his titles and his property, throughout the reign of Edward IV. Moreover, the barony of Tyndale of Langley appears to have been extinct for nearly three hundred years before the birth of the supposed grandfather: the last baron of whom anything is known died without male issue in the reign of Richard I. John Foxe says, that Tyndale "was born about the borders of Wales, and brought up from a child in the University of Oxford, where he by long continuance grew up and increased, as well in the knowledge of tongues and other liberal arts as especially in the knowledge of the Scriptures, whereunto his mind was singularly addicted; insomuch that he, lying then in Magdalen Hall, read privily to certain students and fellows of Magdalen College some parcel of divinity." An ancient picture of Tyndale, which has been several times engraved, is preserved in the library of Magdalen Hall. Tyndale however at last removed from Oxford to Cambridge; "where," proceeds Foxe, "after he had likewise made his abode a certain space, being now further ripened in the knowledge of God's word, leaving that university also, he resorted to one Master Welch, a knight of Gloucestershire, and was there schoolmaister to his children, and in good favour with his maister." At the house of this Sir John Welch, of Little Sodbury, as he is called by other authorities, Tyndale held many disputes on religious subjects with the clerical dignitaries of the neighbourhood, who frequented Sir John's well-laden table; and this after a time brought him into so much danger, that he deemed it prudent to leave the country and come up to London. After preaching for some time, as he had formerly been accustomed to do in the country, in the church of St. Dunstan's in the West, he attempted to get into the service of Tonstall, then bishop of London, of whose learning he had conceived a great admiration, and to whom he made his court, by presenting him, through Sir Henry Guildford, master of the horse and comptroller of the king's household, with a translation of one of the orations of Isocrates; but Tonstall replied that his house was full, that he had more people than he could well provide for, and advised him to seek about in London where he could out long lack employment. After this he was taken into the house of Humfrey Monmouth, or Monmouth, an eminent merchant and one of the aldermen of the city, who kept him for half a year, and then settled upon him an annuity of ten pounds to enable him to live abroad. Monmouth, who was extensively connected with the friends of the new opinions, and who a few years after this got into trouble on that account, said in his own examination before Bishop Stokesley, as reported in another part of Foxe's work, "The said Tyndale lived like a good priest, studying

Digitized by Google

both night and day. His would eat but sodden meat, by his good will, nor drink but small single beer. He was never seen in that house to wear linen about him, all the space of his being there." Tyndale now left England, and proceeded in the first instance to Saxony, where he is stated to have conferred with Luther; after which he repaired to the Low Countries and settled at Antwerp, where his services as a preacher were very acceptable to many of the members of the English mercantile factory there established. It was probably while resident here that, if he did not begin, he at least executed the greater part of his English translation of the New Testament. Of this remarkable work the first edition appears to have been an 8vo volume containing only the text, which was printed at Wittenberg, and published either in 1525 or 1526; the second a 4to, containing glosses as well as the text, the printing of which was begun at Cologne and finished at Wittenberg or at Worms, and which was certainly published in 1526. But this account is in part conjectural, and the subject is one upon which bibliographers are not agreed. These original impressions appear to have been rapidly sold; and both in England, and among the English residents on the continent, the demand was so great, that the Dutch booksellers found it for their interest to produce a successim of reprints in the course of the next few years. It was not till 1534 that Tyndale himself brought out a new edition, in which the translation was altered and improved in a great many passages. In the interim he had also printed at Hamburg, in 1530, a translation of the Five Books of Moses from the Hebrew, in which he is understood to have been assisted by Miles Coverdale, who afterwards produced the first English translation that was printed of the entire Scriptures; and, in 1531, he published at the same place a version of the Book of Jonas. During his residence abroad Tyndale likwise sent to the press several tracts in vindication of his theological opinions, which were all written in his own native language, and were probably mostly sold in England. He was master of an admirable English style—pure, correct, and lucid, and at the same time full of idiomatic vigour and expressiveness: his translation of the New Testament, in particular, deserves to be ranked as one of the classic works of our literature, one of the finest samples we possess of the language in what may be described as the first stage of its maturity, when it had attained in all essential respects the form and character which it has ever since preserved, although it had not effloresced into the luxuriance and full manifestation of its resources which it exhibits both in the poetry and the prose of what has been called the Elizabethan age. Tyndale finished his career at Antwerp in 1536. His translations of the Scriptures and his other publications had been repeatedly denounced by public authority in England; and at last, in 1534, his person was seized, by the contrivance, it is supposed, of the English government, and he was conveyed to the Castle of Vilvoord, or Villefort, near Brussels, where he was kept in confinement for a year and a half, and, being then brought to trial, was condemned as guilty of heresy in conformity with the imperial decree promulgated at the diet of Augsburg, in 1530. Upon this sentence he was, says Foxe, "brought forth to the place of execution, was there tied to the stake, and then strangled first by the hangman, and afterward with fire consumed." The accounts of the affair that have come down to us however are very imperfect and obscure; even the exact dates are wanting.

A new edition of Tyndale's translation of the New Testament was published at London, in small 4to, in 1836; it is very beautifully executed, and professes to be printed verbatim from a copy, supposed to be the only perfect copy extant, in the library of the Baptist College at Bristol, of the first impression of 1525 or 1526. Only some specimens are given of the alterations in the revised edition of 1534. But a reprint of this latter edition has since been produced by the same publisher (Mr. Bagster) in his 'English Hexapla,' Lond. 4to, 1841. All Tyndale's original writings were published, along with those of Frith and Barnes, at London, in 1573, in a folio volume, in which they occupy 478 pp., besides an index; and there is a modern edition of them, along with those of Frith, under the title of 'The Works of the English Reformers William Tyndale and John Frith,' edited by Thomas Russell, A.M., 3 vols. 8vo, London, 1831. In this edition Tyndale's works fill the two first volumes and seventy pages of the third. The most detailed life of Tyndal is a Memoir (of 89 pp.) by Mr. George Offor, prefixed to the reprint of his New Testament; but it is a very uncritical performance.

TYRA'NNIO (Τυραννίων), a Greek grammarian, and a native of Amisus in Pontus, was made prisoner by Lucullus during his campaign in Pontus, B.C. 72. According to Suidas the original name of this grammarian was Theophrastus, instead of which he was nick-named or surnamed Tyrannio on account of his severity towards those who studied under him. He was carried to Rome by Lucullus, and given as a present to Muraena, who restored him to freedom. At Rome he occupied himself with teaching and study, and is said to have amassed a considerable fortune. He is also said to have been employed in arranging the celebrated library of Apellico, which Sulla had brought from Athens, and which contained most of the works of Aristotle and Theophrastus. (Plut., 'Sulla,' 26; Strabo, xiii, p. 609.) That he had a great knowledge of books is clear from the fact that Cicero employed him in arranging his library, which Tyrannio did to the great satisfaction of Cicero. (Cicero, 'Ad Att.,' iv., 4 and 8.) That he however should himself have possessed, as Suidas states, a library of upwards of 30,000 volumes, is hardly credible. Cicero speaks with great respect of his knowledge and his mode of instruction; and we know that about the year B.C. 56 he gave lessons in the house of Cicero to Quintus, the son of Cicero's brother Quintus. (Cicero, 'Ad. Q. Frat.,' ii. 4.) Strabo (xii., p. 548) also mentions him as one of the persons whose instruction he had received. He appears to have possessed considerable knowledge of geography, for Cicero attributes much importance to some objections which he made to Eratosthenes ('Ad Att.,' ii. 6). Cicero alludes to a work of Tyrannio which he valued, but does not inform us on what subject it was written ('Ad. Att.,' xii. 6; 'Ad Q. Frat.,' iii. 4.) Tyrannio died of a paralytic stroke at a very advanced age. (Suidas, s. v.)

Suidas mentions a second or younger Tyrannio, whom he calls a native of Phoenicia and a pupil of the elder Tyrannio, whose name he also adopted, as his real name was Diocles. He was made prisoner in the war between Antony and Octavianus, and was bought by one Dymas, a freedman of Octavianus. He gave him to Terentia, the wife of Cicero, who restored him to freedom, after which he occupied himself with teaching. He is said to have written sixty-eight works, all of which are now lost. Suidas mentions the titles of some, such as 'On the Prosody of Homer,' 'On the Parts of Speech,' 'On the Latin Language,' 'On Orthography,' and similar other grammatical works. The circumstance that a supposed writer like this Tyrannio is not mentioned by any ancient author except Suidas, has led some modern critics to suppose that he never existed, and that Suidas has made some great blunder. (Brucker, 'Hist. Philos.,' ii. p. 13.) A third Tyrannio is mentioned by Suidas as the author of a work on Accentuation, in three books, and some other works which are not specified.

TYRRELL, JAMES, was the eldest of the four sons of Sir Timothy Tyrrell, of Shotover, near Oxford, by Elizabeth, only child of Archbishop Usher; and was born in Great Queen-street, London, in May 1642. After an elementary education in the free school of Somberwell, he was, in 1657, admitted a gentleman-commoner of Queen's College, Oxford, where he resided three years, and then entered himself of the Inner Temple. He took his degree of M.A. in September 1663, and about two years after was called to the bar. He did not however follow the profession of the law, but employed a life of leisure in his historical inquiries and the composition of his various works, residing at first on his estate at Oakley, near Brill, in Buckinghamshire, and afterwards at Shotover, for the sake of easier access to the Oxford libraries. He died in Essex, leaving by his wife Mary, daughter and heiress of Sir Michael Hutchinson, of Hadbury in Worcestershire, one son, Lieutenant-General James Tyrrell, who was governor of Gravesend and Tilbury Fort, and afterwards of Berwick and Holy Island, and sat in parliament for Dorchester and Aldbrighe from 1722 till his death in August 1742, at the age of sixty-eight.

Tyrrell's first appearance in print was in a dedication to Charles II. of a posthumous work of his grandfather Archbishop Usher, entitled 'The Power communicated by God to the Prince, and the Obedience required of the Subject,' which had been drawn up, at the commencement of the civil war, by command of Charles I., and was now, in the beginning of the year 1661, published in quarto, by Dr. Sanderson, bishop of Lincoln. His next performance was an answer to Sir Robert Filmer's speculations upon government, in an octavo volume, printed at London in 1681, under the title of 'Patriarcha non Monarcha; or the Patriarch Unmonarched,' &c. This was followed by a defence of the conduct and character of Usher, published in 1686, at the end of Dr. Parr's life of the archbishop, as 'An Appendix to his Life of the Lord Primate Usher, containing a Vindication of his Opinions and Actions in reference to the Doctrine and Discipline of the Church of England, and his conformity thereunto, from the aspersions of Peter Heylin, D.D., in his pamphlet called "Respondet Petrus."' Tyrrell, who with all the other deputy-lieutenants and justices of the peace of his county, had been struck out of the commission by James II. for refusing to dispense with the Test Act and other penal laws affecting the Roman Catholics, warmly hailed the Revolution; and, after the establishment of the new government, he came forth as a champion of that change in a series of 'Political Dialogues,' nine of which were published in quarto in 1692, a tenth in 1693, three more in 1694, another in 1695; and which were afterwards collected and republished, in a folio volume, in 1718, and again in 1727, under the title of 'Bibliotheca Politica; or an Enquiry into the Antient Constitution of the English Government, with respect to the just Extent of the Regal power and the Rights and Liberties of the Subject,' &c. In 1699 also he published anonymously, in octavo, 'A Brief disquisition of the Law of Nature, according to the Principles and Method laid down in the Reverend Dr. Cumberland's (now Lord Bishop of Peterborough) Latin Treatise on that Subject.' It is mainly a translation and compendium of Bishop Cumberland's work 'De Legibus Naturæ,' not however without additional illustrations and other matter, and many changes in the arrangement and mode of exposition. But Tyrrell's great work is his 'General History of England, both Ecclesiastical and Civil,' in 3 vols. folio (commonly bound in five parts), Lond., 1700-1704. As expressed on the title-page, this history was intended to be brought down "from the earliest accounts of time to the reign of . . . . King William III.;" but only a part of that design was accomplished: the first volume coming down to the Norman Conquest; the second, Part 1, to the session of John; Part 2,

Digitized by Google

to that of Edward I.; the third, Part 1, to the accession of Edward II.; Part 2, to the end of the reign of Richard II. It is asserted by Hearne, in his preface to Thomas de Elmham (8vo, Oxford, 1727), that a farther portion of the work had been prepared for the press; but it has never appeared. Tyrrell's history, which has now become scarce, is valuable as being founded throughout upon the original chroniclers, of whose accounts indeed it is in great part a literal translation; but it is rather an undigested accumulation of materials than an historical narrative with even the humblest pretensions to an artistic character. Besides the narrative, there are many prefaces, introductions, appendices, &c., occupied with the investigation of particular points, or the defence of the author's favourite notions, the most remarkable of which are, that the Norman Conquest made scarcely any alteration in the original or Saxon frame of the government, and that the representation of the commons in parliament in particular has been uninterrupted since the Saxon times. The vindication of these opinions is also the object of several of his 'Political Dialogues.'

TYRTÆUS (*Tyrtæus*), the second great elegiac poet among the ancient Greeks. His age is determined by the fact that he assisted the Spartans in their second Messenian War, which is placed by Pausanias between the years B.C. 685 and 668, while others place its commencement about the year B.C. 660, and even later. The birthplace of Tyrtæus is differently stated: Suidas calls him a Milesian or a Laconian: he of course became a Laconian after receiving the Spartan franchise; and the circumstance that after he was made a Spartan citizen he spoke in his poems of himself as such, and of his Spartan ancestors, led Strabo to think that Tyrtæus was originally a Dorian of Erineos near Mount Pindus, from whence ancestors of his came before a portion of the Dorians had immigrated into Peloponnesus. That he was actually residing in Attica, either at Aphidnæ or at Athens, just before he went to Sparta, is attested by the general consent of antiquity. The common account is that he was going to Sparta, as related by Pausanias and others, runs thus. When the second Messenian War broke out, the Spartans, not knowing how to act, consulted the oracle of Delphi. The god commanded them to avail themselves of the advice of an Athenian, and an embassy was accordingly sent to Athens to ask for a man who was to be their adviser. The Athenians were unwilling to assist the Spartans in extending their dominion in Peloponnesus, and yet not wishing to disobey the command of Apollo, they sent to Sparta Tyrtæus, a schoolmaster who was lame in one foot and had never shown any signs of valour. The story about the lameness may be questioned, but that his mental powers were anything but weak is sufficiently clear from the effects which his poetry is said to have produced at Sparta, and the remains which are still extant. The elegy, which had received the name of Eunomia (Εὐνομία) from Callinus of Miletus, was the means by which Tyrtæus inspired the Spartans with courage and confidence, and by which he led them to their victories over the Messenians.

On his arrival in Sparta he recited his warlike anapæstic elegies to the magistrates and to as many of the people as he could gather around him, and he exhorted them in the most animating strains to fight bravely against their enemies. The number of such stirring war-songs (ἐνοπάων, or ἐνοπάων δι' ἐλεγείων), which being sung to the accompaniment of the flute made a deep and lasting impression upon the Spartans, appears to have been very great. But the mission which Tyrtæus had to fulfil was not only to breathe a new warlike spirit into the Spartans, but also to settle their internal dissensions; for those Spartans who had left their lands in Messenia were discontented, and demanded a new division of land. For this purpose he composed the most celebrated of his elegies, called 'Eunomia' (Εὐνομία; Suidas calls it a πολιτεία), that is, "good government." Some fragments of it are still extant, and enable us to form some idea of the whole composition. A third class of elegies was that which the ancients called μέλη πολεμιστήρια, ἐμβατήρια, ἐνόπλια, ἢ ἐγκάρσια, or ὑπορχηματικά. All the poems of Tyrtæus had an extraordinary influence upon his hearers, but the most popular among them appear to have been his war-songs, for they continued for centuries after to be sung in unison at Sparta, but among the Dorians generally before they went out to battle. There are extant three entire poems of this kind, but it is a matter of great doubt whether they are not much mutilated and interpolated. All the works of Tyrtæus were in later times collected and divided into five books.

Tyrtæus had the good fortune to live to see the fruits of his wise advice—the reduction of the Messenians to the condition of Helots (Paus., iv., 14, 3); and the accounts which we now have of the second Messenian War are probably derived in a great measure from his poems. The first collection of the remains of Tyrtæus that appeared in print is that of S. Gelenius and M. Aurigallus, which also contains the works of Callimachus, 4to, Basel, 1532. The edition of C. A. Klotz ('Tyrtæi Opera quæ supersunt omnia,' &c., with a commentary and a German translation, 8vo, Leipzig, 1767) is not worth much. The best editions in which the poems of Tyrtæus are printed, together with those of Callinus, are those of J. V. Franke ('Callinus, sive Quæstio de Origine Carminis Elegiaci: accedunt Tyrtæi Reliquiæ,' &c., 8vo, Altona, 1816), and N. Bach ('Callini Ephesii, Tyrtæi Aphidnæi, Asii Samii Carminum quæ supersunt,' 8vo, Leipzig, 1831). They are also contained in several collections of Greek poets.

(Thiersch, in the *Acta Philol. Monac.* of 1826, vol. iii., p. 587, &c.; and in general, Müller, *Hist. of the Lit. of Ancient Greece*, i., p. 110, &c.; Bode, *Geschichte der Lyrischen Dichtkunst der Hellenen*, i. p. 211, &c.)

There are many versions of Tyrtæus. The Elegies of Tyrtæus were translated into English verse by R. Polwhele, 4to, 1786; 8vo, 1792; and the War Elegies (four) were imitated by J. Pye, 8vo, 1795.

TYRWHITT, THOMAS, was the eldest son of the Rev. Dr. Robert Tyrwhitt, the descendant of an ancient Lincolnshire family, who at the time of the birth of his son, in London, 29th of March 1730, was rector of St. James's, Westminster, and afterwards became a canon residentiary and prebendary of St. Paul's, archdeacon of London, and a canon of Windsor. Thomas was first sent to school at Kensington, whence he removed in 1741 to Eton, and he remained there till he was elected a scholar of Queen's College, Oxford, in 1747. In 1755 he was elected to a fellowship of Merton College; and having taken his degree of M.A. the following year, although he had also entered himself of the Middle Temple, he continued his residence at the university till 1762, when, resigning his fellowship, he came up to London, and entered upon the duties of the office of clerk of the House of Commons, to which he was appointed on the resignation of Jeremiah Dyson, Esq.; but finding the fatigue too great for his health, he relinquished this appointment in 1768, and devoted the rest of his life to literary pursuits. Mr. Tyrwhitt, who was greatly beloved for his amiable character, died at his house in Welbeck-street on the 15th of August 1786.

The following is a list of his publications, all of which display sound scholarship, extensive reading, much taste and critical acumen, or, at the least, great accuracy and precision, and the most painstaking and conscientious industry, where higher qualifications were not called for:—A poem, entitled 'An Epistle to Florio at Oxford' by R. Ellis of Christchurch), 4to, Lond., 1749. "Translations in Verse" of Pope's "Messiah" and Phillips's "Splendid Shilling" into Latin, and of the 'Eighth Isthmian Ode' of Pindar into English, 4to, 1752. 'Observations and Conjectures on some Passages in Shakespeare' (anonymous, but with the portrait of the author prefixed), 8vo, 1766. 'Proceedings and Debates in the House of Commons in 1620 and 1621, from the original MS. in the Library of Queen's College, Oxford, with an Appendix,' 2 vols. 8vo, Clarendon Press, 1766. 'The Manner of Holding Parliaments in England;' by Henry Elsynge, Cler. Par.; corrected and enlarged from the Author's original MS., 8vo, 1768. 'Fragmenta duo Plutarchi' from the Harleian Manuscript, 5612), anonymous, 8vo, 1773. 'The Canterbury Tales of Chaucer,' with Dissertations, Notes, Glossary, &c., 2 vols. 4to, Oxford, 1775; also 5 vols. 8vo, 1778; and since several times reprinted. This is in all respects an admirably edited work. 'Dissertatio de Hadriani Junii Æsopicarum Scriptore,' 8vo, 1776. 'Poems supposed to have been written at Bristol, in the Tenth Century, by Rowley and others, with a Preface, &c. (in refutation of the alleged antiquity of the poems), 8vo, 1778. 'A Vindication of the Appendix to the Poems called Rowley's,' 8vo, 1779. An edition, in Greek and Latin, with notes, of the poem entitled Περὶ Λιθῶν (On Stones), attributed by some to Orpheus (but according to Tyrwhitt written in the early part of the fourth century). 'Conjecturæ in Strabonem' (privately printed), 1783. An edition of an 'Oration of Isocrates against Monedes, newly discovered in the Medicean Library, 1785. He also left materials for a new edition of Aristotle's 'Poetics,' which were prepared for the press by the Rev. Thomas Burgess and the Rev. John Randolph (afterwards bishops of Salisbury and London), and brought out at the Clarendon Press, in quarto and also in octavo, in 1794. Tyrwhitt is the author of the best notes in Dr. Musgrave's edition of 'Euripides,' 1778, and of many of the most valuable in the variorum editions of Shakspere; and he has enriched the 'Transactions' of the Society of Antiquaries; and the 'Archæologia') with several disquisitions of distinguished learning and ingenuity. His 'Dissertation on Babrius,' after having been republished by himself with additions at the end of his edition of the Greek poem 'On Stones,' was reprinted at Erlangen in Bavaria; and so were his 'Conjectures upon Orpheus,' in 1783, under the superintendence of Th. Ch. Harles. An octavo volume entitled 'Thomæ Tyrwhitti Conjecturæ in Æschylum, Euripidem, et Aristophanem: accedunt Epistolæ Diversorum ad Tyrwhittum,' was brought out at Oxford, from the Clarendon Press, in 1822; and it appears from the preface that a small impression of the same matter had many years before been printed, under the care of Burgess, at Durham. The letters, which fill from p. 91 to p. 164, are from Valckenaer (in Latin), from Villoison (in French), from Brunck (in French), from Ruhnken (in Latin), from Schweighæuser (in Latin and French), and from Ch. Fred. Matthæi of Moscow (in Latin). The editors promise another volume, to consist of Adversaria collected from Tyrwhitt's papers; but this has not appeared.

TYSON, EDWARD, was born in Somersetshire in 1649. He studied at Oxford, and received his Bachelor's degree there in 1670, after which he went to Cambridge, where he was made Doctor of Medicine in 1680. He lived in London, and was physician to the Bridewell and Bethlem hospitals, reader of anatomy at Surgeons' Hall, and, for a time, Gresham professor of medicine. He was one of the chief contributors to the early volumes of the Transactions of the Royal Society, of which, as well as of the College of Physicians, he was a Fellow. He died August 1, 1708.

Tyson was one of the first comparative anatomists of his time. All his works are distinguished by great accuracy and depth of research; they are to this day of unquestioned authority in matters of fact; and they prove that he thoroughly understood the scientific purpose of comparative anatomy. The chief of them are as follows:—1. 'Phocæna, or the Anatomy of a Porpesse dissected at Gresham College,' 4to, London, 1680; 2, 'Carigueya, seu Marsupiale Americanum; or the Anatomy of an Opossum dissected at Gresham College,' 4to, London, 1698; 3, 'Orang-Outang, sive Homo Sylvestris; or the Anatomy of a Pygmie, compared with that of a Monkey, an Ape, and a Man,' folio, London, 1699. This is Tyson's best and most valuable work; for though the others are not less accurate, this relates to an animal for the dissection of which opportunities are exceedingly rare. It was an ohimpazee, and the later labours of Professor Camper and Vrolik, though they have added to what Tyson described, have proved the complete accuracy of nearly all his observations; an accuracy the more meritorious, because, before his time, no dissection of the animal had been recorded. Haller, with full justice, says, "We have nothing in comparative anatomy that can be compared to this work, excepting the works on insects;" by which last he probably means those of Swammerdam. 4. There was published with the last-mentioned work, 'A Philological Essay concerning the Pygmies, the Cynocephali, the Satyrs, and Sphinges of the Ancients, wherein it will appear that they were all either Apes or Monkeys.' 5. And to a second edition of the two preceding was added, 'Vipera Caudisona Americana, or the Anatomy of a Rattle-Snake.' 6, 'Several Anatomical Observations,' folio, London and Oxford, 1650-1705.

Some of these works had before appeared in the 'Philosophical Transactions,' which contain numerous other papers communicated by Tyson between 1678 and 1704. The most important among them relate to the renal capsules, the anal glands of the musk-animal and others, the black excretion of the turtle-fish, the anatomy of the ostrich, and of the Tajasou, and the growth of hair and teeth in ovarian cysts. Tyson also contributed largely to Samuel Collins's 'System of Anatomy,' to Ray's 'Synopsis Methodica Quadrupedum,' and to Willoughby's 'Historia Piscium.'

TYSSENS, PETER, a celebrated Flemish painter, born at Antwerp, in 1625. Tyssens, after Rubens and Vandyck, was the first Flemish painter of his time, in history and in portrait. He first practised as an historical painter, and was highly patronised, but finding portraitpainting a more profitable employment, he devoted his time exclusively to that branch of the art, until, disgusted with some uncandid criticisms which were passed on some of them, he gave up portraitpainting, and again applied himself with increased success to history. There are few cities in Flanders without a specimen of the works of Tyssens, but there are few of his paintings out of his own country. The Assumption of the Virgin, over the great altar of the church of St. James at Antwerp, is generally considered his masterpiece. His drawing was vigorous and correct, his colouring good, and his composition very spirited. He enriched his pictures by tasteful architectural backgrounds. In 1661 Tyssens was made director of the Academy of Antwerp. He died in 1692, or, as some say, in 1683.

His two sons, Nicholas and Agustine, were also distinguished painters in their respective lines. Nicholas Tyssens was born at Antwerp in 1660; spent several years in Italy, and on his return entered the service of John William, the elector-palatine at Düsseldorf, who sent him to the principal cities of the Netherlands to purchase pictures for the gallery which he was about to form there. Tyssens executed his commission to the utmost satisfaction of the elector, but the pictures which he purchased, with others of the Düsseldorf gallery, now form part of the collection of the Pinakothek at Münich. Tyssens first painted armour, implements of war, and trophies: he afterwards tried flower-painting; but he painted naturally birds, in which he was most excellent, and his pictures of this class are little inferior to those of Bool or Hondekoeter. He visited London, where he is said to have died in 1719.

Augustine Tyssens was born at Antwerp in 1662, and was a landscape-painter, and executed many clever pictures in the style of Berghem, which he enriched in a similar way, with ruins, figures, and cattle. In 1691 he was made director of the Academy of Antwerp. He died in 1722.

(Descamps, *La Vie des Peintres Flamands, &c.*; Pilkington, *Dictionary of Painters*, ed. 1829.)

TYTLER, WILLIAM, was born at Edinburgh on the 12th of October 1711. His father was Mr. Alexander Tytler, writer (or attorney) in Edinburgh; his mother, Jane, daughter of Mr. William Leslie, merchant in Aberdeen. He himself, after an education at the High School and University of Edinburgh, was admitted a writer to the signet in 1742, and he practised that branch of the legal profession till his death, on the 12th of September 1792. Mr. Tytler, besides being an accomplished musician, and distinguished for his taste in all the fine arts, was the author of several literary works, the chief of which, his 'Inquiry, Historical and Critical, into the Evidence against Mary Queen of Scots,' first printed in an 8vo vol. in 1759, and after several editions extended to 2 vols. 8vo in 1790, acquired him considerable reputation. It is a defence of Mary, principally against Robertson and Hume. His other publications are—'A Dissertation on the Marriage of Queen Mary to the Earl of Bothwell,' in the 'Transactions of the Society of Antiquaries of Scotland,' vol. i., 4to, 1791; 'The Poetical Remains of James I. of Scotland,' 8vo, Edin., 1783; 'A Dissertation on Scottish Music,' subjoined to Arnott's 'History of Edinburgh;' 'Observations on the Vision,' a poem, first printed in Ramsay's 'Evergreen;' and an essay 'On the Fashionable Amusements of Edinburgh during the last Century,' both published in the Scottish 'Antiquarian Transactions;' and one paper in the 'Lounger.' Mr. William Tytler was the father of Alexander F. Tytler, Lord Woodhouselee.

TYTLER, ALEXANDER FRASER, styled Lord Woodhouselee, the eldest son of the preceding, was born at Edinburgh on the 15th of October 1747. He attended the High School of his native town from 1755 to 1763, when he was sent to the academy kept at Kensington, near London, by James Elphinstone, the author of many works on English grammar and pronunciation. Here he studied drawing, natural history, and Italian, as well as the classics. Returning home in 1765, he entered the University of Edinburgh with a view of studying for the bar. He was admitted an advocate in 1770, and in 1776 married Anne, eldest daughter of William Fraser, Esq., of Balnain, which property, as well as his paternal estate, he eventually inherited. His practice, like that of most young advocates, left him leisure enough for some years; the first fruits of which he gave to the world, in 1773, by the publication of a supplementary (folio) volume to Lord Kames's 'Dictionary of Decisions,' bringing down the work to that date. This compilation was undertaken on the suggestion of Kames, who showed the author much friendship, and aided his labours by his counsel and revision. In 1780 Tytler was conjoined with John Pringle, Esq., who had occupied the chair for some years, in the professorship of universal history and Roman antiquities in the University of Edinburgh; and in 1788 he became sole professor, on the resignation, we believe, of his colleague. This appointment led to the publication, in 1783, of his 'Outlines of a Course of Lectures,' afterwards expanded into 'Elements of General History,' 2 vols. 8vo, Edinburgh, 1801, a work which has been repeatedly reprinted, the latest edition being that revised and continued to the death of William IV. by the Rev. Archibald Alison, the ingenious professor of modern history in the University of Oxford, in 1 vol. 8vo, London, 1840. The lectures, of which this work is an abstract, were left ready for the press by the author, but have never been published. In 1790 Mr. Tytler was promoted to the office of judge-admiral of Scotland; and the same year he read papers before the Royal Society of Edinburgh, of which he had been a member and one of the secretaries since its institution in 1783, a series of papers, which he soon after published anonymously, under the title of 'An Essay on the Principles of Translation.' This performance has ever since been a favourite manual from the public, and has gone through many editions. A memoir of Dr. John Gregory, prefixed to a collected edition of his works published by his son, the late Dr. James Gregory, in 1784; four papers contributed to the Edinburgh periodical publication entitled the 'Mirror,' in 1779; seven contributions to its successor, the 'Lounger,' in 1785; various essays in the 'Transactions' of the Edinburgh Royal Society; a 'Treatise upon Martial Law;' a new edition of Derham's 'Physico-Theology,' with notes, &c., and a Life of the author, published in 1799; and a letter upon the Union, published in 1800, under the title of 'Ireland profiting by Example, or the Question considered whether Scotland has gained or lost by the Union,' are the other principal literary productions of this period of his life. In 1802 he was raised to the bench of the Court of Session, when he took the title of Lord Woodhouselee, from the property of which he had come into possession on the death of his father ten years before. In 1807 he published his last work, 'Memoirs of the Life and Writings of Henry Homes, Lord Kames,' 2 vols. 4to, Edinb. This work (of which there is also an octavo edition in 4 vols. 8vo) has never excited much interest. In 1811 Lord Woodhouselee was appointed a lord of justiciary; but his health, which had some years before been broken by a severe illness from which he never perfectly recovered, soon after this gave way, and his death took place on the 4th of January 1813. A memoir of this respectable writer and excellent man (from which these facts have been taken) was read by his friend, the late Rev. Archibald Alison, before the Royal Society of Edinburgh, on the 3rd of June 1816, and 6th of January 1817, and is printed in the Society's 'Transactions,' vol. viii., 4to, Edinburgh, 1818, pp. 515-564.

TYTLER, PATRICK FRASER, was born at Edinburgh on the 30th of August 1791, the fourth son of Alexander Fraser Tytler, Lord Woodhouselee. He was destined to increase the literary reputation of a family in which literary taste and talent seemed hereditary. After having been educated at the High School and the University of Edinburgh, he became a member of the Scottish Faculty of Advocates in 1813, but he soon abandoned practice for authorship. On the peace of 1814 he accompanied Mr. (now Sir Archibald) Alison and the present Lord-Justice Clerk of Scotland on a visit to the Continent. His first literary efforts were as a contributor to 'Blackwood's Magazine;' but in 1819 he published in Edinburgh an independent work entitled 'Life of James Crichton of Clony, commonly called Admirable Crichton.' The work reached a second edition in 1823, when an 'Appendix of Original Papers' was added to it. In 1823 he published also at Edinburgh, 'An Account of the Life and Writings of Sir Thomas Craig of Riccarton; including biographical sketches of

Digitized by Google

the most eminent legal characters from the institution of the Court of Session by James V. till the period of the Union of the Crowns;' and this was followed in 1826 by a 'Life of John Wicklyff,' published anonymously. It was about this time that, on the earnest suggestion of Sir Walter Scott, who had at one time thought of undertaking the task himself, he began his great work, 'The History of Scotland.' The first volume was published in 1828, and the work was completed in nine volumes in 1843. It has since then passed through several editions, and is recognised everywhere as the standard History of Scotland—the only work in which Scottish history is treated at full length on the basis of authentic materials, and in a calm and accurate as distinct from a merely popular manner. It commences with the accession of Alexander III. to the Scottish throne in the 13th century, and brings down the narrative to the union of the crowns in 1603. While writing this work, Mr. Tytler resided sometimes in Edinburgh, sometimes in London, collecting materials in both places. During the time that the work was in progress he threw off other smaller historical works, of which the following is a list:—'Lives of Scottish Worthies,' in 2 vols., 1831-33; 'Historical View of the Progress of Discovery on the more Northern Coasts of America,' published in Edinburgh in 1832, and recently re-edited in America; 'Life of Sir Walter Raleigh,' 1833; 'Life of Henry the Eighth,' 1837; and 'England under the Reigns of Edward VI. and Mary, illustrated in a series of original letters, with historical introductions and notes,' 1839. Mr. Tytler also wrote the article 'Scotland' for the seventh edition of the 'Encyclopædia Britannica,' and the articles has since been re-published as a useful abridgment. In recognition of claims so well founded, Sir Robert Peel's government conferred on Mr. Tytler a pension of 200*l.* a year. In politics he was a Conservative. Though an Episcopalian, he took much interest in the Scottish Presbyterian movement of 1833-43. In private life he was much beloved for his social qualities. Towards the close of his life he suffered much from ill health, and went abroad for a time. He returned to Edinburgh, and died on the 24th of December 1849. He was twice married, and left two sons and a daughter by his first wife.

TZETZES, ISAAC. [TZETZES, JOANNES.]

TZETZES, JOANNES, a learned grammarian and poet of Constantinople, who lived during the latter half of the 12th century of our era. He was a son of Michael Tzetzes and Eudocia: his father's brother, Joannes Tzetzes, though himself an unlettered man, was fond of the society of the learned. His father was descended from a Basque or Iberian family, but his mother was of a Greek family. He had a brother Isaac, with whom Joannes spent the first years of his life in his father's house, where, as Joannes says, they were trained in all virtue and piety, and learned to despise the wealth and honours of the world. The two brothers were instructed by the ablest teachers of the time, and were afterwards distinguished by the title of grammarians, which then designated a learned and accomplished scholar. Further particulars of their lives are not known.

We possess a considerable number of works by Joannes Tzetzes, consisting of poetical compositions, or rather versified prose, commentaries on ancient Greek authors, and some minor works of a scientific character. His poetical works, most of which are written in the so-called political verse, that is, without any regard to prosody, but in a metre in which only syllables are counted, are as follows: 1. Τὰ εἰς Ὁμηρικά, which, properly speaking, consists of three distinct poems, which are called 'Ante-Homerica,' 'Homerica,' and 'Post-Homerica.' The first contains the whole cycle of the Trojan story from the birth of Paris to the tenth year of the siege of Troy, where the 'Iliad' begins; the second is a mere abridgement of the 'Iliad;' and the third contains the events subsequent to the death of Hector, and an account of the return of the Greeks from Troy. The whole is, like all the versified productions of Joannes Tzetzes, exceedingly dull. Some fragments of this work were first published by F. Morel, who did not know the author's name, in his 'Iliacum Carmen Poetæ Græci cuius nomen ignoratur,' and by Dodwell, in his 'Dissertationes de Veterib. Græc. et Rom. Cyclis,' p. 802. In the year 1770 G. B. von Schirach published, from an Augsburg manuscript, nearly the whole of the 'Ante-Homerica,' a portion of the 'Homerica,' and Dodwell's fragment of the 'Post-Homerica.' T. C. Tychsen at last discovered in a Vienna manuscript the complete 'Ante-Homerica' and 'Post-Homerica,' and communicated his copy of them to Fr. Jacobs, who, after having also procured a complete copy of the 'Homerica,' published the first complete edition of this work at Leipzig, 8vo, in 1793. The best critical edition of the text, for which a Paris manuscript was collated, is that by Imm. Bekker, 8vo, Berlin, 1816. 2. Βίβλος ἱστορικὴ, more commonly called 'Chiliades,' or 'Chiliades Variarum Historiarum.' The former is the name which Tzetzes himself gives to this work; the latter arose from the circumstance that the first editor, N. Gerbelius, divided the whole work into sections of 1000 verses each. Tzetzes himself had divided it into three tables (πίνακες), the first of which contained 140 stories, and ended at Chil. iv. 466. Between the first and second table there is a letter addressed to one Joannes Lachanes, and the second begins at Chil. iv. 781, extending to Chil. v. 192, and contains 32 tales. The third, comprising the remainder of the work, contains 496 narratives. This work, with its numerous mythical and historical tales, is a storehouse of information, and innumerable things are recorded here which would otherwise be unknown. It is however highly probable that Tzetzes did not always derive his information from the original sources, and that he compiled it from the works of other grammarians and scholiasts. The author is exceedingly vain: he is full of his own praise and that of his brother; he delights in mentioning his own name on all occasions, and he treats all other writers with contempt. The first edition of the 'Chiliades' is that of N. Gerbelius, with a Latin translation by P. Lacisius, fol., Basel, 1546; the best edition is that by Kiessling, 8vo, Leipzig, 1826. 3. 'Carmen Iambicum de Filiorum Educatione,' or 'On the Education of Children.' This poem is usually added in the editions of the 'Chiliades.' 4. A fragment of a poem called Περὶ Ἀναβάσεως καὶ Καθόδου, printed in Bekker's 'Anecdota,' iii., 1060. Several other versified productions have never been published, but exist in manuscript in various libraries. The most remarkable among them is a διήθησις τοῦ Ὁμήρου, consisting of upwards of 8000 so-called political verses, and giving explanations of the mythuses which occur in the 'Iliad.'

Joannes Tzetzes wrote commentaries, but only those on the 'Iliad,' on Hesiod, and on Lycophron have been printed. Others, as those on Oppian's 'Halieutica,' on the canon of Ptolemæus, as well as his original works 'On Comedy and Comic Poets,' the 'Antegmenæ' of the Rhetoric of Hermogenes,' a collection of his letters, and other works, are still in manuscript. The only edition of the 'Commentary on the Iliad' ('Exegesis in Homeri Iliadem') is that by G. Hermann, who published it with the work of Draco of Stratonicea on metres, 8vo, Leipzig, 1812. The commentary printed in the Aldine editions of this poet, by Victor Trincavelli, 4to, Venice, 1537, and in that of Daniel Heinsius, 4to, Leyden, 1603. The commentary on Lycophron's 'Cassandra' is ascribed in the manuscript to Isaac Tzetzes, the brother of Joannes, but Joannes states in two places ('Chil.' ii., 1. 396; 'Epist. ad Basil. Achridenum,' printed in Potter's 'Commentary on Lycophron,' p. 111) that he wrote the Commentary himself and gave it to his brother Isaac. J. C. Müller, the last editor, is of opinion that this is the joint production of the two brothers; that Isaac first published it, and that Joannes afterwards made an improved and enlarged edition. This opinion is strongly supported by the condition of the existing manuscripts, some of which contain considerably more matter than others, and display all the vanity and arrogance which are so striking in the 'Chiliades.' But however this may be, the commentary is a most useful compilation from those of the Alexandrine grammarians, and contains a vast amount of mythological and historical information not to be obtained elsewhere, and without it we should scarcely be able to understand the obscure poem of Lycophron. It is printed in several editions of Lycophron, first in that of Basel, fol., 1546, and subsequently in those of Canter, Potter, and Sebastiani. The last and most correct edition, without the text of Lycophron, is that by C. G. Müller, 3 vols. 8vo, Leipzig, 1811, with useful notes and indices.

U

UBERTI, FAZIO DEGLI, of a Guibeline family of Florence, is believed to have been a son of Lapo degli Uberti, and grandson of the great Guibeline leader, Farinata degli Uberti, who after the defeat of the Guelphs at Montaperto, saved Florence from the fury of his own party, which wanted to raze the town to the ground. Of the personal history of Fazio little is known, except that he lived in the middle of the 14th century, that he was an emigrant in consequence of the proscription of his party by the triumphant Guelphs, and that he found an asylum at various Italian courts, among the rest at that of the Visconti at Milan, amusing his patrons by reciting verses. Some of his canzoni and other small poems are found in various collections. He composed also a descriptive poem in terza rima, entitled 'Il Ditt'amondo,' from the Latin words 'dicta mundi,' the 'sayings' or 'the news of the world,' in which, borrowing the plan of Dante, he represents himself travelling about the world in company with Solinus, the author of the 'Polyhistor,' and describes the various countries, their history, the contemporary sovereigns, and other things worthy of note. The poem contains six books, subdivided into cantos, but is not complete. It is written with graphic conciseness and energy of style, and is interesting as a memorial of the geographical information of that age, mixed with fabulous traditions and mythological lore.

The 'Ditt'amondo' was printed at Vicenza in 1474, and reprinted at Venice in 1501, both editions being however full of errors. An improved edition, with corrections by Monti and Perticari, was published at Milan in 1826. Fazio is said, by Filippo Villani, to have died at Verona, after a quiet old age.

UCCELLO, PAOLO, a celebrated old Florentine painter, contemporary with the sculptor Ghiberti. Born in 1397, he would, in the

Digitized by Google

opinion of Vasari, have been one of the most remarkable painters that had lived, from Giotto until Vasari's own time, had he bestowed as much labour on men and animals as he did on perspective. Uccello was the first Italian artist who reduced the principles of perspective to rule: he was acquainted with geometry as a science, which he learnt of his friend the mathematician Giovanni Manetti, with whom he used to read Euclid. He painted in fresco and in distemper, but most of his works are now destroyed. His pictures were generally of such subjects as admitted of the introduction of animals; and he contrived in all his works to display his power of foreshortening. His best works were those painted in Santa Maria Novello, in green earth, where he illustrated the histories of Adam and Eve, and of Noah, the Creation, and the Deluge. In these works he painted numerous animals, amongst them many birds. He acquired his name of Uccello on account of his predilection for painting birds. Vasari does not mention his family name: it was not Mazzocchi, which is a name given to him by Orlandi through misunderstanding a passage in Vasari. He was skilful also in landscape-painting, and the backgrounds of some of his paintings were the best specimens of this department of art that had been produced up to his time.

Uccello painted also in green earth, in the cathedral, a colossal equestrian portrait of an Englishman who was a captain of the Florentine republic, and who is called Giovanni Aguto by Italian writers: he died in 1393. This painting still exists, and is marked at the base, Paull Uccelli Opus. He had a high opinion of his proficiency in his own peculiar line, and he painted on the same panel his own portrait, with the portraits of four other men distinguished in different arts or sciences. He painted Giotto for painting, Brunelleschi for architecture, Donatello for sculpture, himself for perspective and animal painting, and Giovanni Manetti for mathematics. He died, according to Vasari, in 1479, aged eighty-three, very poor, having latterly devoted his whole time to perspective, which was a very unprofitable study to himself, although succeeding artists derived great advantages from his labours. In the National Gallery is a large painting (6ft. by 10ft. 5in.) by him of the 'Battle of St. Egidio.' He died in 1564.

UDALL, NICHOLAS, was born in Hampshire, in 1506. He was admitted a scholar of Corpus Christi College, Oxford, January 13, 1520, and took the degree of B.A. September 3, 1524. After he left college, he became master of Eton school, and obtained the degree of M.A. in 1534, which had been refused to him at college on account of his inclination to the tenets of Luther. He was afterwards master of Westminster school. In the early part of the reign of Edward VI. he was appointed to a canonry at Windsor. He died in 1564.

Udall published 'Floures for Latyne Spekynge,' London, 1533, which consists of selections from Terence's comedies, with an English translation: he also published translations from some of the Latin works of Erasmus; but his chief claim to notice is, that he was probably the first writer of regular English comedies divided into acts and scenes. Wood says that he wrote several comedies, all of which however had been lost, till a printed copy of one of them was discovered in 1818: this is 'Ralph Royster Doyster.'

Warton ('Hist. Engl. Poet.' iii. 213) quotes from the ancient Consuetudinary of Eton School, a passage importing that yearly, about St. Andrew's day, November 30, the master was accustomed to select, according to his own discretion, such Latin plays as were best and fittest to be acted by the boys, in the following Christmas holidays, with scenic decorations, before a public audience; and that sometimes also he ordered the performance of plays in English, provided that he found any with sufficient grace and wit. The author of the piece in question calls it, in his prologue of four seven-line stanzas, a "comedie or enterlude;" the latter, as we have already intimated, being at that date the ordinary appellation for a dramatic production in general; so that, in employing also the less usual term 'comedy,' Udall seems to claim to have his play regarded as of more 'regular' and 'classical' construction, making at the same time express reference to the works of Plautus and Terence, as precedents which he had endeavoured to imitate. The scene of this comedy is laid in London; and it is in a great degree a representation of the manners and notions of the middle classes of the metropolis at that period. It is divided into acts and scenes, has nine male and four female characters, and the performance must have occupied two hours and a half, while few of the moral plays would require more than an hour, for of those which were in two parts, each part was exhibited on a separate day. The plot is amusing and well constructed, with an agreeable intermixture of serious and humorous dialogue, and a variety of character to which no other English play of a similar date can make any pretension. Udall also wrote, probably for his scholars at Eton, a Latin tragedy, 'De Papatu,' 1560.

UFFENBACH, ZACHARIAS CONRAD VON, a learned German, was born on the 22nd of February 1683, at Frankfurt-on-the-Main, where his father was a senator, and belonged to an ancient and noble family of the place. He was educated at the gymnasium of Rudolstadt, whence he proceeded in 1698 to the University of Strasburg to study law. In 1700 he lost both his parents, which obliged him to return to Frankfurt; but as soon as he got over his grief he went to Halle, where he completed his academical studies, and in 1702 he took his degree of doctor of law under Christian Thomasius, after having written an inaugural dissertation, 'De Quasi-emancipatione Germanorum occasione Reformationis Francofurtensis.' Uffenbach from his youth showed a great love of books, and while he was at the universities he considerably increased the library left him by his father. After completing his studies, he travelled for two years through Germany, and collected manuscripts and rare books. In 1704 he returned to Frankfurt and settled there. The next five years were chiefly spent in completing his library, which became one of the most extensive private collections in Germany. In the mean time some offer was made to him at Oxford, and it was partly with a view to see whether the offer would suit his taste, and partly with the view of making some acquisitions for his library, that in 1709 he visited England, and spent nearly a year at Oxford. His constitution, however, not suiting the English climate, which did not agree with his delicate constitution, induced him in 1711 to return to his native place. He took back with him upwards of 4000 rare and curious books, which he had purchased in England and Holland. In 1721 he was raised to the rank of a senator of Frankfurt, and distinguished himself so much among his fellow-citizens, that in the course of nine years he was twice elected mayor: in 1731 he was raised to the office of chief-justice. He died on the 6th of January 1734.

Uffenbach was a man of extraordinary diligence. As long as his health permitted it, he devoted all his leisure time to bibliographical and other studies, and to the composition of most laborious works. He made and published three different catalogues of his library; one in 1720, and another in 1729, under the title 'Bibliotheca Uffenbachiana apocrypha vel latens, hoc est, librorum in corpus redactorum vel aliis insertorum Catalogus.' This catalogue was believed to have been made by the author with the view of disposing of some parts of his library, as his official duties prevented his attending to it as much as before. A third catalogue, in 4 vols. 4to, was published after Uffenbach's death in 1735. Besides these catalogues he commenced several other works, but was prevented from completing them partly by his official engagements, and partly by ill-health. These works were,—1, 'Clossarium Germanicum Medii Ævi;' 2, 'Commentarius de Vita propria,' that is, an autobiography; 3, 'Selectis Historiæ literariæ et librariæ,' the manuscript of which formed several quarto volumes; 4, 'Adversaria, sive Excerpta Realiora ad Rem Librariam et Literariam facientium,' in nine quarto volumes. The work most advanced towards completion was Uffenbach's autobiography; but when the latter years of his life lost all hopes of ever finishing his works, he gave the manuscripts of them to his friend J. G. Schellhorn of Memmingen, together with his literary correspondence, forming eighteen thick quarto volumes, and allowed him to make any use of them he pleased. Schellhorn did not indeed complete or publish the works thus bequeathed to him, but he made much use of the materials collected by Uffenbach for his 'Amœnitates Literariæ,' in the ninth volume of which he gives an account of the earliest printed works contained in the library of Uffenbach. He also wrote a life of his friend, which is prefixed to a collection of Uffenbach's letters, 'Commercii Epistolaris Uffenbachiani Selecta,' &c., 5 vols. 8vo, 1753, &c.

UGGIONE, or UGLO'NE MARCO, called also Marco of Oggione in the Milanese, was one of the best scholars of Leonardo da Vinci. He did not, like most of the disciples of that great master, confine himself to easel pictures, executed slowly and highly finished, but became an eminent painter in fresco, and his works in the Place at Milan have retained even to our time their tone and colour almost unimpaired. Some of them are in the body of the church, but the most remarkable of them is in the refectory: this is the Crucifixion, which is equally admirable for the skill evinced in the composition, the spirited execution, the variety in the numerous figures, and the taste of the costume. For the refectory of the celebrated monastery of the Certosa, near Pavia, he made a copy of the Last Supper of Lionardo da Vinci, which is peculiarly valuable on account of the ruinous condition of the matchless original.

The church of St. Euphemia, at Milan, contains one of his masterpieces, representing the Virgin and Saints. He died in 1530, but his age is not known.

UGHELLI, FERDINANDO, born at Florence March 1595, entered the order of Citeaux, in which he rose to the dignity of abbot. He is chiefly known for his great work, 'Italia Sacra,' published at Rome, in 9 vols. fol., 1642-48, in which he gives the history of the various Italian sees, with the series of their respective bishops, and illustrates them by numerous documents from the episcopal archives, which also reflect much light on the general history of the country. As it was impossible for the author to examine himself all the archives of the numerous Italian sees, he was often obliged to employ others; and the consequence is, that the execution of the work is unequal. Still Ughelli's history is very valuable, and has served as a model for similar compilations of the episcopal history of other nations, and especially of that of France, which was published about fourteen years after the appearance of Ughelli's first volume, under the title of 'Gallia Christiana,' in 1656. A new edition of Ughelli's work was published at Venice, in 10 vols. fol., 1717-33, with considerable additions, and with the 'Sicilia Sacra' of Rocco Pirro.

Ughelli wrote a work in illustration of the history of the Colonna family, 'Imagines Columnensis Familiæ Cardinalium,' Rome, 1650; and another work in Italian, entitled 'Albero e Istoria della Famiglia de' Conti di Marsciano,' Rome, 1667. Ughelli died May 19, 1670.

UHLAND, JOHANN LUDWIG, a highly popular German poet, was born at Tübingen, on April 26, 1787. He was educated in the public schools of that town, and in 1805 commenced the study of law in its university. He became an advocate, and in 1810 received the degree of doctor of laws. His earliest songs were written in 1804, but he first appeared in print in Seckendorf's 'Musenalmanach' in 1806 and 1807. He then contributed to the 'Poetischen Almanach,' and to the 'Deutscher Dichterwald' in 1813. In the autumn of 1812 he began to practise as an advocate at Stuttgardt, and for a time occupied a post in the office of the minister of justice. The national movement against the French, during 1813-15 excited strong feelings in Uhland, to which he gave vent in songs which rapidly became popular. When in 1815 the king of Würtemberg proposed to give his subjects a new constitution, a contest began between the adherents of the old and the supporters of the new system. Uhland was a vigorous supporter of the liberal party, and produced a number of inspiring songs, of which the first collection was published in 1815, having previously been distributed as single pieces; and they have since been issued in repeated editions—the seventeenth was published in 1846—and in most of them with considerable additions.

Uhland's strong political feelings at length led to a more active participation in public affairs, and as he also, about the same time, was paying great attention to science, there was a consequent interruption of his poetical effusions. From 1819 he sat as a member, at first for Tübingen and afterwards for Stuttgardt, of the representative assembly of Würtemberg, in which his talents and his knowledge gained him great influence, and he was chosen chairman of many of the select committees. In 1822 he published a work 'Über Walther von der Vogelweide,' his only literary production for many years. In 1830 he was appointed professor extraordinary of the German language and literature in the University of Tübingen, but resigned the office in 1833, as he failed in obtaining a dispensation from its duties when he was chosen a deputy to the Diet, in which he was one of the most influential and most esteemed members of the constitutional opposition. In 1836 he issued a carefully written work, derived from original sources, 'Über den Mythus der nordische Sagenlehre vom Thor' (on the myth of the northern legend of Thor). At the new election which took place in 1839, Uhland, like most of the members of the party with which he acted, declined coming forward again, and lived for a time in the quiet and retirement which one result of which was the publication, in 1844-45, of an excellent collection of the 'Alter hoch- und nieder-deutscher Volkslieder, (Ancient High and Low German popular songs), to which however the procuring observations have not been supplied. His retirement was interrupted in 1848 by the electoral division of Tübingen selecting him as their representative to the united German National Assembly, in which he acted as a member of the left, or extreme liberal party, until its dissolution, when he again retired from public life. His songs, ballads, and romances form the most valuable portion of Uhland's literary works. His songs are distinguished by their spirit and energy, their truth and depth of feeling, their lively and picturesque representations of nature, and their varied subjects; his patriotic songs in particular contain some most heart-stirring appeals to all the better national feelings that were likely to rouse his countrymen, and in them is a mixture of earnestness and jocularity, with a fervent love of country, and aspirations after the great and good inspired by the recollections of his ancestors. His ballads and romances are remarkable for their appearance of simplicity, the result of a most carefully exercised art, shown by the extreme skill and felicity in the choice of words, and the masterly way in which characters and manners are sketched perfectly but briefly. A translation of some of his poems, with a memoir by A. Platt, has been published in England.

ULFILAS, or ULPHILAS, the most usual orthography of a name of which it is thought that Vulfila, meaning 'Wolfling,' was the correct form. Ulfilas, born about the year 318, was in the year 348 a bishop of the Goths, dwelling between the Danube and Mount Haemus, who had recently been converted to Christianity and had adopted Arianism. In 355 he accompanied his flock, who were compelled to migrate to Lower Mœsia on account of their faith; in 360 he was present at a synod at Constantinople; and in 388 he died in that city, to which he had found occasion to make another visit. Though his name occurs with great frequency in the ecclesiastical history of his time it is in a philological not in a theological point of view that it has become remarkable. He is mentioned by various ancient writers as being the author of numerous works, and amongst them a translation of the Scriptures into the Gothic language, a circumstance the more noteworthy as he was himself by descent a Cappadocian, his parents having been taken by the Goths in a distant forty. This translation was said to include the whole of the Scriptures, except the books of Kings, which it was stated that Ulfilas had refrained from translating from fear of encouraging a warlike spirit among the already too warlike Goths. The version was in constant use among the Gothic congregations in Italy and elsewhere for some centuries, when it disappeared with the language. In the 16th century, Anthony Morillon, secretary to the Cardinal de Granvelle, found in the Monastery of Werden, near Cologne, an ancient volume, containing portions of a translation of the Scriptures, which he at once conjectured to be the long lost Gothic version. This volume, the subsequent vicissitudes of which were very singular, is now in the library of the University of Upsal and is known under the name of the 'Codex Argenteus,' or Silver Volume, from its being bound in solid silver. An additional interest now attaches to it from the discovery first made by Ihre [Iuræ] that the letters in it were produced not by ordinary writing, but by a sort of stencilling process, an early approach towards the art of printing. The first edition of its contents was published by Francis Junius at Dordrecht in 1665, a second by Zahn appeared at Weissenfels in 1805, in which were inserted some additional fragments, discovered by Knittel in a palimpsest, in the library of Wolfenbüttel, and Cardinal Mai and Count Castiglioni published between 1819 and 1839 several additional fragments, which they had found in a palimpsest at Milan. All of these are united in an excellent edition by von der Gabelens and Loebe, published at Leipsig between 1836 and 1846 in two volumes quarto, including a Grammar and Glossary of the Gothic language. This edition, with a translation of the German portions into Latin by Tempestini, was reprinted by the Abbé Migne at Paris in 1848, as the 18th volume of the immense collection of his 'Patrologiæ Cursus Completus.' As the earliest extant specimen of a Teutonic language, and anterior by many centuries to any other, the labours of Ulfilas have a value in the eyes of philologists, which it would be difficult to overrate. Every fragment that is discovered throws light on portions of the history of the German language and our own that might otherwise remain in impenetrable darkness. There is a separate work on the biography of Ulfilas by Waitz, 'Ueber das Leben und die Lehre des Ulfilas,' Hanover, 1840.

'ULLMANN, KARL, was born at Epfenbach, near Morbach, in Baden, on March 15, 1796. His early education was received in the schools of Morbach and Heidelberg until 1812, and completed in the Universities of Heidelberg and Tübingen. At Heidelberg he attended the lectures of Hegel, Daub, and Creuzer, and in 1819, on a visit to North Germany, he formed an intimacy with Schleiermacher, Neander, and De Wette. In 1821 he was appointed professor extraordinary of theology in the University of Heidelberg, having already distinguished himself as a private teacher, and as an author in his essay 'Über die Sundlosigkeit Christi,' a work that has been frequently reprinted. In 1823 he published his essay, 'De Hypsistariis,' and in 1825 a monography of 'Gregor von Nazianz, der Theolog,' both of which acquired him considerable reputation. In 1828, in conjunction with his colleague Umbreit, he commenced the publication of 'Theologische Studien und Kritiken,' a journal of sterling value and wholesome tendency. In 1829 he was called as ordinary professor to the University of Halle, where his instructive discourses and his mild manners acquired him the most cordial friends. In the 'Theologischen Beiträgen' which he issued as Angriffs der Evangelischen Kirchenzeitung auf den hallescben Rationalismus,' (Theological Considerations occasioned by the Attacks of the Evangelical Church Journal on the Rationalism professed in Halle), published in 1830, he warmly pleaded for the freedom of theological discussion. In 1834 he published 'Johann Wessel, ein Vorgänger Luthers' (John Wessel, a forerunner of Luther), an excellent work, which he enlarged in 1841-42, and published under the title of 'Reformatoren vor der Reformation, vornehmlich in Deutschland und den Niederlanden,' which has been translated into English. In 1836 he resigned his professorship at Halle, and returned to Heidelberg, where he taught theology and wrote among other works, 'Historisch oder mythisch,' 1838, directed against the doctrines of Strauss; 'Die Sündlosigkeit Jesaiua,' 1840, written, in conjunction with Schwab, and 'Über den Deutschkatholicismus,' with Hetzer, in 1847; and from his own pen he also produced 'Für die Zukunft der evangelischen Kirche Deutschlands' (Of the future of the evangelical Church in Germany), 1846; 'Über die Gleichberechtigung der Confessionen' (Of the Reciprocal Authority of the Confessions of Faith), 1845; 'Über die Geltung der Majoritäten in der Kirche' (On the Value of a Majority in the Church), 1850; and 'Über das Wesen des Christenthums' (On the Nature of Christianity), of which a fourth edition was published in 1855. Nearly all his works have gone through more than one edition, most of them have been translated into Dutch, and several of them into English, French, and Danish. In 1853 he was nominated an evangelical prelate and a member of the Upper Church Council in Heidelberg, since which time he has taken an active part in endeavouring to produce a Christian union among the clergy in Baden, and a better position for the ministers of the Church in that country.

ULLOA, ANTO'NIO, was born in Seville on the 12th of January 1716. He was educated for the naval service, in which more than one distinguished member of his family from which he sprung had distinguished themselves. He was admitted in 1733 into the company of royal marine guards. In 1735 he was selected in consequence of the distinguished progress he had made in mathematics and in the theory of his profession, along with Jorge Juan, to accompany the French Academicians to South America, to measure a degree of the meridian at the equator. Both the young mariners (Ulloa was at this time only in his twentieth and Juan in his twenty-third year) were promoted to the rank of lieutenant in the navy on receiving this appointment.

The squadron in which Ulloa and his companion embarked sailed from Cadiz in May 1735, and landed them at Carthagena on the 9th of July. They did not return to Spain till the year 1746. The whole of the intervening period was not however devoted to scientific measurements. They were detained five months at Carthagena waiting

Digitized by Google

ing for the French corvette which carried the Academicians, and this time was spent by Ulloa in studying the natural history of the district. The geodetical operations commenced in the neighbourhood of Quito, in June 1736, and the exertions of Ulloa to advance them were strenuous and indefatigable, till towards the close of September 1740, when Juan and he were summoned to Lima by the Viceroy to assist in placing the coasts in a state of defence against the expected arrival of the English squadron under Anson. As soon as the necessary arrangements were made they returned to the scene of their labours, which were almost immediately interrupted by a summons to Guayaquil, where the sack of Payta by the English had spread universal terror. After the necessary measures for the security of the province had been adopted, the terrified inhabitants wreaked upon one of the officers being left to superintend their execution. Ulloa returned to Quito without his companion, and had scarcely reached it when he was recalled to Lima. Two frigates were placed under the command of himself and Juan, with orders to cruise along the coast of Chili and off Juan Fernandez. At last the arrival of reinforcements from Spain set them finally at liberty. On returning to Quito however they found the Academicians had departed, with the exception of Godin, along with whom they observed the comet of 1744. Ulloa and Juan embarked in October of that year on board two French vessels to return to Europe. That which carried Ulloa sought refuge from an English privateer in the harbour of Louisbourg in Cape Breton, but by the time it entered, the town had fallen into the hands of the English, and all on board were made prisoners of war. Ulloa was conveyed to London, where he was received with marks of distinction, made a member of the Royal Society, and by the intercession of his scientific friends set at liberty. He arrived at Madrid, in July 1746, after an absence of eleven years and two months from his native country.

Ulloa's reception at court was flattering; he was appointed to the command of a frigate, and created a commander of the order of Santiago. The task of publishing the scientific observations devolved upon Jorge Juan: to write the history of the expedition was the charge of Ulloa. Two years were occupied in preparing the narrative for publication: it appeared in 1748. The work was comprised in four volumes: the first relates the adventures of the expedition from the time of its departure from Cadiz till the conclusion of the geodetical measurements; the second contains a description of the province of Quito in one book; the third, the narrative of Ulloa's and Jorge Juan's journeys to Lima and cruise along the coasts of Chili while a descent on the part of Anson was apprehended; the fourth, the return voyage from Callao to Europe, and an appendix containing a chronological account of the rulers of Peru, from Manco Capac to Ferdinand VI. The work shows that the necessity of the case, as well as personal tastes, had contributed to devolve the account of the strictly scientific operations of the expedition upon Jorge Juan. Ulloa had more taste for knowledge than talent for strict scientific inquiry. His activity and inventive genius, fruitful in resources, had materially promoted the labours of the expedition, and he had that passion for knowledge which enables its possessor to give an impetus to discovery. But for the additions made to strict science by the Spanish members of the expedition the world is beholden to Jorge Juan. Ulloa's work however, though deficient in method and accuracy, is amusing and suggestive of thought. He and Jorge Juan in the character of their intellects stood in somewhat the same relation to each other as La Condamine did to Bouguer; but to the honour of the Spaniards, no paltry jealousy occasioned unseemly quarrels between them, such as detracted from the merits of the Academicians, and their harmonious co-operation enabled them to get the start of their French colleagues in publishing the results of their labours. Don David Barry published in 1826 a volume which professes to contain the 'Secret Report,' made by Juan and Ulloa to the minister Ensenada, of the condition of Spanish America: it could have been wished that the editor had given some account of the history of the manuscript, and the manner in which it came into his hands.

Ulloa subsequently made tours of observation, by order of the Spanish government, in several countries of Europe. During the reign of Ferdinand VI. however he appears to have been kept in the background. Upon the accession of Charles III. innovation became for a time fashionable at court, and the inquiring and enterprising spirit of Ulloa found itself in a more congenial element. After Louisiana was ceded to the crown of Spain, in consequence of the peace of 1762, he was nominated to take possession of and to organise the province. He arrived at Louisiana in 1766, but his attempt to play the part of governor was an entire failure; it was necessary to supersede him by the appointment of O'Reilly. Ulloa after his return to Europe published (in 1772) a volume of essays on the natural history and antiquities of America. They bear, even more strongly than his narrative of the expedition to South America, the impress of a dilettante spirit of inquiry. In 1778 he published a memoir entitled 'The Marine; or the Naval Forces of Europe and Africa,' a work which we have not met with. In 1778 he published, at Cadiz, 'Observations of a Solar Eclipse, made at Sea.'

In 1779, having by this time risen to the rank of lieutenant-general in the naval service, he was placed in command of a squadron fitted out to intercept and capture an English merchant fleet off the Azores, and then to repair to Havannah, to join a larger force destined to make a descent on Florida. Wholly engrossed by his speculative inquiries, Ulloa forgot to open his sealed despatches, and returned to port after an unsuccessful cruise of two months. He was arrested, tried by a court-martial in 1780, allowed to retain his rank and titles, but never again employed on active service. He even retained his place in the ministry of the marine, but was only employed in examining the papers of the school of naval artillery.

Ulloa died in the Isla da Leon, on the 3rd of July 1795. He retained his constitutional gaiety and activity to the last. Visitors found him surrounded with papers, antiquities, mathematical instruments, crucibles, in short all the implements of science. But if not himself a great philosopher, Ulloa aided materially in promoting that temporary re-awaking of the intellectual activity of Spain, which characterised the second half of last century. He contributed greatly to the establishment of the observatory at Cadiz. Spain is indebted to him for its first cabinet of natural history, and its first laboratory of experimental metallurgy. He was a munificent patron of the arts of printing and engraving. He superintended the construction of the maps of the Peninsula. He originated the canal of navigation and irrigation of Old Castile, commenced under Charles III., and abandoned by his successors. Ulloa superintended the establishment of a cloth manufactory at the expense of the government, at Segovia, which was intended to set the example of improving the domestic manufactures of Spain; and upon his urgent representations young Spaniards were sent to acquire the liberal and mechanical arts in various countries of Europe.

ULPIA'NUS, DOMI'TIUS, a distinguished Roman jurist, was either a native of Tyre in Phœnicia, or his ancestors were of that place. The year of his birth is not known. Tyre was made a Roman colony by Septimius Severus, as appears from the emperor's medals (Hanche, 'Lexic. Rei Numariæ—'Tyrus'); but if that was the first Roman settlement at Tyre, Ulpian could owe nothing of his Roman education to that city, even if it was his native place; and his own words only prove that he or his ancestors were from that place. In the reign of Septimius Severus and of his successor Caracalla (A.D. 198-211), he was a writer on law, but more particularly under the sole reign of Caracalla, as appears from various passages in his writings where he speaks of Severus as 'divus,' a term which implies that Severus was then dead, and of Caracalla as 'Imperator noster,' or the reigning prince. Ulpian was banished by Elagabalus, but the elevation of Alexander Severus to the imperial power (A.D. 222) opened to him the road to new honours. He became scrinium magister and præfectus annonæ, and was a particular favorite of the emperor. He also held the office of præfectus prætorio under Alexander Severus; Lampridius doubts whether he received his appointment under Elagabalus or Alexander Severus, though it is stated that he certainly held it under Alexander. If he held this office under Elagabalus, we must assume that he was deprived of it on his banishment. Ulpian was a confidential adviser of Alexander, and exercised great influence over him. Xiphilinus, the epitomator of Dion, fixes on Ulpian the imputation of clearing the way for his promotion to the dignity of prætorius præfectus by causing the murder of his predecessor. This is not mentioned by any other ancient authority, and it is inconsistent with the character which Lampridius gives Ulpian, whom he calls a good man. Ulpian was murdered shortly after (A.D. 228), in the night-time, by the prætorian soldiers, in the palace of Alexander, and in the presence of the emperor and the emperor's mother. (Dion, lib. 80.)

Ulpian was one of the most fertile of the Roman writers on law. His chief works, as they are known to us from the 'Florentine Index' and the excerpts in the 'Digest,' are the following:—The great work 'Ad Edictum,' in eighty-three books at least, was probably founded on the similar work of Julian, and itself was almost the basis of Justinian's 'Digest.' This work, with the fifty-one 'Libri ad Sabinum,' the twenty books 'Ad Leges Juliam et Papiam Poppæam,' the three books 'De Officio Consulis,' ten books 'De Officio Proconsulis,' the six books on 'Fidei commissa,' two books of 'Institutiones,' and others, were written in the reign of Caracalla. The work of which a fragment is still extant, entitled 'Domitii Ulpiani Fragmenta,' was written probably in the reign of Caracalla ('hodie ex constitutione Imperatoris Antonini,' Tit. xvi., 2), or after Caracalla's reign. This, which is generally considered to be a fragment of his 'Liber Singularis Regularum,' consists of twenty-nine titles, and is a valuable source for our knowledge of the Roman law. This fragment, together with the 'Institutiones' of Gaius (Gaius), has enabled us to attain to more correct views on the historical development and the connection of the various parts of the Roman law. Though it has long been known to jurists, it is only within the present century that it has been used with that critical discrimination which the study of Roman jurisprudence most especially requires; and for this we are mainly indebted to the labours of Hugo and Savigny. These fragments treat chiefly of the law relating to persons and marriage, and on testaments, legacies, and fidei-commissa. The most recent edition of the 'Fragmenta' is that of F. Boecking, 12mo, Lips., 1855. Among Ulpian's other works was probably one 'De Interdictis,' in four books at least, and certainly a work 'De Officio Prætoris Tutelaris,' both of which are mentioned in the 'Vaticana Fragmenta.'

Digitized by Google

The style of Ulpian is clear, but more diffuse than that of his great contemporary Paulus. He was a man of ability, and an accomplished jurist. Ulpian and Paulus, with Cervidius Scævola, are called by Modestinus (Dig. 27, lib. 2, s. 13), who was Ulpian's pupil, the chief of jurisconsulti (συμβουλοι των νομικων); and his superior merit was fully acknowledged in the time of Justinian, whose great compilation from the writings of the Roman jurists, the 'Digest,' contains extracts from twenty-three of Ulpian's works: the proportion of the extracts from Ulpian is about one-third of the whole compilation.

A charge has been brought both against Paulus and Ulpian of being hostile to Christianity. But the passage in Lactantius ('Div. Instit.,' v. 11) which is cited in confirmation of this charge may not apply to this Ulpian; and if it does, the passage is not decisive.

Ulpian the Tyrian, as he is called in the Greek argument prefixed to Athenæus, is one of the speakers in the "Deipnosophista," and he is mentioned (p. 686, ed. Causaub.) as having died happily, "without having given any time or opportunity to disease," which seems a singular way of referring to his death, if the circumstances were such as above stated. But it is not certain that this Ulpian is the jurist.

(Gul. Grotius, *Vitæ Jurisconsultorum*, and Zimmern, *Geschichte des Röm. Privatrechts*, where the authorities are referred to; Lampridius, *Elagabalus* and *Alexander Severus*; Domitii Ulpiani *Fragmenta quibus in Cod. Vat. inscribuntur ad Titulo ex Corpore Ulpiani, accedunt Fragmenta ex Ulpiani Institutionibus, &c., iterum edidit*, ed. Booking, Bonn, 1836.)

ULPIANUS (Ὀλυμπιόδωρος). Three persons of this name are mentioned by Suidas:

ULPIAN of Emesa was a Sophist, and the author of various works, among which was an 'Art of Rhetoric.'

ULPIAN of Gaza was the brother of Isidore the philosopher, and had a great reputation for mathematical ability at Athens, whence it may be concluded that he taught or lived there. He was a contemporary of Syrianus, and must therefore have lived in the 5th century, A.D. He died young. No works of his are mentioned by Suidas.

ULPIANUS of Antioch, a rhetorician, the contemporary of Constantine the Great, is the reputed author of Prolegomena, and a Commentary (Ἐξήγησις) on the Olynthiac and two of the Philippic orations of Demosthenes. There are also attributed to him Commentaries on the Oration of Demosthenes, commonly called 'Symbuleutic,' and on the 'Oration on the Crown,' the 'Oration against Leptines,' and others. These Commentaries are printed in Dobson's 'Collection of the Attic Orators,' and in other editions. They were first printed by Aldus, fol., Venice, 1503, with the 'Lexicon of Harpocration,' entitled, Ὀλυμπιοδώρου ῥήτορος προλεγόμενα εἰς τους Ὀλυνθιακους και Φιλιππικους Δημοσθένους λόγους. Ἐξήγησις ἀνεγνωσμένη εἰς δεκα τους Δημοσθένους λόγους.

It is not certain that Ulpian of Antioch was the author of the Commentaries on Demosthenes. Suidas attributes to him various works, but does not mention the Commentaries.

* ULRICI, HERMANN, was born on the 23rd of March 1806, at Pförten, in Lower Lusatia. He was educated in the public schools of Leipsig and Berlin, in which towns he further had successively held a government situation, and in 1824 he was entered at the University of Halle to study law, in compliance with the wishes of his father. He afterwards removed to the University of Berlin, and in 1827 commenced his professional career as a lawyer's clerk in Berlin, proceeding in 1829 as referendar or practising lawyer at Frankfort-on-the-Oder. The law however had not sufficient charms to withdraw him from the study of ancient history, poetry, and art, and the death of his father towards the end of 1829 allowed him to recede from the profession and to devote himself to his favourite pursuits. The first fruits of his labour was the 'Charakterstik der antiken Historiographie,' in 1833. In the same year he passed an examination in the University of Berlin, and in the following year was created professor in that of Halle, which theneeforward has become his permanent residence. His next literary production was a 'Geschichte der hellenischen Dichtkunst' (History of the Poetical Art in Greece), published in 1835, which was followed in 1839 by his work 'Ub-r Shakspeare's dramatische Werke, und sein Verhältniss zu Calderon und Göthe,' a work which has gone through two editions in Germany, and has been translated into English. Ulrici shows in this work a remarkably just and at the same time poetical appreciation of Shakespere's merits, and he recognises his superiority even to Göthe; but he has started an hypothesis which, though supported by him with considerable ingenuity, appears to us altogether baseless: that Shakspere had for an object the diffusion and maintenance of a religious theory, which Ulrici contends was pre-eminently Christian with a Protestant tendency. This theory he thinks he traces as an under-current in nearly all of Shakspere's plays; but the proofs he produces from Hamlet, we believe, to exemplifications of human character, which, though consonant to the doctrines of Christianity, were not introduced for the purpose of supporting any particular modification of it. In 1841 he published a work, 'Uber Princip und Methode der Hegelischen Philosophie,' in which he opposed the doctrines advocated by Hegel. At this period he appears to have been much occupied with metaphysics. In 1845-46 he published two volumes of 'Das Grundprincip der Philosophie,' and in 1852 a 'System der Logik.' Among his more recent works are an edition of 'Romeo and Juliet,' with Notes, 1853; 'Glauben und Wissen,' 1858; and 'Gott und die Natur,' 1862.

ULUG BEG. The real name of this prince was MIRZA MOHAMMED TARGAI, but he is better known by the surname of Ulug (or Ulugh) Beg. He was the grandsou of Timur, being the son of Shah Rokh, the son of Timur, and was born A.H. 796 (A.D. 1394). He governed his father's territories as regent, his capital being Samarcand, from an early age until A.H. 851 (A.D. 1447), when he succeeded to the throne by his father's death. His life was marked by the usual military successes, without which few Oriental princes of that time could keep their thrones; but as these are of little interest, and form none of his title to fame, we may omit the detail of them. He is said to have had the weakness to cast the horoscope of his eldest son Abdallatif, and, from some suspicions of his fidelity derived from the stars, to have preferred his younger brother. The consequence was that the elder son revolted, defeated and took his father, whom he caused to be put to death. Ulug Beg reigned in his own name only two years.

The astronomical labours of this prince have handed down his name. He was the founder of an observatory, and the patron of some of the best astronomical tables among those which preceded the invention of the telescope. It even appears that he was himself a diligent observer, and in some, perhaps a great degree, the author of the tables which bear his name. According to D'Herbelot, the tables were constructed, under his name and authority, first by his former instructor, Salaheddin Cadizadeh al Roumi, and after the death of that astronomer by Giaschid bin Mohammed Giamschid al Cosadgi. But the expressions quoted by Hyde, from the preface, are difficult to reconcile with any supposition except that of Ulug Beg being actually an observer.

The astronomical works of Ulug Beg were written in Arabic, but were afterwards translated into Persian, in which language the principal of them were translated into Latin by Greaves and Hyde. Greaves published first the chronological portion, under the title 'Epochæ celebriores, Astronomicis, Chronologicis, Historicis, Chataicæ rum, Syro-Græcorum, Arabum, Persarum, Chorasmiorum, usitatæ, ex Tabulis Ulug Beigi,' London, 1650; and afterwards published the geographical part as an appendix to his 'Astronomica quædam ex traditione Shah Cholgii Persæ:' this appendix having the title 'Binæ Tabulæ Geographicæ, una Nesair Eddini Persæ, altera Ulug Beigi Tartari,' Oxford, 1652. Greaves is also said, by Hyde, to have published (but where we do not know) the places of 1019 stars from Ulug Beg; and he had also prepared for the press the whole table of the places of stars, which he left in the hands of Archbishop Usher. Dr. Thomas Hyde, not knowing of what Greaves had done, published, in 1665, at the Sheldonian Theatre, his 'Tabulæ Longitudinis et Latitudinis Declarum Fixarum, ex Observatione Ulugh Beighi,' Oxford, 1665, accompanied by a valuable series of notes, particularly on the Arabic names of the stars: the greater part of all this, if not the whole, was reprinted by Dr. G. Sharpe in 1767. A new edition of Ulug Beg's Catalogue, by Mr. Baily, forms part of the thirteenth volume of the 'Memoirs of the Royal Astronomical Society.' The epoch of these tables is A.H. 841 (A.D. 1437), and the observations were made at Samaraond, long. 99° 16', lat. 39° 37'. Some description of the tables has been given by Delambre, from a manuscript belonging to Lalande ('Astronomie du Moyen Age,' p. 208). The whole enjoys a high reputation for its times and the existing means of observing.

ULYSSES, ULYXES, or ULIXES, is the name under which the Greek hero Odysseus (Ὀδυσσεύς) was popularly known among the Romans. Ulysses, who is the hero of Homer's 'Odyssey,' was a son of Laertes and Anticleia, king of Ithaca, husband of Penelope, and father of Telemachus. The story about Ulysses, as related by Homer, has been much extended and modified by later poets and mythographers. In Homer he is represented as the model of a prudent warrior, as a man of great experience and cunning, always ready to devise means of avoiding or escaping from difficulties, as superior to all men in eloquence and intelligence, in wisdom equal to the gods themselves, and in adversity courageous and undaunted. Later poets, however, have described him as false, cowardly, fickle, and intriguing person. When the Greek chiefs had resolved upon their expedition against Troy, Agamemnon went to Ithaca to invite Ulysses to join them, but it was not without difficulty that he was induced to assist in the enterprise. He joined the other Greeks with the fleet of Aulis, with twelve ships. During the war against Troy he acted a very prominent part, sometimes as a gallant warrior, and sometimes as a bold and cunning spy or emissary. At the taking of Troy he was one of the heroes concealed in the wooden horse. After the destruction of the city his sufferings began. He and his companions wandered about for ten years in the Mediterranean, endeavouring in vain to reach his native island, while his faithful wife Penelope was beset by numerous suitors, who consumed his property. The various calamities he had to encounter before he returned to Ithaca are immortalised in the 'Odyssey.' During the twenty years which he was absent from his home, he always enjoyed the especial protection of the goddess Athena (Minerva), and it was she who at last enabled him to reach Ithaca. His father Laertes was living in solitary retirement, and Ulysses, without being known, was hospitably received by Eumæus, the swineherd. Telemachus, the son of Ulysses, who had in the meantime grown up to manhood, was absent: he had gone to Pylos and Sparta to obtain information concerning his father, but he returned while Ulysses was staying with Eumæus. His father made himself known to him, and a plan was formed to get rid of the insolent

Digitized by Google

suitors. Ulysses, in the disguise of a beggar, followed his son to the town, where he was insulted by the suitors and some of his own servants, but was welcomed by Penelope and recognised by his aged nurse Eurycleia. With the assistance of Athena, Ulysses, his son, and some of his faithful servants began a contest with the suitors, all of whom lost their lives. Hereupon Ulysses made himself known to Penelope, and went to his aged father Laertes. The news of the fall of the suitors excited their friends and relatives to take up arms against Ulysses, but Athena, in the disguise of Mentor reconciled the people to their lawful king. Respecting his death, the 'Odyssey' (xi. 119, &c.) only contains a mysterious prophecy of Tiresias, according to which he was to die a gentle death in his old age. According to later traditions, Ulysses was killed by Telegonus, his own son by Circe, who had been sent out by his mother in search of his father, and was thrown by a storm on the coast of Ithaca, where he was attacked, while plundering the country, by Ulysses and Telemachus. (Hyginus, *Fab.*, 127; Horat., *Carm.*, iii. 29, 8; Dictys Cretensis, vi. 15.)

UMBREIT, FRIEDRICH WILHELM KARL, a Protestant theologian, was born at Sonnebern in Saxe-Gotha, on April 11, 1795. He studied at Göttingen, where his acquaintance with Eichhorn produced in him an inclination for the study of the oriental language, and as early as 1816, his 'Commentatio historiam Emirorum-al-Omrah ex Abulfeda exhibens,' gained the university prize. After passing his examination in 1818 he became professor extraordinary of theology and philosophy at Heidelberg, in 1821 advancing to ordinary professorships of philosophy, and in 1829 to ordinary professor of theology. He was a colleague with Ullmann in the editing of the 'Studien und Kritiken.' His chief works however and his great merits consist in exegetical, esthetical, and critical editions of the Holy Scriptures, to a great extent resting upon his thorough acquaintance with the eastern tongues. His first work, the 'Lied de Liede, das älteste und schönste aus dem Morgenlande' (The Song of Songs, the oldest and most beautiful from the East), in which he maintains its completeness as a connected whole against the opinion of Herder, was published in 1820, and has been since reprinted. This was followed in 1824 by an 'Übersetzung und Auslegung des Buchs Hiob' (Translation and Interpretation of the Book of Job), of which an English translation has appeared, under the title of 'Version of the Book of Job' in 1826 by a Philologisch-Kritischen und Philosophischen Commentar über die Sprüche Salomo's' (a Philological, Critical, and Philosophical Commentary on Solomon's Proverbs); in 1833, by the 'Christlich Erbauung aus dem Psalter, oder Übersetzung und Erklarung ausgewesener Psalmen' (Christian Edification from the Psalter, or Translation and Interpretations of select Psalms); in 1843, by 'Grundröne der Alten Testaments' (Fundamental Principles of the Old Testament); and in 1841-6, by 'Praktischen Commentar uber die Propheten des Alten Testaments' (Practical Commentary on the Prophets of the Old Testament), on which work he has bestowed great pains and labour, and with great knowledge has made the oriental philological interpretation of the Old Testament consonant with modern theological views. His own theological creed is best shown in 'Der Knecht Gottes' (The Servant of God), 1840; and 'Die Sünde: Beitrag zur Theologie des Alten Testamentes (Sin: a Contribution to the Theology of the Old Testament), 1833. In 1847 he published also 'Neue Poesie aus dem Alten Testament,' which has been highly popular in Germany; and, in 1856, 'Der Brief an die Römer.' [*See* SUPPLEMENT.]

UNGER, JOHANN FRIEDRICH GOTTLIEB, was born in 1750, at Berlin. His father, Johann Georg Unger distinguished himself greatly by the improvements which he introduced into printing, and the typographical ornaments which he displayed in printed books. The art of wood-cutting, which had fallen into neglect, was revived by him, and he engraved in wood several landscapes, which are even now considered as works of art. When he died, in 1788, his son, who was established as a publisher and printer, followed the footsteps of his father. He became one of the most distinguished printers and wood-cutters of his time. As a printer, he endeavoured to introduce such changes in the types of the German printed characters as would bring them nearer to the Roman, and remove their old-fashioned and angular forms. The kind of types which he introduced were called, after him, Ungerian types (Unger'sche Schrift), and were used for a time very extensively, but afterwards they gave way to the old forms. The art of wood-cutting was much improved by him, and he was the first who raised it to a high degree of estimation in Germany. As an acknowledgment of his merits, he was appointed, in the year 1806, professor at the Academy of Arts at Berlin, of which he had been a member for some years. At the same time he continued his business as a publisher, and many excellent works appeared from his establishment. He died in 1804, and his wife, FRIEDERIKE HELEN UNGER, a woman of very great acquirements and talent, continued his business until her death, on the 21st of September, 1813. Friederike Unger acquired a considerable reputation as a writer of novels, and as a translator from the French and English, with which two languages she was perfectly familiar. Her novels, which are still much read, are chiefly praised for their beautiful delineation of character. The best among them are:—1, 'Julchen Grunthal, eine Pensionsgeschichte' (Julia Grinsthal, or the History of a Girl at a Boarding-school), Berlin, 1794, 8vo. A third and much enlarged edition, in 2 vols., appeared in 1798. It is translated into several languages. 2, 'Bekenntnisse einer Schönen Seele' (Confessions of a fair Saint), Berlin, 1806; 3, Der junge Franzose und das Deutsche Mädchen' (The Young Frenchman and the German Girl), Hamburg, 1810. Most of her works appeared without her name.

URBAN I. succeeded, A.D. 222, Calixtus I. as bishop of the Christian congregation at Rome, under the reign of the emperor Alexander Severus. It was about this time that Minucius Felix wrote at Rome his dialogue entitled 'Octavius,' in defence of Christianity. [MINUCIUS FELIX.] We have no biographical particulars concerning Urban, except that he died, some say a martyr's death, in the year 230, and was succeeded by Pontianus.

URBAN II., Otho, bishop of Ostia, and a native of France, succeeded Victor III. in the papal chair in 1088, being elected in a council held at Terracina. Guibert, antipope, under the name of Clement III., who had been set up by Henry IV. of Germany, in opposition to Gregory VII., was still acknowledged as pope by a part of the Christian world, and he had possession of some strongholds in the city of Rome. But in the following year the people of Rome, encouraged by Pope Urban, rose against the antipope and obliged him to evacuate the city. Meantime a marriage was negociated, through Pope Urban, between the Countess Matilda, who was the great supporter of the pope against Henry, and Welf, son of the Duke of Bavaria and grandson of the Marquis Alberto Azzo II. of Este. Henry of Germany, alarmed at this alliance, which strengthened the power of the pope, went to Italy with an army, and secured the territory of Mantua, which belonged to Matilda, who was obliged to take refuge with her husband in the Apennine of the Modenese. Mantua surrendered to Henry. The people of Rome, excited by Henry's success, turned against Pope Urban, and recalled the antipope Guibert, 1091. In the following year Henry continued to devastate the territories of Matilda, and the Papal party was evidently on the decline, when the countess contrived to induce Conrad, eldest son of Henry, who was with the army in Lombardy, to revolt against his father by holding before him the prospect of becoming king of Italy. It appears that Conrad was dissatisfied with his father's brutal conduct towards himself as well as towards his step-mother Adelaide. However this may be, Pope Urban received Conrad with great kindness, and caused him to be crowned king of Italy at Milan in 1093. The pope met Conrad at Asagni and other places, also regained possession of Rome, except the castle of S. Angelo and the Lateran palace, in which the antipope kept garrisons; the antipope himself was staying with Henry at Verona. In the following year the keeper of the Lateran palace gave it up to Urban for a large sum of money, and some days after Urban repaired to Germany, where he was met by the Countess Matilda. About this time Henry's wife Adelaide, who was kept in confinement by her husband at Verona, contrived to escape, and sought the protection of the Countess Matilda, to whom she disclosed all the particulars of her husband's brutality towards her. In 1095 Pope Urban assembled a council at Piacenza, at which two hundred bishops were present, as well as Queen Adelaide, who made a solemn exposure of her husband's treatment of her. The antipope and his adherents were excommunicated. There were also present envoys from the emperor Alexius Comnenus, requesting assistance against the Turks. It was in this Council that Pope Urban first proclaimed the Crusade, but the furtherance of that object was put off till the next Council, which the pope convoked at Clermont in France, in the autumn of the same year, and where multitudes took the Cross amidst the general exclamation of 'Dieu le veut,' 'God wills it.' In the following year, 1096, Pope Urban assembled two more Councils at Nismes and at Tours for the same object, and various bodies of the Crusaders, the principal of which was commanded by Godefroi de Bouillon, set out on their march through Germany and Hungary towards Constantinopolis. Another corps under the orders of Hugh, brother of Philip I. king of France, took the road by Italy, and were met by Pope Urban in Tuscany, who gave them his solemn blessing. They then proceeded to Rome, from whence, with the exception of the castle of S. Angelo, they drove away the antipope and his partisans. They then proceeded to Apulia, from whence they crossed over to Greece. Pope Urban returned to Rome, where he celebrated the Christmas festivals with great splendour.

In the following year, 1097, January IV. left Italy, where his party was reduced very low, and returned to Germany. Thus Pope Urban and the Countess Matilda at last obtained their object. His rebel son Conrad, who had married a daughter of Roger, count of Sicily, was acknowledged king of Italy, although his power was little more than nominal, as the great feudatories, such as Countess Matilda, the Marquises of Este, Monferrato, Susa, &c., acted as sovereign princes, and the great towns of Lombardy and Tuscany had already established their independence.

In the year 1098 Pope Urban repaired to Campania, where the Norman princes, Roger, duke of Apulia, his uncle Roger, count of Sicily, and Richard, count of Averса, were besieging Capua, which had revolted against Richard. The pope endeavoured to induce the citizens to capitulate, but not succeeding, he repaired to Beneventum. Capua having at last surrendered, Duke Roger, and his uncle the Count of Sicily, went to Salernum, whither Pope Urban went also to have an interview with Count Roger, who was about returning to Sicily. It was on this occasion that the pope appointed by a bull

Digitized by Google

the count and his successors perpetual apostolic legates in Sicily. This was the origin of the immunities of the church of Sicily, which were afterwards a subject of dispute between the kings of Sicily and the see of Rome, and for the maintenance of which a court, called the Tribunal de Monarchia,' was established.

From Salernum Pope Urban repaired to Bari, where he held a Council, which was attended by one hundred and eighty-five bishops, including several Greek prelates. The controversy about the word 'filioque,' in speaking of the proceedings of the Holy Ghost, which the Greeks rejected, was agitated, and Anselm, archbishop of Canterbury, supported with much eloquence and erudition the part of the Western Church. The Greeks however would not give up the point. From Bari Pope Urban returned to Rome, where he celebrated the Christmas festivities. He also succeeded at last in obtaining possession of the Castle St. Angelo. About Easter in the following year, 1099, he held another Council at Rome, in which the antipope Guibert and his adherents were again excommunicated, and the censure of the church was pronounced against those priests who lived in a state of concubinage. In the following July Pope Urban died, just about the time that the Crusaders took possession of Jerusalem, and was succeeded by Paschal II. Urban II. was a man of considerable abilities and activity; his personal character appears to have been generally esteemed. By his perseverance and timely policy, and through his connection with the Countess Matilda in the north, and the Norman princes in the south, of Italy, he confirmed and strengthened the Papal supremacy which Gregory VII. had laboured to establish.

(Muratori, *Annali d'Italia*, and the authorities therein quoted.)

URBAN III., Uberto Crivelli, Archbishop of Milan, succeeded Lucius II. in November 1185. He strove hard to send assistance to the Christians in Palestine, who were hard pressed by Salah-ed-deen, and he repaired to Venice for the purpose; but he fell ill and died at Ferrara in October 1187, after a pontificate of less than two years.

URBAN IV., James, Patriarch of Jerusalem, a native of Troyes, in France, succeeded Alexander IV. in 1261. Manfred was then on the throne of Sicily and Apulia, and was the acknowledged head of the Guibelines of all Italy, whilst the popes were at the head of the Guelph party, hostile to Manfred and the whole house of Suabia. [MANFRED.] Urban persevered in the policy of his predecessors, and went even farther in his determined hostility against Manfred. He summoned him to appear before him, to answer numerous heinous charges which he stated against him, and as Manfred refused to appear, unless accompanied by a sufficient escort for his own protection, the pope excommunicated him as a tyrant, a heretic, and an enemy of the Holy Church. Manfred sent troops to attack the papal state, and the pope proclaimed a crusade against Manfred, and induced Robert, count of Flanders, to come to Italy with a number of French knights and men-at-arms, who, after defeating the Guibelines of North Italy, and restoring the ascendancy of the Guelph party, marched against Manfred himself, who was encamped on the frontiers of his own kingdom. But one of those insurrections, so frequent among the people of Rome in the middle ages, obliged Urban to recall the Count of Flanders in order to support him against the insurgents. This gave some respite to Manfred, but Pope Urban, who was determined in his purpose, sent a legate to Charles, count of Provence and Anjou, brother of Louis IX., of France, offering him the crown of Sicily and Apulia as fief of the Roman see. Charles accepted the offer, and his brother, Louis IX., gave also his consent, though with reluctance, as that good king had great doubts concerning the justice of the measure. From this fatal convention originated all the wars of the Angevine dynasties and race for the possession of Naples and Sicily, and the subsequent invasions of Italy by the French kings, who derived from the house of Anjou their pretensions to the crown of the Two Sicilies. Charles was making his preparations for attacking Manfred, when Pope Urban fell ill and died at Perugia in 1264, and was succeeded by Clement IV.

URBAN V., Guillaume de Grimoard, a Frenchman, and abbot of St. Victor of Marseille, succeeded Innocent VI. in 1362. Like his predecessor, he took up his residence at Avignon, leaving to the legate Albornoz to defend the temporal interests of the Roman see in Italy. [ALBORNOZ, GIL. C. DE.] Bernabò Visconti, lord of Milan, a brutal but determined man, who oppressed his own subjects and encroached upon all his neighbours, paying no more regard to churchmen than to laymen, was excommunicated by the pope for having usurped several territories of the Roman see. In 1367 however a reconciliation took place, and Bernabò was relieved from the censures of the church; but the reconciliation did not last long, as Bernabò was too restless to remain at peace. In 1367 Pope Urban took the resolution of restoring the pontifical court to Rome, to which he was urged by the Romans themselves. Petrarch also wrote him several pathetic letters to the same purpose. Urban landed on the coast near Corneto, and thence repaired to Viterbo, where Cardinal Albornoz had prepared everything for his reception. After some time the pope proceeded to Rome, in the month of October, escorted by Niccolo of Este, marquis of Ferrara, Amadeus, count of Savoy, Malatesta, lord of Rimini, and other great feudatories, and by the ambassadors of the emperor, of the king of Hungary, and of Queen Joanna of Naples, and a numerous retinue of men-at-arms. He was met outside of the gates by the Roman clergy and people, who accompanied him in the midst of acclamations to the Basilica of the Vatican. The pope found the city of Rome in a very dilapidated condition, many churches, palaces, and houses in ruins, a population scanty and poor, and other marks of the long absence of a central government and court. Nearly the whole of Italy was at that epoch in a deplorable condition. The various princes and republics were continually at war with each other, and kept for the purpose, at great expense, mercenary bands of Germans, Hungarians, English, Bretons, and other foreigners, led by their respective condottieri, who committed all kinds of atrocities in the territories which they scoured. Ambrosio Visconti, one of the numerous bastard sons of Bernabò, who was desolating the Abruzzi at the head of several of these bands, amounting to nearly 10,000 men, was defeated by the troops of Queen Joanna, united with those of the pope. Most of Ambrosio's men were killed, either in or after the fight, and 600 of them were taken prisoners to Rome. The pope caused 300 to be hung, and the rest were sent to Montefiascone, whence having attempted to escape, they were hung likewise. Similar scenes occurred in Lombardy and Tuscany, where Florence, Pisa, and Siena were continually making incursions into each other's territories by means of the mercenary bands. And yet this is the age represented by some historians as one of independence and prosperity for the republics of Tuscany.

In 1368 Joanna, queen of Naples, and Peter, king of Cyprus, went to Rome on a visit to Pope Urban, who received them most kindly. In the month of April the emperor Charles IV. went to Italy with a large force, which was joined by the troops of the pope and of Queen Joanna, for the purpose of chastising Bernabò Visconti, who paid no more respect to the emperor than to the pope. But all these preparations ended in nothing; Charles signed a truce with Bernabò, some say after receiving from him a sum of money, dismissed many of his troops, and then proceeded through Tuscany to Viterbo, where he met the pope, and they proceeded together to Rome, where Isabella, Charles's wife, was crowned empress by the pope with great solemnity. In the following year, 1369, John Paleologus, emperor of Constantinople, repaired to Rome, where he abjured those peculiar tenets of the Eastern church in which it differs from that of Rome, and acknowledged the supremacy of the pope over the whole Christian church. The great object of the journey of Paleologus was to obtain the assistance of the Western states against the Turks, in which however he did not succeed. The pope was not always at peace in his own dominions. He was obliged to send an army against the people of Perugia, who had revolted, and the people of Rome proved at times restive, which probably induced the pope to reside chiefly at Viterbo and Montefiascone. In 1370 Urban determined to return to Avignon. The reason alleged for this was to mediate between the kings of France and England, who were at war. But Petrarch, who greatly lamented this step, attributed it to the importunities of the French cardinals, who preferred the easy life which they led in their own country, to the formality and discipline which were enforced at Rome. In the month of September the pope embarked at Corneto, and returned to Provence, but shortly after his arrival at Avignon he fell ill, and died in December of the same year. He was generally regretted for his personal character, his disinterestedness, charity, and pious zeal. He was succeeded by Gregory XI. A life of Urban V., in Latin, is inserted in the third volume of Muratori's 'Rerum Italicarum Scriptores.'

URBAN VI., Bartolomeo Prignano, archbishop of Bari, was elected, after a stormy conclave, in April 1378, to succeed Gregory XI., who had again restored the Papal see to Rome. Of the sixteen cardinals who were at Rome, twelve were French and four Italian. The former wished for a French pope, but the people of Rome assembled tumultuously, crying out that they would have a Roman pope, and the magistrates of the city sent envoys to the cardinals in conclave assembled entreating them to elect, if not a Roman, at least an Italian pope. As none of the four Italian cardinals was thought fit for the office, it was at last agreed to elect the Archbishop of Bari, a native of the kingdom of Naples, who happened to be at Rome at the time. But before his election was made known, the impatient populace broke into the hall of the conclave and the frightened cardinals ran away. The following day, 9th of April, peace being restored by the magistrates, the cardinals assembled again, and confirmed the election of the Archbishop of Bari, who then accepted the Papacy, and assumed the name of Urban VI. He was solemnly crowned on the 18th of April, attended by the sixteen cardinals who were at Rome, and soon after excommunicated the new pope. The cardinals election of a new pope to the other cardinals, who were still at Avignon, as well as to all the kings, princes, and republics of Christendom. There appears therefore to be no truth in the subsequent allegation of the French cardinals, who began the schism, that the election had not been free, and was a fiction arranged with the consent of Prignano himself, in order to escape from the violence of the Romans. It was not until the following July that the French cardinals, having one after the other left Rome on the pretence of the summer heats, assembled at Anagni for the purpose of revoking the election of Urban, and they invited the Italian cardinals to join their convention. One of the latter, Francis Tebaldeschi, cardinal of S. Pietro, fell ill, and died in the following August, after making a solemn declaration that Urban had been legally elected, and that he acknowledged him as the true successor of St. Peter. The true reason of the secession of the French cardinals, besides their original desire of having a French pope

Digitized by Google

residing at Avignon, was that Urban, who had the character of an austere, zealous churchman, but destitute of all spirit of charity or conciliation, began his pontificate by assuming a harsh, haughty tone towards the cardinals, upbraiding them with their dissolute lives, their simoniacal practices, and threatening them with severe measures of reform, which were certainly wanted, but which, after the inveterate habits of relaxed discipline contracted during the long absence of the Papal court from Rome, could only have been effected gradually and with caution. As it was, Urban by his intemperate conduct, instead of a reform, effected a schism in the church. He also contrived to offend, by his imprudent words and uncourteous behaviour, Joanna of Naples, his natural sovereign, who had sent her husband, Otho of Brunswick, with a splendid retinue to congratulate him on his exaltation. The consequence was that Joanna, and her husband, and also Charles V. of France, gave their countenance to the French cardinals at Anagni, who on the 9th of August declared Urban to be a usurper, and excommunicated him. On the 20th of September they elected as pope, Robert, cardinal of Geneva, a man notorious for his unclerical habits, and for the atrocities which he had committed at the head of the bands of foreign mercenaries in the Romagna, and especially at Cesena, a few years before. He assumed the name of Clement VII., but he is placed in the list of antipopes; for although Urban's subsequent conduct was far from laudable, there is no doubt of his having been legally and canonically elected.

Pope Urban, seeing himself forsaken by all his cardinals, for even the few Italian cardinals had left him, promoted twenty-six ecclesiastics mostly persons of merit, to the rank of cardinal, and excommunicated the others as rebels against the head of the church. Thus began the great Western schism, as it is called, which lasted nearly half a century, and was the occasion of the famous Council of Constance. France, Savoy, and Naples sided with the antipope Clement; the rest of the Catholic world with Urban. Both issued bulls and decretals; both conferred livings and sees, causing thereby great contention and confusion in church and state. Clement took up his residence at Avignon. Urban remained at Rome, where, in 1379, he proclaimed a crusade against the antipope and Queen Joanna, and took into his pay the mercenary troop called the Company of St. George, commanded by Alberico de Barbiano, an Italian condottiere, who defeated, near Marino, in the Campagna, the Breton company or troop in the service of Queen Joanna. In the following year Pope Urban deposed the Queen, by a bull, as being schismatic, heretic, and guilty of high treason, and released her subjects from their allegiance. He also excommunicated and deposed the Archbishop of Naples for having acknowledged the antipope, and he appointed another in his place. Lastly, he wrote to Louis, king of Hungary, and offered him the kingdom of Naples. Louis, who was old, gave up his claims to his cousin Charles of Durazzo, who, having raised an army in Hungary, went to Italy in 1381, and after being crowned at Rome by Pope Urban, marched to Naples, which he occupied without much fighting, and took Queen Joanna prisoner, and some time after put her to death. Urban had stipulated with Charles that he should give to Francis da Prignano, surnamed Butillo, the pope's nephew, the duchy of Capua, with Nocera and other territories; and as Charles, now settled in the throne of Naples, delayed performing his promise, the pope set out for Naples, and saw his nephew put in possession of the duchy in 1383. From Naples Urban went to Nocera, where he remained for a long time with no apparent object. There he had disputes with King Charles, and also with the cardinals of his retinue, who, tired of their uncomfortable and forced residence at Nocera, began to express their opinion of the wayward obstinacy and strange caprice of the pontiff. A series of questions were published about that time by Bartolino, a jurist of Piacenza, about the propriety of appointing curators to the pope in case he showed neglect or incapacity in the performance of the duties of his high office. It was reported to Pope Urban that six of his cardinals had discussed these questions and held the affirmative, and in fact that there existed a conspiracy to arrest him and condemn him as a heretic. Urban became furious at this report, which appears to have been greatly exaggerated; and in January 1385, he had the six cardinals seized and loaded with chains, and gave them in charge to his nephew Butillo, who put them to the torture. One of them, the Bishop of Aquila, was indicted, by the acuteness of the pain, to acknowledge all that he and his colleagues were accused of. Meantime the pope, dreading that King Charles still kept a garrison in the fortress of Capua, which place had been given to Butillo, the pope's nephew, reproached him for not fulfilling this and other conditions of the investiture, and threatened to resume the kingdom as a fief of the Roman see. King Charles sent a force, under the great constable of the kingdom, to besiege Nocera, upon which the pope excommunicated Charles, and he used to show himself daily on the town-walls, and then at the sound of a bell he loudly repeated his anathemas against Charles and against his troops that were encamped around the town. At last the pope was relieved from siege by Sanseverino and other barons, and escorted to the coast of Pæstum, where he embarked on board a Genoese squadron which lay in waiting, and went to Genoa, taking along with him the cardinals as prisoners, except the Bishop of Aquila, who died or was put to death on the road. The others were privately put to death by Urban's order in Genoa; some say that they were drowned in sacks, others that they were strangled in his own palace. The citizens of Genoa were disgusted at this shameless abuse of authority, and Urban left Genoa for Lucca, where he spent the Christmas of 1385. Meantime Charles of Durazzo was murdered in Hungary, whither he had gone to claim that crown, and his infant son Ladislaus was proclaimed at Naples. He had a competitor in Louis II. of Anjou. Pope Urban, being applied to by the queen-dowager, countenanced the claims of Ladislaus, whilst Louis of Anjou was supported by the antipope Clement, who gave him the investiture at Avignon. The kingdom was divided between the two parties. Pope Urban, having raised troops, removed from Perugia, where he then was, to Ferentino, near the frontiers of Naples, but on the way he fell from his mule and was much bruised. He was carried to Rome, and died in October 1389. His violence, which bordered upon frenzy, his accession to, his obstinacy, his cruelty, his worldliness, disgraced his pontificate, and were the cause of many crimes and many calamities. His character and doings bear considerable resemblance to those of Boniface VIII. Theodore von Niem, who was Urban's familiar and an eyewitness of his deeds at Nocera, has given many particulars in his 'Historia de Schismate sui temporis.' Thomas, bishop of Acerno, wrote 'Opusculum de creatione Urbani VI.' Muratori, in his 'Annals of Italy,' gives several other authorities for his account of Urban's pontificate. He was succeeded by Boniface IX.

URBAN VII., Gio. Batista Castagna, born at Rome of a Genoese family, was elected after the death of Sixtus V., in September, 1590, and died a few days after. Gregory XIV. was then elected in his place.

URBAN VIII., Cardinal Maffeo Barberini, succeeded Gregory XV. He was born at Florence in 1568, of a noble family, and after studying with great success at Rome, where his uncle Francesco Barberini filled an office in the Papal administration, he was promoted successively to several important offices, was made referendary of justice, protonotary of the Papal court, legate in France to Henri IV., cardinal bishop of Spoleto, legate of Bologna, and lastly pope, and was crowned in September, 1623. He displayed from the beginning of his pontificate a liberal mind, being generous, affable, fond of literature, and of classical studies, in which he was well versed, and well acquainted with state affairs. He found the court of Rome involved in the tedious and perplexing affair of the Valtellina, which, from being originally a war of religion between the inhabitants of that country and the Grisons, had become an intricate political question, in which the courts of France, Spain, Austria, Savoy, and Rome took a lively part, and which endangered the peace of Europe. Urban, whose policy was rather comprehensive than narrow, was not inclined to add to the already overgrown Spanish power in Italy, and he leaned rather to the side of France, but he was obliged to intervene and conceal his real sentiments, until the treaty of Monçon, in March, 1626, between France and Spain, set the question at rest, at least for a time. The next affair of importance was that of the Duchy of Urbino, a fief of the Roman see, whose duke, Francesco Maria II., dell Rovere, was nearly eighty years old, and had lately lost his only son, who left no male issue. Pope Urban induced the duke to make a donation 'inter vivos,' of his duchy to the see of Rome, after securing for himself a competent income. Thus that fine country, which stood between the Papal provinces of the Marches and Romagna, was incorporated with the Papal State in 1626. Next came the war about the succession to the duchy of Mantua, between the emperor Ferdinand and the court of Spain on one side, and the French on the other, which lasted several years, and which spread desolation all over North Italy and brought in the plague into Lombardy. Pope Urban endeavoured repeatedly to restore peace to Italy, but did not succeed till 1631, by the treaty of Cherasco, concluded between the king of France, the duke of Savoy, and the emperor. Meanwhile the great war, called 'the Thirty Years' War,' was raging in Germany, and Gustavus Adolphus, at the head of the Protestant party, was in the full tide of success. Italy began to feel alarmed, and several princes urged Pope Urban to assist the emperor by all the means at his disposal as the head of the Catholic world. Urban however showed himself rather cool on the subject; he did not feel very friendly towards the house of Austria, since the war of Mantua, and once in full consistory he imposed silence on and ordered away Cardinal Borgia, the Spanish ambassador, who was remonstrating loudly with him on his duties as pontiff.

In 1633 Giacinto Centini, nephew of Cardinal Centini of Ascoli, wishing to see his uncle pope, betook himself to sorcery in company with other infatuated men, in order to effect the destruction of Urban. The absurd conspiracy being revealed, the judges, who themselves believed in magic, made it a capital case: Centini was beheaded, others were burnt, and others sent to the galleys. In the same year, Galileo, being summoned to Rome by the court of the Inquisition, was obliged to abjure solemnly his solar system, after which he was allowed to return to his country-house near Florence. In 1635 war broke out again in Italy between the French and the dukes of Savoy and of Parma on one side, and the Spaniards, who ruled in Lombardy, on the other. Pope Urban, in order to allay the storm, sent to Paris the nuncio Giulio Mazzarino, a young man of abilities, who was then pushing forwards in the world. This embassy was the beginning of the extraordinary fortune of Mazzarino, for Cardinal Richelieu found

Digitized by Google

him to be a man after his own mind, and took him into his confidence; but the ostensible object of Mazzarino's mission, that of peace-making, was forgotten or set aside, and the war continued in North Italy.

In 1642 the Papal state itself was the scene of a petty war. Odoardo Farnese, duke of Parma, was possessed also of the duchy of Castro and Ronciglione, a fief of the Roman see. The Barberini, nephews of Pope Urban, were at variance with the duke upon matters of precedence, and they also wished to have the duchy of Castro for their own family. The duke made preparations for defence. The Barberini persuaded their uncle, who was old and infirm, to take military possession of the duchy of Castro. The duke of Parma made a defensive alliance with the duke of Modena, the grand-duke of Tuscany, and the republic of Venice, against the arms of the Barberini, who, disposing at their pleasure of the Papal treasury and influence, had moved an army to the northward to attack the state of Parma. Several combats took place on the banks of the Po between the Papal troops, commanded by Cardinal Antonio Barberini, and the troops of Modena and Venice. The troops of Tuscany also took part in this desultory but destructive warfare, which lasted till 1643, when by the mediation of France peace was made and Pope Urban promised to restore the duchy of Castro to the duke Farnese on the latter making an humble apology. Vittorio Siri wrote a diffuse history of this war, called 'Guerra di Castro.'

On the 29th of July, 1644, Pope Urban VIII. died, after a pontificate of nearly twenty-one years. He was succeeded by Innocent X. Urban encouraged learning and the arts: he founded the college de Propaganda; he completed the aqueduct of Acqua Felice; built the country residence of Castel Gandolfo, enlarged and embellished the Quirinal palace, and increased the Vatican library. He was himself a good classical scholar, and no mean Latin poet. The principal charge against him is his extreme partiality towards his nephews, who abused his old age and credulity.

URE, ANDREW, M.D., a distinguished chemist, was born at Glasgow in the year 1778. He was educated in the university of his native town, and afterwards studied medicine at Edinburgh, and took his degree of M.D. at Glasgow in 1801. In the following year he was appointed professor of chemistry and natural philosophy in the Andersonian Institution in Glasgow. He also gave the lectures on materia medica in connection with the medical courses of this institution. In the year 1809 he took an active part in the establishment of an observatory in the city of Glasgow, and for this purpose visited London, where he made the acquaintance of many of the distinguished astronomers and chemists of the day. The observatory having been erected, he was appointed astronomer, and lived in the observatory, after whose death she sold the duchy, and, retaining only his family name, was called la Princesse des Ursins, by which name she is known in history. Rome was in her time looked upon as the best school of state intrigue; and the voluptuous, haughty, subtle, and dexterous princess was soon recognised as one of the leading spirits of that court. In 1701, when Philip V. of Spain was married to the princess of Savoy, the choice of a camerara-major occasioned considerable embarrassment. Louis XIV. neither dared to confide the post to a Spanish lady, nor to give umbrage to the Spaniards by the appointment of a French lady. Madame des Ursins, an Italian princess, though a Frenchwoman by birth, was ultimately fixed upon, and in 1701 she joined her royal mistress at Nice. With the exception of a short interval (in 1704), the princess remained in the post of camerara-major till the queen's death in 1714. Previous to her ephemeral disgrace the princess courted the alliance of the Spanish party at court; after her return she appears to have acted entirely by the direction of Madame Maintenon. After the death of the queen the chief solicitude of the princess des Ursins was to procure a new wife for Philip, over whom she might exercise as unbounded a control as over her predecessor. Alberoni, by his false representations of the character of Elisabeth Farnese, persuaded her to promote the king's union with that princess. The first step of the new queen was to drive the camera-major from court with indignity; a step to which the king submitted without remonstrance, and against which the court of France offered no objection. Hopeless of returning to Spain, the Princess des Ursins retired to Rome, but, unable to live without the excitement of political intrigue, she thrust her services upon the Pretender James Stuart, who allowed her to do the honours of his house, till her death in December 1722. Madame des Ursins was a mere courtier; her political struggles were exclusively personal. She could make and unmake ministries—supplant favourites—govern power more undermined herself—but of governing a state she does not appear to have had even the shadow of an idea. She was merely one of those idle though gaudy weeds which grow up in courts, and are of no use even when they supplant triflers as worthless as themselves. The memoirs and letters of the Princess des Ursins interest us in the same way that 'Gil Blas' does—by their mixture of passion and adventure. In this point of view her correspondence with the Maréchal de Villeroi, and still more her correspondence with Madame Maintenon (both have been published), are very edifying. It is clear from those letters that all her unquestionable energy and versatility only enabled her to make her power the means of more embroiling the perplexed affairs of Spain during the War of Succession.

URSI'NUS, BENJAMIN, a descendant of the celebrated Zacharias Ursinus, distinguished himself as a Lutheran preacher during the latter part of the 17th and the beginning of the 18th century. He was at first court preacher to the elector of Brandenburg. In 1701, when Frederic I. assumed the title of king of Prussia, he made Ursinus bishop, and raised him to the rank of nobility. Ursinus used to begin his sermons with the words 'Once upon a time.' When Frederic I. died, in 1713, his successor, Frederic William I., who employed himself in regulating the finances of his kingdom and reducing the public expenditure, also reduced the salary of the bishop Ursinus. The bishop petitioned that his former income might be restored: the king replied by a letter, which contained only these words, 'All that was once upon a time.' The sermons preached by Ursinus on various great court occasions are said to be superior to those of other preachers of the time, both in style and matter.

URSI'NUS, FU'LVIUS, one of the most eminent Italian scholars of the 16th century, was born on the 2nd of December 1529, at Rome. He was the natural son of a commander of the order of Malta, who belonged to the noble family of the Orsini. During his early years his education was conducted with great care, but afterwards a dispute arose between his mother and his father, in consequence of which she and her child were cast upon the world without any means of subsistence, and she was obliged to seek support by begging. However, some early indications of talent which he by evinced procured him a place as 'clericus' in the church of St. John in the Lateran. Here he attracted the attention and gained the attachment of a canon of the name of Gentilio Delfini, who not only took him into his house, but also instructed him in the Latin and Greek languages. The amiable character of Ursinus, his diligence, and his talents gained the canon to use all his influence in his behalf; and after Ursinus had been ordained priest, he obtained successively several preferments in the Church, and became at last the successor to his benefactor. He now formed the acquaintance and friendship of the most distinguished and learned men in Rome and Italy. Cardinal Rainutius made him his librarian; and, after his death, Cardinal Alexander Farnese engaged his services for the same purpose. In these positions he was very liberally rewarded, and had also opportunities of becoming acquainted with all the treasures of ancient literature and art which were then known. Cardinal Caraffa recommended him to Pope Gregory XIII., and procured him an annual pension of 200 ducats. The ample income which he now enjoyed enabled him to spend considerable sums on books, manuscripts of ancient authors, and a valuable archæological museum, and to support his mother, for whom he always showed a tender affection. When he was advanced in years he made his will, in which he bequeathed his museum to Cardinal Odoardo Farnese, his manuscripts to the Vatican library, his printed books to Horatio Langelotti, and the sum of 2000 crowns to Gentilio Delfini, bishop of Camerino, who was probably a near relation to his early benefactor. He died at Rome, on the 18th of May 1600.

Fulvius Ursinus possessed very extensive learning, and he was a man of good sense and talents. His knowledge of ancient manuscripts was very great, and he was particularly skilled in deciphering them. Of this art he appears to have made a sort of secret, upon which he avoided giving any information when he was asked. His works, which are very numerous, consist of commentaries, critical and exegetical, on ancient writers, editions of them, and original treatises on antiquarian subjects. Among his commentaries, which are usually very short, but useful for the critical study of the ancients, the most important are those on the 'Scriptores Rei Rusticæ;' on the Roman historians, such as Sallust, Cæsar, Velleius, Tacitus, and Suetonius; Spartianus, and others. These notes on the Roman historians are reprinted at the end of his 'Fragmenta Historicorum Romanorum,' 8vo, Antwerp, 1595. His notes on Sextus Pomponius Festus are printed in several subsequent editions of this grammarian; those on all the works of Cicero appeared at Antwerp, 8vo, 1581, and are also contained in Lambinus's edition of Cicero. Besides the fragments of the Roman historians, he edited a collection of the lyric and elegiac poets of Greece; and in 1582 he published the first edition of the 'Eclogæ de Legationibus,' which contained various parts of the works of Polybius, Dionysius, and Appian, which had until then been unknown. Among the original dissertations of Ursinus we may mention—1. 'Familiæ Romanæ, quæ reperiuntur in antiquis numismatibus,' of which an improved and enlarged edition was published by C. Patin, 1663. It is also printed in vol. vii. of Grævius's 'Thesaurus Antiquitatum Romanarum.' 2. 'Imagines et Elogia Virorum illustrium, e marmoribus, nummis, et gemmis expressæ.' The best edition is that of J. Faber (1606), with a commentary. 3. An appendix to Ciaconius's treatise 'De Triclinio Romano.' A Life of Ursinus, in which his will also is printed, was published by Joseph Castalio, 8vo, Rome, 1657. It is reprinted in the 'Vitæ Selectæ eruditorum quorundam Virorum,' published at Breslau, 1711.

(Compare Tomasini, *Elogia*; Niceron, *Mémoires des Hommes Illustres*, vol. xxiv.; Jöcher, *Allgem. Gelehrten-Lexic.*)

URSI'NUS, ZACHARI'AS, a celebrated German divine of the 16th century, was born at Breslau on the 18th of July 1534. He studied at Wittenberg, and as he was very poor, he was obliged to live on gratuities and on what he could earn by private lessons. His uncommon perseverance and industry gained him the friendship of Melanchthon, who, in 1557, took him with him to the conference at Worms. From Worms Ursinus went to Geneva, and thence to Paris, for the purpose of acquiring a knowledge of French and of studying Hebrew under Mercer. Almost immediately after his return to Wittenberg he was appointed rector of the Gymnasium Elizabethanum at Breslau, in 1558. Being a follower of Melanchthon, he soon became involved in theological controversies with the strictly Lutheran divines of Breslau respecting the nature of the Lord's supper and baptism and he was designated by the name of 'the Sacramentarian.' He published his own views on these subjects in a dissertation, but as he could not silence his adversaries, and as he himself was not inclined to continue the controversy, he asked leave to resign in 1560, and went to Zürich, where he met with a kind and hospitable reception from Peter Martyr, Gesner, Simler, and others. He had now become much more than a twelvemonth at Zürich, when he was invited to a professorship in the Collegium Sapientiæ at Heidelberg.

In the year 1562 Ursinus was made Doctor of Divinity, and, at the command of the elector palatine, Frederic III., Ursinus drew up the famous Heidelberg Catechism, which was subsequently adopted by all the German Calvinists as the exposition of their creed. It was fiercely attacked by the Lutherans, such as Flacius, Heshusius, and others. The elector ordered Ursinus to write a defence of it, which appeared in 1563, in German. The attacks upon the elector and his protégé however did not proceed from Lutheran divines alone; and the elector was charged by some princes of the empire with protecting and propagating doctrines contrary to the Augsburg Confession. Ursinus was again called upon to write a defence of his doctrine. This he did in 1563, in a work called 'Exegesis Vera Doctrinæ de Sacramentis contra Baem-ist-rum.' In 1564 Ursinus attended the colloquy at Maulbronn, at which he spoke with great energy against Brentius and Schmidlinus, and the doctrine of Ubiquity maintained by them. About the same time the elector founded some new educational establishments at Amberg, Heidelberg, and Neubaus; and Ursinus, at his request, drew up the rules for their administration. The manner in which he discharged this and other duties raised Ursinus so high in the esteem of his prince, that in 1571, when the professorship of Theology in the university of Lausanne was offered to him, and he seemed inclined to accept it, the elector took the pains to persuade Ursinus to remain at Heidelberg. The elector palatine Frederic III. died in 1577, and was succeeded by his son Ludwig, on which a great change took place in the palatinate; for as this prince tolerated only strict Lutherans among his clergy and in the university, Ursinus and his disciples were obliged to quit Heidelberg in 1578, and went to Neustadt, where he was appointed professor of theology at the gymnasium which was just established there. Here Ursinus taught theology and logic, and continued his studies without any further disturbance until his death, on the 6th of March 1583.

Ursinus was a modest though very passionate man; but he exercised great control over his passions, and he is said never to have exhibited an objection immediately. He had no talent for preaching, and he discontinued it as soon as he discovered his unfitness. His diligence and application were extraordinary; and in order that he might not be disturbed by intruders, he put the following inscription on the door of his study:—

> "Amice, quisquis hic venis,
> Aut agito pancis, aut abi,
> Aut me laborantem adjuva!"

Some of his works were at the time translated into English: for instance, his exposition of the Heidelberg Catechism, under the title of 'Summe of the Christian Religion,' was translated by Parkes, 1587, 4to. All his works were collected and published after his death, at Neustadt, 1587; but the best and most complete edition is that which was edited by his former pupils, David Pareus and Quirinus Reuterus, at Heidelberg, 1612, 3 vols. fol.

URVILLE, DUMONT D.' [DUMONT D'URVILLE, J. S. C.]

USHER or USSHER (in Latin USSERIUS), JAMES, a most learned and distinguished Irish prelate, was born at Dublin, on the 4th of January 1580. His father, the descendant of an ancient family, married a lady by an Englishman of the name of Nevil, who in exchange for that had assumed the name of his office on coming over to Ireland with Henry II.'s son John in the quality of usher, about 1185, was Arnold Usher, one of the six clerks of the Irish court of chancery; his mother was a daughter of James Stanyhurst, who was three elected speaker of the Irish House of Commons, and held the offices of one of the masters in chancery and recorder of the city of Dublin. A brother of his father's, Henry Usher (about whom there is an article in Bayle), was Archbishop of Armagh from 1595 to 1613; a brother of his mother's was Richard Stanyhurst, who (as well as his sister and his father) latterly became a Roman Catholic, and is the author of a translation of the first four books of the 'Æneid' into English hexameters, besides several learned theological and historical works, of one of which, his 'Descriptio Hibernie,' an English translation is printed in Holinshed's Chronicles.

Usher, who was his father's eldest son, is said to have been taught to read by two aunts who had been blind from their cradle. He was then sent, at eight years of age, to a school kept in Dublin by two secret political emissaries of King James of Scotland, Mr. (afterwards Sir) James Fullerton and Mr. James Hamilton (afterwards created

Digitized by Google

Viscount Clandeboye in the Irish peerage). The concealed political agents were excellent scholars and teachers, and Usher in after-life used mainly to attribute whatever proficiency he had made in learning to the five years during which he had the benefit of their instructions. From their seminary he proceeded in 1593 to the newly-opened university of Trinity College, Dublin, of which he was one of the first three students that were admitted.

He had already acquired a high academic reputation, when in 1598 the death of his father, who had intended to educate him for the law, left him at liberty to follow his own inclinations, which led him to the study of theology. Upon coming to this determination he made over his paternal inheritance to his younger brothers and sisters, only reserving a small annuity from the rental of the property (which it seems was much involved by law-suits, as well as otherwise encumbered). Having then taken his degree of M.A. in 1600, he was the next year ordained both deacon and priest by his uncle, the Archbishop of Armagh.

His first appointment, which he received very soon after, was of Sunday afternoon preacher before the state, as it was called, in Christ Church, Dublin. Two visits which he made to England in 1603 and 1606, to purchase books, the first time for the library of Trinity College, the second time for himself, brought him into acquaintance with Sir Thomas Bodley, Sir Robert Cotton, Camden, and other distinguished persons of the day, whose admiration appears to have been strongly excited by the extensive acquirements he had made at so early an age. From this time he usually made a journey to England every three or four years, when his practice was to spend one month at Oxford, another at Cambridge, and the rest of his stay at London, principally in the Cottonian Library. In 1607, having proceeded bachelor of divinity, he was chosen professor of that faculty in his college, and this post he held for the next thirteen years. This same year also he was made chancellor of the Cathedral of St. Patrick. In 1610, he was unanimously chosen provost of Trinity College, but declined the office, through an apprehension, it is said, of its duties interfering with his studies. In 1612 he took his degree of D.D.; and the next year, being at London, he there published in 4to his first work, entitled 'De Ecclesiarum Christianarum Successione et Statu:' it is a continuation of Bishop Jewel's 'Apology for the Church of England' (also written in Latin) but it remains itself unfinished both in this first edition and in the reprints at Hanover in 1658, 8vo, and at London in 1687, 4to (along with his 'Britannicarum Ecclesiarum Antiquitates'), although in the last impression falsely described on the title page as 'Opus integrum, ab auctore auctum et recognitum.' Usher had from the first been a zealous opponent of popery, which he maintained the law ought to discountenance not only as politically objectionable, but as idolatrous; he was also in doctrine a decided Calvinist and Predestinarian; and besides being opposed to the Arminian principles, which were now coming into vogue, he did not profess in the matter of church government to hold the same high notions as to the divine right of episcopacy with many of the clergy. In consequence of all this he had obtained the reputation of being inclined to Puritanism; and some pains had to be taken by his friends to satisfy the king's mind on this point; but the representations that were made by influential persons in Ireland, and by Usher himself, were so successful, that in 1620 James nominated him to the see of Meath. In 1623 he was made a member of the Irish privy council; and in January 1624, while he was in England (where he was detained by illness till August 1626) he was raised to the archbishopric of Armagh and the primacy of the Irish church. For some years after this his life was passed tranquilly in the administration of the affairs of his see and the exercise of his pen. In 1631 he published, all at Dublin, in 4to, certain writings of the old theologian Godeschale, in defence of predestination, with illustrations, under the title of 'Godescholci et Predestinarianæ Controversiæ ab eo motæ Historia' (said to have been the first Latin book printed in Ireland); in 1632 a collection of letters of Irish bishops from the 6th to the 13th century, under that of 'Veterum Epistolarum Hibernicarum Sylloge;' in 1638 his 'Emanuel, or a Treatise on the Incarnation of the Son of God,' reckoned one of his greatest performances, and reprinted in 1643 at Oxford, in 1645 and 1648 at London, in 4to, and again at London in 1670, in folio; and in 1639 his celebrated 'Britannicarum Ecclesiarum Antiquitates,' also several times reprinted.

In the beginning of 1640 he came over to England, with the intention of staying a year or two at most; but he never again saw his native country. He took up his residence in the first instance at Oxford, and there published, in 1641, a 4to volume of theological dissertations, under the title of 'Certain Brief Treatises.' The same year he was plundered of nearly everything he possessed in Ireland in an attack of the rebels upon his house at Armagh; and in the state of that country, it seems to have been thought needless for him to return to his archbishopric. Upon this the king, Charles I., conferred on him the bishopric of Carlisle, to be held in commendam; but of this he is said to have made very little; and when soon after the revenues of the bishops were confiscated by the parliament, he did not receive the pension of 400l. a year that was allotted for his support above once or twice. Meanwhile, continuing to reside mostly at Oxford, where he preached every Sunday at one or other of the churches, he published there, in 1644, in 4to, an edition, in Greek and Latin, of the Epistles of Polycarp and Ignatius, reprinted at London in 1647. Soon after this he left Oxford, and retired first to the house of his son-in-law, Sir Timothy Tyrrell, at Cardiff; thence, after a stay of six months, to the castle of St. Donate, on the invitation of the dowager Lady Stradling; thence in 1646 to London, to the house of his friend the Countess of Peterborough, near Charing Cross. In 1647 he was chosen preacher to the society of Lincoln's Inn, upon which he took up his residence in a suit of apartments provided for him in the inn, and had his library, the only part of his property he had saved, removed thither. He preached regularly during term-time in the inn chapel of the inn for nearly two years. In 1647 he published his treatise 'De Romanæ Ecclesiæ Symbolo,' and the next year his learned 'Dissertatio de Macedonum et Asianorum Anno Solari.' In the end of the year 1648, during the negociation between the king and the parliament about the settlement of the Church, his majesty sent for Usher to come to him at the Isle of Wight; and here a scheme of Church government, which had been drawn up by the archbishop seven years before, and then rejected by Charles, was now proposed by him anew, but, although accepted by the king, was rejected by the parliamentary commissioners. It was published by Dr. Bernard at London in 1658, under the title, by which it is commonly known, of 'The Reduction of Episcopacy to the Form of the Synodical government in the Antient Church.' In 1650 Usher published at London, in folio, the first part of his great work, 'Annales Veteris et Novi Testamenti,' which was followed by the second part in 1654; other editions of both parts, all in folio, appeared at Paris in 1673, at Bremen in 1675, and at Geneva (the best) in 1722. The only other works he sent to the press were his 'Epistola ad Ludovicum Capellum de Variantibus Textus Hebraici Lectionibus,' 4to, London, 1652; and his 'Syntagma de Græca LXX. interpretum Versione,' 4to, London, 1655, and again Lipsiæ, 1695. He died at Lady Peterborough's house, at Reigate in Surrey, after a day's illness, on the 21st of March 1656; and his remains were interred in Westminster Abbey by order of Cromwell, who is said however to have left the relations of the deceased prelate to pay the greater part of the expenses of the public funeral. By his wife Phœbe, daughter of Dr. Ussher Challoner, whom he married in 1613, and who died about a year and a half before him, Usher left only one daughter, Elizabeth, who became the wife of Sir Timothy Tyrrell. [Tyrrell, James.] In addition to the works above mentioned, several others were printed from his papers after his death:—1, 'The Judgment of the late Archbishop,' &c., published by Dr. Nicholas Bernard, 8vo, Lond., 1658; 2, 'Chronologia Sacra,' &c., published by Dr. Thomas Barlow (afterwards bishop of Lincoln), 4to, Lond., 1660; 3, 'The Judgment and Sense of the present see of Rome,' also by Dr. Bernard, 8vo, Lond., 1659; 4, 'The Power of the Prince and Obedience of the Subject stated,' by his grandson, James Tyrrell, 4to, Lond., 1661; 5, A volume of Sermons; 6, 'Historia Dogmatica Controversiæ inter Orthodoxos et Pontificios de Scripturis et Sacris Vernaculis,' by Henry Wharton, 4to, Lond., 1690; 7, 'A Collection of Three Hundred Letters written to James Usher, lord archbishop of Armagh, &c., collected by Richard Parr, D.D., his lordship's chaplain at the time of his death,' folio, Lond., 1686. To this collection Parr has prefixed an ample biographical memoir of the archbishop; and there are lives of Usher, in Latin, by Dr. Bates (in the 'Collectio Batesiana'), and by Dr. T. Smith (in his 'Vitæ Eruditissimorum,' and also prefixed to the Geneva edition of the 'Annales'). A complete edition of the works of Archbishop Usher was undertaken a few years back by the Dublin University, under the editorship of Dr. Elrington, but the doctor dying soon after the 13th volume was printed, the publication was for some time suspended, but subsequently resumed under the editorial care of Dr. J. H. Todd, and eventually finished in 17 vols., the last volume being an index to the whole.

UTENHOVE, A. VAN. [Van Utrechy, A.]

UVAROV, SERGY SEMENOVICH, or UVAROFF, as the name is written in French, an eminent Russian statesman and author, was born about 1785 of a noble family, and received his Christian name from the Empress Catherine to whom his father was aide-de-camp. He studied at Göttingen, and in the year 1811 made his first appearance as an author in a 'Project for an Asiatic Academy,' written in French and addressed to the Emperor Alexander, in which he proposed the foundation of a great institution for the study of the languages and literature of Asia. In his following year he was appointed, young as he was, to the curatorship of the university and educational establishments of the district of St. Petersburg, an important office which he discharged with great liberality of views. "The European Republic" he remarked in a Russian pamphlet, published at the conclusion of the great struggle in 1814, "is now preparing to emerge from chaos and to consolidate its foundations. A stupid tyranny will no longer oppose itself to the efforts of reason, and on the whole surface of the globe it will be permitted to think." When the Emperor Alexander's views became of a more retrograde character than they had been, Uvarov, after in vain offering the introduction of some new regulations relating to education, retired, in 1821, from his curatorship, but still retained the post of president of the Academy of Sciences which had been conferred on him in 1818. In the following year he became director of the department of manu-

Digitized by Google

factures and internal commerce, and he was subsequently for some years minister of finance. That his influence was not extinct was proved by his being able to establish in 1823 an institution for the instruction of young diplomatists in the Oriental languages, carrying out in some degree his early project. After the accession of the Emperor Nicolas he was appointed in 1832 Minister of Public Instruction, a step which excited some surprise, as the tendencies of the new government were certainly not to favour of permitting the liberty to think. From that time till 1843 Uvarov was indefatigably active in founding museums, botanical gardens, observatories, and educational institutions, and in providing for the better endowment of such establishments, and any deficiency in liberality in their management was attributed rather to the emperor than the minister. In 1843 he again retired from office on occasion of some new regulation of censorship imposed, of which he disapproved. He died Sept. 16, 1855.

The principal writings of Uvarov are rather elegant than profound: they are collected in two volumes, one bearing the title of 'Studies of Philology and Criticism,' and the other 'Political and Literary Sketches' (*Etudes de Philologie et de Critique*, St. Petersburg, 1843, 2nd edition, Paris, 1845, 'Esquisses politiques et littéraires,' Paris, 1848). All of these essays are in French, except two on philological subjects, one 'On the poet Nonnus of Panopolis,' and the other 'On the Autochthonic Age,' which are in German. In the former to the essay on Nonnus, addressed to Gothe, the author expresses an opinion that "it is now time for every author to choose for his instrument the language which is best suited to the circle of ideas he intends to treat." He seems however, in spite of the confidence of his tone, to have been for some time in doubt as to whether to print in German or and before publication applied to Gothe for advice, who in a half jesting tone replied "Never confide to any German the grammatical revision of your manuscripts. Do not forfeit the immense advantage you enjoy in not knowing German grammar; I have been trying to forget it these thirty years." Among the few foreigners who have written in that language, Uvarov is admitted to have been one of the most successful. In French, which was in the time of his youth more familiar than Russian to educated Russians, his style is pronounced to be perfectly idiomatic by his French editor M. Léouzon Leduc, who in his amusing preface declares with apparent confidence in his own correctness that "everywhere our novels, our plays, our books, whether serious or frivolous, enjoy a monopoly of admiration." The subjects of Uvarov's essays 'Stein and Pozzo di Borgo,' 'Two Princes de Ligne,' 'Venice,' 'Rome,' &c., are in themselves of interest and are treated in a light and graceful style which never fatigues the reader. Uvarov is reported to have written memoirs of his own time, which may probably form the best portion of his writings in the eyes of posterity.

* ALEXEI SERGIEVICH UVAROV, the son of the preceding, has published in Russian 'Researches on the Antiquities of Southern Russia and the coasts of the Black Sea' (*Izsliedovaniya o drevnostiach Yuzhnoy Rossii*, St. Petersburg, 1852, &c.) and is still publishing a magnificent work on the antiquities of Russia.

UWINS, THOMAS, R.A., was born in Pentonville, February 24, 1782. Apprenticed to Smith, an engraver of some repute in his day, he acquired, whilst learning the use of the burin, a certain familiarity with the general principles of design. But having fixed his heart on becoming a painter, he, on quitting Smith, entered as a student at the Royal Academy, at the same time availing himself of the lectures which Sir C. Bell was then delivering to students in art. For some years he was principally occupied in making designs for book engravings, in which he seems to have taken Stothard as his model, but without maintaining considerable originality; many of his designs display very decided power as well as grace. He also made numerous copies of paintings for the use of engravers. At this time he practised almost exclusively in water-colour, and in 1811 was elected a member (and subsequently secretary) of the Society of Painters in Water Colours. Failure of health having led to a temporary abandonment of his profession, he after a short interval commenced practice in Edinburgh as a portrait painter, having prepared himself by making a series of portraits for book illustrations. In 1824 he visited Italy, and the studies which he made during his stay led him to commence painting pictures illustrative of the cheerful ont-door life of the Italian, and especially of the Neapolitan peasantry. These works painted with a light bright pencil, picturesque in costume, gay in colour, and cheerful in spirit, became at once very popular, and their popularity remained undiminished as long as he continued to produce them. As samples of these sunny Italian pictures may be mentioned, 'The Mandolin;' 'Taking leave for a Festa;' 'Neapolitan peasantry returning from a Festa;' 'The Fisherman's Song of Naples;' 'Interior of a Saint Manufactory at Naples;' 'Festa della Madonna del Arco;' 'Loggia of a Vine-dresser's cottage in the afternoon of a Saint-day;' 'Mountaineers returning from the Festa;' 'Day of Naples on the 6th of June;' 'Teaching a child the Tarantella;' 'Children asleep in a Vineyard;' 'Making a Nun.' He also painted some English peasant pieces, as 'The Top of the Stile,' 'The Pet of the Village,' &c., but with less success. Later he painted illustrations from popular authors, Sterne's Maria, the Dorothies, &c.; and still later he essayed a loftier class of subjects, as 'Lear and Cordelia in prison;' 'Cupid and Psyche' (painted for Prince Albert); 'Psyche returning from the Infernal Regions with the Casket of Beauty;' 'The Reproof;' 'John the Baptist proclaiming the Messiah on the Morning after the Baptism;' 'Judas,' &c.; but these were scarcely adapted to his pencil. Mr. Uwins was elected a Royal Academician in 1836; and from 1844 to 1855 he held the office of librarian to the Royal Academy. He was appointed keeper of her Majesty's pictures in 1847, and keeper of the National Gallery in 1847, but he resigned the latter situation after two or three years. In the Vernon collection are two pictures by Mr. Uwins, 'The Vintage in the Claret vineyards, South of France,' and 'Le Chapeau de Brigand:' in the Sheepshanks' collection are four more characteristic examples of his pencil—'Italian Mother teaching her Child the Tarantella;' 'Neapolitan Boy decorating his Inamorata;' 'The Shepherd,' and 'Suspicion.' (See SUPP.)

UZ, JOHANN PETER, was born at Ansbach on the 3rd of October 1720. He studied at Halle, where he formed a friendship with Gleim and Göte, and, in conjunction with the latter, published a translation of Anacreon in 1746. in 1748 he was appointed secretary to the College of Justice in Ansbach, then an independent margraviate. Of this post he performed the duties for twelve years, but devoted his leisure to the writing of poetry, chiefly in a lyrical form, of which in 1749 he published a small collection, entitled 'Lyrische Gedichte.' It acquired him a considerable reputation, and encouraged him to produce the 'Sieg des Liebesgottes' (Victory of Love), a narrative poem; in 1753 'Theodicee,' which has much poetical merit; and in the same year a new edition of his lyrical poems, with considerable additions. In 1760 he produced his didactic poem of 'Die Kunst, stets fröhlich zu sein' (Art is ever Cheerful), written in alexandrines, and which still maintains a high rank in this class of poetry. In 1763 he was appointed assessor of the judiciary court at Nurnberg, and again published his lyrics, with fresh additions; but then for a time abandoned poetry in order to devote himself more sedulously to the duties of his office. In 1781 however he was called upon by his prince to write, in conjunction with Jacobson, a 'Neue Ansbachische Gesangbuch' (a new Ansbach Hymn-book), in which he was very successful. In 1796, when Ansbach was incorporated with Prussia, he was created a counsellor of justice and judge of the court at Ansbach, but he enjoyed his dignity only a short time, for he died on the 12th of May of the same year. His poems still continue popular, and several editions have been issued since his death. The religious hymns, the epistles, and some of his lighter sportive pieces are the best of his productions. In 1825 a monument was erected to his memory in the royal gardens at Ansbach, with a colossal bust from the chisel of Heidelolf.

UZZIAH, or, as he is sometimes called, AZARIAH, king of Judah, was the son of Amasiah and Jecholiah. Uzziah was only five years old when his father Amasiah died (B.C. 809), and as the people of Judah did not acknowledge him as fit to reign till he had reached his sixteenth year, there was a regency for eleven years. Uzziah appears to have been instructed by Zechariah, a wise and holy man, whose teaching had a salutary influence on his mind, so that when he grew up he served the Lord; and we are told that "as long as he sought the Lord, God made him to prosper." When Uzziah was sixteen years of age he was raised to the throne. Everything he undertook prospered in his hands, and his mind was equally engrossed by the arts of peace and of war. He lived castle, and for their protection and subsistence he built towers and dug wells. He also had many husbandmen and vine-dressers, "for he loved husbandry." He repaired the old fortresses and built new ones; and he not only caused the walls of Jerusalem, which had been damaged, to be repaired, but he also strengthened the towers, and had bulwarks and catapults mounted on them. He also caused shields, spears, helmets, bows, slings, and other warlike weapons to be prepared for his army—as it would seem, a kind of militia—which consisted of 307,500 men, commanded by 2600 chiefs, all mighty men of valour. Elated by success and by increasing power, he waged war against the Philistines, and obtained possession of several of their principal towns—Gath, Jabneh, and Ashdod. He was also successful in his wars against the Arabs, of Gur-Baal, the Mehunims, and the Ammonites, and the terror of his name was spread abroad. Hendered arrogant by his power and prosperity, he was dissatisfied at not possessing—like the king of Israel and some other neighbouring monarchs—the right to officiate as high priest at the incense-altar, and he determined to assume the function. Accordingly, he went into the temple to offer incense upon the altar. Azariah, the high-priest, with eighty other priests, followed after him, and warned him that his usurpation of the priestly function was unlawful and impious. Uzziah was enraged at this remonstrance, and took the censer from the incense, but no sooner had he done so than he was smitten with leprosy. On perceiving this, the priests would have expelled him from the Temple as a pollution; but he himself, being conscience-stricken, hastened to leave it, and he remained a leper to the day of his death. According to the Jewish law, lepers were excluded from towns during the continuance of their leprosy: Uzziah was consequently unable to exercise his kingly office, and the sovereign power was administered by his son Jotham in his father's name. Uzziah died B.C. 757, having lived sixty-eight years and reigned fifty-two. His reign was longer than any other of the kings of Judah with the exception of Manasseh. The prophets Amos, Hosea, and Joel began to prophesy during his reign, and in the last year of it Isaiah was called to the prophetic office.

VACARIUS, a civilian, who taught the Roman law at Oxford in the reign of Stephen, about the middle of the 12th century. Of the personal history of Vacarius little is known. In the anonymous Norman Chronicle, which mentions him, and briefly notices a work written by him, he is described as "gente Longobardus, vir honestus et jurisperitus, qui leges Romanas anno ab incarnatione Domini 1149 in Anglia discipulos docerat." Being a Lombard by birth, it is highly probably that he was brought up at the University of Bologna, which at that time was in high reputation, and it is possible, as far as dates are concerned, that he may have studied in the school of Irnerius. Selden has fallen into an error respecting Vacarius, which has been adopted from him by Heinecius, Duck, Montfaucon, and many other eminent writers. He calls him Rogerius Vacarius, and supposes him and Rogerius, abbot of Bec in Normandy, and also Rogerius Beneventanus, a well-known glossator, to be one and the same individual. (Selden 'Diss. ad Fletam, cap. vii., sec. 3-7.) It has been clearly proved by recent German writers that Selden has in this respect confounded three separate persons, and that the mistake originated in the false punctuation of a passage in the anonymous Norman Chronicle, cited by Selden, in which both Vacarius and Rogerius, abbot of Bec, are mentioned. (Wenck, 'Magister Vacarius Primus Juris Romani in Anglia Professor,' p. 3; Savigny, 'Geschichte des Römischen Rechts im Mittelalter,' vol. iv., p. 316.) The time and occasion of Vacarius's appearance in England are related by Gervase of Dover, who is supposed by Selden to have written his Chronicle at the beginning of the 13th century. Theobald, archbishop of Canterbury, relying upon the aid and advice of Thomas à Becket, who had himself studied the Roman law at Bologna, appealed to Pope Celestin II. against the king's brother, Henry, bishop of Winchester, who was legate to the apostolical see, contending that, as archbishop of Canterbury, he was legatus natus, and entitled of right to the legatine authority. This appeal occasioned great litigation. "Orientur hinc inde," says Gervase of Dover, "discordiæ graves, lites et appellationes antea inauditæ. Tunc leges et causidici in Anglium primo vocati sunt, quorum primus erat Magister Vacarius. Hic in Oxonefordiâ legem docuit," &c. (Twysden, 'Hist. Angl. Scriptores X.,' col. ii., p. 1665.) As Celestin II. died in September, 1143, within six months after his election to the papacy, and as Pope Eugenius III. disposed of the subject of the above appeal in 1146 in favour of Archbishop Theobald, the period of the introduction of Vacarius and the Roman laws and lawyers into England, as noticed by Gervase of Dover, must lie between the years 1143 and 1146. In the Chronicle uf Robertus de Monte (of which the above-cited Norman Chronicle appears clearly to be merely an imperfect abstract) it is expressly stated that Vacarius continued to teach the Roman law in England in 1149, and that "many, both rich and poor, resorted to him for instruction." The same authority goes on to say that, "at the suggestion of the poorer students, Vacarius composed nine books from the Code and Digests, which, for my person perfectly acquainted with them, were sufficient to decide all disputed points of law which usually come to be discussed in the courts of law." (Savigny, 'Geschichte,' &c.) This latter expression no doubt refers to the controversies on supposed propositions of law, which we know prevailed as juridical exercises in the universities during the middle ages, and which were probably derived immediately from the scholastic disputations, though the general notion of them might possibly have been handed down by tradition from the schools of rhetoricians at Rome. The only other mention of Vacarius to be found in the meagre histories of those times is by John of Salisbury, in the book entitled 'Policraticus, sive de Nugis Curialium,' which is supposed to have been written about the year 1159. This writer, after inveighing against kings who assumed to command the church and interfere with ecclesiastical matters, says, "I have seen some who have thrown the books of law into the fire, and have not scrupled to cut the laws of the holy canons to pieces if they fell into their hands. In the time of King Stephen the Roman laws, which the house of the venerable Father Theobald, primate of Britain, had brought into England, were ordered out of the realm. Every man was forbidden by a royal edict to retain the books of that law, and our Vacarius was enjoined to silence. Nevertheless, by the help of God, the virtue of that law more prevailed in proportion as impiety sought to weaken it." ('Policrat.,' lib. viii., c. 22.)

A notice of Vacarius is chiefly important as connected with the introduction of the Roman law into England at this early period, and the great attention which it seems to have attracted. From the passages above cited from contemporary writers, it is clear that a foreign professor taught the civil law at Oxford in the reign of Stephen,—that his teaching was attended by great numbers of rich and poor students,—that for the use of the latter he composed a work consisting of an abstract of the Code and Digest,—that the effect of his teaching was sufficiently important to call for its suppression by a royal edict,—and that, notwithstanding that edict, the study of the Roman law continued to flourish exceedingly. With the slender information we possess respecting the history of this period, it is not easy to ascertain with precision either the motives which induced this zealous and persevering attention to e foreign system of jurisprudence, or the practical uses to which the knowledge of it was applied. No doubt the judges, delegates, advocates, and procurators in the episcopal consistories must have been civilians; but the number of those who for this purpose required an acquaintance with the Roman law could not have been sufficiently great to have constituted so large and flourishing a school as that of Vacarius at Oxford. The fact may perhaps be ascribed to a more general cause. We know that the extraordinary impulse which had then recently been given to the study of the Roman law at Bologna had been communicated to the Continental universities of Europe, and that in all of them the juridical disputations in the schools were pursued by great numbers without any practical object, though with a degree of interest, and even enthusiasm, which it is difficult for us to understand at the present day, but which may in great measure be accounted for by the paucity of other objects of polite learning in those ages. This feeling was probably imported into England, and operated in the same manner at Oxford as in foreign universities. That the civil law was not used as an authority in the English common law courts is evident from the records of the Curia Regis which are in existence from the time of Stephen, and which demonstrate that the law of the land was the ancient customary law. Nevertheless the extent to which the Roman law was studied and understood, and the manner in which it was employed by writers, in illustrating the common law and supplying its deficiencies, are exemplified in the treatise of Glanville, and still more remarkably in those of Bracton and Fleta. And indeed Vacarius himself, who wrote in England and for English pupils, seems, in an obscure passage of his work, to indicate the mode in which these writers subsequently made use of the Roman law: "Quid prohibet pauca volui in collectionem istius libri, quæ in aliis libris non utuntur, cumulare, ut infra septa justitiæ quasi ex loco eminenti conspiciendo, discant sine magno labore accedere ad optata." (Wenck's 'Magister Vacarius,' p. 87.)

Several copies of Vacarius's work are still extant in manuscript. The cathedral library at Prague contains a copy which Savigny says he has seen, and of which Professor Wenck gives an account. Another copy is in the town library at Bruges; a third is in the library at Königsberg; and a fourth is the property of Professor Wenck at Cassel, which is particularly referred to in his work respecting Vacarius. The book probably exists in other collections, and one would expect to find it at Oxford; but as yet no other copies have been discovered. The original title appears to have been as follows:—'Liber ex universo mutuatus Vacarii exceptus, et pauperibus præsertim destinatus.' The whole work consists of nine books, as stated in the Chronicles. These books correspond as to their general subjects with the first nine books of the Code, but the subdivisions are different, some of the titles being taken from the Digest or from other books of the Code. The words of the Code and the Digest are retained as the substance or text of these titles, and a copious gloss accompanies it, composed partly of passages taken from other sources of Roman law and partly of the explanations and illustrations of the author. The work has little value at the present day, except as the only remaining work of an English school of Roman law at the early period at which it was written. It is described by Savigny in his history; and Professor Wenck has published a very copious abstract of it in his 'Magister Vacarius.'

VADDER, LOUIS DE, a celebrated Flemish landscape-painter, was born at Brussels in 1560. He excelled in representing the misty atmosphere of his country, especially sunrise scenes; his foliage also was managed with great skill and truth, and he was very successful in representing reflections in water, which he painted with remarkable transparency. He etched some engravings after his own designs. He died in Brussels in 1623. Vadder was the master of Lucas Achtschelling, who was also a clever landscape-painter.

VAGA, PERI'NO DEL, or PIERINO BONACCORSI, a celebrated Italian painter, was born at Florence in 1500. He lost his parents when very young, and was brought up in extreme poverty, but he found a useful protector in the painter Andrea de' Cerl, who took him into his house and gave him employment. He worked afterwards for Ridolfo Ghirlandaio, and finally with a Florentine painter of the name of Vaga, who took him to Rome and recommended him to the notice of Giulio Romano and Penni, whence he acquired his name of Pierino del Vaga. Giulio Romano spoke favourably of Pierino's ability to Raffaelle, who appointed him to assist Giovanni da Udine in the arabesques and stucco-work of the loggie of the Vatican. He assisted also Polidoro da Caravaggio in his chiaroscuri, and exhibited so much ability that he became a great favonrite with Raffaelle, who intrusted him with the execution of some of his designs in fresco, and they are amongst the best painted in the loggie. Pierino painted the 'Taking of Jericho,' the 'Passage of the Jordan,' the 'Offering of Abraham,' 'Jacob and the Angel,' 'Joseph and his Brethren,' and many others.

Digitized by Google

Del Vaga, with the exception of Giulio Romano and Penni, surpassed all the assistants of Raffaelle. He was a great draughtsman and executed with rapidity. Vasari considered him the best designer among the Florentines after Michel Angelo, and the most able of Raffaelle's scholars. His design however resembles more that of Michel Angelo than that of Raffaelle, but he coloured much in the style of Raffaelle. He painted many works in Rome: the best is generally considered the 'Creation of Eve,' in the church of San Marcello. There are numerous works by him in various cities of Italy, in Tivoli, in Florence, in Lucca, in Pisa, and in Genoa, where he painted his greatest works, and held the same position that Giulio Romano held at Mantua; they were respectively the founders of the schools of Genoa and of Mantua. Del Vaga left Rome at the sack of that place in 1527, when he lost all his property, and repaired to Genoa, where Prince Doria took him immediately into his service, and employed him to superintend the decoration of his new palace. The great works executed by Vaga in this palace were amongst the finest paintings in Italy, but most of them are now destroyed. The subjects were chiefly from Roman history and the Heathen mythology. On the ceiling of the great hall he painted in oil the Shipwreck of Æneas and his comrades, but it has since been whitewashed. On the ceiling of a neighbouring apartment he painted in fresco Jupiter destroying the Giants; a work which alone, says Sopranì, is sufficient to immortalise its author, and to render the palace valuable.

Vaga returned to Rome after staying some years at Genoa, and was much employed by Pope Paul III., who granted him a pension for life of twenty-five ducats per month. Shortly before his death his reputation was so great in Rome that nearly all the great works in painting were executed under his direction or from his designs, and he was so much occupied that he made only the cartoons of his works, the painting of them being intrusted to his scholars and assistants, who were very numerous. By incessant application, combined with intemperate habits, he hastened his death. He died at Rome, October 19, 1547, and was buried in the Rotonda, where Raffaelle and other great painters were buried.

His principal scholars were Luzio Romano, Marcello Venusti, Girolamo da Sermoneta, and the Spaniard Luis de Vargas. Caraglio, Bonasone, Hollar, and others have engraved after his works.

VAHL, MARTIN, a botanist, was born on the 10th of October 1749, at Bergen in Norway. Having received his preliminary education at Bergen, he was entered a student of the university of Copenhagen in 1766, and resided in the house of the Rev. Hans Strœm, a distinguished naturalist. It was here that he imbibed his taste for botany, and having lived at Copenhagen two years, he left for Upsal, in order that he might study under Linnæus. Here he became one of the most distinguished pupils of the great botanist, and remained at Upsal for five years. His intercourse however with his preceptor was suddenly interrupted by a domestic occurrence, for "it was scarcely to be expected," says Smith, "that the dignified professor, then in the zenith of his prosperity and honours, could favourably regard the inclination of one of his daughters for a student who had his own fortune to seek; nor is anything recorded of this daughter which might have justified a romantic attachment or adventurous pursuit on the part of the young man."

In 1779 Vahl was appointed lecturer at the Botanic Garden of Copenhagen, where, having remained three years, he was appointed by the king of Denmark to undertake a scientific tour, during which he visited Holland, France, Italy, Spain, Barbary, Switzerland, and England. In these various countries he made large collections of plants, and visited their principal museums. Whilst in England he was in constant intercourse with Sir J. Banks and Sir J. E. Smith, to whose herbaria and libraries he had constant access, and he availed himself extensively of this privilege.

On his return to Copenhagen in 1785, he was appointed professor of natural history in the university, and was intrusted with the continuation of the 'Flora Danica,' already commenced by Œder. This work was completed in twenty-four fasciculi, seven of which were done previous to its having been undertaken by Vahl. He made several journeys to the coasts and mountains of Norway for the purpose of getting materials for this work, which was completed in 1810. In 1790 he commenced a work entitled 'Symbolæ Botanicæ,' it appeared in three folio fasciculi, each containing twenty-five or twenty-five plates. The principal object of this work was to illustrate Forskal's discoveries; but Vahl gave descriptions and drawings of many plants from his own collections. In 1796 he commenced the publication of his 'Eclogæ Americanæ,' which was a sequel to the 'Symbolæ,' and consisted of three fasciculi containing in all thirty plates.

In 1799 and 1800 the government again paid his expenses in visiting Holland and Paris, for the purpose of examining botanical specimens, to enable him to bring out a great work which he had in contemplation on the whole vegetable kingdom. On returning to Copenhagen from this visit, he was appointed professor of botany in the university. He lived to complete only one volume of his great work entitled 'Enumeratio Plantarum.' This was published in 1804: he died on the 24th of December of the same year; and five more volumes were published subsequently. His extensive library, consisting of 3000 volumes of books, his herbarium, and manuscripts, were purchased by the king of Denmark for 3000 dollars (about 675*l.*), besides an annual pension of 400 dollars to his widow, and of 100 dollars to each of his six children.

Vahl also paid attention to zoology: he communicated remarks on the carnivora to Cuvier, and also some observations on insects to Fabricius, and assisted in the completion of the 'Zoologia Danica,' a work that had not appeared at his death. He was a learned and zealous botanist, and his works will remain a monument of his accurate acquaintance with a large portion of the vegetable kingdom. *Vahlia*, a genus of Saxifragaceous plants, was named in honour of him by Thunberg.

(*Biographie Universelle*; Sir J. E. Smith, in Rees's *Cyclopædia*.)

VAILLANT, FRANÇOIS LE, was born in 1753, in Paramaribo, in Dutch Guiana, where his father, a native of Metz and native of Metz, was French consul. His parents had a taste for collecting objects of natural history. They were also in the habit of making frequent excursions to the less settled parts of the colony, always carrying the boy along with them. Le Vaillant at an early age had thus not only contracted the tastes of his parents and the habits of the backwoodsman, but at the age of ten years had acquired considerable experience in collecting, and arranging after a system of his own, insects and birds.

In 1765 the family of Le Vaillant left Surinam to return to Europe. They landed at the Texel, and after spending some time in Holland proceeded to Metz. Here Le Vaillant found a fresh stimulus to his favourite pursuits in the ornithological cabinet of M. Becœur. In this museum he had been accustomed to dry and preserve skins of birds: he now set himself assiduously to acquire the art of preserving the form and attitude of life by stuffing them. A passionate hunter, he tells us that during a residence of two years in Germany and of seven in Alsatia and Lorraine, he killed an immense number of birds. But he had also a taste for studying their habits, and spent whole days and even nights in watching them. These pursuits were in him the indulgence of a passion. What plan of education his parents adopted, or whether they destined him for any profession, is unknown. The only hint preserved on this subject is an incidental observation in his Travels, that his father insisted upon his acquiring a number of languages. Dutch he spoke fluently—probably learnt in childhood; German and French, it is said, he also spoke well, though his writings are alleged by critics to want the idiomatic precision of a native.

In 1781 he came to Paris, where the rich collections of birds and the writings and conversation of naturalists at first attracted and then repelled him. He felt and acknowledged the genius of those in whose hands observations such as he had made self-taught after the desultory manner of an amateur had become a science. He was filled with the varied wealth of collections from all quarters of the world which were opened to his inspection. But accustomed to pry into the habits and economy of the living bird, the mere cataloguing and classifying of skins and skeletons soon became repulsive to him; and the inaccuracies of mere closet speculation he nourished in perhaps overweening estimate of his own more living knowledge. This feeling, his sportsman habits, the pleasant recollections of his boyhood in the forests of Guiana, all contributed to make him dwell with pleasure on the project of ransacking the yet unexplored regions of the earth in order to drag to public view their feathered inhabitants. With this object he quitted Paris, unknown to his friends, in July, 1780. He repaired to Amsterdam, where he formed an intimate acquaintance with Temminck; and after five months spent in preparations, embarked, in December, for the Cape of Good Hope, where he arrived in March, 1781.

Le Vaillant remained in the colony till July, 1784. War had just broken out between England and Holland; the vessels at the Cape were ordered to Saldanha Bay, to conceal them from English cruisers: Le Vaillant accompanied them. An English squadron discovered their place of refuge, and the captain of the ship on board of which Le Vaillant's travelling equipage was embarked, blew it up to prevent its falling into the enemy's hands. Le Vaillant, thus stripped by an accident of all the property he carried with him, was kindly treated by the colonists; the fiscal Boers advanced everything that was necessary to fit him out for the expeditions he contemplated, and the other government officers did all in their power to promote his enterprise. Between this period and his return he spent in the colony the two principal excursions. In the first, which occupied him from the 18th of December, 1781, to the 2nd of April, 1782, he advanced westward, at no great distance from the coast, to the Great Fish river; ascended the banks of that river to the eastern branch to the country of the Gonaquese and Caffres (apparently near to where Beaufort now stands), and from thence made an excursion into the country of the Caffres. He returned by a more northerly route to Cape Town. His second excursion appears to have commenced in April 1783, and lasted sixteen months: in this time he advanced northward beyond the Orange river—how far is uncertain, probably not so far as the map which Labordе constructed from his journals represents, but farther than his rival travellers admit. On his return to the Cape, Le Vaillant contemplated a voyage to Madagascar, but soon relinquished the idea, and embarked for Europe on the 14th of July, 1784. In 1785 he returned to Paris.

Le Vaillant's first care on returning to Europe was to arrange his cabinet and prepare his journals for publication. The narrative of his

Digitized by Google

first expedition from the Cape was published in 1790. In 1789, and again in 1795, efforts were made to have his cabinet purchased by government, but a price could not be agreed upon. In 1796 the second part of his Travels appeared. The first volume of the 'Natural History of the Birds of Africa' was published the same year; it was followed at intervals by four others; the sixth appeared in 1812; and Le Vaillant at his death left two additional volumes in manuscript. The 'Natural History of Parrots,' in 2 vols., was published 1801-5; 'The Natural History of Birds of Paradise,' 1801-6; 'The Natural History of Contingas,' 1805; 'The Natural History of Calaos,' 1804.

The veracity of Le Vaillant has been questioned by Barrow and Lichtenstein, but on very insufficient grounds,—the loose statements of colonists speaking from recollection after a lapse of twenty or thirty years, or the non-appearance of a particular birde at the place where it was met by Le Vaillant after a similar interval. It may be conceded to Barrow that Le Vaillant was not an accurate geographer—he made no pretensions to the character. In his ornithological works he describes the appearance and habits of birds; in his travels he narrates his adventures while in pursuit of them. His accounts of birds are such as could only be supplied by one with whom it was a passion to follow them into their most secluded haunts and watch all their actions. The narrative of his travels throws light upon his character, and explains how he came to be capable of such persevering and minute observation. It is allowed by all who have had opportunities of observing, that he has described the disposition of the Hottentot with perfect fidelity. The narratives of Barrow, Campbell, Pringle, and the events of later years, show how truthfully he has delineated the robust recklessness of the Dutch colonists. Mistakes there are doubtless many, but the history of his travels is essentially a truthful book. It is a sincere and full record of his impressions, of the things in the light in which he viewed them; and the author delineates himself so unreservedly and so unconsciously in his eagerness, buoyance, enterprise, vanity, warmth of affection, and unregulated enthusiasm, that it is easy to estimate the colouring effects of the medium through which all objects are viewed. There is a graphic power and life in Le Vaillant's descriptions, that give all his writings the charm of romance. He is great in the description of an elephant or rhinoceros chase: his faithful monkey Kiees is a most felicitous picture; and there is scarcely a more delicate creation in poetry than his Gonaquoi girl Narina. Le Vaillant stands high in a class of writers, of which St. Pierre, Wilson (the ornithologist), and Audubon may be considered the types.

Neither Le Vaillant's entire devotion to his favorite pursuits, nor his innocent boyish enthusiasm for that kind of liberty which the possessor of the wealth and acquirements of civilised life can command in a genial climate among a rude and simple people, could enable him to escape entirely the dangers of the Revolution. He was only saved from the guillotine by the opportune death of Robespierre. After his liberation he retired to a small property which he possessed at La Neve, near Lauzan; and there, except at brief intervals, during which he was obliged to visit Paris to superintend the publication of his works, he spent the remaining thirty years of his life. There he lived through all the wars of the Revolution, hunting as eagerly, and with as little distraction from the turmoil around him, as if he had been among the woods of Surinam or in the valleys of the Cape. He died on the 22nd of November 1824.

(Le Vaillant, *Voyage dans l'Interieur de l'Afrique*, and *Second Voyage dans l'Intérieur de l'Afrique*, and also incidental notices in his ornithological works; *Travels in Africa*, by Barrow, Lichtenstein, and Campbell; *Biographie Universelle.*)

VAILLANT, JEAN FOY, was born at Beauvais on the 24th of May 1632. When only three years old he lost his father, but he was educated by an uncle, who wished his nephew to study the law, in order that he might become his successor in some offices which he held. The uncle however, who left all his property to his nephew, died at a time when Vaillant was not yet old enough to become his successor, and being now in the possession of a considerable fortune, he followed his own inclinations, and devoted himself to the study of medicine, of which he was made doctor at the age of twenty-four. Vaillant's name has become celebrated, not for what he did in his profession, but for what he did for numismatics: he is one of the first men who showed the importance of ancient coins for history. The circumstance which led him to the pursuit of these studies is related as follows:—A farmer in the neighbourhood of Beauvais, while working in his fields, discovered a great quantity of ancient coins, and not knowing what to do with them, he took them to Vaillant, and consulted him about the use that could be made of the coins. Vaillant looked at them at first very cursorily, but on further thoughts his curiosity became excited, and he began examining them carefully. The discoveries which he made afforded him so much pleasure that henceforth he devoted nearly all his time to the study of this branch of antiquity. Some years after this occurrence he had occasion to go to Paris, where he became acquainted with Pierre Seguin, who had a fine collection of ancient coins, and was very fond of the study. Vaillant visited him frequently, and made also the acquaintance of several other eminent men, who soon perceived that he possessed extraordinary talent, and more than an ordinary knowledge of ancient medals, until at length he also attracted the attention of Colbert. This

minister was then about removing the numismatic cabinet of Gaston de Bourbon to Versailles, and his wished to increase it. He therefore commissioned Vaillant to travel through Italy, Sicily, and Greece, for the purpose of collecting ancient medals for the king's cabinet. Vaillant spent two years on this journey, and collected a great quantity of beautiful and rare coins, which made the cabinet of Versailles one of the most splendid collections of medals in Europe. In the year 1674 Vaillant published his first work, on the coins of the Roman emperors, under the title 'Numismata Imperatorum Romanorum praestantiora, à Julio Cesare ad Postumum et Tyrannos,' of which a second and much improved edition appeared in 1692, 2 vols. 4to. The last and best edition is that of Baldinus, 3 vols. 4to, Rome, 1743. In the same year in which Vaillant published his first work, he was sent out a second time by Colbert in search after ancient coins. He embarked at Marseille for Rome, but on the second day after leaving the port the French vessel was captured by an Algerine corsair, and all persons on board were taken to Algiers as slaves. Vaillant was kept in slavery for upwards of four months, until, after some energetic remonstrances on the part of the French government, he was restored to freedom. After having recovered a number of gold coins which the Algerines had taken from him, he embarked for Marseille. On the second day of the voyage the vessel was again pursued by a corsair, and when Vaillant saw that the danger became threatening, he resolved to secure at least his gold medals, and he swallowed them. However, a sudden change of the wind delivered him himself from the enemy, and after several adventures it was thrown among the sands at the mouth of the Rhône. Vaillant got on shore in a skiff, but suffered very much from the medals till he was relieved of them. Soon after his arrival he was sent out on a third expedition, during which he travelled through Egypt and several parts of Asia. His exertions were richly rewarded; he returned to Paris in 1680, and brought with him a very large collection of coins, which were again incorporated in the king's cabinet, the whole arrangement of which was now intrusted to him. Immediately after his return he was chiefly occupied with studying the coins and the history of the Seleucidæ in Syria, and in 1681 he published the results of his labours in his 'Seleucidarum Imperium, seu Historia Regum Syriæ ad fidem Numismatum accommodata,' 1 vol. 4to. The remaining years of his life Vaillant spent at Paris, where he uninterrupted study of coins, some are still of great value. Besides those mentioned above, the following works deserve notice:—1, 'Numismata æræ Imperatorum et Cæsarum in Colonis, Municipiis, et Urbibus jure Latio donatis, ex omni Modulo percussa,' 2 vols. fol., Paris, 1695; 2, 'Numismata Imperatorum et Cæsarum à Populis Romanæ ditionis Græce loquentibus ex omni Modulo percussa,' 4to, Paris, 1698, a second and enlarged edition of this work appeared at Amsterdam, fol., 1700; 3, 'Historia Ptolemæorum, Ægypti Regum, ad fidem Numismatum accommodata,' fol., Amsterdam, 1701; 4, 'Nummi Antiqui Familiarum Romanarum perpetuis Interpretationibus illustrati,' 2 vols. fol., Amsterdam, 1703. After his death there appeared—5, 'Arsacidarum Imperium, sive Regum Parthorum Historia ad fidem Numismatum accommodata,' fol., Paris, 1725; and 6, 'Achæmenidarum Imperium, sive Regum Ponti, Bosphori, Thraciæ, et Bithyniæ Historia ad fidem Numismatum accommodata,' 4to, Paris, 1725. The 'Mémoires de l'Académie des Inscriptions et Belles Lettres' also contain several interesting papers by Vaillant.

VAILLANT, JEAN FRANÇOIS FOY, a son of the celebrated numismatist, Jean Foy Vaillant, was born at Rome on the 17th of February 1665, when his father was travelling for the purpose of collecting ancient coins. At the age of three years he was brought to Beauvais, and at twelve he was sent to a college of the Jesuits at Paris. His father wished him to follow the medical profession, but at the same time made him familiar with numismatics, and usually took him with him to the royal cabinet of medals during the time that he was engaged in arranging them. Young Vaillant accompanied his father on his visit to England, and after his return to Paris he began seriously to apply himself to the study of medicine, of which he was made a doctor in 1691. His reputation as a numismatist however appears to have been much greater than that as a physician, and in 1702 he was made a member of the Academy of Inscriptions, to the 'Mémoires' of which he contributed several papers on antiquarian and numismatic subjects, which raised great expectations, and show that he would perhaps have surpassed his father had his life been spared longer. He died on the 17th of November 1708, in consequence of a fall which produced an abscess in his head. The only medical work of Vaillant is a treatise on the virtues of coffee.

VAILLANT, SEBASTIAN, botanist, was born on the 26th of May 1669, at Vigny, near Pontoise, being the eldest son of a shopkeeper in that town. At a very early age he acquired a taste for botany, and when only six years old had made a collection of the wild plants of the country, which he cultivated in his father's garden. But his father, fearing that his love of plants would be the ruin of him, directed his attention during his leisure hours to music; and so great was his progress on the organ, that, at the age of eleven, on his tutor dying, he was appointed organist in his place in the Benedictine convent of St. Macloud. He also was distinguished by his attention to his general studies at the grammar-school of Pontoise. He was afterwards appointed resident organist in a nunnery near his native town, and having a strong inclination for the study of medicine, he took every opportunity to visit the sick in a neighbouring public hospital. His progress in anatomical and medical reading having been great, he was appointed assistant surgeon to the hospital. At the age of nineteen he left this position to pursue his medical studies at Evreux, in Normandy; and having been introduced to the Marquis de Goville, a captain of the royal fusiliers, he was appointed by him surgeon to his company, with the rank of lieutenant. In this position he was present at the battle of Fleurus, where his patron having been killed, he left the army and came to Paris in 1691. His intention was still further to pursue medicine, but in the course of his studies he attended the lectures of Tournefort, who was then at the height of his popularity as a botanical teacher. His long-forgotten passion for plants again broke forth, and he resolved to abandon himself entirely to the study of botany. The period was favourable for this determination; the genius of Tournefort had just shed a brilliant light on many of the obscure departments of botany, which somewhat how much remained yet to be done. Vaillant soon gained the friendship of Tournefort, and was afterwards introduced to M. Fagon, first physician to the king, and professor of botany and subdemonstrator of plants in the Jardin du Roi. Fagon made him his secretary, and appointed him, under himself, a director of the Jardin du Roi, and, in 1708, resigned in his favour his professorship and subdemonstratorship, situations which Tournefort was known to have been anxious to obtain. Soon after his appointment to these positions, many improvements were made in the gardens, and Vaillant was commissioned by the king to form a museum of materia medica. In 1716 he was elected a member of the Academy of Sciences, an honour which he had never sought, and which he at first refused to accept.

As a lecturer Vaillant was successful, and for many years he did little else than publish his views through the medium of his lectures. Although a pupil, an admirer, and a friend of Tournefort, he was opposed to many of his views, and especially the system on which he had arranged the vegetable kingdom; and in 1721 he read before the Academy of Sciences a criticism on the method of Tournefort, which was published in the Memoirs of the Academy for 1723. He did not however succeed in establishing any classification of his own; and it is not probable, even if he had lived to have carried out his own views on systematic botany, that he would have produced a system that could have supplanted the one which was the basis of the 'Institutiones Rei Herbariæ,' and which laid the foundation for the labours of Adanson, the Jussieus, and De Candolle. The most successful portions of his criticisms directed against Tournefort were those with regard to the functions of the stamens and pistils, which Tournefort looked upon as only excretory organs, and held to be of very secondary importance in the structure of the flower. Vaillant published his views on this subject in a paper, entitled 'Sermo de Structura Florum, Horum Officiatis magna partium ac constitutionis,' &c., Leyden, 1718. It was also published at the same time in French. Between the years 1718 and 1722 he read several papers before the Academy of Sciences on the genera and species of the natural order Compositæ, which were very valuable contributions towards the elucidation of the structure of that difficult order of plants. He did not publish remarks on the foreign species of other orders, but Sir J. E. Smith states that the remarks in his Herbarium, preserved at Paris, "display astonishing instances of his profound knowledge and acute judgment with respect to the genera, species, and synonyms of plants."

Vaillant had evidently during his life been preparing for some great work, but before he had arranged his materials he was attacked with the symptoms of pulmonary consumption, which obliged him to abandon his design. These symptoms never on which he had spent a great deal of time and labour, and which he was anxious to have published, and that was on the plants growing around Paris. Tournefort had, in his 'History of Plants which grow in the neighbourhood of Paris,' attempted the same thing; but this was admitted to be the least successful of his efforts, and Vaillant planned for his work the assistance of Aubriet, the first botanical draughtsman of the day, who had made upwards of 300 drawings: the descriptions of all the species were very carefully made, with an accurate account of the synonyms, in which Tournefort's work was very deficient; and, in addition, he had also examined to some extent the cryptogamic plants. Finding that he could not publish this work before his death, he wrote to the celebrated Boerhaave, requesting that he would consent to publish it: a negociation was carried on between the two by means of our countryman Dr. William Sherard (Sherard, William); and ended in the consent of Boerhaave to publish the work. Vaillant, having been thus relieved of this last earthly anxiety, prepared composedly for his death, which took place on his birth-day, May 26, 1722.

The posthumous work, entitled 'Botanicon Parisiense,' was published at Leyden in 1727, forming a large folio with 33 plates, containing between 300 and 400 figures of plants. The figures are uncoloured, and the plants are arranged in an alphabetical manner. The definition of the species is in Latin; the rest of the text is in French.

Vaillant was a man of no ordinary talent and integrity. His botanical works display the accuracy and originality of his mind, and it is probable that had not his plans been too gigantic for his enfeebled constitution and the shortness of his life, he would have left behind him more abundant proofs of his genius. He began to tread in the path which was so successfully followed up by Linnæus; and his attempt at improving the nomenclature of botany is an indication of his perception of the necessity of that change which was effected by the subsequent efforts of Linnæus. He was also one of those who, before the time of Linnæus, distinctly taught and upheld the doctrine of the sexuality of plants. He has been sometimes censured for his attacks on Tournefort, but these were directed, not towards the man, for whom he entertained a profound regard, but towards what he deemed his errors. When his friend and patron Fagon was on his death bed, Vaillant was unremitting in his attentions throughout a painful disease; and when pressed to receive a sinecure under the government enjoyed by Fagon, as a reward for his attentions, he refused. He left a widow, but no offspring. The genus *Vaillantia* of De Candolle was named in honour of him.

(Bischoff, *Lehrbuch der Botanik*; Haller, *Bib. Bot.*; *Biog. Univ.*; Sir J. E. Smith, in Rees's *Cyclopædia*.)

VAILLANT, WALLERAND, a distinguished portrait painter, was born at Lille in 1623, and was the pupil of Erasmus Quellinus, at Antwerp. He painted the portrait of the Emperor Leopold I. at Frankfurt, and many of the people of his court. He subsequently went with Marshal Grammont to Paris, and there equally distinguished by the French court. After having amassed considerable riches he died at Amsterdam, in 1677.

Vaillant was employed in 1656 at Brussels by Prince Rupert to assist him in executing some plates in the new method of mezzotinto engraving then communicated to the Prince by Siegen (Siegen, Ludwig von). As Vaillant is the first artist who engraved in this style, his prints have more than ordinary interest. Among these are two portraits of Prince Rupert, one of which is inscribed—Prinz Robbert, Under wende de Swarte Prent Konst, which is one of the principal causes of Siegen's being so long deprived of the merit of his invention.

Vaillant had four younger brothers, who were all painters or engravers and his pupils.

VAKHTANG, the name of several kings of Georgia.

Vakhtang the First, surnamed Goor Aslan, was, according to the chronicles of Georgia, the thirty-third king of that country, and a descendant of Sapor the First, king of Persia, who ascended the throne in A.D. 238, and having conquered Iberia, gave it to his son Mirian, who founded the third dynasty of Georgia. Vakhtang the First died about the end of the 5th century. He was a great warrior, and extended the frontiers of his empire, and strengthened them by the construction of many fortresses. The Georgian chronicles of this period are however very uncertain, and contain much fable mingled with truth.

Vakhtang the Second, of the dynasty of Bagratides, ascended the throne of his country in 1289, with the consent of the Mongols, whose dominion at that time extended over a great part of Asia. He died after a reign of three years, regretted by his subjects on account of his virtues.

Vakhtang the Third, of the same dynasty as the second of the same name, ascended the throne in 1301. The Mongols wishing to compel him and his nation to embrace the Mahometan faith, went to the court of the khan, in order to induce him to desist from his design against the Christians of Georgia. He did not succeed in his object, was imprisoned, and afterwards murdered in 1304. He is reverred as a martyr.

Vakhtang the Fourth belonged to the same dynasty as the preceding. He succeeded his father, Alexander, who became a monk in 1442. Having granted several provinces to his younger brothers, who governed them as his vassals, he assumed the title of king of kings. He died after a reign of 30 years, without issue.

Vakhtang the Fifth, king of Kartli, (one of the provinces into which Georgia was divided) is also known under the name of Shah Nawaz, which he assumed on being obliged outwardly to conform to Mohammedanism. He ascended the throne in 1605. He lived a long time in Persia, at the court of Shah Abbas the Second, with whom he enjoyed great favour. This and other favourable circumstances enabled him to reunite under his dominion, with the approbation of the Shah of Persia, the disjointed part of Georgia, and this country enjoyed under his rule a repose of which it had been long deprived. He died in 1676, having during his lifetime divided his dominions between his two sons.

Vakhtang the Sixth, the legislator of Georgia, and the grandson of the preceding, ascended the throne of Kartli in 1703, after his brother Khosrew, who had become a Mohammedan, and during the lifetime of his father Leo, who was detained in Persia. Vakhtang

Digitized by Google

assumed the government in the name of his father, and went to the court of Persia in order to obtain the confirmation of his dignity. The Shah would not grant the confirmation, except on condition of Vakhtang embracing Mohammedanism, which having refused to do, he was imprisoned, and his brother Jesse, who complied with the condition, was put in his place. Jesse governed Kartli two years, during which it suffered from internal troubles and the inroads of the Leghis. Vakhtang, who had been imprisoned all this time at Ispahan, resolved, in order to restore tranquillity to his country, outwardly to conform to Mohammedanism. He thus conciliated the Shah, who nominated Vakhtang his sirdar, and appointed him governor of the province of Azerbijan, and sent his son Bakar to govern Kartli, whence Jesse, having abjured the Islam, had retired. Vakhtang remained seven years in Persia before he was permitted to return to his own country. His first care was to improve the laws and the state of religion. He therefore assembled such learned men as he could find, translated from the Greek the statutes of the Emperor Leo the Philosopher, accommodated them to the regulations of different Armenian and Georgian kings, added to them several of his own, and thus formed the code which is known by his name. He also undertook the printing of the Bible, which had been, as it is believed, translated as early as the 4th century from the Greek into the Georgian, and corrected in the 11th by three Georgian princes, monks of the Iberian convent on Mount Athos. This version, being corrupted by successive copyists, required great emendations: the version of the books of the Ecclesiasticus and of the Maccabees had been entirely lost. These were however supplied before the printing was undertaken, by Vakhtang's uncle, Archil, king of Imeritia, who, being expelled from his country, died in Russia. Vakhtang established at Tiflis a printing-press, and printed the Gospels, the Acts, the Psalms, and several liturgies and prayer-books; but the court of Persia, perceiving that Vakhtang, instead of following the Koran, promoted Christianity, sent an army against him. Vakhtang, after having defended himself for some time at Tiflis, was finally expelled; his printing establishment and all the published books which could be found were destroyed; and his brother Constantine, who had become a Mohammedan, was established in his place. Vakhtang called the Turks to his assistance, and submitted to the authority of the Sultan; but these protectors, having occupied the country, gave the throne to his brother Jesse, who again became a Mohammedan.

In the invasions and wars between the Turks, Persians, and Afghans, three-fourths of the population of Georgia were destroyed; and Vakhtang, after having wandered a long time with his most faithful adherents in the mountains, sought protection from Peter the Great, who invited him to Russia. Vakhtang went to Russia in 1725, with his family, and many of the inferior clergy of Georgia. But Peter had just died, but his successor, Catherine the First, granted Vakhtang a large pension and considerable estates. Vakhtang resided in Russia till 1734, but in that year he resolved to make an attempt to recover his dominions by the co-operation of the Shah of Persia. The empress Anna consented to Vakhtang's project, but gave him instructions how to act in Persia, and in what manner he should induce the Georgians as well as the Caucasian highlanders to enter the Russian service, in order to secure their entire submission to the authority of Russia. Vakhtang started for his diplomatic journey, in company with a Russian general, but fell ill on his way, and died at Astrakhan. His descendants exist to the present day in Russia under the name of the Georgian (Grusinski) princes.

Vakhtang the Sixth was a man of considerable talents and attainments, which is shewn by his engaging in literary pursuits amidst all the troubles with which his life was agitated. He wrote the history of Kartli, which is considered to contain very important materials for the history of Georgia, and is known under the name of the 'Chronicle of Vakhtang the Sixth.' One manuscript copy of this chronicle exists at Rome, and another at St. Petersburg, in the Rumianzoff Museum. Des Guignes employed it for the names of the kings of Georgia in his 'Histoire des Huns,' &c. It has been also mentioned by Guldenstadt and Klaproth.

(Klaproth, *Tableau du Caucase; Encyclopedical Dictionary of St. Petersburg.*)

VAKHUSTA, a natural son of Vakhtang the Sixth, king of Kartli (Georgia). He completed, with his brother, Prince Bakar, the printing of the Bible in Georgian, which had been only partly done by their father, Vakhtang the Sixth. He established for that purpose, in his house near Moscow, a printing-press, taught the art of printing to several Georgian clergymen, and completed the first edition of the Bible in the language of his country in 1743. The printing-press was afterwards transferred to Moscow, where several religious works in Georgian were printed. Vakhusta wrote a history of Georgia, which still remains in manuscript.

VALCKENAER, LUDWIG KASPAR, a celebrated Dutch scholar, was born in 1715 at Leeuwarden in Friesland. He studied at Franeker, and although he had chosen philology as his department, he devoted considerable time to philosophy and theology. After the completion of his studies he was for a time master in a school, until, in 1741, he was appointed professor of Greek at Franeker, in the place of Hemsterhuis. In 1755 he obtained the professorship of Greek and of archæology in the university of Leyden, which office he held until his death March 15, 1785. The life of Valckenaer, like that of most scholars, presents few incidents worthy of note, and all that we can say of him is that he was a very modest man, and contributed greatly to maintain the high reputation of the university of Leyden. He possessed a very extensive knowledge of all the matters connected with antiquity, but the department in which he excelled was his critical and grammatical knowledge of the Greek language; and what he has done in this respect, partly in his editions of Greek writers and partly in separate dissertations, has secured him a distinguished place among the illustrious scholars of his country. Among his editions of Greek authors, the following deserve especial notice:—1. The work of the grammarian Ammonius, 'De Differentia adfinium Vocabulorum,' to which are added some other ancient grammatical works, Leyden, 4to, 1739 (reprinted with some additions at Leipzig, 8vo, 1822); 2. the 'Phœnissæ' of Euripides, with a very excellent commentary, the Greek scholia, and a Latin translation by H. Grotius, Franeker, 4to, 1755 (reprinted at Leyden in 4to, 1802, and at Leipzig, 2 vols., 8vo, 1824); 3. the 'Hippolytus' of Euripides, with a Latin translation by Rasikleus, and notes by the editor, Leyden, 4to, 1768 (reprinted at Leipzig, 8vo, 1823); 4. the 'Idyls' of Theocritus, with a Latin version by Welstein, Leyden, 8vo, 1773. The commentary, especially that on the idyl called the 'Adoniazusæ,' is full of the most exquisite grammatical remarks. Valckenaer also wrote notes on other writers, such as Herodotus and Callimachus, which were inserted in the editions of others. Those on Herodotus are contained in the editions of Wesseling and Schweighäuser. Among his separate treatises, his 'Diatribe in Euripidis Perditorum Dramatum Reliquias,' which is contained in the edition of the 'Hippolytus,' was printed separately at Leipzig, 8vo, 1824. This is one of the most masterly treatises ever written on matters of antiquity, and should be studied by every scholar. His smaller essays were collected and published at Leipzig, in 2 vols. 8vo, 1808.

VALCKENAER, JAN, the only son of Ludwig Kaspar Valckenaer, was born at Leyden, 1759. He studied jurisprudence in the university of Leyden, and was afterwards appointed professor of the same department in the university of Franeker. His reputation as a distinguished jurist, and still more his political sentiments, for he was one of the leaders of the anti-Orange party, procured him in 1787 the professorship of jurisprudence in the university of Utrecht. But in the same year the rights and claims of the hereditary Stadtholder of the Netherlands, William V., were victoriously established by the armed assistance of Prussia, and Valckenaer was obliged to quit Holland. The Dutch patriots, to whom Valckenaer belonged, were only intimidated, but not annihilated. They looked to France for support, and on the 6th of February 1795, Valckenaer, together with other representatives of the patriots, presented himself at the bar of the National Assembly of France, and requested them to send an army into Holland to support the party of the patriots. In 1795 a French army under Pichegru made its appearance in the Netherlands, and Valckenaer returned to Holland as I was appointed professor of public law in the university of Leyden. His now started a patriotic journal called 'Tha Advocate of Batavian Liberty,' which however did not last long, for in the beginning of the year 1796 he was sent as ambassador of the Batavian republic to Spain. He returned to Holland in 1799, but was sent again in the same year as minister plenipotentiary to the court of Madrid. He remained there till 1801, and after his return he withdrew for a time altogether from public life. But soon after he was sent on a special mission to Berlin, to settle some financial matters, which however had not the result which was anticipated. On the 16th of March 1810, Louis Napoleon, king of Holland, sent Valckenaer on a mission to Napoleon, to avert a rupture with the French emperor, and to prevent, if possible, the contemplated incorporation of the Netherlands with France. A few months after Louis Napoleon abdicated, and the events which followed induced Valckenaer to withdraw from public life. He spent the remainder of his days in study and in the enjoyment of the company of a select circle of friends, partly at Amsterdam and partly at his country-seat near Haarlem, where he died on the 25th of January 1821, in the age of sixty-two. Valckenaer was an able politician and statesman, but he had the misfortune to see nearly all the plans for which he had struggled thwarted by the circumstances of the time. He wrote several political pamphlets, which have been praised for the soundness of their arguments and the eloquence with which they are treated.

VALDES, JUAN, or VALDESSO, GIOVANNI, a native of Spain, studied law, was employed in several missions by the emperor Charles V., and appears to have lived to an advanced age in retirement at Naples. He died in 1540. He carried from Germany to Italy several works of Melanchthon and other reformers, and adopted several opinions condemned by the Roman Catholic Church, to which he converted some of his familiar friends. Neither Valdes nor any of his disciples duging his life separated themselves from the Roman communion; and he remained unmolested on account of his opinions, although they appear to have been generally known. A similar spirit of negative or latent heresy prevailed at the same time in different parts of Italy, in Piedmont, at Bologna, Padua, and Vicenza. In 1542 the Italian governments, especially that of Naples, took the alarm, and the friends of Valdes were obliged to fly or recant. Valdes

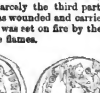
Digitized by Google

has been claimed by the Socinians, but it is difficult from the few works attributed to him, and published after his death, to glean what his doctrinal opinions really were. Thot which was published at Basel in 1550, with the title 'Le cento dieci Considerazioni del S. Giovanni Valdesso, nelle quali si ragiona delle Cose più utili, più necessarii, e più perfette della Cristiana Professione,' consists of commentaries on the gospels of St. Matthew and St. John, the Epistle to the Romans, and the Epistle to the Corinthians. It is exclusively practical. Bayle attributes to Valdes two dialogues printed at Venice without date or author's name, which, judging from their titles, must be rather historical than polemical.

VALENS, ABURNUS, a Roman jurist, whose age is partly determined by the fact that he cites Javolenus and Julianus (Dig. 4, tit. 4, s. 33), from which we may conclude that he was younger than both. He is called Aburnius in the Florentine Pandect. He was a Sabinian, as appears by his being placed by Pomponius among the followers of Javolenus. It appears that he was living under Antoninus Pius (Capitol., 'Pius,' 12), though, as the text of Capitolinus stands, he is called Salvius Valens. His complete name may have been Salvius Aburnus Valens; or Salvius in this passage may be seperated from Valens and may mean Salvius Julianus. But there is a rescript of Pius (Dig. 48, tit. 2, s. 7, § 2) addressed to Salvius Valens.

Valens wrote seven books on Fideicommissa, from which there are excerpts in the Digest; and there is also in the Digest a passage from the seventh book of a work on Actiones. Valens is mentioned by Pomponius, and cited several times by Paulus (Dig. 4, tit. 4, s. 33).

VALENS, FLA'VIUS, emperor of Constantinople, reigned from A.D. 364 to 378. He was a brother of Flavius Valentinian, who, after being proclaimed emperor in 364, made Valens his colleague, and gave to him the government of the Eastern empire, and Constantinople as his capital. The year after his accession, while he was residing at Cesarea in Syria, he received intelligence of a rebellion, which was headed by Procopius, a Cilician, who assumed the purple at Constantinople. Valens himself was in despair at the news, and would have resigned himself to his fate, but the courage and resolution of his generals saved him; and in the two engagements of Thyatira and Nacosia, Procopius was deserted by his troops and conducted by some of his own followers to the camp of the enemy, where he was immediately beheaded, 366. The year after this victory Valens marched with an army across the Danube against the Goths, who had supported the usurper Procopius. During the war which now ensued, and lasted for upwards of two years, the Goths acted on the defensive. In the third year the Goths suffered a great defeat, and Athanaric, the judge of the Visigothi, sued for peace and obtained it, A.D. 369. Valens returned to Constantinople in triumph. About the same time he was threatened with a war by Persia, but he confined himself to the protection of Armenia, without letting matters come to an open war. His empire now enjoyed peace for several years, during which some wise regulations in the administration of legislation were made. In 375 his brother Valentinian died, and Valens was thus deprived of a wise adviser at a time when he was most in need of him. In the year following the Huns entered Europe from Asia, and after having subdued the Alani, pressed upon the Goths north of the Danube, some of whom were likewise subdued. About 200,000 Visigoths took refuge in the Roman territory as suppliants, and obtained permission to settle in it. They were soon followed by hosts of Gouthrungi, or Ostrogothe, who crossed the Danube without having asked the permission of the Romans. The Goths soon found themselves exposed to all kinds of vexations from the Roman officers: in consequence of which a part of them, headed by Fritigern, took up arms, defeated the Romans near Marcianopolis, and began ravaging the country. Valens had been staying during the last years at Antioch, watching the proceedings of the Persians, and was still there when these events occurred. Two generals whom he sent to Pannonia, was unable to effect anything against the Goths. Fritigern secured the assistance of the cavalry of the Huns and the Alani, and at last Valens himself hastened with an army of veterans from Syria against the Goths. A slight advantage gained by his general Sebastianus emboldened him so much that he hastened to fight a decisive battle in the neighbourhood of Adrianople before the emperor of the West could come to his assistance. The victory of the Goths on that memorable day in A.D. 378 was so complete, that scarcely the third part of the Roman army escaped. Valens himself was wounded and carried to his tent, which, according to some accounts, was set on fire by the barbarians, and the emperor ended his life in the flames.



Coin of Valens.
British Museum. Actual size.

Valens, who at the time of his elevation was in his thirty-sixth year, was a man of a passionate and also of a cruel character, and always lent a ready ear to informers. Most of the noble acts of his reign, such as his legislative measures, the establishment of schools, and the reduction of taxes, were owing partly to the influence of his brother, to whom he was sincerely attached, and partly to the wisdom and virtue of his prmfect Sallust. During the first year of his reign he imitated the toleration of his brother; but after he had received baptism at the hands of the Arian bishop Eudoxus, he adopted his theological views, and persecuted those who differed from him.

(Ammianus Marcellinus, xxvi-xxxi.; Aurelius Victor, *Epitome*, 46; Orosius, vii. 32; Sozomen, vi. 8: compare Gibbon, *Decline and Fall*, chaps. 25, 26.)

VALENTIN, MOÏSE, a French painter of great ability, was born at Coulomiers, in Brie, in 1600. Writers differ as to the Christian name of Valentin; some call him Moses, and others Peter. He was first educated in the school of Vouet; he afterwards visited Italy, and adopted the style of Michel Angelo Caravaggio, in which he painted several admirable pictures, and he became one of the best of the 'naturalisti,' or followers of Caravaggio, at Rome, although he died on the 7th of August 1634. Valentin died of a fever in consequence of taking a cold bath on a hot summer's evening, after smoking and drinking wine to excess. Cardinal Francesco Barberini, nephew of Pope Urban VIII., was a great patron to Valentin, and employed him to paint several pictures for him, a Death of John the Baptist, and others: it was also through his interest that Valentin was commissioned to paint an altar-piece for St. Peter's, of the Martyrdom of SS. Processo and Martiniano. There is also in the Corsini palace an excellent picture by him of the Denial by Peter. He did not often paint religious subjects: his favourite pictures were scenes from common life, as soldiers playing at cards, fortune-tellers, concerts, and tavern and inn scenes, &c. He painted with rapidity, generally from nature, had a light touch, and coloured well and forcibly, but his drawing is often incorrect, and his forms are vulgar. There are eleven pieces by Valentin in the Louvre at Paris, but his works are not numerous: several of them have been engraved. N. Poussin and Valentin were contemporaries at Rome, and were great friends.

VALENTINIAN I., FLA'VIUS, a Roman emperor, who reigned from A.D. 364 to 375. He was a son of Count Gratian, and a native of Cibalæ, in Pannonia. He distinguished himself as a gallant warrior in various campaigns; his mind was uncorrupted by the sophistries of the age, and his body was strong and healthy. After the death of Jovian in 364, Valentinian, then at the age of forty-three, was proclaimed emperor at Nicea, although he himself was absent at Ancyra, and had never employed any means for the purpose of raising himself to that high station. Shortly after his accession he divided the empire between himself and his brother Valens, reserving for himself the western portion. [VALENS, FLAVIUS.] The frontiers of the empire were tremendously exposed to great danger during his reign. The Alemanni and Burgundians penetrated into Gaul from the east, the Franks from the north, and the Saxons made inroads from the sea. The Picts and Scots pressed forward from the north, and ravaged the province of Britain. Valentinian chose Paris as the central point for his operations against the barbarians, and through his general, Jovinus, he gained a great victory over the Alemanni in 366. The year following he was attacked by a dangerous illness, and on his recovery he raised his son Gratian to the rank of Augustus. Britain was in the meantime delivered from the inroads of the Picts and Scots by Count Theodosius, who recovered the country as far as the wall of Antoninus. In 368 the Alemanni renewed their attacks upon eastern Gaul, and plundered Moguntiacum (Mainz); but Valentinian drove them back, crossed the Rhine, and defeated them in their own country, near Solicinum (Schmotzingen or Sulzbach), and as they retreated into their forests the emperor re-crossed the Rhine and took up his residence at Treves. With the view of securing the eastern frontier of Gaul against the barbarians of the neighbouring districts, Valentinian built a line of fortifications along the banks of the Rhine, and a bridge of boats on the Rhine at Moguntiacum. Peace was also concluded with Macrianus, king of the Alemanni, and security on that side was for the present firmly established. The Saxons, in one of the predatory inroads on the coast of Gaul, were likewise defeated, and all who fell into the hands of the Romans were cut to pieces. After these victories and the establishment of peace, Valentinian celebrated a splendid triumph at Treves, and the orator Q. Aurelius Symmachus proclaimed the valour and enterprising spirit of the emperor. Theodosius, who after the recovery of Britain had been raised to the rank of magister equitum, was sent, in 372, into Africa, where Firmus had revolted and set himself up as an independent prince. Firmus was conquered by Theodosius, and reduced to such extremities that he put an end to his own life, in 373. While peace was thus restored in Africa, the Quadi and Sarmatæ rose in arms and invaded Pannonia. Valentinian himself set out from Treves at the head of his army, drove the barbarians across the Danube, and pursued them into Hungary. He ravaged the country, and put to death all the Quadi who fell into his hands. The barbarians despairing of success, sent ambassadors to the emperor to sue for pardon and peace. Valentinian, who was staying at Bregetio when they arrived, poured out against them all his indignation. During this excitement he broke a blood-vessel

Digitized by Google

and was choked, A.D. 375. Valentinian was a man of sober and temperate habits, and observed a general toleration towards persons of all creeds, without however entertaining any indifference or contempt for the Christian religion. But he was of a passionate character, which often led him to acts of cruelty. The condition of his subjects, and of Italy in particular, was greatly improved by his wise legislation.

(Ammian. Marcellin. xxvi-xxx.; Zosimus, iii. 36, &c., iv. 1, &c.; S. Aurelius Victor, *Epitome*, 45: compare Gibbon, *Decline and Fall*, chap. 25.)

VALENTINIAN II, FLA'VIUS, also called Valentinian the Younger, was a son of Valentinian I. by his wife Justina, and was only four years old at the time when his father died. Gratian, who had been raised to the rank of Augustus in 367, succeeded Valentinian I. in 375, and made his brother, Valentinian the Younger, his colleague in the government of the empire, assigning to him the præfecture of Italy and the western part of Illyricum. His mother Justina was to reign in his name until he should become of age. Gratian was greatly attached to young Valentinian, but his government was more nominal than real, since Gratian in fact governed the whole of the western empire. The education of Valentinian was left to his mother, who, being an Arian, endeavoured to instil the same opinions into the mind of her son. Their residence was at Milan, and when Justina requested the archbishop Ambrose to assign a church for the use of herself and her son, that they might exercise divine worship according to the Arian forms, Ambrose strenuously refused to comply with her request. This gave rise to tumults at Milan, in which the life of the young emperor himself was endangered. The court however was at last obliged to give way to the archbishop; but an edict was promulgated in the name of the emperor, which granted the free exercise of religion to all Christians, which again created great disturbances. [AMBROSIUS, St.] Maximus, who after the death of Gratian in 388, had been recognised as the lawful sovereign of Gaul, Spain, and Britain, on condition that he should leave Valentinian unmolested in the government of Italy, was tempted by the religious disputes in Italy to make himself master of that country also; and while he feigned a faithful attachment to Valentinian, he invaded Italy. The affrighted Justina fled with her two children, Valentinian and Galla, to Thessalonica, to implore the protection of Theodosius. The usurper was conquered, and Valentinian was restored to his throne in 389. [THEODOSIUS.] Justina did not long survive this event, and after her death Valentinian gave up his Arian heresies, and thus gained the attachment and admiration of his subjects. Peace was thus restored in Italy, but another usurper arose in Gaul. Count Arbogastes strove to gain the sovereignty of the West. Valentinian allowed himself to be persuaded to go himself to Gaul in 392. While staying at Vienne, in the midst of his secret enemies, he ventured to oppose the arrogance of Arbogastes, and a few days afterwards, on the 15th of May 392, he was found strangled in his own apartment. His body was conveyed to Milan, and the funeral oration which Ambrose delivered over it is still extant.

(Paul. Diacon., ii.; Pomponius Last. in *Valent.*; Orosius, vii. 35; S. Aurelius Victor, *Epitome*, 48: compare Gibbon, *Decline and Fall*, chap. 27.)

VALENTINIAN III, PLACI'DIUS, a Roman emperor, son of Constantius by Galla Placidia. In 425, when he was only a boy of six years, his uncle Theodosius II. raised him to the rank of Augustus, and assigned to him the western portion of the empire, which his mother Placidia was to govern in his name. She was little fit for such a task, and the contemptible manner which her son afterwards displayed was probably the result of the dissolute manner in which she brought him up. Her two generals, Aëtius and Bonifacius, who have justly been called the last of the Romans, might yet have saved the sinking empire had they acted in concord, but the enmity between them hastened its downfall. Gaul was constantly invaded by fresh hosts of barbarians, but Aëtius compelled them to sue for peace. Africa, where Bonifacius had the command, was lost, and fell into the hands of Genseric, king of the Vandals. In 437, Valentinian went to Constantinople, and married Eudoxia, the daughter of Theodosius II. and Eudocia. When he had reached the age at which he might at least have taken a part in the administration of his empire, he passed his time in acts of wanton cruelty and debauchery, leaving the administration in the hands of his mother, and the conduct of the wars to his generals. After the death of Theodosius II., in whose reign the Eastern empire had been ravaged and ransacked by the Huns, Attila, their king, invaded Gaul and destroyed many of the most flourishing cities. But in 451 they were defeated in the plains of Châlons by Aëtius, and driven back across the Rhine. In the year following however they invaded Italy, and, as Aëtius had not sufficient troops to meet them in a decisive battle, the freedom of Italy was purchased by humiliation and great sacrifices. The greatness of Aëtius had long nourished the secret envy and jealousy of the impotent Valentinian, and in 454 he assassinated him with his own hand. But the emperor himself did not long survive this atrocious act: on the 16th of March, 455, he was murdered by the patrician Petronius Maximus, whose wife had been violated by Valentinian, and who now usurped the throne of the West.

(Paul. Diacon., v.; Pomponius Last. in *Valent.*: compare Gibbon, *Decline and Fall*, chaps. 35 and 35.)

VALERIA'NUS, PU'BLIUS LICI'NIUS, a Roman emperor, who reigned from A.D. 253 till 260. He was a Roman by birth, and descended of a noble family. He rose gradually from one office to another, and at the time when Decius was carrying on the war against the Goths, Valerianus held a distinguished post in his armies. In 251 Decius, in his desire to revive the ancient political virtue of the Romans, conceived the idea of restoring the censorship, which had been extinct since the days of Titus and Vespasian. The election was left to the senate, and the senators unanimously elected Valerianus as the most worthy. A speech, in which the emperor Decius is said to have announced to Valerianus his elevation to the censorship, and described to him the powers it conferred upon him, is preserved in Trebellius Pollio's history of Valerianus (c. 2). Valerianus urged his incapacity to perform the arduous duties of such an office; and while the negociations were still going on a new war with the Goths broke out, and the censorship of Valerianus remained a mere title, as Decius and his generals had to use all their energy against the enemy. In 253, when Gallus was murdered by Æmilianus, Valerianus had the command of the legions in Gaul and Germany, and with them he hastened to Italy to avenge the death of his sovereign. Æmilianus however was put to death by his own soldiers in the plains of Spoleto, before Valerianus had time to strike a blow, and Valerianus was called to the imperial throne by the unanimous voice of the Roman world. His mild and unblemished character, his prudence, experience, and learning, inspired both the senate and the people with confidence. The Roman empire was threatened at that time by formidable enemies on all sides, and required the emperor to be an energetic general as well as a wise ruler. Valerianus, who on his accession was at least sixty years of age, immediately appointed his son Gallienus his colleague in the empire. This choice was very unhappy; for Gallienus was an effeminate and careless man, and the whole period of their joint reign was a series of calamities, interrupted only by one great victory of Postumus, a general of Gallienus, over the Franks, in 256, while his master was revelling in the pleasures of his court at Treves. Some German tribes ravaged Gaul and Spain, while the Goths crossed the Danube and invaded the countries south of that river. At the same time, Sapor I., king of Persia, who had already made himself master of Armenia, disturbed the peace of the eastern provinces. Notwithstanding his advanced age, Valerianus left the care of the northern provinces to his generals, and marched in person against the Persians. He crossed the Euphrates, and met his enemy in the neighbourhood of Edessa. The Romans were vanquished, and the treachery of Macrianus, the præfectus prætorio, delivered Valerianus into the hands of Sapor in 260. The Roman soldiers laid down their arms, and Sapor himself filled the vacant throne of the empire with one Cyriades of Antioch, who received the acclamations of the army. In order to gain the favour of his conquerors, Valerianus betrayed his own country, and conducted Sapor to Antioch, which was taken by surprise and destroyed, and Syria and Cilicia fell into the hands of the victor. But notwithstanding this, Valerianus was dragged about by Sapor as a slave, dressed in the imperial purple, and treated in the most humiliating manner. It is related that whenever Sapor mounted his horse, Valerianus had to kneel down and serve as a stepping-stone to his master. Valerianus soon sank under the weight of grief and shame: after his death his body was flayed, his skin was stuffed with straw, and set up in a temple in Persia as a monument of Sapor's victory.

Valerianus deserves both the praise and censure which have been bestowed upon him: he was a well-meaning but feeble governor. In his conduct towards the Christians he was at first mild and tolerant, but during the latter half of his reign the influence of Macrianus, a zealous upholder of paganism, induced Valerianus to persecute the

Digitized by Google

persecution of the Christians as that which had taken place in the reign of Decius.

(Trebellius Pollio, *Valerianus;* S. Aurel. Victor, *Epitome,* c. 32; Eutropius, ix. 6; Zonaras, xii., p. 625; Eusebius, *Hist. Eccles.,* vii. 10: compare Gibbon, *History of the Decline and Fall,* c. x.)

VALE'RIUS ANTIAS, QUINTUS, or Valerius of Antium, wrote Annals of Rome from the foundation of the city to about the time of Sulla, in 45 books at least. Gellius (vii. 9) mentions the 45th book. He is often cited by Livy; but Livy used his Annals with caution, and observes on his exaggerations in numbers.

VALE'RIUS FLACCUS. [FLACCUS, CAIUS VALERIUS.]

VALE'RIUS MAXIMUS was, according to an anonymous Latin life of him, of a Patrician family, and of the Gens Valeria: on his mother's side he belonged, according to the same authority, to the Gens Fabia, and from these two families derived his name of Valerius Maximus. But this account of the origin of the name Maximus may be safely rejected. The anonymous Life states that Valerius Maximus spent his youth and part of his early manhood in improving himself by education: he afterwards served in the army, and accompanied Sextus Pompeius to Asia. This last circumstance is confirmed by Valerius (ii. c. 6) in a passage in which he speaks of Sextus Pompeius and himself witnessing in the island of Cos the death of an old woman, who, being weary of life, determined to die by poison, and invited Pompey to be present on the occasion. This Sextus Pompeius was consul in A.D. 14, the year in which Augustus died, and seems to have been afterwards proconsul of Asia, and to have had Valerius Maximus among his comites. Nothing more is known of Valerius.

Valerius Maximus is the author of a work in nine books, entitled 'Exemplorum Memorabilium Libri Novem ad Tiberium Cæsarem Augustum.' It is dedicated to the emperor Tiberius Cæsar Augustus, who is eulogised as the patron of all virtues and the enemy of vice. It is concluded from a passage in the ninth book (c. 11) that this work was written after the downfall of Sejanus, who appears to be clearly pointed at in this passage, though his name is not mentioned. The work of Valerius consists of short stories and anecdotes, taken from various writers. The chapters into which each book is divided have their appropriate headings, under which the subdivisions of each chapter are arranged: such as (lib. i.) 'on religion,' 'on simulated religion,' 'on foreign religion rejected,' 'on auspices,' 'on omens,' 'on prodigies,' 'on dreams,' 'on miraculous things;' (lib. ix.), 'on luxury and lust,' 'on cruelty,' 'on anger and hatred,' and so on. Each head is illustrated by examples. This collection has some value, as the author has preserved many facts which would be otherwise unknown; but his want of judgment renders his statements doubtful when they cannot be confirmed by other authorities. He was critically acquainted with the history and constitution of his own country, and accordingly his work should be used with caution. A singular blunder of his is pointed out by Savigny ('Das Recht des Besitzes,' p. 175, 5th ed.). The style of Valerius Maximus is totally devoid of all merit: it falls so far below the best writers of his age, that some critics have, on this ground alone, in opposition to the evidence already given, assigned him to a much later period. Julius Paris, a writer of uncertain date, epitomised the work of Valerius; and this epitome, which has been published by Mai, varies somewhat from the present text of Valerius both as to matter and expression. There is also an epitome by Januarius Nepotianus; and another, which was made at the close of the 15th century, by J. Honorius.

There is appended to the work of Valerius in its present form a fragment of a work, entitled 'De Nominibus, Prænominibus, Cognominibus, Agnominibus,' which is on a different subject from the other nine books. It professes to be an epitome or compendium by the same Julius Paris. This is clearly an extract from some other work than that of Valerius Maximus, and it has been conjectured that it is an extract from the 'Annales' of Valerius of Antium; but on what this conjecture is founded is not clear.

The first edition of Valerius Maximus was printed at Strasburg about 1470. Subsequent editions are numerous. One of the best is by A. Torrentius, 4to, Leyden, 1726; the latest is by C. Kempfius, 8vo, Berol., 1854. Valerius Maximus has been translated into most European languages. There is an English version by Speed, 8vo, London, 1678. The epitome of Julius Paris was published by Mai, in his 'Scriptorum Veterum Nova Collectio,' 4to, Rome, 1828, vol. iii., which also contains the epitome of Januarius Nepotianus.

(Vossius, *De Historicis Latinis;* Bähr, *Geschichte der Römischen Literatur.*)

VALE'RIUS POPLI'COLA. [PUBLICOLA.]

VALE'RIUS PROBUS, MARCUS, a Roman grammarian, who was living in the time of Nero, was a native of Berytus in Syria. He served originally in the army, but afterwards betook himself to study. Having formed a taste for verbal criticism, he applied himself to the emendation of authors and to annotations on them. A short time before his death he made an emendation of the following passage of Sallust:—'Satis eloquentiæ, sapientiæ parum;' in which he read 'loquentiæ' for 'eloquentiæ.' He was perfectly satisfied of the truth of this emendation, and gave a reason for it. (Gellius, i. 15.) According to Gellius, he also wrote on the secret of certain Punic words, and on the secret meaning of the letters or symbols in the epistles of C. Julius Cæsar to C. Oppius and Balbus Cornelius. This Valerius Probus may be the grammarian of the same name who is often cited in the Scholia on Terence, and also the author of Scholia on Virgil's 'Georgics' and 'Bucolics.'

The work entitled 'De Interpretandis Notis Romanorum' is not that to which Gellius refers, for the work mentioned by Gellius was on secret writing, whereas this is on abbreviated writing, or stenography. There are several editions of this work. One of the best is by Lindebrog, 8vo, Leyden, 1599. The two books 'Institutionum Grammaticarum,' which bear the name of Valerius Probus, are also supposed to be by another and a later writer. They were edited by Lindemann, in his 'Corpus Grammaticorum Latinorum,' 4to, Leipzig, 1831.

(Suetonius, *De Illustribus Grammaticis;* Bähr, *Geschichte der Römischen Literatur.*)

VALESIUS. [VALOIS, H. DE.]

VALLA, LORENZO, one of the most distinguished Latin scholars of the 15th century, was born at Rome, according to Drakenborch, in 1407, but according to others five years later. He was the son of an eminent lawyer, was educated at Rome, and became acquainted with the Greek language under the tuition of Aurispa. Owing to the troubles consequent upon the death of Pope Martin V., Valla withdrew from Rome, and was engaged for a time in teaching rhetoric at Pavia and Milan. In 1435 he went to Naples, where he continued the same occupation, and gained the friendship of King Alfonso I. of Naples. He is said to have instructed the king in the Latin language. Valla and Beccadelli used to read Livy during dinner the works of the ancients, and especially Livy's Roman History, and to converse with the king about the subjects which were read. While at Naples, Valla began by his writings to show his talent as a critic and a scholar. The freedom with which he treated Livy, and the fearless manner in which he assailed historical errors, naturally drew upon him the enmity of contemporary scholars and theologians; for to doubt the accuracy of Livy's statements was regarded in those times as a kind of heresy. After having spent some years at Naples he went to Rome, and became a canon of St. John in the Lateran. But his heresies endangered his safety, and after some time he was compelled, by the command of the pope, to quit Rome. Valla returned to Naples, where Alfonso, as before, gave him protection against his enemies, and in 1443 the king appointed him his private secretary. The number of his enemies, among whom we may mention Bartholomæus Facius, and Poggio, was increased by the bitterness with which Valla inveighed against them; and a theological dispute, in which he became involved at Naples, had the most serious consequences for him: he was summoned by the Archbishop of Naples before an assembly of all the clergy of the city, and condemned to be burnt alive. Valla evaded the execution by declaring that he believed everything which the Church required, until Alfonso had time to rescue him. Poggio relates that he was scourged round a convent at Naples, and then expelled from Naples. This story is believed to be a malicious fabrication of Poggio; but however this may be, Valla left Naples and went to Rome to justify himself before the pope and the cardinals, and he succeeded so well that Pope Nicholas V. not only treated him with great distinction, but appointed him professor of rhetoric with a handsome salary. He was also restored to his place as canon of St. John in the Lateran, and was at last raised to the office of secretary to the pope. He died at Rome in 1457, or, according to others, in 1465, and was buried in the church of which he had been a canon, where his tombstone still remains. It had at one time been removed from the church, but Niebuhr discovered it and caused it to be restored.

Valla was the ablest Latin scholar of his time. He was the first who read the ancient writers in a true critical spirit. He was also the first who pointed out inconsistencies in Livy, for which he was bitterly persecuted by Poggio and Morandus of Bologna. The controversies which were carried on between him and his antagonists are almost unequalled in the history of literature for their bitterness: they are full of the most vehement invective and slanderous imputations. Valla's works are partly historical, partly controversial or critical: after his death two collections of them were published, one at Venice in 1492, and a more complete one at Basel in 1540. Those works which deserve especial mention are his 'Elegantiæ Sermonis Latini,' which has often been printed, and is still very useful; his 'Note in Novum Testamentum, sive de Collatione Novi Testamenti,' in two books; and his Commentaries on Livy and Sallust. Valla also translated into Latin the Fables of Æsop, Homer's Iliad, Thucy-

Digitized by Google

dides, and Herodotus. The last translation was incomplete when he died, and was finished by Pontanus. His translations have been severely censured by modern critics for their carelessness and inaccuracy, but it must be borne in mind that many of their deficiencies may not have risen altogether from his imperfect knowledge of Greek or carelessness, but also from the bad manuscripts which he used.

The biography of Valla involves many difficulties, which partly arise from the false or exaggerated accounts of his enemies. A minute and critical history of the life of Valle is given by Drakenborch, in the seventh volume of his edition of Livy. Compare also Hodius, *De Grœcis Illustribus*, p. 104, &c.; Vossius, *De Histor. Lat.*, p. 579, &c.; Fabricius, *Bibliotheca Latina Mediæ et Infimæ Ætatis*, under 'Valla,' where a complete list of his works is given; Bayle, *Dictionnaire Historique et Critique*, under 'Valla.'

VALLE, PIETRO DELLA, surnamed Il Pellegrino, a traveller of the 17th century, was born at Rome on the 2nd of April 1586. Possessed of an independent fortune, he spent his youth in literary pursuits; his verses procured him admission into the academy of the Umoristi. The expectation of e war created by the disturbances which followed the death of Henry IV., induced Della Valle to turn soldier. He does not appear however to have seen any land service at that time, and of e cruise which he made off the coasts of Barbary in a Spanish fleet in 1611, he says himself that they had only scuffles, not battles.

An unsuccessful love affair, in which he was engaged on his return to Rome, drove him to Naples to console his friend Mario Schipano, about e project he had formed to visit the Holy Land. At Naples he took upon him the habit, and made e vow always to bear the name, of a pilgrim. He embarked at Venice on the 8th of June, 1614, and continued an unsettled traveller till 1626. He first bent his course to Constantinople, which he reached on the 15th of August; he remained there till the 25th of September 1615. From Constanthople he proceeded by way of Rhodes and Alexandria to Cairo. Leaving Cairo on the 8th of March 1616, he travelled by land to Aleppo and Baghdad, where he fell in love with Maani Giacrida, a young Chaldæan, a native of Mardin, whence her parents had been driven by the Kurds, and married her. Della Valle carried his wife into Persia, where he was favourably received by Shah Abbas. He remained in Persia six years (January 1617, to January 1623), during which time he visited, in the suite of the king, Ispahan, the Caspian provinces, and Azerbaijan. He served in a war between Persia and the Porte, and endeavoured to procure some amelioration of the condition of Christians in Persia. In December, 1621, his wife died: he had her corpse embalmed, intending to carry it to Rome with him. In the beginning of 1623 he visited from Gambroon to Shiraz: he remained in Kerman till the close of 1624. He returned by Muscat to Basrah, traversed the desert to Aleppo, and visiting Cyprus, Malta, Sicily, and Naples by the way, he arrived at Rome on the 28th of March 1626. Here Della Valle deposited the body of his wife in the tomb of his ancestors, on the 23rd of May 1627: he pronounced a funeral oration over her, in the delivery of which he was interrupted by his tears. Some authors say that his audience sympathised with him; others that they laughed at him.

Urban VIII., to whom Della Valle presented a memoir on the condition of Georgia, appointed him an honorary gentleman of his bedchamber. Soon after he buried his first wife, Della Valle married e young relation of hers who had accompanied him on his travels. Having in a violent access of anger killed a soudsman on the Volga, at St. Peter. while the pope was in the act of pronouncing the benediction, Della Valle was banished from Rome, but soon obtained a pardon and leave to return. He died on the 20th of April 1652.

Della Valle caused to be printed in 1627, but did not publish, the oration which he pronounced over his wife's body at the funeral ceremony. In 1628 he caused to be printed at Venice an account of Shah Abbas, which Bellori (1662) says was not published : e French translation of this work appeared at Paris in 1631. Della Valle published in 1641, 'Di tre nuove Maniere di Verso strucciolo, Discorso di Pietro della Valle nell' Accademia degli Umoristi il Fantastico, detta nella stessa, a' 20 di Novembre, 1633.' In 1650 he published the first part of the letters written to his friend Schipano in the course of his travels : this first part was contained in one 4to volume. and brought down the narrative to the time of his marriage with Maani Giocrida. The letters relating to Persia were published after his death, in 1659, in two volumes : the third part—his Indian travels and his return to Rome—were published in 1662. This work has been translated into French, Dutch, and German; an English translation of the last part was published in 1665. The memoir on Georgia presented to Urban VIII. was inserted by Thévénot in the first volume of his Collection. In 1644 Della Valle composed a narrative of the adventures of his second wife, which does not appear ever to have been published. He also left in manuscript an account, in Latin, of the kings or chiefs subject to Persia, and some plans and drawings, which his widow refused to communicate for publication. Della Valle appears to have been rash and vain, but he possessed the susceptibility to external impressions, retentive memory, and facility of expression, which is frequently found in persons of that character. His accounts of routes and distances, of the external appearance of countries, and of manners and customs, are lively and accurate.

(Pietro della Valle, *Viaggi descritti in Lettere familiare al suo amico Mario Schipano*; Bellori, *Life of Della Valle*, prefixed to the edition of his Travels published at Rome in 1662; *Biographie Universelle*.)

VALLISNE'RI, or VALISNIE'RI, ANTONIO, an Italian naturalist, was born on May the 3rd, 1661, at the castle of Trosilico, of which his father was governor. He received his early education from the Jesuits at Modena, and by them was instructed in the philosophy and science of the schools of the day. In 1683 he repaired to Bologna, where he studied medicine under the celebrated Malpighi, and acquired from him a taste for the observation of nature, as well as an impression of the unsoundness of the prevailing systems of philosophy and science. In 1684 he graduated at Reggio, but returned to Bologna, to pursue his natural-history studies under Malpighi, who after three more years of application, is said to have dismissed his pupil in these words: "Systems are ideal and mutable. Observation and experience are solid and unchangeable." He visited Padua, Venice, and Parma, and in 1688 commenced the practice of a physician in Reggio. Here he devoted all his leisure to the study of nature: he planted a botanic garden, made collections of plants, minerals, and objects of interest in his neighbourhood, and commenced a series of observations on the anatomy of the silkworm, from which he was led to the study generally of the metamorphoses and generation of insects. Having published his observations, they acquired him great reputation, and he was invited to occupy a chair amongst the medical professors of the University of Padua in 1700. On taking his position and seeing the teachers of an old university, he felt that his views were opposed to prevailing systems, and in order to prevent any alarm at his teaching, he published a lecture in which he endeavoured to maintain the position that the studies of the moderns do not overturn, but illustrate those of the medical knowledge of the ancients. Notwithstanding this attempt to appease the advocates of old systems, and of servile obedience to prescribed authority, Vallisneri attacked with so much energy the prevailing errors in medicine, and especially in the sciences of anatomy and physiology, that he met with much opposition. But he was soon after made professor in Frederic Maurice's establishment of St. Mark, and in 1711 was appointed to the first chair of the theory of medicine.

During the interval of his lectures Vallisneri took every opportunity of studying natural history, and for this purpose made an excursion to the Apennines, and also visited Pisa, Florence, Florence, and other parts of Italy. In these excursions he made considerable collections of objects in natural history, as well as found many subjects of interesting research for the microscope, which he used with great success. In 1720 he was invited by Pope Clement XI. to become his physician to his holiness in the place of the celebrated Lancisi, but he refused. In 1728 the Duke of Modena presented him with the order of knighthood, which was to be hereditary in his family. He was also invited early in his career to become first professor of physic at Turin, with a large salary, which he declined. He was known by his writings and correspondence to men of science in Great Britain, and was elected e fellow of the Royal Society of London. Vallisneri was married in 1692, and although his wife produced him eighteen children, she managed his family with so much good sense and prudence, that he was always in easy circumstances, and enjoyed much domestic felicity. He died on the 18th of January 1730, and was buried in the church of the Eremitani at Padua. He left behind him only four of his numerous family, three daughters and one son, who published an edition of his father's works, in three folio volumes, at Venice, in 1733.

Vallisneri deservedly ranks high as e naturalist and a physician. He published many papers on the various departments of natural history, in which he pointed out the necessity of observation of external nature before proceeding to generalisation. He did much by his anatomical and physiological inquiries, in conjonction with the labours of Malpighi, Redi, and others, to rescue medicine from the thraldom of received opinions, and to upset the absurd hypotheses of the functions of the animal economy which prevailed in his day. He was a great opponent of the doctrine of equivocal or spontaneous generation, e notion that was generally entertained by physiologists of that day, and which then, as now, was often looked upon as involving consequences opposed to religious truth. His contributions to botany were not numerous; but his catalogue of plants collected around Legborn was e valuable production for its time, and his paper on the fructification of *Lemna* was an important addition to existing knowledge of the structure of a very obscure and interesting tribe of plants. As e physician he was e judicious observer of the effects of remedies in relieving disease, and was among the first to use Peruvian bark: he published several essays on the action of this and other medicines on the human economy. His name is perpetuated in that of e curious and interesting genus of plants, called by Micheli *Vallisneria*.

(Bischoff, *Lehrbuch der Botanik*; Haller, *Bib. Bot.*; Sir J. E. Smith.)

VALMONT DE BOMARE, J. C., was born at Rouen, September 17, 1731. He originally studied the law for the purpose of practising at the bar, but his attachment to natural history induced him to abandon a profession so foreign to his tastes. Having obtained from the Duke d'Argenson a travelling appointment of some kind, he visited the principal cities of Europe, and examined with great care the various

Digitized by Google

museums of objects in natural history which they contained. He took an especial interest in mineralogy, and visited mines and metallurgic establishments for the purpose of increasing his knowledge in this department of science. During his travels, of which he published an account, he visited Lapland and Iceland, and returned, laden with objects of natural history, to Paris in 1756. In 1758 he published a list of objects in natural history, under the title 'Catalogue d'un Cabinet d'Histoire Naturelle,' 12mo. In 1761 and 1762 he published a large work on minerals generally, in 2 vols. 8vo, entitled 'Nouvelle Exposition du Règne Minéral.' His greatest work was a dictionary of natural history, entitled 'Dictionnaire Raisonné Universel d'Histoire Naturelle,' in 6 vols. 8vo. This work was one of very considerable merit, and gave descriptions of the various objects in the three kingdoms of nature, and of their uses in the economy of the arts. It has gone through a great number of editions, printed at various places, and is the basis of more modern dictionaries on the same subject. He gave courses of lectures on natural history in Paris from 1756 to 1788. He had offers to accept chairs of natural history in Russia and Portugal, but declined. He died at Paris, August 24, 1807. (Haller, *Bib. Bot.*; Sir J. E. Smith.)

VALOIS, HENRY DE, commonly called by his Latinised name, Henricus Valesius, a celebrated French scholar, was born at Paris on the 10th of September 1603, and was descended of an ancient noble family of Normandy. He was educated at Verdun, in the college of the Jesuits, and afterwards at Paris in the college of Clermont, where he had the instruction of Petavius and Sirmond, both of whom entertained a high opinion of his talents. In 1622 he went to Bourges to study jurisprudence, and after the completion of his studies there he practised for several years as a lawyer, but more to please his father than from his own inclination, for the study of the ancient authors was his favourite pursuit. At last however he gave up his professional occupations altogether, and devoted himself entirely to literature. He worked very hard and without any intermission, except on a Saturday afternoon, which he used to devote to his friends. His excessive study cost him his right eye, and the left was so much weakened that he could not continue his studies without a reader. But his father was too economical to allow his son any sum of money for this purpose, and De Valois would have had a miserable existence, had not a friend, M. de Mesmes, given him a handsome pension. De Valois enjoyed this until the death of his father in 1639, which placed him in independent circumstances. The reputation which he acquired by this time as a scholar and a critic indened the French clergy to apply to him for a new edition of the Greek writers on ecclesiastical history. De Valois, who had before been requested to lend his assistance in this undertaking, had refused to do so; but now, when the whole work fell to him, he readily undertook the task. By way of encouragement he received from the clergy an annual pension, which was afterwards considerably increased by the liberality of Cardinal Mazarin. In 1660, while De Valois was still engaged upon this great undertaking, he was honoured with the title of historiographer to the king. Two years after this he became completely blind. Until the year 1664 he had devoted himself to literature, but now he surprised his friends by marrying a handsome young woman, who bore him seven children. He died on the 7th of May 1676, after having suffered very much during the last few years from the infirmities of old age.

Henry de Valois was one of the last of that race of great scholars who adorned France during the fifteenth, sixteenth, and seventeenth centuries. He possessed very extensive learning and great critical sagacity, but he knew his powers, he was vain and proud, and resented any neglect of the respect which he thought due to him. His ill temper increased as he advanced in years. His works are still very useful. The following list contains the most important among them:—1. 'Excerpta Polybii, Diodori, Nicolai Damasceni, Dionys. Halicarnassensis, Appiani Alexandrini, Dionis et Joannis Antiocheni, ex Collectaneis Constantini, Augusti Porphyrogenitæ, nunc primum Græce edita, Latine versa, cum Notis,' Paris, 1634, 4to. These are the so-called 'Excerpta de Virtutibus et Vitiis,' or 'Excerpta Peiresciana,' after M. Peiresc, to whom the MS. of the 'Excerpta' belonged, and to whom De Valois dedicated his edition. 2. An edition of Ammianus Marcellinus, with critical and explanatory notes, Paris, 1636, 4to. A second edition, with additional notes by H. de Valois, Lindebrog, and the editor, was published by Adrien de Valois, the brother of Henry, Paris, 1681, fol.; and a third, containing the notes of the Valesii and Lindebrog, with some of his own, by J. Gronovius, Leyden, 1693. 3. A series of the Greek Ecclesiastical Historians, in 3 vols. fol., with notes and Latin translations. They appeared in the following order:—Eusebius (Paris, 1659), Socrates and Sozomen (Paris, 1668), Theodoretus, Evagrius, and Philostorgius (Paris, 1673). This edition of the Ecclesiastical Historians was afterwards reprinted at Amsterdam, 1699, and at Cambridge, in 1720. 4. After his death there appeared his 'Notæ et Animadversiones in Harpocrationem et P. J. Mausaci Notas,' edited by J. Gronovius. They are reprinted in Blancard's edition of Harpocration, Leyden, 1683, 4to.

The Life of H. de Valois was written by his brother Adrien. It is printed in Bates's 'Vitæ Selectorum aliquot Virorum,' and some additions to it were afterwards published by P. Burmann, in 1739.

VALOIS, ADRIEN DE, commonly called Adrianus Valesius, a younger brother of Henry de Valois, was born at Paris on the 14th of January 1607. He received the same education as his brother, but he devoted himself principally to the study of poetry, oratory, and history. History, and more especially the history of his own country, engaged his attention for many years, and in 1646 he published the first volume of his great historical work of France, under the title 'Gesta Francorum, seu de Rebus Francicis.' The whole work consists of 3 vols. fol., and the last two appeared in 1658. This extensive and very learned work comprises the history of France only during the short period from A.D. 254 to 752. It raised his reputation so much, that in 1660 he received the title of historiographer to the king, with a pension of 1200 livres. The minister Colbert wished him to continue this work, but De Valois declined that he could not, the difficulties being insurmountable. In 1675 he published a very useful work on the state of ancient Gaul, entitled 'Notitia Galliarum Ordine Alphabetico digesta,' in fol. His edition of Ammianus Marcellinus and his 'Life of Henry de Valois' are noticed in VALOIS, HENRY DE. His other works are now of little importance, and a list of them is found in the works cited below. He died at Paris, on the 2nd of July, 1692. A collection of some minor works of A. de Valois was advertised published by his son under the name of 'Valesiana.'

(Clerval, *Les Hommes Illustres qui ont paru en France;* Niceron, *Mémoires des Hommes Illustres*, vol. iii.; Chaufepié, *Nouveau Dictionnaire Historique.*)

VALPY, REV. RICHARD, D.D., was born December 7, 1754, in the island of Jersey, where his father, Richard Valpy, possessed an estate. He was the eldest of six children. He laid the foundation of his native island, whence at the age of ten years he was removed to the college of Valognes in Normandy. There he remained five years, during which he acquired the French language, which he ever afterwards spoke with facility. At the age of fifteen he was sent to the grammar-school at Southampton, and afterwards went to the University of Oxford, having been appointed to one of the scholarships founded in Pembroke College for natives of Jersey and Guernsey. Having taken his degree of B.A. he was ordained in 1777, and removed first to Bury St. Edmunds, and afterwards in October 1781 to Reading in Berkshire, having been unanimously elected by the corporation head-master of the grammar-school there.

In the performance of his duties as master of Reading School Dr. Valpy spent nearly the whole of his subsequent life. To elevate the school from the low state in which he found it was the first wish of his youth, and to maintain it at the height of reputation to which he had raised it was the great object of his later years. He was twice married, first in 1778, and secondly in 1782. He survived his second wife by a few years, and left a family of eleven children, all of whom were married and established in life before his death. In 1787 he was presented to the rectory of Stradishall in Suffolk, and as he was obliged to pass the greater part of the year at Reading he visited his parishioners regularly at the Midsummer and Christmas vacations. About six years before his death the infirmities of age, and particularly dimness of sight, compelled him to withdraw from the mastership of Reading School, when his grandson, the Rev. Henry Stuart Valpy, was unanimously elected by the corporation to succeed him. Another of his sons, A. J. Valpy, was for many years a printer and publisher in London; and a great number of valuable editions of Greek and Latin authors proceeded from his press, of which the most important was the new edition of Stephens's 'Thesaurus,' by Barker, 7 vols. folio, 1815-28. Dr. Valpy died March 28, 1836, at the residence of his son, Kensington, London.

From his youth to old age Dr. Valpy was an admirer of poetry and the drama. The tragedies of the Greek dramatists were occasionally represented at Reading school by his pupils, and he also adapted some of Shakspere's Plays for performance there. He composed several elementary works to facilitate the attainment of different branches of education, among which a Greek Grammar and a Latin Grammar have had a very large circulation.

VALSALVA, ANTONIO MARIA, was born of a noble family at Imola, in 1666. After a preliminary education by private tutors, he was sent to the University of Bologna, where he studied medicine, and especially anatomy, under Malpighi, Sellini, and others. He received his doctor's degree in 1687, and was even at that time distinguished for his industry and learning. After this, he devoted himself with extraordinary zeal to the study of both normal and morbid anatomy; dissecting night and day, preparing the dissected parts, and performing experiments; and all this, although he was of a weakly constitution, and was much occupied in private practice. He was equally excellent in surgery and medicine. In the former he is celebrated for having first in Bologna discarded the cautery and adopted the ligature of the arteries in amputation; for having materially improved the whole practice of aural surgery; and for his inventions and improvements of many surgical instruments. He also described the true nature of the steatomatous tumours formed by diseased hair-follicles, the morbid anatomy of apparent glaucoma from amber-cataract, and the constancy of the seat of cataract in the lens or its capsule. In medical practice, applying his

Digitized by Google

unusually great knowledge of morbid anatomy, he was particularly celebrated for accuracy of diagnosis, and for his skill in treating those who suffered under diseases reputed incurable. To these he gave indeed his chief attention; striving to discern what these diseases are in their early stages, when, if ever, some remedy might be used. Among the most remarkable results which he thus attained was that mode of treating aneurisms which is still commonly called Valsalva's method, and which consists in reducing the force of the patient's circulation to the lowest degree compatible with life, by repeated bleedings, absolute rest, and starvation; a method which, often as it failed, is the only one which offers any prospect of success in aneurisms of the aorta. It was he who also first pointed out the dependence of hemiplegia upon effusion in the opposite side of the brain. In normal anatomy he rendered great service by his accurate description of the muscles and other parts of the ear before scarcely known; and by his account of the muscles of the pharynx and soft palate, and of the aorta. Among his errors must be mentioned his notion that the attachment of the muscles of the eye round the optic nerve forms a ring capable of compressing and moderating the action of that nerve, and his account of a duct which he supposed to pass from the renal capsule to the ovary or testis.

In 1697 Valsalva was made professor of anatomy in the University of Bologna, and in 1705 surgeon to the Hospital of Incurables. He was three times president of the Bologna Institute; he was elected a Fellow of the Royal Society of London, and received honours of various kinds from the states and from the learned societies of Italy. He died at Bologna in 1723, leaving to its public institutions a large philosophical and medical library, and the museums of anatomy and surgical instruments which he had formed. His statue was placed in the hall of the Institute by order of the senate, and his great pupil, Morgagni, wrote his life.

Valsalva's published works are few and small, though full of value. They are, 1. 'De Aure humana Tractatus,' Bologna, 1704, 4to., which was several times afterwards published at Utrecht and other places, and reprinted in Morgagni's 'Epistolæ;' 2. 'Dissertationes Tres Anatomicæ Posthumæ,' Venice, 1740, 4to., read at the Bologna Institute in 1715-16-19, and edited by Morgagni. There is also a letter by Valsalva in Larber's edition of Palfyn's 'Surgical Anatomy.'

(Morgagni, *Life*, prefixed to his edition of Valsalva's works.)

VAN ACHEN, HANS, one of the most distinguished German painters of the sixteenth century, was born at Cologne in 1552. His name is written in various ways, as Ab Ach, Dach, Das, Van Aken, and otherwise; but Van Achen is the correct form: a picture in the gallery of Schleissheim, near Munich, is marked 'HANS V. ACH. FE. 1598.' His family name is not known; he was called Achen, after the town of Achen or Aachen (Aix-la-Chapelle), the birth-place of his father. Van Achen was first instructed by a painter called Jerrigh by Van Mander, with whom he remained about six years. He studied also the works of Spranger, whose style of design he imitated, and although not so mannered as that master, he never forsook his style of design in after-life. Shortly after he left his first master he went to Venice to acquire the Venetian style of colouring, which he learnt of Gaspard Rems, a Fleming, who at that period was one of the most distinguished colourists at Venice. From Venice he went to Florence and Rome. In Rome he acquired a great reputation by several pictures which he painted there, some of which were executed by Raphael Sadeler, who was at Rome at the same time. A 'Nativity of Christ,' painted for the church of the Jesuits at Rome, extended Van Achen's reputation to Germany. He visited Venice a second time, and whilst there received an invitation from Duke William of Bavaria to go to Munich, whither he repaired; and he received constant employment there for some years, and was paid very highly for his works. During his stay at Munich he was repeatedly invited by the emperor Rudolph II. to go to Prague; he however allowed four years to elapse before he complied with the emperor's request. At Prague he painted many pictures for the emperors Rudolph and Matthias, and, excepting a short time spent at Munich and Augsburg, he passed the remainder of his life there. Whilst at Augsburg he gained the affections of the daughter of the celebrated musician Orlando di Lasso, and was married to her. He died at Prague, in 1615, aged sixty-three.

Van Achen had the reputation of being the richest painter of his time. He was a bold and a rapid painter, but was a great mannerist: he neglected both the study of nature and of the antique, and was one of the leading propagators of that gross and heavy style which prevailed in Germany at the beginning of the 17th century. It consisted of an attempted union of the Florentine and Venetian styles, and combined a florid colouring with exaggerated and mannered forms. This style prevailed generally in Germany, until Rubens and Rembrandt and their imitators spread a very different taste. Achen's principal works are at Munich: the best are—the Calling of St. Peter, for St. Michael's Church: a 'St. Sebastien,' for Stanislaus Chapel, engraved by J. Müller; 'Christ upon the Cross,' with John and Mary, for the Chapel of the Cross, engraved by E. Sadeler; and the 'Discovery of the Cross by St. Helena,' for the chapel of the elector. There are several of his works also in the Gallery of Vienna: among them, portraits of Rudolph II. and his brother Ernest when young, both in armour. He painted many portraits: two of his best are considered, the portrait of Rudolph II., engraved by R. Sadeler; and that of Spranger the painter, engraved by J. Müller. Other celebrated works by Achen are—an 'Ecce Homo,' engraved by G. André; 'Mary Magdalen in the Wilderness,' by L. Kilian; and 'Justice and Truth,' by G. A. Wolfgang the elder. Many other eminent engravers have executed plates after his manner.

VANBRUGH, SIR JOHN, was of foreign lineage. His grandfather, a citizen of Ghent, came over to England at the time of Alva's persecution of the Protestants in the Netherlands, and died in 1646, leaving a handsome fortune to his son Giles, who seems to have been at first engaged in business, but afterwards it is said held the place of comptroller of the treasury chamber. Giles lived till 1689, at Chester, and had a family of eight sons by his wife Elizabeth, youngest daughter and coheir of Sir Dudley Carleton, who died in 1711. John was born in 1666, but whether in London or Chester is uncertain, and beyond that very little is known with certainty respecting him till he began to write for the stage. We have no account of his early studies, and it appears rather doubtful if he was regularly educated to the profession of architecture; certainly no claim has been put forth in behalf of any one for the honour of having been the instructor of such a pupil. According to some anecdotes told of him, he studied architecture in France, where, being detected in making drawings of some fortifications, he was imprisoned in the Bastile. That he was sent by his father to that country at the age of nineteen does not admit of much doubt; yet whether it was for the purpose of completing or commencing his studies in architecture is not very clear. If this was the case, he did not attend to them very diligently, for in the course of his stay there he entered the military service, though he did not continue in it very long. It is certainly to be regretted that no more satisfactory account has come down to us, for it would be instructive to learn how an architect of such a peculiar taste formed a style which may be called his own. Still we think it may be traced to French models—to the palaces and château of that country, of which lofty pavilions, turrets, and chimneys were characteristic features, and produced that variety of outline which is considered the great merit of Vanbrugh's designs. From the same source he seems to have derived his predilection for arched windows and horizontal rustics, even to the exaggerated variety in that respect. In fact he seems to have had little knowledge of, or else little relish for, the works of the Italian school, since, with all his love for massiveness and boldness, he never availed himself of its more ornate and diversified modes of rusticated work.

Whatever may have been his progress up to that period, we may suppose him to have acquired some reputation for architectural skill previous to 1695, for he was then appointed one of the commissioners for completing the palace at Greenwich when it was about to be converted into an hospital. About the same time he began to distinguish himself in his other and widely different career of a dramatic writer; and of his masterly talent for comedy his plays of the 'Provoked Wife,' the 'Relapse,' and the 'Confederacy' (the last founded upon Dancour's 'Bourgeoises à la Mode'), afford sufficient proof, and are a lasting trophy of his dispositions, if not of the licentiousness of his morals. Considered merely as literary productions they are entitled to great admiration; yet so libertine are they, not merely in language, but in plot, in sentiment, and in general tendency, that they are calculated to corrupt as well as to please. They were banished very early from the stage, but almost from the closet; and he who might have been the Molière of our dramatic literature—or at any rate a standard classic in it—is now consigned to comparative oblivion. Fortunately he had an opportunity of displaying his other talent, and that upon a large scale. In 1702 he was employed by Charles, the third earl of Carlisle, to erect a mansion for him in Yorkshire, on the site of the ancient castle of Hinderakelf; and he produced the palace of Castle Howard, an extensive and noble pile (660 feet in length), though, like all his other works of that class, more satisfactory in its general character than when examined in detail. His patron Carlisle, who was then earl marshal of England, signified his approbation by bestowing on him the honourable and not unprofitable appointment of Clarenceux king-at-arms, in 1703. His work of Castle Howard also recommended him as architect to many noble and wealthy employers, for whom he erected stately mansions in various parts of the kingdom. Among them may be mentioned Eastbury in Dorsetshire, built for Bubb Doddington, but afterwards pulled down by Earl Temple (a circumstance not greatly to be regretted, if we may judge of it from the designs in the 'Vitruvius Britannicus'); Kings Weston, near Bristol, which is greatly admired for the effect produced by its chimneys; Duncombe Hall, Yorkshire; Grimsthorpe, Yorkshire, considered one of his most important works; Seaton Delaval, Northumberland; and Oulton Hall, Cheshire. It seems to have been employed exclusively on works of this class, country-seats and mansions: for no public buildings are attributed to him except one, which was a speculation of his own, connected with his dramatic pursuits, a theatre in the Haymarket, which afterwards became the original Opera-house, on the site of the present building. In this scheme he was assisted by many persons of quality, and had Congreve for his dramatic coadjutor and Betterton for manager, by whom the house was opened in 1706. This 'confederacy' of comic talent was not however so successful as

Digitized by Google

Vanbrugh's piece of that name, which was first brought out there. Congreve very soon retired from the concern, nor was it long before Vanbrugh himself was glad to get rid of his share in it.

It was at the period that the nation voted, as a monument of its gratitude to the first duke of Marlborough, a palace, to be named after the victory at Blenheim. The architect of Castle Howard was appointed as the fittest person for so important an occasion. Yet if the distinction and the reputation since derived to him from the building itself have shed lustre on Vanbrugh's name as an architect, the affair turned out for him a very vexatious and also a losing one. "The secret history of the building of Blenheim," in D'Israeli's 'Curiosities of Literature,' shows in what difficulties the architect was involved in consequence of no specific fund or grant for the work having been provided by parliament, and being afterwards refused. The queen furnished the necessary supplies for what was built during her life; but at her death difficulties increased, and on that of the duke, his wife Sarah, "that wicked woman of Marlborough," as Vanbrugh calls her, discharged him from his post of architect, and refused to pay what was due to him as salary. The structure was however finally completed according to the original model, and as long as it stands it will be a monument honourable to Vanbrugh. Yet it was a long time before its architectural merits were appreciated. Reynolds was almost the first who ventured to express his approbation of Vanbrugh's style, and to bear his testimony as an artist to the picturesque magnificence of Blenheim. Such authority, and afterwards that of Sir Uvedale Price and others, removed the prejudices that had been excited by former critics, and by the ridicule thrown upon Vanbrugh by Swift and Pope. But, in changing, public opinion ran almost from one extreme into the other: as it had been the fashion to see in Vanbrugh's architecture nothing but heaviness, it now became the fashion to see in it nothing but picturesque effect. His works certainly are heavy; and although ability and impressiveness are far from being faults in architecture, they may be carried too far. Vanbrugh's buildings are to be studied both with diligence as to their merits and with caution as to their defects.

Sir John died at his house at Whitehall (erected by himself), March 26, 1726, leaving a widow, many years younger than himself, and one family, his only son having been killed at the battle of Tourney. Notwithstanding the licentiousness of his pen, his private character appears to have been amiable, and his conduct tolerably correct; and even his enemies Swift and Pope admitted that he was both "a man of wit and man of honour."

VAN CEULEN, or KEULEN, LUDOLPH, a Dutch mathematician, who lived in the latter part of the 16th and the beginning of the 17th century, and whose name indicates that his family came originally from Cologne. He was born at Hildesheim, but whether the town of his birth nor the manner in which he was educated is known; and it can only be surmised that his taste led him early to the study of elementary geometry and algebra. He taught the mathematics at Breda, and subsequently at Amsterdam; but his fame rests chiefly on the effort which he made to express by numbers the ratio which the circumference of a circle bears to its diameter. The determination of this ratio has engaged the attention of mathematicians from the time of Archimedes; and during the 16th century, Metius, Vieta, Adrian Romanus, and Van Ceulen, laboured by extending the approximative processes, to reduce the error within narrower limits. The diameter being supposed to be the unit, Romanus obtained an expression for the circumference in numbers consisting of seventeen decimals, and Van Ceulen computed one which differed from the truth only in the thirty-fifth decimal. It may be observed that the approximation has since been carried to a much greater extent by means of the well-known series for the value of a circular arc in terms of its tangent.

Van Ceulen published at Delft, in 1596, a tract on the circle, in Dutch; and a translation of it, in Latin, was published by Snellius in 1619, under the title 'De Circulo Adscripticio.' The method pursued in the investigation is described in this work; and though extraordinary labour must have been undergone in the performance of the arithmetical computations, it may be seen that this was not accompanied by any display of genius; since, beginning with the known chord and the sagitta of one-sixth of the circumference, the process consists in computing the lengths of the chords and tangents of the arcs formed by continual bisections. As a monument of patient industry the determination has great merit; and it may be presumed that the computer estimated his labour highly, for, according to Snellius, he requested that the numerical expression of the circumference of a circle might be inscribed on his tomb.

Besides the work which has been mentioned, Van Ceulen published two others, in Dutch, on mathematical subjects, both of which were also translated in Latin by Snellius, and published at Leyden in 1615, under the titles 'Fundamenta Arithmetica et Geometrica,' and 'Zetemata (seu problemata) Geometrica.' From these works it may be seen that the author possessed considerable skill in the management of algebraic quantities.

He died at Leyden in 1610, and was interred in the church of St. Peter in that city.

VANCOUVER, GEORGE, was born, according to the author of his Life in the 'Biographie Universelle,' about 1750, but probably some years later. Vancouver himself states, in the introduction to the narrative of his Voyage round the World, that he entered the navy in his thirteenth year; and John Vancouver, who edited the work, states that his brother's first appointment was to the Resolution, by Captain Cook, in 1771.

George Vancouver served as midshipman on Cook's second voyage (1772-1775); and on the third voyage, in which that great navigator lost his life (1776-1780). His name only occurs once in the history of these two voyages: Captain King mentions his having sent Mr. Vancouver to Captain Clerke for instructions the morning after the murder of Captain Cook. When Captain King was promoted from being first-lieutenant of the Resolution to be captain of the Discovery, Captain Gore permitted him to take with him "four midshipmen who had made themselves useful to me in astronomical calculations, and whose assistance was now particularly necessary, as we had no Ephemeris for the present year." Of this number it is almost certain that Vancouver must have been one, for of the six original midshipmen of the Resolution, the two eldest had by that time been promoted in consequence of the death of Captains Cook and Clerke. A better school for a seaman than the two principal voyages of so accurate a navigator and surveyor, so strict a disciplinarian as Cook, can scarcely be imagined. Captain King has borne testimony to the merits of the young officers in the expedition of 1776-80:—"The two ships never lost sight of each other for a day together, except twice; which was owing, the first time, to an accident that happened to the Discovery off the coast of Owlyhee; and the second, to the fogs we met at the entrance of Awatska Bay. A stronger proof cannot be given of the skill and vigilance of our subaltern officers, to whom this share of merit almost entirely belongs."

The Resolution and Discovery reached the Nore on the 4th of October 1780, and on the 9th of December following Vancouver was created a lieutenant and appointed to the Martin sloop. He continued on board this vessel until he was removed to the Fame, one of Lord Rodney's fleet in the West Indies, where he remained till the middle of the year 1783. In 1784 he was appointed to and sailed in the Europe to Jamaica, and remained at that station till the vessel returned to England, in September 1789.

When Vancouver arrived in England, he found that a voyage had been planned by the government for exploring the Southern regions. A vessel, named the Discovery, had been purchased for this service, and Captain Henry Roberts, who had served under Cook during his two last voyages, had been named to the command. Commodore (afterwards Admiral) Sir Alan Gardner, under whose flag Vancouver was then serving, recommended him to the Admiralty, and he was solicited by the board to accompany Captain Roberts. Having been intimate friends while on board Captain Cook's ship, the arrangement was agreeable to both officers. Towards the end of April the Discovery was nearly ready to proceed down the river, when intelligence arrived of depredations committed by the Spaniards on different branches of British commerce on the north-west coast of America. The equipment of the Discovery was suspended, and Vancouver removed his professional career under his old captain, Sir Alan Gardner.

The high prices obtained by the sailors of the Resolution and Discovery, at Canton, for the ill-selected, half-worn furs which they had brought with them from the north-west coast of America, had attracted a horde of adventurers to that region. Their loose observations, published by ignorant book and map compilers, had given currency to the most inaccurate and contradictory accounts of the coast. The discoveries of Cook had also stimulated the Spaniards to resume their long-suspended maritime activity. A survey of the north-west coast of America by Spanish officers of marine was commenced in 1775, and prosecuted with intermissions for several years with skill and dexterity. In April 1789, an attempt was made by some British subjects to establish themselves at Nootka: the attempt was unique to the Spanish officers engaged in the survey; the settlement was forcibly broken up, and some commanders of British merchantmen made prisoners, and their vessels and cargoes seized. The court of Spain yielded to the representations made by the British resident, and at last to a request a letter addressed to the Spanish commandant at Nootka, instructing him to deliver up possession of the country and buildings to the British officer by whom the letter should be delivered to him, was transmitted to the court of St. James's by Count Floride Blanca. The Discovery was appointed to be commanded by Chatham, an armed tender, destined to accompany her; and in March 1791, Vancouver was appointed to command these vessels on an expedition to the north-west coast of America. His instructions were, to receive the surrender of Nootka by the Spaniards; to make an accurate survey of the coast from the 30th degree of N. lat. northwards; and to inquire after any communications, by inlets, rivers, or lakes, between the coast and Canada. The summers of 1792-93 were allowed for the execution of the survey; the intervening winter was to be spent in completing the examination of the Sandwich Islands. After the completion of the survey, the vessels were to return to England by Cape Horn, and, if practicable, to examine the west coast of South America, from the south point of the island of Chiloe, supposed to be about 44° S. lat., in order to ascertain which was the most southern Spanish settlement, and what harbours there were south of that settlement.

Digitized by Google

The expedition sailed from Falmouth on the 1st of April 1791. The close of that year and the beginning of 1792 were occupied in an examination of the Sandwich Islands. On the 16th of March the vessels sailed for the coast of America, which they struck in 39° 27' N. lat. They ran down the coast, examining it minutely, to Nootka, where the frank and honourable conduct of Quadra, the Spanish commander, rendered the diplomatic part of Vancouver's commission easy and agreeable. From Nootka the expedition returned southward to San Francisco de Monterey, examining more in detail the various inlets along the coast. When the season during which the operations of the survey could be carried on with safety terminated, Vancouver returned to the Sandwich Islands. On the 29th of April he was again off the coast of America, near Cape Mendocino. He landed at Rocky Point (41° 2' N. lat.), discovered and taken possession of by the Spaniards in 1775. Thence he ran along the shore to Nootka, where the coast survey was resumed. Vancouver returned on the approach of winter to Owhyhee, and in 1793 again returned to the American coast, which he surveyed as far north as Cook's Inlet. Having concluded this operation, he, in compliance with his instructions, sailed along the coast of South America, visiting the principal Spanish settlements, and doubling Cape Horn, brought the Discovery into the Shannon on the 13th of September 1795. During the whole of these operations the most cordial assistance and frank communications were interchanged by Vancouver and the Spanish officers engaged in a simultaneous survey of the coast.

In 1794 Vancouver had without solicitation been promoted to the rank of post-captain. He was employed after the conclusion of his voyage, and from that time to his death, which took place May 10, 1798, he was incessantly busied preparing his journals for publication. Before his death, all the charts were completed, and the narrative printed and corrected as far as the 408th page of the third volume. The little that remained to be told was prepared for the press by his brother John. Of all the pupils of Cook, George Vancouver approached nearest to his master in accuracy and persevering energy. With the exception of sixteen months, and that a two years during which he was busy preparing his journals for the press, he was engaged in active service till his death. The greater part of his survey of the north-west coast of America was performed in boats. The arduous service undermined his constitution, and on his return to England it was apparent that his death must be a premature one. The same strict enforcement of discipline, and the same incessant care of the health and comfort of his crew, which characterised Cook, were also found in Vancouver.

VAN DALE, ANTON, a learned Dutchman, was born on the 8th of November 1638. He was the son of a merchant, and, in compliance with the wish of his parents, he engaged in mercantile occupations up to the thirtieth year of his age. But the desire of knowledge which he had felt ever since his childhood induced him to abandon commerce and devote himself to the study of theology and medicine. After the completion of his studies he took his degree of doctor of medicine; but, having no taste for practice, he officiated for several years as a preacher among the Mennonites, until he was appointed physician to the hospital at Haarlem, where he remained until his death, on the 28th of November 1708.

Notwithstanding his medical practice, Van Dale never abandoned his theological studies, and he also devoted a great deal of his leisure to the study of Greek and Roman antiquities. His works, which are all of a theological and antiquarian nature, show great learning and critical skill, but they are deficient in method and arrangement. They are all written in Latin, the language in which he wrote when he ceased to be of much use. The following were at the time regarded as the most important:—1, 'Dissertationes II. de Oraculis,' 4to, 1700; 2, 'De Origine at Progressu Idololatriæ et Superstitionum,' 4to, 1696; 3, 'Dissertatio super Aristea de Septuaginta Interpretibus,' 4to, 1705. Several other dissertations, as 'Super Sanchuniathone,' and nine 'Dissertationes Antiquitatibus et Marmoribus eum Romanis tum Græcis inservientes,' were published after his death (4to, 1712 and 1743).

VANDELLI, DOMINIC, an Italian physician, who paid much attention to the study of natural history. His earliest contributions to natural history was a dissertation on some insects and marine zoophytes, accompanied with drawings. This was published at Padua, where he probably graduated, with the title 'Dissertationes de Aponchernia, de nonnullis Insectis terrestribus, et Zoophytis marinis,' 4to, 1758. In 1761 he published an account of some of the Conferve found in the hot-springs of Padua. He visited South America, and remained in Brazil some time, and on his return was appointed superintendent of the botanic garden at Lisbon. In 1768 he published an account of the dragon-tree, and in 1771 a small work entitled 'Fasciculus Plantarum,' which he dedicated to Sir Joseph Banks. It was accompanied with four engravings of figures of plants. He also wrote against Haller, maintaining, in opposition to that distinguished anatomist, that the tendons and fibrous membranes generally possessed sensibility. This is said to have displeased Haller very much, who spoaks of Vandelli's labours very disparagingly. He also wrote some small papers on the actions of medicine and other subjects. He visited England at a very advanced age, in the year 1815, and died shortly after his return. He was a correspondent of Linnæus; and, at the suggestion of Browne, Linnæus named a genus of Scrophulariaceous plants, in honour of him, *Vandellia*. The species of this genus are West Indian plants, and one of them, the *V. pratensis*, is known in Cayenne by the name of Wild Basil, and is esteemed a powerful vulnerary.

VANDER HELST, BARTHOLOMEW, a celebrated Dutch portrait-painter, was born at Haarlem in 1613, or, according to the 'Museo Florentino,' in 1601. He was one of the best portrait-painters of his time, and was called by some Rembrandt or Vandyck. He excelled equally in the head and figure and in the accessories, which he painted with the fidelity of representation almost peculiar to the painters of his nation: he also coloured richly and drew well. He painted likewise small historical pieces, and had great skill in landscape-painting.

In the town-house of Amsterdam there is a large picture by Vander Helst, containing twenty-four full-length portraits of officers of the train-band of that place, which Sir Joshua Reynolds pronounced the finest picture in the town-house, and one of the best pictures of portraits in the world. He says, "This is perhaps the first picture of portraits in the world, comprehending more of those qualities which make a perfect portrait than any other I have ever seen: they are correctly drawn, both heads and figures, and well coloured; and have great variety of action, characters, and countenances, and those lively and truly expressing what they are intended for, that the spectator has nothing to wish for." This picture is dated 1648. There is a portrait by him of a Lady (No. 149) in the National Gallery. Vander Helst was still living in 1668: Pilkington and some others mention 1670 as the date of his death; Houbraken gives no date, and Nagler says the date of his death is unknown. Vander Helst left a son, according to Houbraken, who painted battle-pieces and landscapes, but he was very inferior to his father.

VANDER HEYDEN, JAN, a celebrated Dutch architectural painter, was born at Gorcum in 1637. He learnt originally of an obscure painter on glass, and commenced early without other instruction to paint pictures of old buildings, churches, palaces, and other architectural views. He is unrivalled for the representation of modern architecture: his pictures are remarkable for their elaborate finish and the faithful arrangement of their masses of light and shade; and yet, through their admirable perspective and harmony of colouring they have all the softness and truth of nature, and in this respect are superior to the works of Canaletto.

Sir Joshua Reynolds says that the works of Vander Heyden have "the effect of nature seen in a camera-obscura." There are several of his works in this country. In the collection of Sir Robert Peel there is a very small view, on wood, of a street in Cologne, with figures by A. Vandervelde, which was purchased for 415 guineas. There is also in the collection of Lord Ashburnham a small town view, on wood, with twenty figures by A. Vandervelde, which he paid for 600l. It was taken by the French, and was placed for some time in the Louvre, but was sent back to Holland at the general restoration of the works of art carried off by the French to their rightful owners. There is likewise in the Bridgewater Gallery an excellent specimen of the works of Vandar Heyden. A. Vandervelde painted figures in many of Vander Heydeu's pictures, and after that painter's death he was assisted by Lingelbach. One of his best pictures is a view of the town-house of Amsterdam: it is now in the Louvre. He painted also views of the Royal Exchange of London, and of the London Monument.

Vander Heyden was a mechanic as well as a painter, and he is said by some Dutch writers to have been the inventor of fire-engines. This is however not sufficiently attested; yet he is known to have been a skilful improver of those machines, both in their efficiency and portability. He published in 1690 a book in folio upon the subject, with illustrations drawn and etched by himself; and he was appointed by the authorities of Amsterdam to the office of director of the fire-engines of that city, with an annual salary. This appointment interfered with Vander Heyden's time for painting: he executed several good pictures after it notwithstanding. He died September 28, 1712.

VANDER MEER, JAN. There were apparently three Dutch painters of this name, but the accounts of them do not agree: some writers relate of only two artists what others relate of three.

JAN VANDER MEER, the old, was born at Rotterdam in 1627. He painted in various styles, but excelled chiefly, according to D'Argenville, in small landscapes with figures, and in sea-pieces, in which he displayed a perfect knowledge of the construction of ships. This statement however has been questioned, for Vander Meer painted historical pieces and portraits, and is said also to have painted some battle-pieces; and it is not probable that the same painter should practise in so many different lines. According to Houbraken, he visited Italy and spent some years in Rome. In 1664 he was dean of the guild of painters in Amsterdam, and was at one time in affluent circumstances: he purchased a picture of De Heem for 2000 florins, which eventually proved of great service to him. In 1672, when nearly all his property was either destroyed or stolen by the French at Utrecht, he presented this picture to the Prince of Orange, who gave him a situation under the government, and in 1674 created him a counsellor. The landscapes and other small pieces attributed to this

Digitized by Google

painter are executed in a light and free manner, but are too blue in the distances. According to Van Eynden and Vander Willigen, in their 'History of National Art,' Vander Meer painted only history and portrait. The date of his death is variously given from 1691 to 1711.

JAN VANDER MEER, the younger, a relation, and, according to some, the son of the preceding, was born in 1656. He was first instructed by the elder Vander Meer, and after his death he became the scholar of N. Berghem, in whose style he executed a few pictures, but he painted chiefly landscapes with sheep and goats. His landscapes are excellent, and in painting sheep, which predominate in his pictures, he has not been equalled by any of his countrymen: he seldom painted horses or cattle. He excelled also in making pen-and-ink drawings, which he shaded very skilfully with Indian ink. He etched likewise a few plates in a very masterly manner. He died in 1706, in great poverty, brought on by intemperate habits. Some of the pictures attributed to the elder Vander Meer have been most likely painted by the younger.

The supposed third artist of this name is by some writers called John, and by others Jacob; and the misfortune said to have happened to the elder Vander Meer at Utrecht is related of this artist, but the accounts are too discrepant to enable us to say decidedly whether there were three or only two artists of this name.

VANDERMEULEN, ANTONY FRANCIS, a celebrated Flemish landscape- and battle-painter, was born at Brussels in 1634. He was the scholar of Peter Snayers, and painted some good battles in the style of his master while still very young. Some of these pictures were seen by the French minister Colbert, who invited Vandermeulen to Paris, and held out such hopes to him that he was induced to leave his own country and settle in the French capital, where he was allowed a pension of 2000 francs by Louis XIV., besides being paid handsomely for his works. His pension was afterwards increased to 6000 francs.

Vandermeulen accompanied Louis XIV. to the Netherlands in some of his campaigns, and made drawings of all the fortified places visited by the king or his army, and of all the sieges, battles, and engagements in which he was successful. The pictures painted from these designs are highly valued both for their faithful representation of the localities and for their correct costume. He excelled also in horses, which he designed with great spirit. His execution was free and his colouring generally rich, but his landscapes are rather too green in tone: his handling is in the style of Van Uden and Wildens.

Vandermeulen's principal works, twenty-nine in number, were in the Château de Marly. There are now many of them in the Louvre and many others at Versailles. These pictures are mostly of a large size: they were dead-coloured from his designs by his scholars, Martin the elder, Baudouin, and Bonnart, but were all finished by himself. The best are views of Luxembourg and Fontainebleau, the Entrance of Louis XIV. into Arras, Ghent, and another city, and the Passage of the King over the Pont-Neuf.

Vandermeulen was a member of the highest class of the French Academy. He was the friend of Le Brun, and after the death of his first wife he married a niece of that painter, who by her uncle's will is said to have sent her husband prematurely to the grave. He died at Paris in 1690. Many of his pictures and designs have been engraved; the prints after his works amount to nearly one hundred and forty.

PETER VANDERMEULEN, the brother of Charles Anthony, painted some battles for William III. of England: he came to this country in 1670. He was originally a sculptor.

VANDERMONDE, a French mathematician and philosopher, was born in Paris in 1735, and during his childhood, his health being delicate, his father, a physician of eminence, caused him to be early taught to sing, in the hope that, by the exercise of his voice, his lungs might acquire strength.

When he was thirty years of age he was introduced to Fontaine, in whose society he felt so much pleasure that he became his pupil, and immediately applied all the powers of his mind to the study of mathematics. In this he appears to have succeeded so far, that on being recommended by his friend Dusejour to propose himself as a candidate for admission to the Académie des Sciences, he prepared a memoir on the resolution of algebraic equations, which he read at a sitting of that learned body in 1771. Having been elected, he subsequently presented several other memoirs on mathematical subjects: among these may be mentioned one entitled 'Recherches analytiques sur les Irrationelles d'une nouvelle espèce,' and another on the elimination of unknown quantities.

Vandermonde had always a decided taste for music, and during several years he made it a particular object of study. Having analysed the works of the best musicians of the time, he came to the conclusion that the whole art was founded on one general law, by which, with the aid of mathematical processes, it would be possible for any person to become a composer; and he explained the nature of his method before the Académie in 1788, and again in 1790. His two 'Mémoires' were submitted to the consideration of certain members who were appointed to examine them; and though a favourable report was made by Gluink, Philidor, and Piccini, the opinions were not unanimous; the mathematicians are said to have found in the 'Mémoires' too much music, and the musicians too much mathematics.

The versatility of his taste and talent led Vandermonde next to the study of chemistry; and becoming connected with Lavoisier, Monge, and Berthollet, he was engaged for a time in making experiments on the gases and on the composition of iron and steel.

After the death of Vaucanson, Vandermonde was appointed to the direction of a conservatory or museum for arts and manufactures which had been formed by that philosopher; and considering it as a collection which might be made highly useful to the country, he spared no pains or expense to augment it with models of all the different machines which he could procure. This was the original of the Conservatoire pour les Arts et Métiers, which was afterwards removed to the Abbaye St. Martin.

From a conversation with M. Senovert, the translator of Stewart's 'Philosophy of the Human Mind,' he was induced to study that branch of science; and applying himself to it with his usual ardour, he was soon above the level of his countrymen in his knowledge of that intricate subject. On the formation of the École Normale he was appointed in 1795 professor of political economy in that institution, and in the same year he was appointed to the first class of the Institut.

At the breaking out of the Revolution Vandermonde entered into the clubs which were then formed, purely, it is said, as a philosopher, that he might study the characters of the men who distinguished themselves in those turbulent times, and without taking any active part in the measure which were then put in practice.

He exhausted his private fortune in advancing the objects of the museum which had been committed to his care; and being paid, like other public functionaries, in assignats, the depreciation of these reduced him to poverty. He died of a vomiting of blood, on the 1st of January 1796.

His works consist only of the 'Mémoires,' which are printed in the volumes of the Académie des Sciences. His lively imagination seems to have carried him too rapidly from one subject to another to permit him to acquire a profound knowledge of any; and thus the reputation which he acquired during his life may be said to have terminated at his death, or to have survived only for a time in the memory of his friends.

VANDERVELDE, ADRIAN. This celebrated painter was born at Amsterdam in 1639, and showed great ability for drawing at an early age. He became the scholar of John Wynants, with whom he remained some years. Adrian Vandevelde excelled in landscapes, in cattle, and in small figures, and was of great assistance to many of the most distinguished painters of his time by embellishing their pictures with figures, and thus aiding greatly to their value. He painted figures in the pictures of Wynants, Vander Heyden, Ruysdael, Hobbema, Moucheron, and others. Vandervelde executed likewise some historical pieces, in which he was very successful; he painted a 'Taking down from the Cross' for a Roman Catholic church at Amsterdam, in which the figures, though less than life, were of a considerable size: and the same is said of other works of a similar description unfinished at his death in 1672, in only his thirty-third year. Considering the early age at which he died, his pictures are very numerous, yet they are sold for very high prices.

Adrian Vandervelde was well acquainted with the human figure, and also with everything else that he painted. He was extremely industrious, and was constant in his recourse to nature in the studies of all his works: the various effects of light upon the trees and other objects of his landscapes, both in the morning and evening scenes, are remarkably true to nature, and are managed with great mastery of his materials. He is distinguished also for the extreme delicacy of drawing of all the objects which he represented.

VANDERVELDE, or VANDEVELDE, WILLIAM, called the Old, a distinguish him from his son of the same name, a very celebrated marine painter, was born at Leyden in 1610. Of his early studies little is known, but he appears as a boy to have been bred to the sea; and it was during the voyages of his youth that he acquired his love for the sea and his knowledge of ships, which was eventually of such eminent service to him in his career as a marine painter. He distinguished himself early by some drawings of sea-fights, and he was in consequence commissioned by the States of Holland in 1666 to accompany Admiral de Ruyter on board the Dutch fleet, for the purpose of making designs of whatever engagements might take place between the Dutch and English fleets. He made some admirable drawings of the great engagement which took place off Ostend in June in that year. By these and other designs he acquired such a reputation that he was invited in 1675 to England by Charles II., who granted him a pension of 100*l.* per annum, with the title of painter of sea-fights to the king. He is said to have been so zealous in the service of Charles, as to be ungrateful to his country: he led the English fleet to burn Schelling.

Vandevelde did not paint his designs: they were generally executed with a pen on drawing paper for that purpose, upon parchment, or upon white prepared canvas; he also executed some in black and white: every part is drawn and made out with a knowledge and precision unrivalled in that style. Some of his designs were painted in oil by his son, who lived with him in this country, and received from the king also a pension of 100*l.* per annum for that express purpose. A copy of the following privy-seal was purchased among the papers of Pepys, and was given by Dr. Rawlinson, the antiquary, to Vertue, the engraver:—"Charles the Second, by the grace of God, &c., to our dear cousin, Prince Rupert, and the rest of our commissioners for executing the place of lord high-admiral of England, greeting. Whereas we

Digitized by Google

have thought fitt to allow the salary of one hundred pounds per annum unto William Vandevelde the elder, for taking and making draughts of sea-fights; and the like salary of one hundred pounds per annum unto William Vandevelde the younger, for putting the said draughts into colours for our particular use; our will and pleasure is, and wee do hereby authorise and require you to issue your orders for the present and future establishment of the said salaries to the aforesaid William Vandevelde the elder, and William Vandevelde the younger, to be paid unto them and either of them during our pleasure; and for so doing these our letters shall be your sufficient warrant and discharge. Given under our privy-seal at our pallace of Westminster, the 20th day of February, in the 26th year of our reign." After the death of Charles, James continued the pension.

Vandevelde witnessed many of the fights that he drew: he attended the engagement at Solebay in a small vessel by order of the Duke of York. He died in London, and was buried in St. James's Churchyard; the following inscription was engraved on his tombstone: "Mr. William Vandevelde, senior, late painter of sea-fights to their majesties king Charles II. and king James, dyed 1693."

VANDERVELDE or VANDEVELDE, WILLIAM, the Younger, was greatly superior to his father, and is accounted by connoisseurs the best marine-painter that ever lived; but in representing the grandeur of a stormy ocean he is very far inferior to Turner, and in truth of colour and transparency he is inferior also to Stanfield. William Vandevelde was born at Amsterdam in 1633, and was taught by his father until he came to England, where he was placed with Simon de Vlieger, a clever ship-painter. Young Vandevelde came early to this country, and lived probably with his father at Greenwich: he died on April 6, 1707. The works of the younger Vandevelde are very valuable: the best of them are in England. His calms and smaller pieces are equally excellent, and they are all remarkable for their delicacy of drawing and transparency of colouring. Walpole says of him, "William Vandevelde, the son, was the greatest man that has appeared in this branch of painting; the palm is not less disputed with Raffaelle for history, than with Vandevelde for sea-pieces." Six of the younger Vandevelde's pictures are in the National Gallery, 'A Calm at Sea,' and 'A Fresh Gale at Sea;' but they are of small size and little importance. The collection of the Earl of Ellesmere at Bridgwater-House is very rich in Vandevelde, containing 'The Entrance to the Brill;' 'A Calm;' 'A Fresh Breeze;' two 'Naval Battles;' a 'View of the Texel;' and the famous 'Rising of the Gale,' in competition with which—and as a companion to it—Turner painted his 'Gale at Sea,' which now hangs in the same gallery.

The younger Vandevelde had a brother Peter Anne, who also painted sea-pieces, and made good copies of the works of his father. He died in Holland. Both the Vandeveldes sat to Sir Godfrey Kneller.

VANDER WERFF, ADRIAN. This celebrated painter was born of a good family at Kralinger Ambacht near Rotterdam, in 1659. He studied first with Cornelius Picolett, a good portrait painter, but at the age of thirteen was placed with Eglon Vander Neer, with whom he remained four years, and made such progress as to render his master great assistance in his works. At the early age of seventeen Vander Werff set up for himself as a portrait painter at Rotterdam. He painted small portraits in oil, in the style of Netscher: he however soon got tired of this branch, and took to historical painting; and he was remarkably successful in disposing of his first pictures. Perhaps no painter ever rose more steadily to fortune than Vander Werff; every year added to his wealth and to his reputation. He painted a picture for an East India merchant of the name of Steen at Amsterdam, where he had been with his master Vander Neer, which was apparently the making of his fortune. It attracted the attention of and was purchased by the Elector John William of the Pfalz, when passing through Amsterdam; and when that prince was at Rotterdam in 1696, he visited Vander Werff, and ordered two pictures of him: his own portrait, for the grand-duke of Tuscany, and a Judgment of Solomon, which pictures he requested Vander Werff to bring to him in person to Düsseldorf, in the following year. Vander Werff took the pictures, and the elector was so well satisfied with them, that he wished to take the painter into his service, and offered him a noble salary: Vander Werff however consented to give up only six months in the year to the elector, and was allowed a salary of 4000 florins, but it was raised to 6000 upon his afterwards consenting to devote nine months in the year to the prince, who presented him with his portrait set in diamonds, accompanied with knighthood for him and his heirs. He purchased also at a high price the works which Vander Werff executed during the remaining three months of the year.

Vander Werff received very high prices for his pictures. After the death of the elector in 1716, he was at liberty to dispose of them to whom he pleased; and in the following year, 1717, he sold three to one nobleman for 10,000 florins, a Judgment of Paris for 5500 florins, a Holy Family for 2500 florins, and a Magdalen for 2000 florins. In the year after he sold another Judgment of Paris for 5000 florins, and a Flight into Egypt for 4000 florins: shortly afterwards he sold to an English gentleman ten pictures for 33,000 florins; and after his death, a painting of the Prodigal Son was sold for 5500 florins. He died November 12, 1722.

The pictures, or the greater part of them, painted by Vander Werff for the elector John William, which formed part of the Düsseldorf collection, are now in the Pinakothek at Munich, where there are twenty-nine paintings by Vander Werff, including the Fifteen Mysteries of the Roman Church, and many of his best pieces. The Ecce Homo, containing many small figures, painted in 1698; Abraham with Sarah and Hagar, painted in 1699; and a Magdalen in the Wilderness, painted in 1707; are remarkable works, equally excellent in composition, drawing, colouring and execution, and are perhaps almost unequalled for their delicate and elaborate finish; yet through an artificial chiaroscuro they have a cold and inanimate effect, which greatly detracts from the gratification the spectator might be expected to experience in contemplating such exquisite works of art. Sir Joshua Reynolds saw most of these pictures at Düsseldorf before the collection at that place was purchased by the late king of Bavaria, and in his 'Journey to Flanders and Holland' he has made some remarks on these pictures, which define admirably the beauties and defects of this painter. He says: "His pictures, whether great or small, certainly afford but little pleasure. Of their want of effect it is worth a painter's while to inquire into the cause. One of the principal causes appears to me, his having entertained an opinion that the light of a picture ought to be thrown solely on the figures, and little or none on the ground or sky. This gives great coldness to the effect, and is so contrary to nature and the practice of those painters with whose works he was surrounded, that we cannot help wondering how he fell into this mistake. In describing Vanderwerff's manner, were I to say that all the parts everywhere melt into each other, it might naturally be supposed that the effect would be a high degree of softness; but it is notoriously the contrary, and I think for the reason that has been given; his flesh has the appearance of ivory or plaster, without any of that transparency in the shadows that constitutes likewise to give this hardness, is a want of transparency in his colouring, from his admitting little or no reflection of light. He has also the defect which is often found in Rembrandt, that of making his light only a spot."

JAN VAN DER WEYDEN, ROGER, the elder, a celebrated early Flemish painter, whom recent researches have identified with Rogelet of Bruges, the *Ruggieri da Bruggia* of Vasari, and *Rogerius Gallicus* of Facius. He was born about 1390, and was a scholar of Jan Van Eyck, whose new method of oil painting he introduced into Italy. Jan van der Weyden practised both in distemper and oil, and is said to have been the first to substitute linen cloth for panel to paint on. By 1430 he had acquired so high a reputation that Pope Martin V. presented an altar-piece by him to Juan II. of Spain. In 1436 he was appointed painter to the city of Brussels. He visited Italy in 1449, painted an altar-piece for Lionel d'Este of Ferrara, and visited at the Jubilee in Rome in 1450, and, according to Wautera, afterwards went to Paris and painted there the picture now in the Palais de Justice, attributed to Van Eyck. He died at Brussels June 16, 1464, and was buried in the church of St. Gudule. Van der Weyden was the best of Van Eyck's scholars, and his influence was strong in forming the Flemish school; but his drawing is often meagre, and as a colourist he is much inferior to his master. The museums of Antwerp, Berlin, and Munich possess some of his best works. In the National Gallery is a "Deposition" (No. 664) by him.

VAN DER WEYDEN, ROGER, the younger, the son, or more likely grandson, of the preceding, was born about the middle of the 15th century. Nothing trustworthy is known of his life, except that he was admitted a master of the Antwerp Guild in 1528, and died in that city, of the sweating sickness, in April 1529. His style is formed on that of the elder Van der Weyden, and though less vigorous shows more feeling and refinement. The National Gallery possesses by him, 'Portraits of Himself and Wife;' 'the Magdalen;' 'Her Dolorosa;' and 'Ecce Homo.'

VANDYCK, SIR ANTONY. This great painter was born at Antwerp, March 22nd 1599. His father was a glass-painter of Hertogenbasch (Bois-le-Duc), and gave his son his earliest instruction in drawing: he was instructed also by his mother, who painted landscapes, and was very skilful in embroidery. Before he became the scholar of Rubens, Vandyck is said to have been placed with Van Balen. With Rubens he made such progress as to be soon intrusted with the execution of some of his master's sketches, and, according to a common but probably incorrect report, to excite his jealousy. Rubens has had the credit of having been actuated by jealousy when he advised Vandyck to confine himself to portrait painting, and to visit Italy for the purpose of studying the works of Titian and other great Italian masters. Walpole attributes a more malicious motive: he supposes that Vandyck felt the hopelessness of surpassing or even equalling his great master in his own line, and that he voluntarily devoted his chief attention to portrait. If Rubens recommended Vandyck to visit Italy, it was clearly to his own benefit, and his following that advice clearly shows that he saw fully the advantages to be derived from such a visit, of which Rubens himself was an excellent example. The immediate cause of Rubens's reputed jealousy of his scholar is accounted for by a variously told anecdote. Diepenbeck, another of Rubens's scholars, is said to have been pushed by one of his companions against the great picture of the Descent from the Cross, upon a part that was still wet, and to have done it considerable damage, which was however so well repaired by Vandyck, that Rubens is reported to have been at first better pleased with that part

Digitized by Google

of the picture after the accident than before it; but upon the circumstance being related to him, to have become jealous of Vandyck, and to have repainted the part again himself. Another version of the story says that this accident increased his esteem for Vandyck. Whatever may be the real statement of the case, Rubens and Vandyck appear to have parted on the best of terms. Vandyck presented Rubens with two historical pictures, an Ecce Homo and Christ in the Garden of Olives, and a portrait of Rubens's second wife: he was presented in return by Rubens with one of his most beautiful horses.

In the year 1623 Vandyck set out for Italy, but delayed some time at Brussels, fascinated by the charms of a peasant girl of Savelthem, who persuaded him to paint two pictures for the church of her native place—a St. Martin on horseback, painted from himself and the horse given him by Rubens; and a Holy Family, for which the girl and her parents were models. In Italy he spent some time at Venice and Genoa, where he painted many excellent portraits. From Genoa he went to Rome, where he was also much patronised, and lived in great style. A portrait of Cardinal Bentivoglio, painted at this time, is one of his masterpieces: it is in the Pitti Palace, and hangs near the celebrated portrait of Leo X. by Raffaelle, and is in every respect an admirable picture. Vandyck was known in Rome as the Pittore Cavalieresco. He avoided the society of his countrymen, who were men of low and intemperate habits. They had formed themselves into a well-known society called the Schilder-Bent, and annoyed Vandyck so much that he was obliged to leave Rome and return to Genoa about 1625. Germana were also admitted into this society: it was not broken up until the year 1720. Whilst at Genoa Vandyck received an invitation to go to Palermo, which he went, and he painted the fine portraits of Prince Philibert of Savoy, the viceroy, and other distinguished persons; also the celebrated painter Sophonisba Anguisciola, then in her 92nd year. He remained only a short time in Sicily, being driven away by the plague. He returned to Genoa, and thence to his own country.

Vandyck's first picture after his return to Antwerp was a St. Augustin, for the church of the Augustines in that place, by which he established his reputation as one of the first painters of his time, and it was followed by his still more celebrated picture of the Crucifixion painted for the church of St. Michael at Ghent. He painted several other excellent historical pictures, but acquired greater fame by his portraits. He was in high favour with his old master Rubens, who is said to have offered him his eldest daughter in marriage, but Vandyck declined upon the plea that he intended to return shortly to Rome, or really, as some say, because he was in love with the step-mother. From Antwerp Vandyck went to the Hague by the invitation of the prince of Orange, Frederick of Nassau, and painted many portraits of the principal personages at that court. Whilst at the Hague the death of the great love of the arts of Charles I., and he came to England with the hope of being introduced to the king. His hopes not being realised, he went to Paris, and not being more successful in that place, he returned to his own country. Charles however, having shortly afterwards seen the portrait of the musician Nicolas Lanière, director of the music of the king's chapel, requested Sir Kenelm Digby, who had sat to Vandyck, to invite him to come again to England. He came to England about 1632; was lodged by the king at Blackfriars; was knighted in that year following, and in 1633 the king not only granted an annual pension of 200*l.* for life, with the title of painter to his majesty, besides being handsomely paid for his works. There is a note in Walpole of a sum of 280*l.* paid to Vandyck by the king, for various pictures in 1632. For a single whole length the king paid 25*l.*, but other people appear to have paid more. Walpole says, "Vandyck had 40*l.* for a half, and 60*l.* for a whole length; a more rational proportion than that of our present painters, who receive an equal price for the most insignificant part of the picture."

Vandyck was indefatigable in his application; he painted a portrait in a day. He often detained people who sat to him to dinner, that he might have an opportunity of studying their countenances, and he retouched their portraits again in the afternoon. He kept a great table, and was of most expensive habits; he was also fond of music, and was liberal to musicians. In the summer he lived at Eltham in Kent. Buckeridge, in his 'Essay towards an English School,' speaking of Vandyck, says, "He always went magnificently dressed, had a numerous and gallant equipage, and kept so good a table in his apartment, that few princes were more splendid or better served." This luxurious and sedentary life destroyed his constitution and wasted his means. He endeavoured to repair his fortunes by the absurd study of alchemy and the search of the philosopher's stone: a pursuit in which he was probably assisted, says Walpole, by the same person as his friend Sir Kenelm Digby. Shortly before he died, the king bestowed on Vandyck, for a wife, Mary, grand-daughter of the unfortunate Ruthven, earl of Gowry. Not long after they were married, he went with his wife to Paris, "in hopes," says Walpole, "of being employed in some public work;" but after remaining there for a short time, and seeing no prospects of success, he returned to London, and, still bent upon executing some public work, he proposed to the king, by Sir Kenelm Digby, to paint the walls of the banqueting-house at Whitehall with the history and procession of the Order of the Garter. He made a design, with which the king is said to have been pleased, but he demanded such a large sum for the carrying it into execution (80,000*l.*, probably a misprint for 8000*l.*), that it was judged unreasonable; and whilst the king was treating with him for a less sum, the project was put an end to by the death of Vandyck: he died in London, on the 9th of December 1641; and was buried in St. Paul's Cathedral, near the tomb of John of Gaunt. He left one daughter by his wife Mary Ruthven, who married Mr. Stepney, who rode in the horse-guards on their first establishment by Charles II. Not withstanding his expensive habits, he died worth about 20,000*l.*

Vandyck is generally allowed to dispute the palm with Titian in portrait painting, and he is by some accounted upon the whole superior to him. He was inferior to Titian in richness and warmth of colouring, but surpassed him in perhaps every other respect. Vandyck is unrivalled for the delicacy of drawing and beauty of his hands; he was perfect master of drawing and of chiaroscuro; he was admirable in draperies; and with simplicity of expression and grace of attitude, he combined both dignity and individuality. His portraits generally impress us with the feeling that he has not only selected the most suitable attitude for the figure, but that he has also chosen the best view of the countenance. His latest works are executed in a careless though masterly manner, but some of his earliest portraits, particularly some of those painted in Italy, combine with his own masterly style of design the exquisite finish of Holbein.

Although Vandyck has acquired his great name by his portraits, he painted also many excellent historical pieces, and he never at any time ceased to paint pictures in this line; they are however very inferior to his portraits: they want generally both feeling and expression. His best historical picture, in the opinion of Sir Joshua Reynolds, is the Martyrdom of St. Stephen between the Pillars of Heaven, at the Recollets at Mechlin, of which he says, "This perhaps is the most capital of all his works, in respect to the variety and extensiveness of the design, and the judicious disposition of the whole. In the efforts which the thieves make to disengage themselves from the cross, he has successfully encountered the difficulty of the art; and the expression of grief and resignation in the Virgin is admirable. This picture, upon the whole, may be considered as one of the first pictures in the world, and gives the highest idea of Vandyck's powers: it shows that he had really a genius for history-painting, if it had not been taken off by portraits."

Vandyck's pictures are very numerous, almost as much so as those of Rubens. Many of the best of them are in this country, at Windsor Castle, at Hampton Court, at Wilton House, and at Blenheim, and in many other private collections. His masterpiece, in the opinion of Walpole, is the dramatic portrait of the Earl of Strafford and his secretary Sir Thomas Mainwaring, at Wentworth House. There is one also at Blenheim of this subject, which Dr. Waagen praises very highly, but which Walpole however says that the picture at Wentworth House is infinitely superior to it. At Wilton House there are twenty-five pictures by Vandyck, and it is here, says Walpole, that Vandyck is upon his throne; and the great portrait of Philip, earl of Pembroke, with his family, says the same writer, "though damaged, would serve alone as a school of this master." Charles I. was painted several times by Vandyck, sometimes on horseback, and he repeated some of the portraits of him: they are among his best works. Among his more interesting works also is the series of portraits of the most eminent artists and scholars his contemporaries at Antwerp, painted in small in chiaroscuro, before he left Antwerp for the Hague. The originals were never collected, but they were etched and have been published together, to the number of one hundred, three times, under the following titles—*Imagines Virorum doctorum, pictorum, chalcographorum, &c. numero centum, ab Antonio Vandyck pictore ad vivum expressæ et ejus sumptu æri incisæ Antverpiæ.* Vandyck etched some of the plates himself.

The superb head of Gevartius, as it is called, in the National Gallery in Dulwich, attributed to Vandyck, is supposed by some critics to have been painted by Rubens. Passavant and Dr. Waagen are both of this opinion, but they think that the rest of the picture is the work of Vandyck. Dr. Waagen has observed that this picture cannot be the portrait of Caspar Gevartius, the friend of Rubens, for he was not born until 1593, and it represents a man between 50 and 60; and that if it represents the canon John Gevartius, it cannot have been painted by Vandyck, for he died in 1623, whilst Vandyck was in Italy; nor can it have been painted by him before he went to Italy, for it is not the production of a young hand. It is clear from the print by P. Pontius that it is the head of Cornelis Van der Geest. There are four other works by Vandyck in the National Gallery—A 'Portrait of Rubens,' 'The Emperor Theodosius refused Admission into the Church by St. Ambrose,' which is little more than a free copy of the picture by Rubens in the Imperial Gallery at Vienna; a similar study of Rubens's 'Miraculous Draught of Fishes;' and a 'Study of Horses.'

VANE, SIR HENRY, the Younger, was born about the year 1612. He was descended from an ancient family in the county of Kent, and was the eldest son of Sir Henry Vane of Hadlow in Kent, knight,

Digitized by Google

comptroller of the household and secretary of state to King Charles I. He received the first part of his education at Westminster School. About the sixteenth year of his age Sir Henry Vane became a gentleman commoner of Magdalen Hall, Oxford; but Wood says, that when he should have matriculated as a member of the university, and taken the oaths of allegiance and supremacy, he quitted his gown, put on a cloak, and studied notwithstanding for some time in that hall. On leaving Oxford he spent some time in France, and more in Geneva, where he contracted an unconquerable aversion towards the government and liturgy of the Church of England. After his return home, his father, being then comptroller of the household and a privy councillor, was greatly displeased on discovering the heterodox state of his son's opinions. The interference of his father in the work of recalling him to the doctrines of the Church of England produced the effect of confirming him in his sectarianism. In 1635 he went, for conscience sake, to the infant colony of New England, where he remained about two years. On his return to England he married; and, through his father's interest, was joined with Sir William Russell in the office of treasurer of the navy. In 1640 he was knighted. He sat for the borough of Kingston-upon-Hull in the parliament which met at Westminster, April 13, 1640, and again in the Long Parliament, which began November 3, the same year. During Strafford's trial young Vane, in searching for some papers for his father, found in his father's cabinet some notes, which were used as material evidence against Strafford on the trial. Having been appointed sole treasurer of the navy, and considering the loss, which by reason of the war amounted to nearly 30,000*l.* a year, as too much for a private subject, he gave up his patent, which he had for life from Charles I., to the parliament, only desiring that 2000*l.* a year should go to a deputy whom he had hired to the business. When the Independents sprung up, he declared himself one of their leaders. He did not approve of the force put upon the parliament by the army, nor of the king's execution, withdrawing for some time for public affairs.

Upon the establishment of the Commonwealth, in February 1648-49, he was appointed one of the council of state; and in 1652 he was for a time president of the same council, and also at the same time one of the commissioners of the navy. On the 9th of January 1649-50, he made the Report to the House of Commons from the Committee appointed to consider the most proper settling future Parliaments. Towards the end of 1651 he was nominated one of the commissioners that were to be sent into Scotland in order to introduce the English government there.

Vane was one of those who would not submit to the usurpation of Cromwell. When Lieutenant-Colonel Worsley entered the House of Commons, on the 20th of April 1653, with two files of musqueteers, to drive out the Commons, Vane exclaimed, "This is not honest! yea, it is against morality and common honesty:" whereupon Cromwell fell a railing at him, crying out with a loud voice, "O, Sir Henry Vane! Sir Henry Vane! the Lord deliver me from Sir Henry Vane!" In 1656, as Vane persevered in his hostility to Cromwell's government —which hostility he displayed in a book published by him, entitled 'A Healing Question propounded and resolved'—he was imprisoned for some time in Carisbrook Castle in the Isle of Wight. But, notwithstanding this and other means to shake his resolution, he remained inflexible both under Oliver and his son and successor Richard.

After Richard's abdication the Long Parliament, which had been restored by a general council of the army, was reconstituted; and Sir Henry one of the Committee of Safety, and also a member, and afterwards president, of the council of state. But he afterwards seems to have fallen under the displeasure of the parliament, for it was voted that he should repair to his house at Raby, and remain there during the pleasure of the parliament.

On the king's restoration, the House of Commons resolved, on the 11th of June 1660, that Sir H. Vane should be one of the twenty persons to be excepted out of the Act of General Pardon and Oblivion, for and in respect only of such pains, penalties, and forfeitures to attend extending to life, as should be thought fit to be inflicted on him. In July he was committed to the Tower. In January 1660-61 an insurrection of the Fifth-Monarchy Men broke out, and Sir Henry Vane, being almost the only person of station who had countenanced them, was removed from one prison to another, and at last to the Isle of Scilly. In August 1660 the Lords and Commons had joined in a petition to the king, that "if he were attainted, yet execution as to his life might be remitted," to which his majesty returned a favourable answer. But in July 1661 the Commons had so far altered their sentiments as to order that he should be proceeded against according to law, and for that purpose be sent for back to the Tower of London.

On Monday the 2nd of June 1662, Vane was arraigned, having been indicted of high treason before the Middlesex grand jury the preceding term. He pressed much for counsel, and the court assured him that after pleading counsel should be assigned him; which assurance, after his pleading *not guilty*, we are informed the court thought fit to violate. On Friday the 6th of June, the attorney-general having addressed the jury, Sir Henry was required to make his defence, and to go through with his case all at once, and not to reply again upon the crown lawyers. Vane spoke in his defence with great spirit and courage. After he had finished, Finch, the solicitor-general, addressed the jury, who, having then retired for about half an hour, returned with their verdict, which found the prisoner guilty of high treason from the 30th of January 1648 (the day of Charles I.'s execution). On the 11th of June, the sentence-day, the court finally refused to hear his reasons for an arrest of judgment, though they had promised him, before the verdict, that they would hear anything of that kind he had to offer; as they had also, before his pleading *not guilty*, promised him counsel. The sentence was, that he should be hanged, drawn, and quartered, at Tyburn; but in the order for his execution the manner of his death was altered into a beheading only on Tower Hill, which order was accordingly carried into execution on the 14th of June.

Sir Henry Vane left only one son, who was knighted by King Charles II., and created, by King William, Lord Barnard of Barnard Castle.

Sir Henry Vane was the author of various publications, both political and theological. Of the latter, the most remarkable bears the following strange title:—'The Retired Man's Meditations, or the Mysteric and Power of Godlines shining forth in the Living Word, to the unmasking the Mysterie of Iniquity in the most Refined and Purest Forms. In which Old Light is restored, and New Light manifested, being the Witness which is given to this Age. By Henry Vane, Knight,' 4to, 1655, in which, amongst other subjects equally dark, he discusses the "creation, nature, and ministry of angels," "the tree of knowledge of good and evil," the "fall of man," and "the thousand years' reign of Christ;" which last discussion, though it might be supposed to be the Fifth Monarchy Man's strong subject, we found the most unintelligible of the whole.

VAN EFFEN, JUSTUS, a writer who has been called the Addison of Holland, was born at Utrecht in 1684, and was intended by his father for the same profession as his own, namely, the military service. But Justus felt no inclination for military service, and finally, and applied himself to that of jurisprudence, in which faculty he obtained a Doctor's degree at Leyden in 1727. He does not however appear to have practised law much as a profession; for he was at first successively employed as private teacher in several families of rank, and afterwards occupied in literary pursuits. In the first-mentioned capacity he was brought into contact with superior society, and had the opportunity of forming advantageous connections, owing to one of which he was appointed to accompany Van Duivenvoorde as his secretary when he was sent, by the States, in 1714, to congratulate George I. on his accession. He afterwards visited England a second time in 1727, in the quality of first secretary to Count Van Welderen, who was then ambassador to this country. On the former of these occasions he became acquainted with Steele, writing, and translated his 'Tals of a Tub,' not however into Dutch, but into French, which language he wrote as easily as his own, under the title of 'Conte du Tonneau.' On the other, he was elected a member of the Royal Society of London. In 1719 he visited Sweden, in company with a German nobleman, and there received many marks of attention from the highest persons at court. A place of some emolument was bestowed upon him by his patron Van Welderen; but as its duties did not accord with his inclination, he put in a substitute, to whom he gave a considerable part of the salary, and occupied himself with his pen, not only more congenially, but so successfully as to acquire a high literary reputation.

Many years before (1711) he had published a French work, under the title of 'Le Misanthrope,' upon the plan of our British 'Spectator,' and he now commenced a similar one, but every way superior to the former. The 'Hollandsche Spectator,' begun in 1731, and continued till 1735, the year of the author's death, was not only the first attempt of the kind in the language, but has become a classical work. It is stamped with very easy elegance of style, by pleasantry and wit, tempered by judgment and correct feeling. Like his English model, Van Effen both instructs and pleases; and if time has deprived their pictures of life and manners of the charm of freshness, it has also imparted to them no little historic value. He died September 15, 1735.

(Van Kampen, *Beknopte Geschiedenis van der Letteren en Wetenschappen in de Nederlanden.*)

VAN HELMONT, SEGRES JACOB, a Flemish historical painter, was born at Antwerp in 1663. He was the son of Matthew Van Helmont, a painter of Brussels, and was instructed in his art by his father: he followed however a very different line. The father painted markets, fairs, shops, alchemists at work, and similar scenes; the son distinguished himself for religious compositions in the great style. The younger Van Helmont settled at Brussels: he was of a weak constitution, and never left his own country. He excelled in composition and in colouring, and was considered one of the best Flemish painters of his time. He painted many works for the churches and for private persons at Brussels. Descamps has enumerated many of his works. The Triumph of Elijah over the Priests of Baal, in the church of the Carmelites; the Martyrdom of St. Barbara, in St. Mary Magdalen; and the Triumph of David, in St. Michael's church, at Brussels, are considered his masterpieces. He died at Brussels August 21, 1726, aged forty-three.

VAN HELMONT. [HELMONT, VAN.]

VAN HOECK, JAN, a distinguished Flemish painter, was born at Antwerp about 1600. He first studied for one of the learned professions, but became the pupil of Rubens, and studied afterwards some time in Rome. While in Italy he was invited by the emperor Ferdinand II. to his court, and was much employed by him. He eventually returned to his own country, where he died, according to Houbraken, in 1650.

Van Hoeck was admirable in history and portrait, and excelled both in light and shade and colour; his figures also are better drawn than is the case with those of the pupils of Rubens and the Flemish school generally. The 'Christ on the Cross' in the church of Saint Sauveur, or the cathedral, at Bruges, is one of the finest pictures in Belgium. The Christ, which is of the size of life, has extraordinary effect and reality, and is certainly superior to the celebrated Christ of the church of St. Michael at Ghent, by Vandyck, and it is more real and impressive than any of those of Rubens: beneath the cross are the Virgin and other saints. There is a print of it by the younger Cornelius Galle; this engraver however is not very accurate in his drawing. Independent of the Christ, the composition of the picture is meagre and formal, and wants dramatic truth.

VANINI, LUCILIO, was born at Taurosano, in the province of Otranto, in 1585. He studied at Naples, Rome, and Padua, and applied himself especially to metaphysics. He afterwards travelled about Germany, France, and England. He was of a sceptical turn of mind, but seems to have had a leaning towards astrology. Cardano and Pomponazzi were his favourite authors. He was fond of religious polemics, a perilous vocation in that age. He says himself that he held disputations in England in favour of the Roman Catholic faith, and was imprisoned forty-nine days for it. Returning to Italy, he taught philosophy at Genoa; but perceiving that his orthodoxy was suspected, he went to France, where he published a curious work, the title of which alone gives some insight into the state of his mind—'Amphitheatrum æternæ Providentiæ Divino-magicum, Christiano-physicum, nec non Astrologo-catholicum, adversus veteres Philosophos, Atheos, Epicæos, Peripateticos, et Stoicos.' Lyon, 1615. His next work was 'De admirandis Naturæ, Reginæ Deæque mortalium, Arcanis,' Paris, 1616. This work raised a storm against the author, because it was considered as savouring of pantheism. The Sorbonne condemned the book to the flames. In the mean time Vanini was offering his services to the Papal nuncio Ubaldini at Paris, to write a defence of the Council of Trent. In 1617 he left Paris for Toulouse, where some time after he was arrested by order of the parliament of that city; and in February 1619 he was condemned to be burnt as a professed atheist. The president of the parliament, De Grammont, wrote an account of his examination, which is given at length by Brucker, in his 'History of Philosophy,' and by Niceron, in his 'Mémoires des Hommes Illustres,' from which it appears that Vanini died making a profession of atheism. But several Roman Catholic writers, among others Tommaso Rubieri, in his 'Notizie del Matematici e Filosofi Napoliani,' have defended Vanini against the charge of atheism. He was burned February 19, 1619.

VANLOO, JEAN BAPTISTE, originally of a noble family of Ecluse in Flanders, which had long numbered painters among its members, was born at Aix in Provence, in 1684. His grandfather Jacques was a clever portrait painter, and his father Louis Vanloo excelled in design and was a good fresco painter: he was educated in Paris in the French Academy, but settled at Aix in Provence in 1683. His two sons, Jean Baptiste and Charles André, both became eminent painters.

Jean Baptiste was instructed by his father, who taught him to draw when he was still a child: he set him to copy pictures by the old masters, and young Vanloo is said to have made a good copy when he was only eight years old. Jean Baptiste painted portraits and history, and first practised at Nice and Toulon, where he married the daughter of an advocate. He was obliged to leave Toulon in 1707, when it was besieged by Victor, duke of Savoy, afterwards called king of Sardinia, and he returned to Aix, where he remained five years, during which time he painted many portraits and several religious pieces. In 1712 he returned to Nice, and his father dying shortly afterwards he finished the works which his father had left incomplete. He then went to Genoa and to Turin, where he was noticed by the duke of Savoy, whose family he painted as well as a portrait of the duke himself. He became acquainted at Turin also with the duke's son-in-law the Prince of Carignano, who took Vanloo into his service and sent him to Rome, where he became the scholar of Benedetto Luti. In 1719 Vanloo was lodged by his patron the Prince of Carignano in his hotel at Paris. On his return from Rome, Vanloo visited Turin and painted some pictures for the king of Sardinia, who would have retained him in his service but for his engagement with the Prince of Carignano. He soon acquired a great reputation in Paris, and was in great favour with the regent, the duke of Orleans, for whom he repaired in distemper the five cartoons by Julio Romano of the Loves of Jupiter, and also the frescoes of Niccolo Abati from the designs of Primaticcio at Fontainebleau. In the latter he was assisted by his brother Charles André. These works and the gallery containing them were destroyed in 1738 to make room for a new building.

In portrait Vanloo had few rivals in Paris. He painted Louis XV. and the queen of France; also the king Stanislaus Leczinski and his queen. Yet although he was so much occupied with portraits, he applied himself constantly to historical pieces, some of which gained him great credit. In 1731 he was made a member of the Academy, and in 1735 he was appointed professor. He painted a picture of Diana and Endymion for his reception into the Academy. Notwithstanding Vanloo's great success, a large family and an unsuccessful speculation (he lost 40,000 francs in the Mississippi scheme) rendered constant exertion necessary. He came, in 1738, with two of his sons to London, with a view of trying his fortune in this country, and he met with great success. His first works in London were portraits of Colley Cibber and Owen Mac Swiney, "whose long silver beards," says Walpole, "were extremely picturesque, and contributed to give the new painter reputation." He continues—"Vanloo soon bore away the chief business of London from every other painter. His likenesses were very strong, but not favourable, and his heads coloured with force. He executed very little of the rest of his pictures, the draperies of which were supplied by Van Aken and Vanloo's own disciples Eccardt and Root. However Vanloo certainly introduced a better style; his pictures were thoroughly finished, natural, and no partyangeled. He was laborious, and demanded five sittings from each person. But he soon left the palm to be again contended for by his rivals. He laboured under a complication of distempers, and being advised to try the air of his own country, Provence, he retired thither in October 1742, and died there in April 1746." French authorities say he died at Aix, September 19, 1745.

Vanloo had an extraordinary facility of execution; he painted three well-finished heads in a single day. His colouring was rich and his drawing was correct. He had five sons, two of whom became distinguished painters, Louis Michel, painter to Philip V., king of Spain; and Charles Amadée Philippe, painter to Frederic the Great of Prussia.

Vanloo's historical pieces are numerous: 'Christ entering into Jerusalem,' at St. Martin des Champs; and 'St. Peter delivered from Prison,' at St. Germain des Près, in Paris, are his best works.

VANLOO, CHARLES ANDRÉ, knight of the Order of St. Michael and director of the French Academy of Painting at Paris, the younger brother of Jean Baptiste Vanloo, was born at Nice in 1705. He learned painting and sculpture when a boy at Rome; he was instructed and assisted by his brother and by Benedetto Luti, and in sculpture by Le Gros. His brother took him with him to Paris in 1719, and he commenced his career as a decorative painter in the great Operahouse, but he soon forsook this branch for portrait painting. In 1723, when only eighteen, he gained the first medal for drawing at the Academy, and in 1724 the first prize for painting. In 1727 he went again to Rome, and gained one of the prizes of the Academy of St. Luke: he also distinguished himself by a picture of the 'Apotheosis of St. Isidore,' and two or three other works, which attracted the notice of Cardinal Fleury, Religious, French minister in the court of Rome, who procured him a pension from the French king; and in 1729 he was honoured with the title of Cavaliere by the pope.

On his return to Paris he delayed some time at Turin, where he painted eleven pictures from Tasso's 'Jerusalem Delivered,' for the king of Sardinia; and he married there the celebrated singer Christine Sommis, with whom he arrived at Paris in 1734. Dandre Bardon, who wrote a Life of Charles Vanloo, says that Madam Vanloo was the first singer who excited the admiration of the French for Italian music. In 1735 Vanloo was admitted a member of the Academy; he painted as his reception picture Marsyas flayed by Apollo, which is one of his best works. Frederic the Great of Prussia wished him to enter into his service, and offered him a pension of 3000 dollars (450*l.*) and double payment for his works; Vanloo however declined, but recommended his nephew Charles Amadée Philippe to Frederic, who was appointed the king's painter. Vanloo himself painted for the king a picture of the Sacrifice of Iphigenia.

In 1751 Vanloo was presented by Louis XV. with the Order of St. Michael; and in the same year was made director of the Academy: in 1762 he was appointed principal painter to the king. He died in Paris July 15, 1765.

Charles André Vanloo was considered by the admirers of the old French school the last of the great historical painters of France. He was an easy and a rapid draughtsman; free and vigorous in colouring, and had a masterly execution: he was however rather poor in invention. He was very fastidious, and he often destroyed some of his best pieces. He was a man of singular temper; he went every night to the theatres, but generally to the Italian comedy, yet he always rose early. Diderot ('Essai sur la Peinture') says that Vanloo could neither read nor write.

VANMANDER, CAREL, or CHARLES, a painter, poet, and biographer, born at Meulebeke near Courtray, in 1548, was descended of an old noble family of West Flanders. Members of his family had held high offices in church and state as early as the thirteenth century: his father was a landowner and farmed likewise some government estates. Vanmander showed great ability for both poetry and painting when very young, and he was placed at an early age with Lucas de Heere at Ghent, likewise a poet and painter. He studied

Digitized by Google

painting afterwards with Peter Vlerick at Courtray; and in 1569 he returned home. He spent five years in his native place, devoting much of his time to poetry and dramatic representations, and he superintended a theatre at home, of which he was poet, painter, and manager, and which he made extremely popular. He painted also some altar-pieces and a few other pictures. In 1574 he set out for Rome. In Rome Vanmander became acquainted with Spranger, and was led away from the correct taste which he might otherwise have acquired there, by the mannerism of that master and of the period. He was however very industrious and acquired great distinction. He left Rome in 1577 for his own country, and on his way visited Basel and Vienna. At Basel he painted some frescoes in the cemetery: at Vienna he again met with Spranger, and assisted him in some of his works. Vanmander, after his return home, lived some years in peace, dividing his time between poetry and painting; but the civil wars soon rendered it necessary for him to leave his native place. His father's house was plundered by some Walloons, and he himself only escaped hanging by the accidental arrival on the spot of an Italian with whom he had been acquainted in Rome, who released him. He first went to Courtray, but upon the plague breaking out in that place he removed to Bruges; and shortly afterwards, in 1583, he went with his wife and two children to Haarlem, where he remained twenty years, respected by all who knew him. At Haarlem Vanmander established an academy and had many scholars; here also he accomplished many literary labours. He wrote many songs; translated the 'Iliad;' the 'Bucolics' and 'Georgics' of Virgil; and Ovid's 'Metamorphoses;' and compiled also the greater part of his 'Lives of the Painters,' which he began, in 1604, at Amsterdam, in a castle between Alkmaar and Haarlem. In the same year he removed to Amsterdam, where he died September 11, 1606, leaving a wife and seven children. Three hundred of his friends and scholars followed his body to the grave.

The world is chiefly indebted to Vanmander for his 'Lives of the Painters' ('Het Schilder Boek'), Haarlem, 1604, 4to., which contains notices of the painters of antiquity, and of the most celebrated Italian, German, Dutch, and Flemish painters. A modernised edition of the Dutch, Flemish, and German painters, with many portraits, and some additions, was published at Amsterdam in 1764, under the title 'Het Leven der Doorluchtige Nederlandsche en eenige Hoogduitsche Schilders' ('Lives of the Illustrious Netherland and some German Painters'). Vanmander painted a considerable number of pictures on religious subjects, many of which have been engraved. He was a good landscape painter, both in fresco and in oil: he executed at Rome some large landscapes in fresco, which gained him great credit. His son, Charles Vanmander, born at Delft in 1580, also distinguished himself as an historical and portrait painter. He was painter to Christian IV., king of Denmark, excelled in portrait painting, had a free touch, and coloured well. He was still living in 1665.

(Vanmander, *Het Leven der Schilders*, ed. 1764; Schopenhauer, *Johann Van Eyck und seine Nachfolger*; Fiorillo, *Geschichte der Zeichnenden Künste*, &c.; Füssli, *Allgemeines Künstler Lexicon*.)

VANNI, CAVALIERE FRANCESCO, one of the most celebrated Italian painters of the latter half of the 16th century, was born at Siena, in 1563, of a family long distinguished in the Sienese annals of painting. He was first instructed by his father, and after his death, for a short time, by his step-father Archangelo Salimbeni: he is then said to have studied with Bartolomeo Passarotti at Bologna, which Lanzi questions; and in his sixteenth year he went to Rome and finished his studies with Giovanni de' Vecchi. He ultimately adopted the style of Baroccio, and became the most distinguished of all that painter's imitators; though he copied also some of the works of Correggio and Parmegiano at Parma, and it was perhaps more owing to his admiration for the works and style of Correggio that he painted in the manner of Baroccio, than from any direct imitation of the latter. Vanni obtained such reputation at Siena by some of the altar-pieces which he executed for its churches, that he was invited by Clement VIII. to Rome, and commissioned by that pontiff to paint a picture for one of the altars of St. Peter's. He painted Simon Magus rebuked by Peter, and gave such satisfaction that he was created cavaliere of the order of Christ. This picture is still in good preservation, is executed completely in the style of Baroccio, and is one of Vanni's best works. Other celebrated works by him in Rome are—in Santa Cecilia in Trastevere, the Flagellation of Christ, and the Death of St. Cecilia; and a Dead Christ in Santa Maria della Vallicella. He painted also some celebrated works in Siena, at Pisa, and at Pistoia. His picture of St. Raimond walking on the Sea, at San Domenico, is considered the best painting at Siena. He was also a skilful architect, and fond of the mechanical arts. The only building attributed to him, however, is the oratory of S. Sepolcro, near Siena. He died at Siena October 25, 1609.

Vanni's style was so much like that of Baroccio, that even good judges have been misled as to the authorship of some of Vanni's pictures, supposing them to be works of Baroccio. With however the single exception of colouring, Vanni was upon the whole inferior to Baroccio; and in colouring he was sometimes hard. His drawing in general was excellent, but has less fulness than Baroccio's; he had also less vigour of conception and less spirit of execution.

Vanni formed a numerous school, of which his two sons Michelangelo and Raffaelle Vanni were distinguished scholars. Both attained the rank of cavaliere; but according to Lanzi, the younger was the more deserving of it. Raffaelle was born in 1596. He painted many pictures of merit in Rome; where, in 1655, he was elected a member of the Academy of St. Luke. He painted in the style of Pietro da Cortona. He died in 1673. His brother, born in 1623, died in 1671.

Many of the works of Francesco Vanni have been engraved by some of the most eminent engravers; he himself also etched a few plates. His portrait is in the painters' portrait gallery at Florence.

VANNI, GIOVANNI BATTISTA, a Florentine painter, or according to others, a native of Pisa, was born in 1599. He was the scholar, first, of Jacopo da Empoli, and then of Christofano Allori, in whose style he painted, especially in colouring. He excelled in imitating, and made some excellent copies after Titian, Correggio, and Paul Veronese; he etched some plates after the two last, in a spirited though careless manner: The Marriage at Cana, after Paul Veronese, dated 1637, is his best production in this line. The painting of San Lorenzo, in the church of San Simone at Florence, is considered his best picture; but it is not a work of the highest order. He died in 1660.

VAN OOST, JACOB, the Elder, a celebrated Flemish historical painter, was born at Bruges, in 1600, of a good family. He distinguished himself when very young, and even before his twenty-first year was accounted one of the best painters of Bruges. He copied some of the pictures of Rubens with such fidelity, both of colouring and execution, that the copies have passed, and still pass, for originals by that master. After painting some time at Bruges, he went to Italy, and paid great attention to the works of Annibal Carracci at Rome, and endeavoured to appropriate his style of composition and design, which he did to a great degree. He returned in 1630 to Bruges with the reputation of a great painter, and was solicited for works from all quarters. In 1633 he was elected dean of the corporation of painters of Bruges. His pictures are very numerous, though on a large scale: his design and chiaroscuro were good, and his colouring rich and fresh in the carnations; but his draperies are sometimes raw and careless. Some of his pictures are executed with a beautiful boldness, that they are scarcely intelligible except at a considerable distance, when their effect is masterly; others, on the contrary, are highly finished and the colours are well blended. His pictures have few figures, are well composed, and are unencumbered with unnecessary accessories: the landscape of his backgrounds was generally in good taste; the architecture, in which he excelled, by himself. There are many of his works at Bruges; in the Hôpital de St. Jean there are several, some of which are among his best pieces. In one of the halls of justice at Bruges there is a picture of the condemnation of a criminal, which is considered Van Oost's masterpiece. He was equally excellent as a portrait painter. He died in 1671.

VAN OOST, JACOB, the Younger, son of the elder Van Oost, was born at Bruges in 1637. He was first instructed by his father, then studied two years in Paris, and afterwards spent some time in Rome. After his return to Bruges he for a short time assisted his father; but having determined to establish himself at Paris, he set out for that capital in 1673. He however delayed upon his road at Lille to paint a few portraits, which brought him so many sitters and other engagements, that he fixed himself in that place, and resided there forty years, until after the death of his wife. He returned to his native place in 1713, the year of his death, and the seventy-sixth of his age. The younger Van Oost was also an able painter in history and in portrait, but his historical pieces are not numerous. His style was like that of his father, but he painted with a freer touch, and his draperies are very superior. His figures are correct and expressive.

VAN OS, PIETER GERARD, a distinguished animal-painter, was the son of Jan Van Os, a clever flower-painter, who was born in 1744, and died at the Hague in 1808. He was also a marine painter and a poet.

Pieter Van Os was born at the Hague in 1776, and was taught painting by his father. He selected Paul Potter as his model, and copied his pictures assiduously, and some of the works of Charles Dujardin. He made such an excellent copy of the celebrated young bull by Potter, in the gallery of the Hague, that William V., prince of Orange, purchased it and a copy after Dujardin, and placed them in his gallery. For a time, owing to the disturbed state of society towards the end of the 18th century, which was very unfavourable to the arts, Van Os was forced to give up his favourite pursuit of animal painting, and to take to portrait painting in miniature and to teaching drawing. After a few years however he again commenced painting landscapes, with cattle, sheep, &c., by which he acquired a great reputation. In 1813 and 1814 he served as a captain of volunteers, and was present in some engagements, which induced him to try his hand at military subjects, in which he was not unsuccessful. The emperor Alexander purchased a picture of him in 1813, of the entrance of the Cossaks into Utrecht, and placed it in his palace at St. Petersburg. He died at the Hague April 2, 1839.

The pictures of Van Os are numerous, and are sold at high prices: many of them have been engraved. He himself also etched many plates of cattle, &c. in a masterly manner from his own designs, and from the pictures of eminent painters, Potter, Berghem, Ruisdael, and others.

VANSOMER PAUL, a Flemish portrait painter, was born at Antwerp about 1576. He was instructed by his brother Bernard Vansomer, a good painter of conversation pieces and portraits, who had studied in Italy, and lived at Amsterdam. Paul came to England about the year 1606, and met with great success here. He painted James I., and many of the principal statesmen and noblemen of that time. There is a portrait of James I. at Windsor, a view of Whitehall in the background; and another at Hampton Court, with some armour by his side, painted in 1615, a superior picture according to Walpole. There is also at Hampton Court a portrait of the queen of James I. with a horse and dogs, by Vansomer; which is imitated, says Walpole, in the tapestry at Houghton. The same writer mentions likewise the following pictures by this painter:—Francis Lord Verulam Bacon, and his brother Nicholas, at Gorhambury (there is a portrait of Bacon by Vensomer, in the collection of Earl Cowper at Pansanger); the Marquis of Hamilton with a white staff, at Hampton Court; the lord chamberlain, William, earl of Pembroke, at St. James's, an admirable portrait; and in Walpole's opinion, a whole length at Chatsworth of the first earl of Devonshire in his robes, though ascribed to Mytens, worthy of the pencil of Vandyck, and one of the finest single figures he had ever seen. He mentions also a portrait of Anne of Denmark, the queen of James I., with a prospect of the west end of St. Paul's.

Vansomer died in London, and was buried in St. Martin's in the Fields, as appears by the register: "Jan. 5, 1621. Paulus Vansomer, pictor eximius, sepultus fuit in ecclesia."

VAN SWIETEN. [Swieten, Gerard Van.]

VANUCCHI. [Sarto, Andrea del.]

VANUCCI. [Perugino, Pietro.]

VANUDEN, LUCAS, a distinguished Flemish landscape painter, was born at Antwerp in 1595. He was instructed by his father, who was also a landscape painter; but not satisfied with the precepts of art, he was constantly in the fields, from sunrise until sunset, sketching all the striking effects of nature, and he made valuable use of his studies in his paintings. Rubens was a great admirer of the works of Vanuden; he employed him to paint skies and landscapes in many of his pictures, which Vanuden adopted admirably to the style of Rubens. Rubens also inserted figures in the pictures of Vanuden, although he himself was a good figure-painter.

His paintings are distinguished for their lightness of touch, clearness and truth of colouring, and for pure skies and light easy foliage. He painted large and small pictures, adopting his touch to the size and nature of his composition, but his small pieces are more characteristic of his style; he was fond of extensive and distant views. Vanuden also etched some landscapes in a masterly manner, some original designs, and some after Rubens and Titian. The date of his death is not known, but it occurred after 1662.

VAN UTRECHT, ADRIAN, one of the most distinguished of the Flemish painters of still-life, was born at Antwerp in 1599. He painted fruit, flowers, shell-fish, dead game, birds, &c., sometimes together and sometimes separately, with such remarkable truth and freedom of touch, and elegance of composition, that he received many more orders than he could execute. The best of his pictures were purchased by the king of Spain, and taken to that country: they are very scarce, are rarely met with at auctions, and are sold for high prices. He excelled in birds of all descriptions. He died rich, at Antwerp, in 1641. With the exception of Snyders, Van Utrecht was superior to all other painters in still-life.

VAN VEEN, or VAE'NIUS, OTHO, called also Ottovenius, a distinguished painter, was born at Leyden in 1550, according to Houbraken, or 1556, according to De Piles and others; Van Mander says he was forty-seven in 1604. His father was burgomaster of Leyden, and his mother was of a distinguished family of Amsterdam. Van Veen was instructed in letters by Lampsonius, private secretary to the bishop of Liège, and was taught drawing by Isaac Claes or Nicolas, and painting by Jost Van Wingen. His father sent him to Liège in his fifteenth year, where he remained three years in the house of the bishop, Cardinal Groosbeck, who then sent him to Rome with letters to Cardinal Madoccio, by whom he was well received. In Rome Van Veen studied with Federigo Zucchero; and after spending eight years in Italy, he visited Vienna, where the emperor wished to detain him in his service: he visited also Munich and Cologne, where he likewise had flattering offers to induce him to remain, but which his desire to settle in his own country led him to decline. He settled at Brussels, in the service of Alessandro Farnese, duke of Parma, and governor of the Spanish Netherlands, of whom he painted a full length in armour, which obtained him a great reputation. After the death of the Duke of Parma, Van Veen removed to Antwerp, established an academy there, and painted many pictures for its churches. Rubens attended his academy. When the Archduke Albert of Austria, who succeeded the Duke of Parma as governor, made his public entry into Antwerp, Van Veen designed the triumphant arches which were erected upon the occasion; and the duke was so well satisfied with the devices, that he invited Van Veen to Brussels, and appointed him master of the mint there. He painted the portraits of Albert, and of his wife, the infanta Isabella, daughter of Philip II. of Spain, which were sent to James I. of England. Louis XIII. invited Van Veen to Paris, but he declined to leave the archduke.

Van Veen died at Brussels in 1634, aged seventy-eight, or, according to Houbraken, in 1629. He left two daughters, Gertrude and Cornelia, who both distinguished themselves in painting; Gertrude painted her father's portrait, which has been engraved.

There are several paintings by Van Veen at Antwerp; and in the cathedral of Leyden there is a Supper of the Lord, which is considered a good work. He excelled in invention and in chiaroscuro. His imagination was very fertile: his designs are very numerous; a list of them, with the Life of Van Veen, was printed at Amsterdam in 1682, in a work entitled 'Académie des Sciences et des Arts,' &c., by Isaac Bullart. Among them are emblems of Horace: 'Zinnebeelden getrokken uit Horatius Flaccus,' &c., 103 plates, with text illustrated in Latin, Dutch, and French. Many of his designs are ingenious in their invention, and skilful in their composition, but the plates are badly executed. He designed also emblems of divine and profane love; and thirty-two illustrations of the life of Thomas Aquinas. He published also a history of the war of the Batavians under Claudius Civilis against the Romans, from Tacitus, with forty illustrations; and the history of 'The Seven Twin Sons of Lara,' likewise with forty illustrations, which were engraved by Antonio Tempesta. Felibien, in his 'Entretiens sur les Vies des plus célèbres Peintres,' has extracted part of this work, relating the artist's history and describing the subject of each plate. In the Pinakothek at Munich there are six small allegorical paintings of the triumph of the Roman church by Van Veen; curious designs, but extremely cold and blue in colouring. Van Veen was very fond of allegorical and mythological representations, and Raynolde supposes that Rubens acquired his taste for the same subjects from him. In the cathedral at Bruges there is a Nativity by Van Veen, of which Reynolde observes:—"Many parts of this picture bring to mind the manner of Rubens, particularly the colouring of the group of one of the shepherds; but in composition I esteem it as but a tame performance, and would not be worth mentioning here, but from its being the work of a man who had the honour to be the master of Rubens."

VANVITELLI, LUIGI, a very distinguished architect, inasmuch as he erected one of the most extensive edifices of the 18th century, in which however it must be admitted the greatness of the opportunity was not equalled by his talent. Though he may be considered an Italian, Luigi was of Flemish origin, his father being a native of Utrecht, and his real name was Van Wittel, afterwards Italianized by a slight alteration. Gaspare, the elder Vanvitelli, was born in Utrecht in 1653, and going to Italy for improvement in his profession as a painter, fixed his residence at Naples, where he acquired considerable repute for his ability in landscape and architectural subjects. He was familiarly known as Vanvitelli degli Occhiali, on account of his always wearing spectacles, without which he could hardly see; yet he continued to paint after he had reached a very advanced age, and indeed after he had submitted to an unsuccessful operation on one eye, the sight of which he entirely lost. He died on the 13th of September, 1736.

His son Luigi was born at Naples in 1700, and began while a child to display a strong inclination and considerable aptitude for art, in which he was encouraged and instructed by his father. So great was his proficiency, that at the age of twenty he was employed by Cardinal Acquavive to paint some frescoes in the chapel of St. Cecilia; and he afterwards made some of the cartoons from celebrated pictures, preparatory to their being copied on a larger scale, in mosaic, for St. Peter's at Rome. About this period too he began to study architecture under Filippo Ivara, one of the most noted in his profession. His first architectural work was the restoration of the Palazzo Albani at Urbino, for the Cardinal di San Clemente; besides which he erected two churches in that city, St. Francesco and Domenico, work that led to his obtaining the appointment of architect to St. Peter's at the age of twenty-six. He was also associated with Niccolo Salvi in the undertaking for conducting the water of the Vernlcino to Rome. About the same time there was a competition of all the most eminent architects of the day for a design for the church of S. Giovanni Laterano at Rome, to which both Salvi and Vanvitelli sent in designs; and, accordlog to a memoir on the subject by the latter, their designs were approved: but the first decision was set aside by the pope, who decided in favour of that by Galilei; yet not so much, it is said, on account of its architectural merit as for private reasons. However neither Salvi nor Vanvitelli was overlooked. Salvi was employed upon the fountain of Trevi. Vanvitelli was sent to improve the harbour and public works at Ancona, where he built the celebrated Lazaretto, a pentagonal structure, and repaired and altered some churches and chapels. He was likewise occupied with many employments of a similar nature at Macerata, Perugia, Pesaro, and Siena. When at Milan, in 1745, he made a design for the façade of the Duomo, in which he endeavoured to keep something of the character, if not of the style, of the rest of the edifice; but it was neither carried into execution at the time, nor afterwards followed in the actual façade begun by Leopoldo Pollak and completed by Zanoja and Amati. At Rome his most important work was the convent of S. Agostino; but he also executed there, for the Portuguese ambassador, a superb chapel, which was conveyed to Portugal, and there re-erected in the church of the Jesuits at Lisbon.

Such was the reputation he had now obtained, that when the king

Digitized by Google

of Naples, afterwards Charles III. of Spain, determined to erect a palace at Caserta that should be upon a scale hardly inferior to that of any other edifice of the kind in Europe, he at once made choice of Vanvitelli as the architect, and the first stone was laid, January 28th 1752. This vast pile is an unbroken parallelogram of uniform design, all its fronts being nearly similar in their elevations: those facing the north and south are 730 feet, the others 570 in length, and the general height of the building is 102 feet, which is however increased to 162 at the angles, where there is a square pavilion, forming a second order. The elevations consist of a very lofty basement, comprising a ground-floor and mezzanine; and above that an Ionic order with two series of windows, and mezzanine windows in the frieze. Although it may be considered in some respects as the principal front, since it faces a spacious semi-elliptical piazza enclosed by uniform range of buildings for lodgings and stables, the south front is less decorated than that towards the gardens, for it has columns only in the centre and at the extremities, while in the other the order is continued throughout in pilasters as well as columns; yet the degree of unity thus kept up is attended with a very great drawback, for the narrower inter-columns between the centre and end breaks cause the others to appear offensively wide, and those parts of the composition where there ought to have been greater richness, to look poor and straggling: this is particularly the case with regard to the centre, which is only three inter-columns in width; therefore that and its pediment become ill-significant in comparison with the entire mass, a defect which is further increased by the end pavilions being so much loftier. Owing to the great height of the basement, the cornice of the order (which is very plain and poor in itself) forms an inadequate finish to the general elevation; and even if the entablature be considered only in relation to the order, independently of the basement, it is disfigured by the small mezzanine windows in its frieze. Internally the general plan is divided into four spacious courts by other ranges of building from north to south and from east to west, those intersection forming a large and lofty octagon crowned by a dome; but though this last shows itself as an important feature when seen in geometrical elevation, where it breaks the outline and gives a towering central mass, it is entirely lost in the building, except in a very distant view of it, and can be seen only from the inner courts; a circumstance that is much to be regretted, because it is very ugly. That part of the building forms a large octangular vestibule, with the grand staircase on one side and the chapel on the other; and these and the upper vestibule are by far the most striking and scenical portions of the interior, the rest only presenting long enfilades of rooms, with little remarkable in point of architecture. With the greatness of mere quantity, Caserta is deficient in grandeur of quality: except those pointed out, its faults are few; but its beauties also are few: therefore, considering what ample scope was afforded the architect, it must be considered to have failed, at least comparatively. Vanvitelli published a large folio volume of the plans, &c. in 1757, under the title of 'Dichiarazione de' Disegni del Reale Palazzo di Caserta.'

Besides the palace itself and the subordinate buildings attached to it, he executed at Caserta one of the most stupendous works of its kind undertaken in modern times, namely, the aqueduct, or ranges of aqueducts, commenced in 1753, in order to supply the palace with water. His labours at Caserta led to his being employed on many other works at Naples, the principal of which are the cavalry barracks, near the Ponte Maddelena, and the three churches of S. Marcellino, Delle Rotonda, and La Nunziata. Among those at other places are the public hall at Brescia and the bridge at Benevento. Few architects have enjoyed a more prosperous career; yet, shortly before his death, which happened March 1st 1773, he felt the mortification to incur a severe stigma upon his professional character, being condemned at Rome to pay the sum of 5000 crowns for having estimated the repairs of the aqueduct of Acqua Felice at only 2000, though the actual expense was 22,000 crowns.

(Milizia, *Vite*; Quatremère de Quincy, *Histoire, &c. des plus Célèbres Architectes*; *Kunstblatt*, 1824.)

VARCHI, BENEDETTO, was born at Florence in 1502. He was sent by his father, who was an advocate, to Pisa to study law; but at his father's death he gave up the law, for which he had no taste, and applied himself wholly to literature. At the time of the fall of the Florentine republic, Varchi, who belonged to the losing party, emigrated to Padua and Bologna, where he became intimate with Bembo and other learned men. Some years after, Cosmo I., being firmly established on the ducal throne of Florence, recalled Varchi, and appointed him one of the directors of the New Florentine Academy, which he instituted for the purpose of cultivating the Tuscan language and illustrating its standard writers. The academy frittered away much time in pedantic and interminable disputes about mere words, but it brought forth also many useful works, among which were the 'Ercolano' of Varchi, a disquisition, in the form of dialogue, on language in general, and more particularly on the Tuscan language. Varchi maintained that the Tuscan or Italian language, which he, through an excess of nationality, calls Florentine, was suited to any branch of literature and to every style of writing, and capable of expressing all kinds of sentiments and conceptions, however varied. This he laboured to prove by translations from the Latin. He published translations of Seneca, 'De Beneficiis,' and of Boethius, 'De Consolatione.' He wrote Commentaries on Dante and Petrarch, and also sonnets and other short poems. But the principal production of Varchi is the 'Storia Fiorentina,' from the year 1527 to 1538, an important period, which embraces the last struggle and fall of the republic, the tyrannical and dissolute rule of Alessandro de' Medici, which ended with his assassination, the elevation of Cosmo to the ducal throne, and the subsequent inroad of Filippo Strozzi and his band of malcontents, which ended in the defeat at Montemurlo and the exile of the leaders. Varchi wrote it at the desire of Cosmo, and he has been charged with partiality towards his person. This partiality however was probably a matter of feeling and habit, and not a servile affectation. Besides, Duke Cosmo was certainly a very superior man. Placed when a mere youth in a very critical position, and in circumstances of universal corruption, he proved himself stern and even cruel towards his enemies; but he effected also much good, and strove to heal some of the wounds inflicted by the wars, revolutions, anarchy, and misgovernment of nearly half a century. That his public character has been represented as worse than it was by the reports of his enemies, is an opinion entertained by several reflecting and dispassionate writers. Varchi's narrative is very diffuse, and his language abounds with popular Florentine forms of speech, which are perhaps too colloquial for the gravity of history. His work was not published for a long time after his death; yet parts of it transpired in his lifetime, and drew upon him the vengeance of powerful persons whom he had exposed. One night he was attacked and stabbed in several parts of his body. He however recovered, and although the guilty parties remained unknown or unpunished, Duke Cosmo endeavoured to compensate Varchi for the injury he had received by making him a gift of his pretty country-seat called 'La Topaja,' and of the clerical benefice of Montevarchi. Pope Paul III. invited him to Rome, but Varchi declined the offer. He died of apoplexy December 18, 1565.

About forty years since a small critical work of Varchi was discovered in manuscript in the Magliabechian library at Florence, and published under the title of 'Errori di Paolo Giovio nella Storia,' Florence, 1821.

(Cornlani, *I Secoli della Letteratura Italiana*; Tiraboschi, *Storia della Letteratura Italiana*.)

VARENIUS, BERNHARDUS, author of a treatise on systematic geography, of which Newton, when Lucasian professor of mathematics at Cambridge, published an edition for the use of his students, was a native of Ulsen in the territory of Lüneburg, now part of the kingdom of Hanover. The materials for a life of Varenius are lamentably meagre. Nothing appears to be known of his parentage, the time of his birth, or the events of his boyhood. The library of the British Museum contains a copy of a Thesis on Aristotle's definition of motion, printed at Hamburg in 1642, which Varenius undertakes to defend, on the 16th of December, in a public discussion under the presidency of his tutor Joachim Junge, rector and professor of physics and (pro tempore) of logic in the gymnasium of Hamburg. The thesis is dedicated to Albert von Eitzen, burgomaster of Hamburg: Conrad Meyer, archdeacon of Celle; Jodocus Capelle, preacher in the St. Jacobi Kirche's Church at Hamburg; and Hinrich Sholz, Secretary to the duke of Lüneburg and Brunswick. The author calls his thesis 'Musarum Philosophicarum Primitiæ.' The library of the British Museum also contains a copy of a medical thesis 'De Febri in genere,' printed at Leyden in 1649, which 'Bernardus Varenius, Ultza-Lunaburgensis' undertakes to maintain in public disputation on the 22nd of June as part of his trials previous to receiving the degree of doctor of medicine. This 'inaugural thesis' is dedicated by the author to the burgomasters and senators of Lüneburg. Varenius's 'Description of Japan' was published at Amsterdam in 1649; it is dedicated to the burgomasters and senators of Hamburg, and the date of the dedication is Amsterdam, the calends (1st) of July, about a week after he had taken his degree. He assigns as the reason for dedicating his book to the magistrates of Hamburg, his having learned the first elements of philosophy, mathematics, and physics in the gymnasium of that city. In the preface addressed to the reader he mentions that after he had finished his medical studies he was for a time deterred from entering upon practice by the small prospect he had of obtaining employment; and that in this state of mind he had devoted himself to the study of philosophy and the mathematical sciences. During this interval he had composed a treatise on 'Conic Sections,' but had been unable to find a publisher for a work so remote from popular interest. At last an opening had presented itself for entering into medical practice, offering only a slender prospect of remuneration at first, but on the other hand ample opportunities of acquiring practical knowledge. He had resolved, he proceeds, to embrace this opportunity, and to restrict his inquiries in future to medicine, and to geometry and physics, which he esteemed important auxiliary studies. He thus leaves it to be inferred that the publication of his account of Japan, which he describes as an amusement of his leisure hours, an attempt to present in a systematic form and in the Latin language a compendious view of the information respecting that empire contained in Dutch and Portuguese authors, was his farewell to general literature. The 'Systematic Geography' ('Geographia Generalis') of Varenius was originally published at Amsterdam, in 1650. In the dedication of this work to the senators of Amsterdam, the author alludes to his account of Japan, published the year before,

Digitized by Google

and states as his reason for dedicating the book to them, that he had found in their city an asylum and the means of pursuing his studies when obliged to fly from his native country, laid waste by the ravages of war. He intimates his intention, if the Geography is favourably received, to follow it up by a work on the food and drink of various nations, and on the different kinds of medicines in use among them. These incidental notices in the dedications and prefaces of the works we have mentioned, appear to establish the identity of their author, and supply a faint outline of his history from 1642 to 1650. Of the subsequent history of Varenius we have found no trace, except that Chalmers asserts, on what authority we have been unable to discover, that he died in 1660. Jocher makes a literary Varenius the tutor to a son of Hervord in Westphalia, who was at one time chaplain to Duke Augustus of Brunswick-Lüneburg, and died pastor and superintendent of the church at Ulzen in 1636: this may have been a relation (father?) of Bernhardus Varenius. The 'Description of Japan' ('Descriptio Regni Japonim') is, as has been noticed above, a mere compilation. It was the last of a series of similar monographs of actually existing states, published by the Elzevirs. Prefixed is a dissertation on what constitutes a state; a list of the states into which the world was divided at the time of publication; and a catalogue of the authorities consulted for the account of Japan. An appendix contains a notice of the Dairi of Japan, and some information respecting Siam and Persia. Annexed is an account of the religion of the Japanese, and a narrative of the introduction into and suppression of Christianity in Japan, dedicated to Christina, queen of Sweden. Lastly, there is a short view of all religions. The 'Geographia Generalis' is divided into three books. The author treats, in the first and second, of general or universal geography; in the third, of special or particular geography. The contents of the first book will show the nature of the work, including under this designation all that relates to the form, dimensions, or motion of the world, the general properties of the land, the seas, rivers, &c. The second book is devoted to what he terms 'Relative Geography,' and in this is comprehended everything relating to climates, seasons, the difference of apparent time at different places, the lengths of days in different latitudes, temperature, &c. In the third book, 'Comparative Geography' (by which Varenius means the relative positions of places), after some remarks upon the longitude, the construction of globes and maps, measurement of distances, and of the sensible and visible horizons, six chapters are devoted to an exposition of the theory and practice of navigation. The work is the first attempt at a system of physical geography: it is characterised by precision, good arrangement, and lucid expression. The author has evidently had extensive acquirements in mathematics, and views of more scientific views in natural history than prevailed for well nigh a century after his book was published. Newton's editions of the 'Geographia Generalis' (1672 and 1681) contain important improvements in the mathematical theory and corrections of the tables of latitudes and longitudes. Jurin, a fellow of Trinity College, Cambridge, at the suggestion of Bentley, published a new edition, with an appendix containing the most recent discoveries, in 1712. An English translation of Jurin's edition by Dugdale, revised by Shaw, was published in London; the second edition of this translation is dated 1765. The contents of Jurin's appendix are introduced into the body of the work; and the geographical nomenclature and positions are adapted to the best English maps. A French translation from this English edition, by Depuisieux, was published at Paris in 1755. The publication of Varenius's 'Geographia Generalis' marks an epoch in the history of geography.

VARGAS, LUIS DE, a distinguished Spanish painter of the 16th century, born at Seville in 1502. He was the first who established a correct and grand style of design in oil and in fresco painting in Andalucia, where, until his time, the Gothic taste prevailed generally. He exhibited a disposition to excel in design at a very early age, and his natural taste disapproving of the style of the artists of his own country, he determined upon visiting Italy and studying the works of the great masters of that country. His accordingly, in 1527, went to Rome, and is said to have become a scholar of Perino del Vaga, the beauties of whose style and of the human body he fully mastered. Vargas remained twenty-eight years in Italy: his first known work in Seville is dated 1555. Cean Bermudes contradicts the account of Palomino about Vargas returning to Seville after a seven years' sojourn at Rome, and finding himself inferior to Antonio Flores (or rather Francisco Frutet, as Bermudez says) and Pedro de Campaña, returning for another seven years to Italy; and he points out other inaccuracies in Palomino's notice of this painter—for example, the compliment paid to Vargas's picture in the cathedral, called La Gamba, by Perez di Alessio, at the expense of his own St. Christopher, which is an anachronism, as the St. Christopher was not painted until 1584, sixteen years after the death of Vargas, who died in 1568, and not 1590, as is stated by Palomino. Vargas established a greater reputation at Seville than any painter that preceded him, and he executed many excellent works there in oil and in fresco, which deservedly rank him with the first painters of Italy. His design was correct in outline and grand in style; his foreshortenings were admirable, and in this respect he is unrivalled in Spain; and had his works been as conspicuous for tone and harmony of colouring as they were for brilliancy, composition, character, and expression, Vargas, says Bermudez, would have been the first among Spanish painters. His principal works, which are all religious, are at Seville—in the cathedral; in the Hospital de Santa Marta; in Santa Cruz; in Santa Maria la Blanca; in the Merced Calzada; in the Hospital de la Sangre; and in the Hospital de la Misericordia. Some of these works are much decayed; others have been badly restored: in the last-mentioned place is a fresco of the Last Judgment. Vargas is described as having been a very amiable man, but he was of a melancholy and superstitious turn of mind: he was in the habit of chastising himself, and used to lie in a coffin some hours a day meditating upon death.

VARIGNON, PIERRE. The common source of all biographies of Varignon is the éloge of him inserted by his friend Fontenelle in the Memoirs of the Academy of Sciences, and republished in the separate collection of éloges by the same author.

The subject of this article was born at Caen in 1654. His father, an architect, destined him for the church, and placed him at the college of his native town. He learned to make a sun-dial as well as his father's workmen could teach him, and this gave him a longing to know the principles on which such things are done, which he never found the way to gratify until, by accident, he met with a Euclid in a bookseller's shop. From this he went on to the writings of Des Cartes, much against the wishes of his friends, and became well versed in the mathematics of the day. Among his college friends was the Abbé de St. Pierre (not Bernardin, the author of the 'Studies of Nature,' but Charles), whose regard for Varignon induced him to make over to the latter 300 francs a year out of 1800, which was his patrimonial fortune. This was his sole provision for many years, and enabled him to pursue his studies. The two friends went to Paris in 1686, took up their quarters in the same house, and pursued their several researches. It was here that Fontenelle, who was also of Normandy, became acquainted with them; and he describes Varignon as the most laborious of students, glad to go on working at what he was doing at two o'clock in the morning, under the pretext of its not being worth while to go to bed, because he usually rose at four. In 1687 his first work, the 'Projet d'une Nouvelle Mécanique,' brought him at once into such reputation that he was in the following year elected to the Academy, and appointed professor of mathematics to the Collège Mazarin: in 1690 appeared the 'Nouvelles Conjectures sur la Pesanteur.' By 1705 he had ruined his health: he was for six months in danger, and for three years in a state of debility. His life is a purely literary one, and there is nothing more to say, except that he died in the night of December 22, 1722, without illness, having performed his usual duties at the college the day before.

We take his works from the 'Biographie Universelle:'—1, 'Projet d'une Nouvelle Mécanique,' 4to, Paris, 1687; 2, 'Nouvelles Conjectures sur la Pesanteur,' 12mo, Paris, 1690; 3, 'Nouvelle Théorie,' 2 vols. 4to, Paris, 1725; 4, 'Eclaircissements sur l'Analyse des Infiniment Petits,' 4to, Paris, 1725; 5, 'Traité du Mouvement des Eaux Courantes,' 4to, Paris, 1725; 6, 'Eléments de Mathématiques,' 4to, Paris, 1732; 7, 'Démonstration de la Possibilité de la Présence Réelle,' 8vo, in a collection of pieces on the real presence, by Vernet, Geneva, 1730. There is perhaps no better test of real eminence than the desire of the surviving contemporaries to have an author's works; and more of Varignon was published after his death than he himself had published during life. It is however to be remembered that, besides his two separate works, he printed a great deal in the Memoirs of the Academy of Sciences, particularly in defence of the new doctrines of the infinitesimal calculus. His name is familiar to all who have even glanced at the history of his theory as the explainer of its difficulties in answer to the earnest and frequently plausible attacks which were made upon it. The 'Eläircissements,' &c., above mentioned, were intended by him as a commentary upon the well-known work of his friend De l'Hôpital, the first elementary writing upon the differential calculus. The 'Projet,' &c., was a much more remarkable work, in fact the first in which the great elementary principle of the composition of forces is made the basis of a systematic development of statics. Montucla mentions that Stevinus had preceded him in the knowledge of the use of this truth; insisting particularly upon his having used in the most elegant and useful form of the theorem, namely, that forces which are as the sides of a triangle balance one another. Mr. Hallam ('Literature of Europe,' vol. ii., p. 462) cannot find this 'triangle of forces' in Stevinus. But the fact is that the theorem, though not perhaps separately enunciated by Stevinus, is used by him: for instance, in Albert Girard's edition of Stevinus, p. 449, column 2, a look at the second figure with the accompanying text will show that LDO and OFC are 'triangles of forces.' The merit of Varignon consists in his making the composition of forces a basis for everything, in which he has been followed by most writers since his time. Stevinus mixed different principles. Mr. Hallam remarks, very naturally, "Had it" (the triangle of forces) "been known to him" (Stevinus), "we may presume that he would have employed

Digitized by Google

it, as is done in modern works on mechanics, for demonstrating the law of equilibrium on the inclined plane, instead of his catenarian hypothesis." So he would have done had he been reviewing the subject: but he was discovering it; and that very inverse order which so often takes place in discovery, and which brought out the binomial theorem as an ultimate result of a mode of finding the areas of certain curves, occurred in the case of Stevinus, who brought out the mode of using the triangle of forces, rather than the theorem itself, from this very catenarian hypothesis; and, as far as we can see, partly by demonstration, partly by extension. One of the greatest compliments which Varignon's memory received was this, that his 'Projet,' &c. took such possession of the public mind, that by the time the work itself (3 in the above list) appeared, of which it was the 'Projet,' it excited very little notice, and added nothing to his fame.

The conjectures on the cause of gravity show that Varignon was not as happy in clear perception of hydrostatical laws as in those of statics. He imagines that the gravitation of a body towards the earth is the excess of the pressure downwards of the superincumbent columns of air over the pressure upwards of the column between the earth and the body. This is enough for a specimen: even Fontenelle avows that he thinks it possible his friend may here have added one to the number of proofs of the difficulty of the subject. But notwithstanding this, Varignon may be placed among those men whose reputation is probably very much below their desert as estimated by their utility.

VARILLAS, ANTOINE, a native of Guéret, the capital of La Marche, was born in 1624. When he had completed his studies, he was sent to Paris as private tutor to some of his young countrymen. In 1648 he was appointed historiographer to Gaston, duke of Orleans. Dupuy procured for Varillas the situation of sub-librarian in the royal library, which he held under more than one of Dupuy's successors, and lost on account of his negligence in collating Brienne's manuscripts, which had been purchased by Colbert, with the originals in the library. He was allowed to retire with a pension of 1200 livres, which was withdrawn by Colbert in 1669. In the same year Varillas was offered a pension by the States-General of Holland to write the history of the United Provinces; but he declined the task, on the plea that he could not serve with his pen the enemies of France. In 1670 the archbishop of Paris obtained a pension from the assembly of the clergy for Varillas, whom he knew to be engaged on a history of heresies. Varillas died at Paris, the 9th of June, 1696. He had published works are:—1, 'Politique de la Maison d'Autriche,' 12mo, Paris, 1658; 2, 'Histoire de la France,' Paris, 1683 et seq.; 14 vols. in 4to, or 28 in 12mo. The work contains the reigns of the kings of France from Louis XI. to Henri IV.; 3, 'La Pratique de l'Education des Princes, ou l'Histoire de Monsieur de Crequy, seigneur de Canaples,' Chèvres,' in 12mo, Paris, 1684; 4, 'Les Anecdotes de Florence, ou l'Histoire Secrète de la Maison de Médicis,' La Haye, 12mo, 1685; 5, 'Histoire des Révolutions arrivées in Europe en matière de Religion,' 6 vols. in 4to, or 12 in 12mo, Paris, 1686-89. This work extends from 1374 to 1569: a continuation to 1650, which would fill 12 quarto volumes, has remained in manuscript; 6, 'La Politique de Ferdinand le Catholique,' 3 vols. 12mo, Amsterdam, 1688. A continuation of this work by the author exists in manuscript. The style of Varillas's writings is good for his age; but his disinterested facts are neglected to verify his quotations, and has even been convicted of alleging manuscript authorities which never existed. Indolence and vanity seem to have been the chief if not the sole motives to his falsifications.

VARIUS, LUCIUS, a Roman poet, and a friend and contemporary of Virgil and Horace, both of whom speak of him in terms of the highest praise. (Virgil, 'Eclog.' ix. 35; Horat. 'Carm.' i. 6. 1, &c.; 'Satir.' i. 5, 40; 6. 55; 'Epist.' ii. 1. 247; 'Ad Pison.' 55, &c.) From Donatus' 'Life of Virgil,' it is clear that Varius survived Virgil, who died B.C. 19: for Varius is there described as one of the executors of Virgil, and as one of the poets who undertook the correction of the 'Æneid.' Varius distinguished himself no less as an epic than as a tragic poet. We know of two epic poems of Varius: the one was a description of the exploits of Augustus and Agrippa, which is completely lost; and the second is called 'De Morte,' and was probably an account of the death of Julius Cæsar. Macrobius (vi. 1) has preserved two lines of this poem. As to his tragic compositions, the ancients are unanimous in saying that he excelled all his countrymen; and Quinctilius (x. 1. 98) says that the tragedy 'Thyestes' of Varius would bear comparison with any Greek tragedy. (Compare 'Dialogus de Caus. Corrupt. Eloquent.' 12; Philargyr. 'ad Virg. Eclog.' viii. 10.) But notwithstanding this general acknowledgment of his merits, no fragments of his tragedies are preserved which can be attributed to him with any certainty.

(Bothe, *Poetarum Latii Scnicor. Fragm.*, i, p. 257, &c.; Weichert, *De L. Vario, Poeta, Commentatio*, Grimma, 4to, 1829; *Poetarum Latinorum Reliquiæ*, p. 156, &c.)

VARLEY, JOHN, an artist who ranks very high as a water-colour painter, was born in London about the year 1777, of parents in rather moderate circumstances, and was about to be apprenticed to a silversmith, very much against his own inclinations, when the death of his father, who had always opposed what he considered an idle talent for drawing, left him at liberty to choose a profession. That his family were unable to further his views may be taken for granted, since he was fain to content himself at first with obtaining employment with an obscure portrait-painter in Holborn. Afterwards, when about fifteen or sixteen, he received some instruction from a drawing master of the name of Barrow, with whom he made a sketching excursion, which was of material service to him; for a view which he then made of Peterborough Cathedral brought him into notice. He next became acquainted with Arnold, the landscape painter, with whom he made a tour through North Wales about the year 1799. On his return from that excursion, he was for some time employed by Dr. Munro in making sketches for him of the scenery in the neighbourhood of his residence at Fetcham in Surrey. Two other professional excursions through Wales in 1801-2, and similar ones through various parts of England, stocked his portfolio with subjects that occupied his pencil for many years, and established his reputation as the first in that department of art he had chosen. It was certainly no mean one first, if not the very first, who began to advance the practice of water-colour drawing to that of water-colour painting, and to give that mode of execution a solidity and force, a freedom and breadth, which it had not before attained, nor was even supposed capable of. Up to that time, scarcely anything had been produced beyond washed or tinted drawings, very little superior to the coloured prints of the same period—raw and feeble in effect. Varley gave to his paintings nearly all the vigour of oil-pictures, and by a mode peculiar to himself; for he worked with great rapidity, and does not appear to have produced his effects by repeated sponging and other processes now in use, or by admixture of body colour: his colours look as if they had been laid on at once, and hardly retouched. Of late years, his paintings were rich, powerful, and part landscape harmony, very pure and powerful in effect, but somewhat monotonous and conventional in manner. Although he was not an original member of the 'Society of Painters in Water-Colours' (established in 1804), he afterwards joined it, and his contributions contributed in no small degree to the attraction of its exhibitions. From them and his practice as a teacher he derived a considerable income for many years; but a numerous family, and want of either management or economy, kept him almost always in difficulties. Besides which, he devoted much time to the study of judicial astrology, which he may almost be said to have made a second profession, for he was in the habit of giving his advice formally to those who consulted him respecting their 'nativities,' and is said to have received fees on such occasions, or at least to have found a liberal consideration for a drawing in a client of that kind. He certainly made no secret of his pretensions, nor did he show any disinclination for the title of 'Astrologer' publicly attached to his name. Of extraordinary predictions by him many strange anecdotes are told; but if he possessed the art of foreseeing events, he did not possess that of averting the troubles and misfortunes in the midst of which he lived—which a little ordinary prudence would have enabled him to avoid. Varley was married twice: his first wife died in 1824; his second was the daughter of Wilson Lowry, the celebrated engraver. He himself died November 17, 1842, at the residence of a friend, near Cavendish Square.

VARNHAGEN VON ENSE, KARL AUGUST, was born at Düsseldorf, on February 21st, 1785. His father soon afterwards removed to Hamburg, and he was thence sent to study medicine in the university of Berlin. A decided inclination for literature and philosophy there early developed itself, and in 1806, in conjunction with Chamisso, he published a 'Musenalmanach.' The lectures of A. W. Schlegel and the acquaintance of Fichte confirmed him in his study of philosophy, and he continued it in Hamburg, Halle, Berlin, and Heidelberg. In 1809 he left Tübingen on the breaking out of the Austrian war, and joined the Austrian army by a circuitous route, and after the battle of Aspern, received a commission in the Austrian army. In this capacity he was present at the battle of Wagram, in which he was wounded, and removed to Vienna. When he had again joined his regiment in Hungary, he formed an intimacy with Colonel afterwards General Prince Bentheim, whom he accompanied as adjutant in several journeys after the peace of Vienna, among other places to the court of Napoleon at Paris, in 1810, where he formed many literary and political friendships, and in Prague he had become acquainted with the Prussian minister Von Stein and Justus von Gruner. When Austria joined in the Russian campaign in 1812, he left the service and proceeded to Berlin, where he had hopes of procuring employment in the civil service. From the change of circumstances he was induced in 1813 to enter again into the military service, and, reserving his allegiance to Prussia, accepted a commission as captain in the Russian army. With Tettenborn he went first to Hamburg, and afterwards accompanied him as adjutant in his march to Paris. Yet during the war he wrote a 'Denkschrift der Hamburgischen Ereignisse' (History of the Occurrences in Hamburg), a succinct relation of the recent events, published in 1813; and to this succeeded the 'Geschichte der Kriegsmage Tettenborns' (History of Tettenborn's Campaign), in 1814. While in Paris he was received into the Prussian diplomatic service, and accompanied Prince Hardenberg to the Congress of Vienna, in 1814; and while here he wrote an official report on the affairs of Saxony. After the short war of 1815, he accompanied Prince Hardenberg to Paris, and was shortly afterwards appointed resident minister at Karlsruhe, where he remained till 1819, when he retired from public business, but accepted the title of Privy Legation Councellor, and took up his abode at Berlin. In 1822 he was sent on a special mission to Cassel, and has been generally active in political affairs.

Of his very numerous writings the earlier productions belong chiefly to the romantic poetical species; his later productions are chiefly devoted to history, biography, and literary criticism. As a prose writer he is considered by his countrymen as among the most eminent for his style, which, evidently formed on the model of Göthe, is remarkable for a smoothness that gives it a marked character; this however, is most noticeable in his historical works, such as his 'Geschichte des Wiener Congresses' (History of the Vienna Congresses); but in his biographies it assumes a more lively and less studied air. Among his principal works we may mention—'Deutsche Erzählungen' (German Tales), 1815; 'Vermischte Gedichte' (Miscellaneous Poems), 1816; 'Geschichte der Befreiung Preussens in Schlesien' (Spiritual Apophthegms of A. S.), 1822; 'Göthe in der Zeugnissen der Mitlebenden' (Göthe from the Testimony of his Contemporaries), 1823; 'Biographische Denkmale' (Biographical Memorials) in five volumes, 1824-30; 'Zur Geschichtschreibung und Literatur' (On the Writing of History, and Literature), 1833; 'Leben des Generals Seydlitz' (Life of General Seydlitz), 1835; 'Leben des Generals Winterfeldt,' 1835; 'Leben der Königin von Preussen Sophie Charlotte,' 1837; 'Leben des Feldmarschalls Grafen von Schwerin,' 1841; 'Leben des Feldmarschalls Keith,' 1844; 'Leben des Fürstens Blücher von Wahlstatt,' 1845; 'Hans von Held,' 1845; and 'Denkwürdigkeiten und vermischte Schriften' (Memoirs and Miscellaneous Writings), in 7 volumes, 1843-6; 'Karl Müller's Leben und Kleine Schriften,' 1847; 'Schlichter Vortrag an die Deutschen' (A plain Statement for Germans), 1847; 'Leben des Generals Bülow von Dennewitz,' 1853. He has been in addition a frequent contributer to collections, periodical works, and to the political journals, particularly to the 'Allgemeine Zeitung.'

RAHEL ANTONIE FRIEDERIKE LEVIN, wife of the preceding, was born of a Jewish family in Berlin, named Levin, or Robert, in June 1771. She displayed extraordinary talents almost in her childhood, which, though they were not very carefully cultivated, seemed to develope themselves the more vigorously. On her father's death her mother gave her scope to her genius, and in a short time she had assembled around her a circle of the most distinguished literary men and artists of her time, by whom her extraordinary abilities in conversation were highly appreciated. The misfortunes of her country in 1805, and the death of Prince Louis Ferdinand, for whom she had a great esteem, and which was mutual, caused her much sorrow, but in all the mischances of life she ever showed the most lively sympathy with her surrounding associates, whether in weal or woe. During the war, and also during the sieges of the cholera in Berlin in 1831, she dispensed help and consolation to the utmost her reach. She first became acquainted with her husband in 1803, and the acquaintanceship became more intimate in 1807, but they were not married till Sept. 27, 1814, after she had relinquished Judaism and become a Christian. She accompanied her husband in his various missions, and everywhere became the centre of an eminently intellectual conversational circle, which was frequented by the most distinguished men and women of the capital in which she happened to be, and the charms of her conversational talent are described as being truly extraordinary. She is said to have excited her husband to write and afforded him some assistance in, his literary labours; but she did not herself aspire to the reputation of an authoress, nor give anything to the press during her life. She died at Berlin on March 7, 1833, and in 1834 her husband issued a selection from her writings under the title of 'Rahel, ein Buch des Andenkens für ihre Freunde' (A Book of Remembrance for her Friends); and in 1836 in two volumes, 'Galerie von Bildnissen aus Rahel's Umgang und Briefwechsel' (Gallery of Portraits from Rahel's Conversation and Correspondence). Both display considerable talent, with keenness and depth of observation, but hardly maintain the high reputation she had acquired in her social intercourse.

VAROTARI, ALESSANDRO, called PADOVANI'NO, a celebrated painter, was born at Padua in 1590. His father Dario Varotari was also a distinguished painter and an architect: he was the scholar of Paul Veronese, and established a school at Padua, where he died in consequence of a fall, in 1596, six years after the birth of his son, and in the 61st year of his age. The instructor of Alessandro Varotari is not known, but he went in 1614 to Venice, and devoted himself to the study of the works of Titian: he made some copies after Titian, which were remarkable for their fidelity, and acquired him a great reputation. In his own pictures he displayed such a mastery over many of the characteristic excellencies of Titian, that he is considered to approach nearer to him than any other of his imitators, in freedom of touch, in mellowness and gradation of tints, and in simplicity of composition. The works of Padovanino are seldom seen out of Venice and Padua. He excelled in painting women and children, but were more successful in the richness of his carnations and in his impasto than in the outlines of his figures. His masterpiece is generally considered the Marriage at Cana, in the Academy of the Fine Arts at Venice, formerly in the monastery of San Giovanni di Verdara at Padua. This painter had several scholars, who painted in his style, and had such facility in copying some of his works, that it is extremely difficult to distinguish some of the copies made by his scholars from the originals painted by Padovanino. He died in 1650. His most distinguished scholar was Bartolomeo Scaligero.

CHIARA VAROTARI, sister of Alessandro, was a distinguished portrait-painter; her portrait, by herself, is in the Florentine Painters' Portrait Gallery. She was born at Verona in 1563, and died there in 1639.

VARRO, MARCUS TERE'NTIUS, was born at Rome in the year B.C. 116, and descended from an ancient senatorial family. He was instructed by L. Ælius, who is spoken of as a most distinguished person, and afterwards by Antiochus, an Academic philosopher. The whole of his early life must have been spent in the acquisition of that prodigious learning which he afterwards displayed in his works. But he did not on that account withdraw from public life altogether; for in A.D. 67 we find him at the head of a part of the fleet of Pompey the Great in his war against the pirates. During the civil wars between Cæsar and Pompey, Varro steadily adhered to Pompey, and was appointed one of his generals in Spain. The western part of the peninsula was placed under his especial protection, and he had two legions at his command. When his colleagues had been compelled to surrender, and Cæsar marched westward, Varro also surrendered in the neighbourhood of Cordubs, and after being set at liberty he went to Pompey at Dyrrachium, where he was staying at the time of the battle of Pharsalus. During the absence of Cæsar in Egypt, B.C. 47, Antony destroyed Varro's villa near Casinum, where a great part of his property was lost. After the defeat of Pompey, Varro withdrew altogether from public life, and returned to Italy; and when Cæsar came to Rome Varro became reconciled to him, and was intrusted by him with the purchasing of the books for, and the whole management of, the Greek and Latin libraries, which were then established at Rome. He now enjoyed for a few years perfect peace, and gave himself up entirely to study and the composition of several works. But new troubles arose. After the murder of Cæsar, in B.C. 43, Varro, then a man of upwards of seventy years of age, was put by Antony on the list of the proscribed, apparently for no other reason but because Varro was a staunch friend of republican freedom. Varro himself escaped, as his friends conceal-ed and protected him until the danger had passed over, but his libraries were irrecoverably lost. After the battle of Actium, B.C. 30, Varro again lived at Rome, and appears to have been highly esteemed by Augustus, who gave him the superintendence of the library founded by Asinius Pollio. Notwithstanding the great loss of books and other property which Varro had sustained, his literary activity remained unabated to a very advanced age. In his eighty-eighth year he was still writing. (Plny, 'Hist. Nat.,' xxix. 18.) His died in the ninetieth (B.C. 27), or, according to Valerius Maximus, in the hundredth year of hisage.

Varro was one of the most extraordinary men that ever lived. He was certainly the most learned of the Romans; but his learning was not the learning of the closet only: he had acquired a practical knowledge of men and things during his public career, and on the basis of this solid knowledge he wrote his works in the retirement of his villas. There was scarcely any branch of knowledge with which he was not thoroughly conversant: he was an historian, a philosopher, a naturalist, a grammarian, and a poet, and in all these branches he is spoken of in terms of the highest praise. Varro was for his time and for the Romans what Aristotle was to the Greeks. His himself says that he wrote 490 books ('septaginta hebdomades,' Gellius, iii. 10), but all of them, with the exception of two and a few fragments of others, are now lost. We shall only mention some of the more important among his lost works, and then add a few remarks on those which exist. 1, 'Rerum Humanarum Antiquitatis Libri xxv.;' 2, 'Rerum Divinarum Antiquitates Libri xvi.;' 3, 'De Vita Populi Romani,' consisting of at least eleven books; 4, 'De Gente Populi Romani Libri iv.;' 5, 'De Initiis Urbis Rome Liber;' 6, 'De Re Publica,' consisting of at least twenty books; 7, 'De Philosophia Liber;' 8, 'De Scenicis Originibus Liber,' of which a third book is mentioned; 9, 'De Poetis;' 10, 'De Plautinis Comœdiis;' 11, 'De Bibliothecis,' &c. (See the list in Fabricius, 'Biblioth. Lat.,' i., c. 7.)

The two extant works of Varro are on the Latin language ('De Lingua Latina') and on Agriculture ('De Re Rustica'). The former, of which a part only is extant, consisted originally of twenty-four books, of which we now possess only books 5, 6, 7, 8, 9, and 10; and these are much mutilated and interpolated. The work was written between the years B.C. 46 and 4, and was dedicated to his intimate friend, M. Tullius Cicero. In the first three of the extant books Varro treats on the origin of words, and in the last three on the accidents of words, such as declension and conjugation. The subject is of such a nature that we cannot judge of him by it; but it is nevertheless of great value on account of the philological remarks as well as various historical and archæological matters which are mentioned incidentally. The first edition of 'De Lingua Latina' is that of Venice, 4to, 1498, edited by Pomponius Lætus and Rhodandellus. The best among the subsequent editions are the Bipont (2 vols. 8vo., 1788), that of Spengel (Berlin, 8vo., 1826), and especially that of C. O. Müller (Leipsig, 8vo, 1833). The Bipont edition contains a collection of the fragments of Varro's lost works.

The work 'De Re Rustica' is complete, and not in such bad condition as the 'De Lingua Latina,' although another of the principal passages from it which are not in it now. It consists of three books, and is dedicated to his wife Fundania. Although Varro wrote it at the age of eighty, it is, at least among the Roman works on agriculture, the best that has come down to us. It is written in the form

Digitized by Google

of a dialogue, and in a pleasing and lively style. Besides the subject it professes to treat of, it contains a great number of passages illustrating ancient mythology, archæology, and ethics. It is chiefly based upon Greek works, and one written by the Carthaginian Mago. It is printed in the collections of Varro's works published by H. Stephens (1569), Popma (Leyden, 8vo, 1601), and others; and also in all the collections of the 'Scriptores Rei Rusticæ,' the best of which are those by J. M. Gesner, with notes of Ernesti (Leipzig, 2 vols. 4to, 1772-74), and J. G. Schneider (Leipzig, 4 vols. 8vo, 1794-97), who has also given a very good Life of Varro. Of the Menippean Satires of Varro but a few fragments remain; these have been collected with the fragments of the Libri Logistorici, and edited in a very satisfactory manner by F. Ehler, Quedlinburg, 8vo, 1844.

(Fabricius, *Biblioth. Lat.*, i. c. 7; Orelli, *Onomast. Tullianum*, under 'M. Terentius Varro.')

VARRO, PUBLIUS TERE'NTIUS, surnamed ATACI'NUS, a Roman poet, was born, according to Hieronymus, in the Chronicle of Eusebius, about the year B.C. 82, at Atax in Gallia Narbonensis, or according to Wüllner, at Narbo itself. Respecting his life little is known beyond the facts that he learned Greek at the age of thirty-five, and died in B.C. 37, at the age of forty-five. Varro distinguished himself in epic, elegiac, and epigrammatic poetry; but with the exception of some fragments and epigrams, his works are now lost. We know of three epic poems of Varro—1, 'An epic on the war of Cæsar against the Sequani.' 'Bellum Sequanicum,' of which Priscian (x., p. 877) quotes the second book. 2, 'Bellum Punicum Secundum,' which Fabricius attributes to Marcus Terentius Varro, but others, with greater probability, to P. Terentius Varro Atacinus. 3, 'Argonautica:' this poem was a free translation of the 'Argonautics' of Apollonius Rhodius, and was very celebrated among the Romans. It is frequently referred to by contemporary writers, as well as by later grammarians.

(For a more detailed account of this poet see Wernsdorf, *Poet. Lat. Minores*, v., 3, p. 1385, &c.; and Wüllner, *Commentatio de P. Terentii Varronis Atacini Vita et Scriptis*, Münster, 4to, 1829. In both of these works the remains of the poet are collected.)

VARUS, QUINTILIUS. [HERMANN.]

VASA, GUSTAVUS. [GUSTAVUS ERICKSON.]

VASARI GIORGIO, Cavaliere, born at Arezzo in 1512, was a celebrated painter and architect in his time, but his reputation now rests nearly exclusively upon his Lives of the most excellent Italian Painters, Sculptors, and Architects, 'Vite de' più excellenti Pittori, Scultori, e Architetti,' published in Florence, in 1550, in 2 vols. 8vo., and again in a second edition by himself, in 1568, in 3 vols. 4to, with portraits cut in wood, likewise in Florence, with many new lives of living and deceased artists, up to the year 1567. This work became remarkably popular, and many editions of it have been since published: one at Bologna, from 1647 to 1663, with the same portraits; one at Rome, in 1759, with copperplate portraits, and emendations and annotations by Bottari; again, at Leghorn and Florence, with additional notes by Bottari, in 1767-72; another at Siena, in 1791-94, by Della Valle, with some additional information respecting the artists of Siena (this edition was reprinted in the Milan edition of 1808); and complete editions of the works of Vasari were published in Florence, in six volumes, 8vo, in 1822-23, in which the biographies were reprinted from the edition of 1568, without notes, but with copies of the portraits of Bottari's edition, by Montani of Cremona and Giovanni Masselli, Florence, 1832-38; and again in 1846-57.

The last life in Vasari's work is his own, which he traces up to his fifth-fifth year. He was instructed in design by his father Antonio Vasari, and in painting by William of Marseille; and being taken to Florence, in 1524, by Silvio Passerini, Cardinal of Cortona, he was there further instructed by Michel Angelo, Andrea del Sarto, and others. Vasari lost his father, in 1528, of the plague, and in 1529 he turned goldsmith in order to be the better able to assist his family, who were supported by an uncle. He however the same year took up his former profession at Pisa. He afterwards returned to Arezzo, and studied with Francesco Salviati, from whom he was taken by Cardinal Ippolito de' Medici, who took him into his service to Rome, and introduced him to Clement VII. He returned afterwards to Florence, and there, through the encouragement and protection of the Medici family, he met with all the success he could desire. Few painters have been more successful in point of patronage, or have executed more works than Vasari; but his paintings are remarkable for no particular excellence, though they are generally correctly drawn, and many of them are conspicuous for a dignity of character which is not common. He was the intimate friend and an enthusiastic admirer of Michel Angelo, and he may be almost termed a servile imitator of his style. The majority of Vasari's works were executed from his designs or cartoons by his scholars, who were very numerous: they painted at Rome a great ceiling with many frescoes for the Cardinal Farnese, in a hundred days, but so little to Vasari's satisfaction, that he determined from that time, 1544, not to entrust to them the finishing of any work whatever. Vasari in his 'Life' relates the origin of his biographical work; he un-ertook it in consequence of a suggestion of the celebrated Paolo Giovio, and at the request of Cardinal Farnese. It is a vast compilation and a work of great labour, whether the prodnction of one or more persons, and remains even now unrivalled by any work of its kind, notwithstanding its numerous inaccuracies and his partiality for the Florentines: the style is excellent for the period, and the language is both powerful and eloquent. Vasari died at Florence, in 1574, and was buried in Arezzo. There is a German translation of Vasari's Lives by Schorn, which is extremely valuable for its notes, and an English translation by Mrs. J. Foster forms 5 volumes of Bohn's Standard Library.

VATER, JOHANN SEVERIN, a distinguished German linguist and theologian, was born at Altenburg on the 27th of May 1771. After having received his preparatory education in the gymnasium of his native town, he went in 1790 to the University of Jena, where he studied philosophy and theology, the latter under Griesbach, Schnederlein, and Paulus. From the year 1792 to 1794 he continued these studies in the University of Halle, where he also began his career as academical teacher. In 1796 however he returned to Jena, where he was appointed professor extraordinary in the theological faculty. Along with the Hebrew language, the grammatical knowledge of which was greatly advanced by him, he now devoted himself to the study of a variety of languages, for the purpose of comparison, and of discovering what was then called a philosophical or universal grammar, which was to develope the great principles common to all languages and their respective grammars. In the year 1800 he was invited to go to Halle as ordinary professor of theology and Oriental literature. Without giving up his linguistic studies, he now devoted considerable time to the critical examination of the early books of the Old Testament, and of ecclesiastical history. After the death of Adelung, in 1806, who left his great linguistic work, 'Mithridates,' unfinished, Vater, with the assistance of Adelung's manuscripts and of several distinguished scholars, undertook its completion. Adelung had only published one volume, and the other three were published by Vater (Berlin, 1806-17). In 1809 he was appointed professor of theology and librarian in the University of Königsberg, where he continued his linguistic labours with unabated zeal. His studies embraced the languages of civilised nations, as well as those of the tribes of America and Africa. In 1820 Vater returned to Halle as professor of theology, and although he did not altogether abandon his former linguistic pursuits, yet va find him chiefly engaged in ecclesiastical history and the exposition of the New Testament. During the later years of his life he edited several theological and religious periodicals, as the 'Journal für Prediger,' the 'Kirchenhistorisches Archiv,' and the 'Jahrbuch der Häuslichen Andacht,' the last of which he himself had set on foot in 1819. He died at Halla on the 16th of March 1826.

Vater possessed a more extensive knowledge of languages than any of his contemporaries, although he did not enter into their spirit so deeply as others. His works however are very valuable on account of the immense materials which they contain for the study of comparative grammar.

The following list contains the most important of his linguistic works:—1, 'Uebersicht des Neuesten was für Philosophie der Sprache in Deutschland gethan worden ist, in Einleitungen, Auszügen, und Kritiken,' Gotha, 8vo, 1799; 2, 'Versuch einer Allgemeinen Sprachlehre,' Berlin, Halle, 8vo, 1801; 3, 'Lehrbuch der Allgemeinen Grammatik, besonders für Höhere Schulklassen, mit Vergleichung älterer und neuerer Sprachen,' Halle, 8vo, 1806; 4, 'Handbuch der Hebräischen, Syrischen, Chaldäischen, und Arabischen Grammatik, für den Anfang der Erlernung dieser Sprachen bearbeitet,' 2nd edit., Leipzig, 8vo, 1817; 5, 'Literatur der Grammatiken, Lexica, und Wörter-Sammlungen aller Sprachen der Erde, in Alphabetischer Ordnung,' Berlin, 8vo, 1815 (this work is printed in German and Latin); 6, 'Analekten der Sprachenkunde, mit einer Sprachenkarte von Ostindien,' Leipzig, 2 parts, 1820 and 1821; 7, 'Vergleichungstafeln der Europäischen Stammsprachen und Süd-west Asiatischer; 8, K. Rask Ueber die Thrakische Sprachelasse; Albanesische Grammatik nach Fr. Mar. de Lecce; Grusinische Grammatik nach Maggio, Ghal und Firalow, und Galische Sprachlehre von Ch. W. Ahlwardt,' Halle, 8vo, 1822.

VATTEL, EMMERICH, the celebrated writer on international law, was born at Couret, in the principality of Neufchâtel, in 1714. The family was of considerable antiquity in the principality. Emmerich's father Vattel, a clergyman, had been ennobled by the king of Prussia. John Frederick, an elder brother of Emmerich, entered the French service, and rose to the rank of lieutenant-colonel and knighthood. Charles, a younger brother, entered the Sardinian service, and fell at the passage of the Tanaro. Jacob Vattel, who represented another line of the same family, was burgomaster of Neufchâtel in 1762.

Emmerich was educated for the church. He was sent to the university of Bâle to study the classics and philosophy. Having completed the usual curriculum of the Faculty of Arts, he returned to Neufchâtel, and passed with distinction the preliminary examinations, which all who proposed to enter the church had to undergo before commencing their theological studies. He then repaired to Geneva, to devote himself to those strictly professional pursuits. The writings of Leibnitz and Wolff had however more attractions for him than the 'Institutes' of Calvin. It was an age in which literary men were caressed and promoted at courts, and young Vattel felt a greater vocation for such worldly advancement than for the charge of a rural parish. In 1741 he proceeded to Berlin, in the hope that the court

Digitized by Google

of Frederick II., who had recently ascended the throne of Prussia, and whose taste for literature was general, might afford a field for his talents. At Berlin Vattel contracted an intimacy with Jordan. In 1742 he published a defence of Leibnitz's system, which he dedicated to Frederick. His wish was to enter the diplomatic service of Prussia, but no vacancies occurred, and his fortune was too limited to admit of a lengthened attendance at court. In 1743 some overtures from the court of Dresden, which sought to rival that of Berlin in a reputation for the patronage of art and literature, induced Vattel to visit that city. The gracious reception he experienced from Count Brühl decided his resolution to enter the service of the king of Poland and elector of Saxony.

It is extremely doubtful in what capacity Vattel was attached to the Saxon court in 1744-46. In 1746 he obtained the appointment of diplomatic counsellor (conseiller d'ambassade), with a pension, and was sent to Berne as the king of Poland's minister with that republic. The duties of a Polish ambassador at Berne were not very onerous: Vattel was able to spend the greater part of his time with his family at Neufchâtel, and to devote himself to literary pursuits. In 1746 he published a collection of essays. In 1747 it was reprinted, under the title of 'Philosophie Leisure,' and dedicated to Count Brühl. Some of them have the appearance of having been previously published in some periodical—possibly the 'Journal Helvetique.' The subjects are sufficiently diversified:—'Essai sur le fondement du Droit Naturel;' 'Sur les Moyens de répondre aux Manichéens;' and 'Sur la Nature d'Amour, à Mademoiselle de M.' They evince a cultivated taste for French literature, with an easy play of good-natured but not very brilliant wit. The discourse upon love is dated 1741. In 1757 he published 'Polisrgie,' a collection of miscellanies in prose and verse. But the chief employment of Vattel during the ten years which elapsed between the appearance of the two volumes was the preparation of his work on the law of nations. The first edition was published at Neufchâtel (the title-page has the fictitious place of publication 'Londres') in 1758.

About the time that the work appeared he was called to Dresden, and received an appointment in the diplomatic bureau. He gave so much satisfaction as a practical diplomatist, that he was soon raised to the rank of a privy counsellor. His intense application to business undermined his constitution, and in 1766 he was obliged to visit his native country in search of health. The favourable symptoms produced by relaxation and the mountain air encouraged him to resume his labours before his health was quite re-established. His complaint returned with increased violence soon after he reached Dresden, and a second visit to Neufchâtel proved unavailing. He died on the 28th of December 1767. He had married at Dresden in 1764, Marianne de Chêne, by whom he left one son.

The work by which Vattel is best known is his 'Droit des Gens.' It is the work of a scholar, not of a practical diplomatist; for the almost nominal charge of Polish envoy to the republic of Berne could afford but scanty experience. It evinces no very extensive acquaintance on the part of the author with treaties or negociations, or even with political history: his principal authorities are the systematic writings of Grotius, Puffendorf, and Wolff. According to the custom of the period, an imaginary law of nature is substituted for the real practice of nations. In respect to its doctrinal merits, the work has all that speciousness and superficiality which characterise the moralists of the 'Encyclopédie.' The work however obtained an extensive reputation. It had the fashionable tone of the age, and was therefore more relished than Grotius and Puffendorf; and its systematic arrangement was found useful by practical diplomatists, as it enabled them to classify the fruits of their own experience. It became a text-book in the universities, and was quoted by negociators who had not quoted their views and other authorities were wanting. The original French text has gone through many editions: 4to, Londres (Neufchâtel), 1758; 4to, Neufchâtel, 1773; 4to, Amsterdam, 1775; 12mo, Bâle, 1775; 4to, Nimes, 1775; 8vo, Lyon, 1807; 8vo, Paris et Lyon, 1820 (a bad edition); 8vo, Paris, 1820 (the worst edition); 8vo, Paris, 1830 (an indifferent edition); 8vo, Paris, 1838 (a good edition); 8vo, Paris, 1839 (the best edition). There have been three Spanish editions:—Madrid, by Hernandez, 1820; Burdeos, by J. B. J. O., 1822; Paris, by Aturens, 1824. The last two translations are mere plagiarisms of the first. An English translation was published in 4to in 1760, and reprinted in 8vo in 1793. Mr. Chitty, in 1833, republished the edition of 1793, with valuable notes, containing the most modern rules and decisions. A German translation by Schulin was published at Frankfurt-on-the-Main, in 1760.

Next in importance among the works of Vattel is that entitled 'Questions de Droit Naturel, et Observations sur le Traité du Droit de la Nature de M. le Baron de Wolff,' 12mo, Berne, 1762; 12mo, Paris, 1763. This is a critical examination of Wolff's treatise, characterised by that talent for arrangement and lucid expression which is the chief merit and source of attraction in Vattel's writings.

The remaining works of this author are of little consequence:—1, 'Pièces Diverses, avec quelques Lettres de Morale et d'Amusement,' 12mo, Paris, 1746. This collection was republished at Geneva and Dresden, in 1747, in 12mo, under the title 'Le Loisir Philosophique, ou Pièces Diverses de Philosophie, de Morale, et d'Amusement;' and again at the Hague, in 1765, in 8vo, under the title 'Amusements de Littérature, de Morale, et de Politique.' 2, 'Poliergie, ou Mélanges de Littérature et de Poésies, par M. de V***,' 12mo, Amsterdam (Paris), 1757; 3, 'Mélanges de Morale, de Littérature, et de Politique,' 12mo, Neufchâtel, 1770.

(*Helvetische Lexicon*, von Vattel; *Sketch of Vattel's Life*, prefixed to the edition of 1773; Quérard, *La France Littéraire; Biographie Universelle.*)

VATTIER, PIERRE, was born near Lisieux in Normandy, in 1623, and died at Paris April 7, 1667. He was physician to Gaston, duke of Orleans, and devoted a great part of his time to the translation of Arabic writers on history and medicine. The titles of his published works are as follows:—1, 'Histoire Abomemate, ou Annales du Calife Daher,' 4to, Paris, 1657; 2, 'L'Histoire du Grand Tamerlan,' 4to, Paris, 1658, from the Arabic of Achamed, son of Guerapo; 3, 'Portrait du Grand Tamerlan,' 4to, Paris, 1658; 4, 'L'Unicrocrite Musulman, ou Interpretation des Songes,' 8vo, Paris, 1664, from the Arabic of Gabdorrachaman, son of Nasor; 5, 'Merveilles d'Egypte selon les Arabes,' 12mo, 1666, Paris, from the Arabic of Murtadi. This was translated into English by John Davies, and published, 8vo, London, 1672; 6, 'La Logique, traduite d'Arabe,' 8vo, Paris, 1658, from Avicenna; 7, 'De Morbis Mentis Tractatus,' 8vo, Paris, 1659, also translated from Avicenna, of the whole of whose works he promised a translation, which he is said to have completed, but which was never published; 8 'Elegie de Thegrai,' 8vo, Paris, 1660; 9, 'Nouvelles Penées sur la Nature des Passions,' 4to, 1659, which appears to be the only work of his own composition. His translations are said to be inaccurate, and in many parts incomplete.

VAUBAN, SEBASTIEN LE PRESTRE DE, was born in May, 1633, at St. Leger de Foucheret, near Saulieu in Burgundy. His family had been in possession of the lordship of Vauban for more than two hundred and fifty years, but the fortune or otherwise the estate became incumbered with debts; and both his father, Urbain le Prestre, who had spent his life in the service of his country, and his mother, Aimée de Carmagnol, dying while he was young, he was left to the care of M. de Fontaines, prior of St. John, at Semur, who generously supported him, and besides teaching him to read and write, gave him the only instruction in arithmetic and geometry which he ever received from a preceptor. Unwilling probably to remain a burden to his benefactor, and stimulated by the example of his uncles and relations, all of whom were in the army, he entered at seventeen years of age into the regiment of Condé, which was then in the service of Spain, and he was received as a cadet in the company of Arcenal. In this situation his good conduct soon procured for him a commission; and joining to the experience acquired in the field a knowledge of the mathematics as far as they are connected with the military art (for he had then studied trigonometry and mensuration), having probably also read the writings of the Italians on fortification, he was qualified to undertake the duties of an engineer.

At the beginning of the year 1652, when only nineteen years of age, he was employed on the fortifications of Clermont in Lorraine, and in the same year he was sent from thence to serve at the siege of Ste. Menehould. Here he superintended the construction of the lodgments, and during the assault of the place he performed the daring exploit of swimming across the river under the fire of the enemy. In the following year he was taken prisoner by a party of French royalists and brought before Cardinal Mazarin, who, having heard of his gallantry, received him kindly and solicited him to enter the king's service. Vauban readily consented to take that step, having had no objection in following the standard of Condé than the desire of studying the art of war under that great general; and he was immediately appointed to a lieutenancy in the regiment of Burgundy. In that year (1653) he served under the Chevalier de Clerville at the second siege of Ste. Menehould, and after the taking of that place he was appointed to superintend the repairs of its fortifications. In the following year he assisted at the siege of Stenay, and three months afterwards at that of Clermont. Both of these places were taken, and in 1655 he received a commission which placed him in the corps of engineers. During that year he directed the sieges of Landrecies, Condé, St. Guislain, and Valenciennes; and in 1657 that of Montmédi, where he received three wounds. In 1658 he had the chief direction of the attacks at the sieges of Gravelines, Ypres, and Oudenarde. The Maréchal de la Ferté, under whom he served, and who in 1656 had given him a company in his own regiment, as an acknowledgment of his superior merit gave him then one in another regiment, and ventured to predict that if the life of the young officer were spared he would attain the highest dignities. Cardinal Mazarin also sent him a present, accompanied by flattering expressions of esteem, which stimulated the ingenuous mind of Vauban to still greater acts of zeal for the public service; in fact, so much does he appear to have been occupied by his duties, that only it is said by the accounts given of his exploits in the government papers his relatives obtained any knowledge of his existence.

Hitherto Vauban had to make his way without any of the advantages which wealth or the patronage of the great procures; but from this time he enjoyed the confidence of the government, and his history may be said to be connected with that of his country.

In 1661 occurred the peace of the Pyrenees; and then Dunkirk, Fort Louis, and Mardike having been ceded to France, the king (Louis XIV.) determined to strengthen their fortifications, so that

Digitized by Google

they might constitute a bulwark against the Spaniards, who then possessed Artois. He committed this important duty to Vauban, who accomplished the proposed end to his satisfaction, and at the same time conciliated the inhabitants by causing a canal to be cut, which was to allow, in case of necessity, a commercial communication between these places. At this time also it is said that he gave plans for improving the fortifications of Cherbourg.

When the war recommenced in 1667, Vauban had the direction of the sieges which the king conducted in person; and at Douay he received in his face a musket-ball, the scar from which he carried to his grave. Notwithstanding his wound he conducted the siege of Lille, and succeeded in taking the town after nine days from the opening of the trenches. The king, who was present, gave him on this occasion the appointment of lieutenant in the French guards, together with a pension, and the more flattering distinction of a public eulogium.

After the peace of Aix-la-Chapelle (1668) he was occupied in superintending the repairs of the fortifications of Flanders and Artois; and in the same year he was made governor of Lille, the citadel of which town he had constructed. He also gave plans for executing new works in Provence and Roussillon; and he went with M. de Louvois to Piedmont, where he visited Verrua, Vercelli, Turin, and Pinerola, and suggested projects for improving their fortifications. At his departure the Duke of Savoy presented him with his portrait enriched with diamonds; and on his return from Italy he went to superintend the works which were being executed at Dunkirk, where 30,000 men were constantly employed with admirable regularity.

In 1672, the Dutch having united themselves under the Prince of Orange in opposition to France, Louis XIV. proceeded in person to the seat of war; and under the direction of Vauban several places were besieged and taken; in the following year Maestricht was invested; and here Vauban made a great improvement in the mode of conducting the attack, by executing long trenches connecting at intervals the several lines of approach, and forming covered communications by which the different divisions of the attacking force were enabled to support each other. In or near the fronts of these trenches he placed the batteries destined to silence the fire from the place. Vauban immediately afterwards reconnoitred the fortifications of Trèves, and having given directions for the prosecution of the siege, France being at that time threatened on all sides, he proceeded to visit the fortifications on the coast. After giving orders for the construction of new works for the defence of the Isle of Ré, he revisited Flanders, and subsequently he rejoined the king, who was then carrying the war into Franche Comté. But the allies having in the meantime invested Oudenarde, he entered that place, and conducted the defence so vigorously that they were obliged to raise the siege; and for these services he was in 1674 made brigadier of the French infantry.

During the following year the armies of France were compelled to act on the defensive; but in 1676 Vauban besieged Valenciennes, and took the place after an assault made by daylight, in opposition to the opinions of the generals of the army, who gave the preference to a night attack. During this campaign he was made marechal de camp, and received a pension, besides a present from the king of 25,000 crowns. In the following year he conducted the siege of St. Guislain under Marshal d'Humières, and the fall of that place was followed by that of Ghent. Ypres was immediately invested, and soon afterwards taken. At this time the death of the Chevalier de Clerville, who was director-general of the fortifications, left that post vacant, and the king immediately conferred it on Vauban. It was that at first he declined it on the ground that it would bring him into close intimacy with the ministers: these were Louvois and Colbert, men jealous of each other; and Vauban probably felt that it would be difficult to give satisfaction to both. He was at length induced to accept the post, and he appears by the uprightness of his conduct to have succeeded in acquiring their esteem.

The peace of Nimuegen (1678), which relieved Vauban from the duty of taking fortresses from the enemy, enabled him to direct all the energies of his mind to the improvement of those which belonged to his country. He first went to Dunkirk, where, by cutting through the sand-bank which closed the entrance, and providing the means of keeping the channel open by directing through it a current of water, he rendered the harbour one of the most important in the north of France: from hence, proceeding to the south, he gave plans for enlarging the fortifications of Toulon, and for the construction of its arsenal; and making Perpignan the centre of the defences of the Eastern Pyrenees, he caused the fortress of Mount Louis to be constructed. Returning to the north, he was employed in improving the chain of fortresses along the frontiers on that side: with this view he completed, near Calais, the fort of Neulay and that of Lakenoque, by which the communication between Ypres and Menin was protected, and Cassel covered. The construction of the works of Maubeuge and the repair of those of Charlemont served to secure the line between the Schaldt and the Meuse, which was before imperfectly protected by Philippeville; and a chain of new fortresses closing up the Vosges secured the conquest of Alsace. The fort of Huningueun near Basel protected the frontier of the Rhine and the Jura; and the new forts which he caused to be built at Fribourg served to render that important place nearly impregnable.

While the execution of these works was in progress, Vauban went again (1680) to the south, where he formed a plan of defence for the Western Pyrenees, improving the port of Bayonne and making that place the grand depôt, while St. Jean Pied-de-Port served to connect the line of defence with the mountains: he also caused the fort of Andaye to be constructed for the purpose of defending the mouth of the Bidassoa. In 1681 Vauban was employed in adding new works to Brest, Rochfort, and other places for the protection of the coast; but these works were scarcely traced when he was called upon to strengthen those of Strasbourg, a free city which had fallen into the hands of the French. He constructed the citadel of that place, and executed the fortifications of the city with the right bank of the Rhine by means of Fort Kehl, and by several strong redoubts; facilitating the arrival of materials for the works by cutting a canal with sluices, the construction of which he superintended in person.

Hostilities breaking out in 1683, Vauban proceeded in the following year with the French army into Belgium, where in four days he took Courtray, and immediately laid siege to the strongly fortified city of Luxembourg: this place was also taken, but not till all the resources of the art of attack had been displayed; and it is said that on this occasion he first constructed trench-cavaliers for the purpose of dislodging the defenders from part of the covered way previously to an assault being made. In reconnoitring by night for the purpose of ascertaining the depth of the glacis, being accompanied only by a few men at a distance, he was discovered by the sentinels; but he was fortunately enabled to retire in safety, having first deceived them by walking coolly towards them as if he had been one of their own officers.

The war having suddenly terminated in 1684, Vauban strengthened the fortifications of Luxembourg by the addition of a crown, and a horn-work beyond the ravine on the western side of the town; and in order to become completely master of the course of the Moselle, he then constructed the fort called Mount Royal. About the same time he was enabled to display his talents as a civil engineer by executing in part the magnificent aqueduct of Maintenon, by which the waters of the Eure were to be conveyed to Versailles. In 1686 he visited the great canal of Languedoc, which had just then been executed; and he is said to have suggested some improvements which were afterwards adopted.

Two years afterwards the war again broke out, and Vauban was immediately employed under the Dauphin, in conducting the sieges of Philisbourg, Manheim, and Frankenthal: the first of these places, which had been fortifications he had strengthened in 1676, held out twenty-two days from the time of opening the trenches; and most of the engineers under his orders being killed or wounded, the duty of superintending the operations fell almost wholly on himself. The year he was made lieutenant-general, and the king in a complimentary letter recommended him to be careful of his life for the good of the service. The Dauphin, as a token of regard, presented him with four pieces of cannon for his Château de Bazoche. It is said to have been at the siege of Philesbourg that Vauban first put in practice ricochet firing; and that he improved the organisation of a corps of pioneers, expressly for siege duties. In this year he began the fortresses of Landau and Befort.

The following year (1689) Vauban had the command at Dunkirk, Bergues, and Ypres, with orders to enter into and conduct the defence of any of these places, should it be besieged, but no investment took place. During the year 1690 Vauban was rendered incapable of doing any military duty in consequence of a severe illness which he contracted while superintending the repairs of the fortifications of Ypres; he recovered however, and next year he besieged and took Mons. In 1692 the siege of Namur was formed under the orders of the king, and the first attacks were directed against Fort Guillaume, a strong work which had been constructed by the celebrated Coehorn, who then commanded it: the fort was obliged to surrender to the superior fortune of Vauban, who succeeded in cutting off its communication with the town, and the latter was soon afterwards taken. The siege of the fort and town lasted twenty-nine days from the opening of the trenches, during which time five strong sorties were made by the garrison. In 1693 he conducted the siege of Charleroi.

The Duke of Savoy threatening to invade Brittany, Vauban was sent into the south of France to ascertain the state of the fortresses on that side, and he gave plans for improving the works at Besançon, for fortifying Fenestrelles, and constructing Fort Dauphin. In 1694 the sea-ports being frequently bombarded by the English fleets, application was made to Vauban, who suggested the formation of magazines and casemates which should be proof against the destructive effects of shells and red-hot shot. In 1697 he besieged and took Aeth in a few days from the opening of the trenches. After the peace of Ryswick Vauban was employed for several years in visiting the frontiers and in forming projects for the defence of the country; and in 1698 he commenced the important fortress of New Brisach.

The War of the Succession commencing in 1703, Vauban proceeded to Namur, in order to superintend the repairs of the fortifications; and at this time the king, as a recompense for his many services, elevated him to the dignity of a marshal of France: this honour he at first declined, urging that it would put it out of his power to serve the country by directing any future siege, as he could not with that rank act under a general of the army. He at length however accepted it; and he readily consented soon afterwards to conduct the siege of Old

Digitized by Google

Brissach, under the orders of the young Duke of Burgundy, the pupil of Fénélon. This was one of the places which Vauban had constructed, and it surrendered on the fourteenth day.

In 1706, after the battle of Ramilies, Marshal Vauban was sent to command at Dunkirk and on the coast of Flanders, where his presence served to support the energies of the people, who were much discouraged by the reverses which the armies of the country had sustained during the war. He succeeded in dissuading them from executing their project of inundating the district in order to prevent the enemy from besieging that town; and he immediately commenced an intrenched camp, extending from Dunkirk to Bergues, by which the town was more effectually secured.

This was his last public work, for he died March 30, 1707, after an illness of eight days, in the seventy-fourth year of his age. He had married Jeanne d'Annel (of the family of the Barons d'Espiri, in Nivernois), who died before him; and he left two daughters, the Countess of Villebertin and the Marquise d'Usez.

During the intervals of his services in the field he employed his leisure in composing his three principal works: these are entitled 'Traité de l'Attaque des Places,' 'Traité des Mines,' and 'Traité de la Défense des Places.' The last was finished only a short time before his death. Several editions of these works have been published, and the best is that of Foissac, Paris, 1795. During his life he also found time to write a great number of memoirs on various subjects; and near the end of his days he collected them in twelve folio volumes (manuscript). He entitled them his 'Oisivetés;' and among them is a paper on the abuses practised in collecting the 'dixme royale;' one on the limits of ecclesiastical power in temporal matters, one on the cultivation of forest-lands, and many on finance, on geography, and on different parts of the mathematics: there is also a memoir concerning a project for joining the canals of maritime Flanders with the Lys, the Deule, the Scarpe, and the Scheldt, and one concerning the defence of Paris. In consequence of the disasters experienced during the campaign of 1706, the king contemplated abandoning his capital and retiring behind the Loire; and on this occasion Vauban wrote the memoir last mentioned, in which he pointed out the importance of preserving Paris, and the possibility of defending it, adding a plan of the fortifications which he proposed to construct for its defence. This memoir was published in 1821.

Fontenelle, in summing up the military actions of Vauban, observes that he superintended the repairs of 300 old fortresses and executed 53 new ones; that he conducted 53 sieges, many of them under the eye of the king, and that he was present at 140 vigorous actions. He was much beloved by his soldiers, who obeyed him willingly, both from the confidence which they placed in him, and from the knowledge that he avoided exposing them as much as the good of the service would permit. At the siege of Cambray the king, by the advice of the persons about him, was on the point of ordering that an assault should take place, and that the garrison should be put to the sword; Vauban alone opposed this advice, observing that it would be preferable to save one hundred French troops than to destroy three thousand of the allies; and the king had the good sense to abandon the idea. The humanity of Vauban's character is also manifest in the effort which he made to induce the king to re-establish the Edict of Nantes; unhappily, the bigotry of the king or the influence of the priesthood rendered his representations on this point fruitless. He had no constant system in fortifying places, but he appears to have followed in some respects the method of the Italian engineers: what are called his three systems have been formed since his death from a diligent study of the works which he executed at different times. In 1693 the order of St. Louis was founded, chiefly by the advice of Vauban, who was immediately invested with the dignity of Grand Cross of the Order, he being one of the seven to whom that dignity was at first confined. When the Académie des Sciences was renewed in 1699, Vauban was appointed one of its honorary members; and Fontenelle observes that no one better deserved this distinction, since no one had more completely rendered science subservient to the benefit of mankind.

Besides the 'Eloge' by Fontenelle, in his 'Histoire du Renouvellement de l'Académie,' we have an account of Vauban's life in an 'Eloge' by Carnot, and another by M. Noel in 1790; the former gained the prize proposed by the Académie de Dijon in 1783, and the latter that which was proposed by the Académie Française in 1785.

It is remarkable that little is known of the collateral branches of the family of Vauban: one of his grand-nephews was a lieutenant-general and governor of Bethune; and the son of this officer, after having served in America under Rochambeau, and subsequently in La Vendée, died at Paris in 1816.

VAUCANSON, JACQUES, DE, the mechanician, was born on the 24th of February 1709, at Grenoble, in the present department of Isère, in France, of a noble family. His predilection for the mechanical arts developed itself early. While yet a boy he was accustomed to attend his mother, a woman of strict piety, to a Sunday conversation with some other religious women, at which he amused himself by observing through the chinks of a partition a part of the movements of a clock in an adjoining chamber. He endeavoured earnestly to understand the principles of the movement he saw, and at the end of several months he discovered the principle of the escapement. From this moment his taste was fixed. He constructed with rude tools a clock in wood, which marked the hours with great exactness; and he made for a miniature chapel the figures of some little angels which waved their wings, and of some priests which performed several ecclesiastical movements. Chance fixed his residence for a time at Lyon, where a project was being discussed for bringing water to the town by a hydraulic machine, and he invented one which his modesty prevented him from offering, but when he arrived in Paris he was delighted to see that the same idea had there been carried into effect. He perceived then that for the completing of his schemes he required a better knowledge of anatomy, music, and mechanics, and he zealously studied those arts for several years. The student of the Flute-player in the gardens of the Tuileries gave birth to the desire of making a similar one that would play. The reproaches of an uncle, who considered the notion as extravagant, suspended its execution; but after an interval of some years, and during a long illness, he succeeded in its construction. It was exhibited in Paris in 1738, where it was seen by d'Alembert, who described it in the article 'Androide' in the 'Encyclopedie Méthodique.' It really played on the flute, that is, projected the air with its lips against the embouchure, producing the different octaves by expanding and contracting their opening, forcing more or less air in the manner of living performers, and regulating the tones by its fingers. It commanded three octaves, the fullest scale of the instrument, containing several notes of great difficulty to most performers. It articulated the notes with its lips. Its height was nearly five feet six feet, and in which some of the machinery was contained. In 1740 he declined accepting an invitation from Frederic of Prussia, who was desirous of assembling all the most distinguished men of Europe, to take up his residence at Berlin. In 1741 he produced a flageolet-player, who beat a tambourine with one hand. To flageolet had only three holes, and some notes were made by half stopping them: the force of wind required to produce the lowest note was equal to one ounce; for the highest it was fifty-six pounds (French). The construction was altogether different from that of the Flute-player. In the same year he produced a duck, which has been considered as the most ingenious of his automata: it dabbled in the water, swam, drank, and quacked like a real duck, and the peculiar motions of the animal were very successfully imitated. It raised and moved its wings, and dressed its feathers with its bill; it extended its neck, took the corn from the hand, and swallowed it, during which the natural motion of the muscles of the neck were perfectly perceptible. It digested the food it had swallowed by means of materials provided for its solution in the stomach. The inventor made no secret of the machinery, which excited great admiration at the time. Another of his inventions was an asp, which he prepared for the tragedy of 'Cleopatre,' by Marmontel, that hissed and darted at the bosom of the actress; and he commenced a figure, at the suggestion of Louis XV., that was to contain an imitation of the circulation of the blood, but he abandoned it in disgust at the slowness with which the workmen provided him executed the king's orders.

But Vaucanson did not confine his mechanical inventions to these ingenious but comparatively useless objects. About 1741 Cardinal de Fleury had appointed him inspector of the silk manufactories, and he was not long before he introduced a great improvement in the mill for thrown-silk, an improvement which excited the anger of the workmen of Lyon against him, who, thinking it would reduce the value of their labour, on one occasion pelted him with stones. His only revenge was the inventing of a machine for weaving flowered silks, in which, as a kind of sarcasm, the moving power was an ass. He also invented a machine for giving a dressing to the silk, so as to render the thread of each bobbin or skein of an equal thickness throughout, with several other improvements in the manufacture. In the journal of the Académie des Sciences, of which he was a member, he gave a description of his silk-throwing mill, and of many other useful mechanical inventions, in several papers, which display a remarkable talent for description, being alike clear and precise. After a long illness, by which he was confined to his bed for eighteen months, he died on the 21st of November 1782. He had formed a collection of machines and objects relating to arts and manufactures, which he bequeathed by his will to the queen, who appears to have set small value on the legacy. It was proposed to transfer it to the Académie des Sciences, but the intendants of commerce claiming some of the manufacturing machines, disputes arose, and the result was the dispersion of a most curious and valuable storehouse of mechanical inventions.

VAUCHER, JEAN PIERRE, professor of historical theology at Geneva. Although a preacher and a teacher of theology, he is better known for his works on botany. The first work on botany published by Vaucher was on the family of 'Conferve,' the phenomena of whose sporules excited his attention. This was published at Paris in 1800, and entitled 'Mémoire sur les Graine des Conferves,' &c. He continued his researches upon the family of plants, to which he had already directed his attention, and in 1803, published his history of fresh-water Conferve ('Histoire des Conferves d'Eau Douce,' &c.), a work which has long been held in the highest estimation, and which laid the foundation of all subsequent labours in this department of botany. His remarks on the reproduction and growth of the various species of Conferve that fell under his observation were correct, nor has much advance been made in this department of botany since

Digitized by Google

his day. For although subsequent algologists have added greatly to the lists of species of Algæ, they have done much less towards the elucidation of their functions. Vaucher subsequently pursued his researches on the structure and functions of several of the genera and species of Cryptogamic plants. The result of his observations was published in several papers in the 'Memoirs of the Society of Natural History and Physics of Geneva.' He also published at Paris, in 1827, a work on the structure and functions of the Orobanches, which was illustrated with 15 lithographs of dissections of these plants. In 1828 he published a monograph on the natural order Equisetaceæ. Although his published observations on plants up to this time had been for the most part confined to the lower orders, he had all his life been more or less preparing for a great work on the physiology of plants in general. The first part of this work was published in 1830, but finding that the plan on which he had commenced it was too extensive, he deferred any further publication of the work till it was completed in 1841, when it appeared in Paris, in 4 vols. 8vo, entitled 'Histoire Physiologique des Plantes d'Europe, ou Exposition des Phenomènes qu'elles présentent dans les diverses Périodes de leur Développement.' He received the first complete copy of this work on his death-bed, and he employed the few remaining days that his strength permitted in sending some copies to his friends. The work was dedicated to Charles Albert, Prince of Carignano, afterwards king of Sardinia, who was one of his former pupils.

The design and execution of this work are novel. In describing the structure and functions of plants, species, or small groups of species are taken, and are studied independently of other plants, for the purpose of arriving at their individual peculiarities. His leading idea in the observations contained in this work is, that the species, genera, and families of plants have distinctive physiological as well as structural characters. The labour required for this work was immense, and only a long life could have enabled him to do it; but it was with Vaucher a labour of love, and he appears to have pursued it without regard to fame or reward. His observations are of course confined to plants which he had observed in a living state, and which could only comprehend a small portion of the vegetable kingdom. His general views in this work are not always free from error, nor is his terminology so correct as is required at the present day; but whatever may be the faultiness of his generalisations, or want of accuracy in the use of terms, his observations are entitled to the confidence of the botanist. Many parts of the work however were finished when botany was much less advanced than at the time of its publication, and consequently display deficient knowledge of modern observation. Vaucher, with De Candolle and others, was one of the founders of the Geneva Society of Natural History and Physics. He died at a very advanced age in the year 1841, beloved and respected by all who knew him. A genus of confervoid plants was named in honour of him 'Vaucheria,' by De Candolle.

(Bischoff, *Lehrbuch der Botanik*; Alphonse de Candolle, *On the Life and Writings of Vaucher*, translated in the 'Annals of Nat. Hist,' vol. x., from the *Bibliothèque Universelle*.)

VAUGHAN, REV. ROBERT, D.D., a leading minister of the Congregationalists or Independents, was born near the close of the last century, and was educated for the ministry at Bristol. For some years he was Professor of History in London University (now University College), and while minister of the Independent Chapel at Kensington occupied a prominent position among the dissenting ministers of the metropolis, his pulpit oratory being regarded as of a more than commonly intellectual character. His historical works had also secured him a considerable reputation in literary circles and with the general public. On the removal, in 1842, of the Lancashire Independent College from Blackburn to Manchester, where a spacious and handsome building was erected for it, Dr. Vaughan was invited to become president of the extended establishment, and having accepted the invitation, he removed to Manchester. He has continued to fill the office of president of the college in conjunction with the chair of theology up to the present time, with great advantage to the institution; but in consequence of failing health he has recently (August 1857) tendered his resignation.

Omitting single sermons, lectures, and addresses, of which he has published several, the following is a tolerably complete list of Dr. Vaughan's literary works published with his name:—'The Life and Opinions of John de Wycliffe, D.D., illustrated principally from his unpublished manuscripts. With a preliminary view of the Papal System,' 2 vols. 8vo, 1828, of which a 2nd edition was published; but some twenty years later he recurred to the work, recast the old and added new materials, and published in one vol. in 1853 'John de Wycliffe, D.D., A Monograph: with some account of the Wycliffe MSS.;' 'Memorials of the Stuart Dynasty, including the Constitutional and Ecclesiastical History of England from the Decease of Elizabeth to the Abdication of James II.' 2 vols. 8vo, 1831; 'The Causes of the Corruption of Christianity,' 8vo, 1834; 'Thoughts on the past and present State of Religious Parties in England,' 12mo, 1835; 'The Protectorate of Oliver Cromwell, and the State of Europe during the early Part of the Reign of Louis XIV.,' 2 vols. 8vo, 1838; 'History of England under the House of Stuart,' published in the 'Library of Useful Knowledge,' 2 vols. 8vo, 1840; 'Congregationalism, or the Polity of Independent Churches, viewed in relation to the State, and the tendencies of Modern Society,' 12mo, 1842; 'The Modern Pulpit viewed in its relation to the State of Society,' 12mo, 1842; 'The Age of Great Cities, or Modern Society viewed in its relation to Intelligence, Morals, and Religion,' 12mo, 1843; 'The Age and Christianity,' 12mo, 1849. Several of these works have passed through more than one edition. Shortly after his settlement at Manchester Dr. Vaughan projected the 'British Quarterly Review,' and from its establishment in 1844 to about 1865 he has been its editor; and during these twenty years he has enriched its pages with a large number of essays on historical, political, theological, social, and educational subjects. A selection from his essays was published in two volumes in 1849.

VAUQUELIN, NICOLAS-LOUIS, a distinguished French analytical chemist, was born May 16, 1763, at St. André d'Hébertot, of parents in an humble station in Normandy. Fourcroy, accidentally meeting with him, was so much pleased with his quickness and integrity, that he took him to Paris and made him superintendent of his laboratory, in which he speedily became an expert experimenter, and on many occasions which were acknowledged, and probably on some which were not, he performed experiments published by Fourcroy.

He was a professor of chemistry in Paris, and eventually became chemist to the School of Mines, and a member of the Institute. He was extremely industrious, and has published many memoirs on mineral, vegetable, and animal analysis: in performing his varied researches he not only improved the methods of analysis previously in use, but also discovered some elementary bodies, of which the chief and most remarkable were chromium, existing in the red lead of Siberia, as an acid combined with oxide of lead, and glucina, a new earth, or rather metallic oxide, which he found in the emerald and beryl. The discovery of chromium has been of vast importance to the arts; for having been since found in enormous quantity combined with iron, and in various parts of the earth, it has been extensively used in the state of oxide for giving a green colour to porcelain, and chromic acid combined with oxide of lead, forming chromate of lead, is a fine yellow pigment.

Vauquelin died on the 14th of November 1829: his character and conduct were most excellent and exemplary, and he passed through the bloody stages of the French revolution uncontaminated by its violence or vices.

VAUVILLIERS, JEAN FRANÇOIS, a French scholar, was born, in 1737, at Noyers in Burgundy, and received a careful education from his father Jean Vauvilliers, a scholar of considerable merit. Jean François had scarcely finished his studies when he was appointed one of the librarians of the Royal library at Paris, and in 1760 he became professor of Greek in the Collège de France. After having distinguished himself by several works on Greek literature and history, he was elected, in 1782, a member of the Academy of Inscriptions. The beginning of the Revolution enriched him with his learned pursuits. He was successively president of the quarter of St. Geneviève at Paris, first 'député suppléant' of Paris in the assembly of the états généraux, president of the communauté, lieutenant to the maire of Paris, and lastly, 'prévôt des marchands,' in which capacity he had the care of the provisions necessary for the supply of the capital. The people of Paris at that time believed that it was the secret intention of the court to starve them, and they opposed by armed force the export of provisions from the capital into the provinces. Vauvilliers acted in these cases with great energy, and he more than once succeeded in making the mob desist from their predatory disturbances. In his political opinions he was rather royalist; he supported the proposition of Brissot for the abolition of slavery in the colonies, but he also defended the rights of the Roman Catholic church. When he was summoned to take the oath of allegiance to the new democratic system, Vauvilliers declined taking it, laid down his professorship in the Collège de France, and afterwards justified himself in a pamphlet, 'Questions sur les Sermens, en particulier sur celui de Haine à la Royauté.' He was arrested by order of the revolutionary committee, but he published his liberation, and then became a member of the council of the Five Hundred. He published several pamphlets on political questions, and expressed his opinions with so little reserve, that he was at last sentenced to deportation, in September, 1797. However he escaped to Switzerland, and afterwards went to Russia, whither he was invited by the emperor Paul. The Academy of Sciences of St. Petersburg elected Vauvilliers a member. He died at St. Petersburg on the 23rd of July, 1801.

Vauvilliers is the author of numerous works and treatises, partly on Greek literature, and partly on modern politics, legislation, and administration. The most important among them are, I, 'Essais sur Pindare, contenant une Traduction de quelques Odes de ce Poëte,' &c., Paris, 12mo, 1772; 2, 'Examen Historique et Politique du Gouvernement de Sparte,' Paris, 12mo, 1769; 3, A number of papers concerning the Manuscripts of Pindar, Æschylus, and Sophocles, in the 'Notices et Extraits;' 4, An edition of Sophocles, which had been prepared by Capperonnier. It contains some notes and a preface by Vauvilliers, Paris, 2 vols. 4to, 1781. His notes are severely attacked by Brunck; but Harless, in Fabricius's 'Bibliotheca Græca,' speaks highly of their merit.

(Quérard, *La France Littéraire*, where a complete list of his works is given; *Biographie Universelle*; Fabricius, *Biblioth. Grac.* ii., p. 224.)

VECCHI, GIOVANNI DE', a distinguished Italian painter, born at Borgo San Sepolcro, in 1536. He was the scholar of Raffaellina del Colle, and painted in oil and in fresco. His works are very numerous in the churches of Rome and its vicinity: he made the cartoons for the two great mosaics of the evangelists Luke and John in St. Peter's on the Vatican. He died in 1614. His portrait is in the Academy of St. Luke at Rome.

VECCHIA, PIETRO, a distinguished painter of the Venetian school, was born at Venice in 1605. He was the scholar of Alessandro Varotari, but painted in a different style. His real name appears to have been Mattoni, and he acquired the name of Vecchia from his skill in imitating and restoring old pictures. Vecchia painted many pictures so exactly in the style of Giorgone, that it is almost impossible to decide between the works of these painters: he painted also some pictures in the styles of Pordenone and Titian. He made the designs of many of the mosaics in the church of San Marco at Venice, but his easel pictures were generally of inferior subjects, and his talent was more for the ludicrous than the serious. Some of his efforts in illustration of the Passion of Christ were signal failures as regards a proper feeling for the subject. His touch was bold, his drawing and colouring excellent, and some of his effects of light and shade strikingly powerful and masterly. He died at Venice in 1678.

VECELLIO TIZIANO. [TITIAN.]

VECELLIO, FRANCESCO, the brother of Titian, was born at Cadore in 1483; commenced life as a painter, and imitated the style of his brother. His afterwards took to a military life, returned again to painting, and then again forsook it in 1531 for the life of a merchant, as is reported, by the advice of Pietro, who is said to have been jealous of him: he was a painter of great ability. There are several excellent pictures by him in the Venetian state. He died in 1560.

VECELLIO, ORAZIO, the son of Titian, was born at Venice in 1515. He was an excellent portrait-painter, accompanied his father to Rome, and assisted him in most of his works. Many of Titian's portraits are said now to be attributed to his father. He died at the same time as his father, in 1576, likewise of the plague. He is said to have wasted much money in the study of alchemy.

Titian's property was divided by his eldest son, POMPONIO VECELLIO, a priest, who, according to report, soon squandered it away. Besides the two sons Titian had a daughter named Cornelia.

VECELLIO, MARCO, called MARCO DI TIZIANO, was the nephew of Titian, and was born at Venice in 1545. He was a great favourite with Titian, painted in a similar style, and executed many good works. He died in 1611.

VEGA CARPIO, FRAY LOPE FELIX DE, was born at Madrid on the 25th of November 1562. His father, as he informs us in his 'Laurel de Apolo,' p. 45, was also a poet, to which circumstance may perhaps be ascribed Lope's early taste for poetry. According to Montalvan ('Fama Posthuma,' p. 15), before Lope had attained the age of five he could read Spanish and Latin; and before his hand was strong enough to guide the pen he recited verses of his own composition, which he had the address and good fortune to barter for sweetmeats and toys with his playfellows. At the age of twelve he had, by his own account, not only written short poems, but composed dramas in four acts; and during the intervals which his studies at school allowed him, he also wrote rhymes. Having lost his father when he was about thirteen, he was soon after impelled by so strong a desire of seeing the world, that he resolved to escape from school. He concerted his project with a schoolfellow, and they actually left Madrid together, without the knowledge of their relations or their masters. Being however detected in their flight, Lope and his schoolfellow were brought back to their relations. Upon his return to Madrid, young Lope ingratiated himself with the Bishop of Avila by several pastorals, and a comedy in three acts, called 'La Pastoral de Jacinto,' which is justly considered as a prelude to the reform which he meditated in the Spanish stage. It is moreover probable that during this interval, between school and the university, which he was enabled to enter through the liberality of his patron the bishop, he composed several poems, which he retouched in after-life. After spending four years at the University of Alcalá, Lope became attached to the Duke of Alva, at whose request he wrote his 'Arcadia,' a mixture of prose and verse, romance and poetry, pastoral and heroic, the design of which is avowedly taken from Sannazaro, though its execution has been pronounced by Spanish critics to be superior to that of the model. The 'Arcadia,' though written perhaps as early as 1580, was not published till 1598. Some time after Lope had executed the command of his illustrious patron he left his service, and married a lady of rank, Doña Isabel de Urbino. He continued to cultivate poetry with increased enthusiasm, until being involved in a duel with a gentleman of rank, he wounded his antagonist, and was obliged to separate himself from his wife, whom he loved tenderly, and leave Madrid. Lope fixed upon Valencia as the place of his retreat; but some years after, having previously ascertained that he would not be prosecuted, he returned to the capital, and was reunited to his family. He did not however long enjoy this new-found happiness: his wife, whose health had been for some time on the decline, died shortly after his return. To fly from such painful recollections, Lope became a soldier, and joined the 'invincible Armada.' The fate of that expedition is well known; and Lope, in addition to the difficulties and dangers of the voyage, had the misfortune of seeing a beloved brother expire in his arms. During this unfortunate voyage Lope composed his 'Hermosura de Angelica,' a poem which professes to take up the story of that princess where Ariosto left it, and which Marini, one of his Italian admirers, has not hesitated to pronounce superior to the 'Orlando.' On his return from the Azores, Lope quitted the career of arms, and entered the service, first, of the Marquis of Malpica, and afterwards of the Count of Lemos, with whom he remained until his second marriage, to Doña Juana de Guardia, a lady of Madrid: he was then twenty-eight years old. About eight years after this event, in 1598, on the occasion of the canonisation of St. Isidorus, a native of Madrid, Lope entered the lists with the best poets of the day, and surpassed them all in the number and merit of his performances. Prizes had been assigned for every style of poetry, but no more than one could be obtained by the same person. Lope succeeded in the hymns; but not contented with this, he produced besides, in an incredibly short space of time, a poem of ten cantos, in short verse, as well as several sonnets and romances, and two comedies, which he published together under the feigned name of Tomé de Burguillos.

This was perhaps the most fortunate period of Lope's life: he had, by his own statement, written already no less than nine hundred dramas for the stage, besides twelve volumes of other poetry; and although the remuneration then given to authors was very moderate, yet he gained much, and had so many presents conferred upon him by men of rank, who were anxious to become his patrons, that he was enabled to live in affluence. He had a son named Carlos, on whom he doated, and who promised to be the heir of his talents. The period of his domestic happiness did not last long: his son died; his wife soon followed her child to the tomb, and Lope was left with two daughters. The spirit of the poet seems to have sunk under such repeated losses; and he resolved to soothe it by the exercise of devotion. Accordingly, having become secretary to the Inquisition, he shortly afterwards became priest, and in 1609 a sort of honorary member of the brotherhood of St. Francis. Meanwhile the reputation of Lope as an author was rising to that height which it afterwards reached, and he worked as assiduously as ever. He seldom passed a year without giving some poem to the press; and sometimes a month, or even a week, without producing some play upon the stage. In a very short space of time, 'Los Trimphos de la Fé,' 'Las Fortunas de Diana,' three novels in prose, 'Circe,' an heroic poem, and 'Philomena,' a singular but tiresome allegory, were the fruits of his prolific pen.

Such was his reputation, that he himself began to distrust the sincerity of the public, and wishing to ascertain whether the extravagant applauses heaped upon him were the result of fashion or a homage paid to his merit, he published a volume without his name. But either the number of his productions had gradually formed the public taste to his own standard of excellence, or his fertile genius was so well adapted to the taste of the times, that his 'Soliloquies of God,' though printed under a feigned name, secured him as many admirers as his former productions. Emboldened probably by this success, he dedicated his 'Corona Tragica,' a poem on Mary Queen of Scots, to Pope Urban VIII., who wrote him a letter of acknowledgment in his own hand, and conferred on him the degree of doctor of divinity. Lope now found himself the same literal barbarchal, the populace, followed him with veneration in the streets; Philip III., himself a poet, would stop to gaze at such a prodigy; the people crowded round him wherever he appeared; the learned and the studious of Europe made pilgrimages from their country for the sole purpose of conversing with him; and his name became the sole index of merit. So much was his name, that it was used in common conversation to signify anything perfect in its kind; and a Lope diamond, a Lope day, or a Lope woman, became fashionable and familiar modes of expression. Lope had dangerous rivals in Gongora and Cervantes, with neither of whom he seems to have lived on good terms. Indeed, if we are to judge from the many satirical allusions contained in his writings, Gongora and Lope were sworn enemies to each other. As to Cervantes, it is probable that the immense popularity which Lope de Vega enjoyed, and the honours which he received from all parts of the country, may have awakened a sentiment of jealousy in his breast; whilst Lope was living in prosperity and splendour, the author of 'Don Quixote' was actually starving in the same street; Lope continued to publish plays and poems, and to receive every reward that adulation and generosity could bestow, till the year 1635, when his health gradually declined, and he expired on Monday, the 26th of August, in the seventy-third year of his age. He was buried at the convent of nuns in the Calle de Cantarranas, whence his remains have lately been removed to the National Pantheon of Madrid.

Notwithstanding his undisputed talent, Lope is better known for the prodigious number than the quality of his writings. According to a calculation made by one of his panegyrists, twenty-one million three hundred thousand of his lines were actually printed, and no less than eighteen hundred plays of his composition acted upon the stage. "Were we to give credit to such accounts," says Lord Holland, "allowing him to begin his compositions at the age of thirteen, we must believe that upon an average he wrote more than nine hundred lines a day; a fertility of imagination, and a celerity of pen, which, when we consider the occupations of his life as a soldier, a secretary,

Digitized by Google

a master of a family, and a priest; his acquirements in Latin, Italian, and Portuguese; and his reputation for erudition, become not only improbable, but absolutely, and one may almost say physically impossible." Yet there can be no doubt that Lope was, even in prolific Spain, the most prolific of writers. Montalvan tells us, that when Lope was at Toledo he wrote fifteen acts in fifteen days, making five plays in a fortnight. He himself informs us in the eclogue to Claudio, one of his last works, that he had written upwards of fifteen hundred dramas, one hundred of which had been composed in as many days:

"Pues mas de ciento en horas veinte quatro
Pasaron de las Musas al theatro."

In addition to the works mentioned in the course of this notice, Lope wrote several epic poems, as 'La Jerusalem Conquistada;' 'La Circe;' 'La Dragontea' (on the 'Death of Sir Francis Drake');' La Andromeda;' numerous pastorals; 'Los Pastores de Belen;' 'La Dorothea,' &c. &c.; a burlesque poem, entitled 'La Gatomachia;' several epistles, and other short poems, which were collected and printed at Madrid, 1776-79, 21 vols. 4to. But it is not on any of these productions that the reputation of Lope really rests: that was founded on his dramas, in which he showed himself master of his art. The number and merit of his plays, at a period when the Castilian language was generally studied throughout Europe, directed the attention of foreigners to the Spanish theatre, and probably induced them, more than the works of any one writer, to form their compositions upon the model which Lope established, and others afterwards refined. His plays have always been popular in Spain. Even now, when the introduction of the French dramatic school has considerably lessened the taste for the old drama, 'La Moza de Cantaro,' 'La Noche Toledana,' and others of Lope's plays are still acted on the Madrid stage.

Lord Holland has given, after Hiuerta, a list of all the dramas attributed to Lope de Vega, which exist in print. There are 497 plays, and 21 'Autos Sacramentales,' in all 518, to which number may be added many which have been lost, and many more which, though acted on the stage, were never printed, besides those which are preserved in manuscript.

VEGA, GEORGE, a German mathematician, and colonel in the Austrian artillery, was born at Sagoritz in Carniola, in 1754. His family name is said to have been Vlacci, but this he never seemed into Vega. His parents, though in reduced circumstances, gave him the benefit of a good education, and sent him to prosecute his studies at Laubach, where, under the tuition of Maffei, who was afterwards bishop of Buruburna in Dalmatia, he made great progress in the mathematics: for this prelate he entertained the highest esteem and gratitude, which, but two years before his death, he testified by dedicating to him a second edition of his principal work.

Vega commenced his military career by entering into a corps of engineers, with which he served, first in Carniola, and afterwards in Hungary: here his merit and his knowledge of the military sciences soon procured for him the notice of the Emperor Joseph II., who gave him the appointment of mathematical instructor in the imperial artillery, with the rank of lieutenant in its second regiment.

Though engaged in the duty of giving lessons, and in the composition of his works, he served with the Austrian army in Flanders at the commencement of the wars arising from the French Revolution, and distinguished himself on several occasions by his gallantry: he was raised in 1796 to the rank of major, and subsequently to that of lieutenant colonel; and, with the dignity of a baron of the empire, he was made Chevalier of the order of Maria Theresa. While thus enjoying the prospect of attaining the highest military honours, he was suddenly deprived of life, in the forty-eighth year of his age, by the hand of an assassin. In 1802, while at Diesdorf, near Magdeburg, having made an agreement with a miller of that place for the purchase of a horse, he set out, September 17, with the man, intending to proceed to the stable where the horse was kept. On the way, while passing a bridge, the colonel, who went first, was struck to the ground by a blow on the head from behind, and before he could recover he was despatched by repeated strokes: his body, from which the murderer took a watch, a purse of money, and a case of drawing instruments, was then thrown into the Danube. Nine years afterwards a protractor, having on it the name of the unfortunate colonel, and which was one of the instruments in the case, being found in the possession of the miller, was the cause of detection. On being examined, the man prevaricated, and having at length confessed his crime, he was condemned and executed.

Vega is known as a mathematician by several useful works: the first of these is entitled 'Logarithmische-trigonometrische und andere zum gebrauche der mathematik tafeln und formeln,' 8vo, Vienna, 1783. Of the others, the principal are 'Vorlesungen über die Mathematik,' Vienna, 1786. This work contains treatises on arithmetic and algebra, geometry, trigonometry and the infinitesimal calculus, mechanics, hydrostatics and pneumatics; and an edition was published at Vienna in 1819. 'Thesaurus Logarithmorum completus ex arithmetica logarithmica et ex trigonometria artificiali Adriani Vlacci collectus, etc,' Lotin and German, Leipsig, 1794; 'Manuale logarithmico-trigonometricum, mathesseos studiosorum commodo in minorum Vlacci, Wolfii aliarumque hujus generis tabularum logarithmico-trigonometricarum mendis passim quam plurimis scatentium, locum substituturum,' Leipzig, 1800. This is a second edition with additions. It is divided into four parts: the first contains an explanation of the properties of logarithms; the second and third contain tables of the logarithms of numbers, sines, tangents, &c.; and the fourth is a treatise of plane and spherical trigonometry. Besides the above works, Vega published an introduction to chronology (Vienna, 1801); and in 1803 there was published at the same place a tract on weights, measures, and coins, which he had written. He was a member of several learned societies; among others, those of Göttingen, Erfurt, and Berlin.

VEGETIUS, FLAVIUS RENATUS, a Latin writer on the military art, concerning whom nothing is known beyond what can be gathered from his work itself. In the manuscripts the titles 'Vir Illustris,' or 'Vir Illustris Comes,' are added to his name. He must have lived and written about the year A.D. 385, in the reign of the emp-ror Valentinian III., to whom the work is dedicated: it consists of five books, and bears the title, 'Epitome Institutorum Rei Militaris.' There are several expressions in the work which leave no doubt that the author was a Christian. It is written in a plain and easy style, and considering the late period to which it belongs, the language is purer than might be expected. Vegetius himself appears to have had a practical knowledge of the subject on which he wrote; but he derived most of his materials from earlier writers, among whom he mentions Cato Censorius, Cornelius Celsus, Frontinus, Paternus, and the constitutions of Augustus, Trajan, and Hadrian, concerning military affairs. Considering the loss of earlier and better works on the military regulations of the Romans, the work of Vegetius is a valuable relic of antiquity; but it is to be regretted that the author did not use sufficient discretion in keeping the different periods apart: for he sometimes mixes indiscriminately institutions and regulations of the early times with those existing in his own days. The first book treats of the formation and training of soldiers; the second, of the divisions and subdivisions of an army, and the arrangements of a camp; the third, of military discipline, the care to be taken of the welfare of the soldiers, and of the drawing up of an army in battle array: the fourth, of sieges, military engines, and of the mode of attacking and defending fortified places; and the fifth, on maritime warfare. The first edition appeared without place or date, about the year 1472. The first is a good edition by P. Scriverius, with commentaries by G. Stewechius and J. Antwerp, 4to, 1607. It contains also some other ancient works on military affairs. The best edition is that of N. Schwebel (Bipont, 8vo, 1806), with notes by the editor, and some of those of his predecessors. A German version of Vegetius was printed as early as 1474, and one in French in 1485. From the French version Caxton published in 1489 a translation by desire of Henry VII., 'The Fayt of Armes and Chyvalry from Vegetius.'

VEIT, PHILIPP, was born at Berlin on the 13th of February 1793. Having finished his preparatory studies in Dresden, and served in the army of deliverance, he proceeded in 1815 to Rome, where he joined with Cornelius, Overbeck, Schadow, and the other young German painters who banded themselves together with the avowed purpose of regenerating German art to the religious purity and earnestness of mediæval times, and of whose proceedings and intentions we have elsewhere spoken. [CORNELIUS; OVERBECK; SCHADOW, WILHELM; SCHNORR.] The views on art which the young painters adopted were those which had been enunciated by Frederick Schlegel, and which Philipp Veit had to the fullest extent imbibed. Veit's mother, the daughter of Moses Mendelssohn, had married Frederick Schlegel as her second husband, and with him renounced the Protestant for the Roman Catholic church, her son followed in their steps, and became a devoted pupil of his step-father. More almost than any of the colleagues in the art-movement Veit adopted the mystical and symbolical method of treating religious subjects, and he did not, like some of them, subsequently fall into a more realistic style. Of the famous frescoes of the 'History of Joseph,' painted at the Villa Bartholdy, Rome, by the associated artists, Veit executed 'Seven Years of Plenty' as a companion to Overbeck's 'Seven Years of Dearth,' and its exuberant richness of treatment, fertility of invention, and skilful composition and execution, won for it an amount of admiration quite equal to that of its great rival. Subsequent works—including a scene from the Paradise of Dante in the Massimi Villa, a 'Triumph of Religion,' &c.—maintained his reputation, and he was called to take the post of Director of the Städelsche Art Institute at Frankfurt-am-Main. Here he produced a great number of important works, and sustained the character of the Institute at a high point. His most celebrated work is the large fresco at the Institute representing 'Christianity bringing the Fine Arts to Germany,' with heroic-sized figures on either side of Germania and Italia. This is one of the most ambitious pictures of the new school of German religious art, and though possessing the coldness and ambiguity of most symbolical designs is admitted on all hands to display great mental power, beauty of drawing and composition, and very considerable technical skill; and as a whole to be grand and impressive in effect. Other works are 'The two Maries at the Sepulchre;' 'St. George,' in the church at Bensheim, and many other scriptural, historical, and allegorical pieces, and numerous portraits. Lithographic prints have been published of the greater portion of his chief works. As has been seen, Veit is a

Digitized by Google

man of strong religious feeling, and this, in its excess, led in 1843 to the termination of his connection with the Städelsche Institute. The council having purchased Lessing's picture of 'John Huss, before the Council of Constance,' [LESSING, K. F.] to place in the building, Veit protested against its admission, and eventually resigned his directorship. He then removed his atelier to Sachsenhausen in Hesse-Cassel. He has since painted for Frankfurt Cathedral an important picture of the 'Ascension of the Virgin;' and for the King of Prussia, among others, 'The Maries at the Sepulchre,' 'The Parable of the Good Samaritan,' and 'The Egyptian Darkness,' which he has rendered in an entirely original manner.

VELÁZQUEZ, DIEGO RODRIGUEZ DE SILVA Y, was born at Seville, and baptized June 6, 1599. His parents, on the father's side, were of Portuguese origin. Having manifested, while yet a child, a decided turn for drawing, he was placed under Francisco Herrera el Viejo. This master, harsh, violent, and extravagant as a man, was an artist of great native power, boldness and originality; his paintings were true exponents of his character. He first broke down the timid and conventional style of the Sevillians, who hitherto had followed in the manner of the Italians; to obtain effects true to nature was his ambition, and for this end he despised means and materials alike, working with the coarsest colours, and using brushes of an unusual length. The principles of his method and handling are to be traced in all the works of his pupil, improved indeed by a higher quality of touch and intention. Velázquez, who was of a gentle disposition, was driven by ill usage from this studio, and entered that of Francisco Pacheco, who was the opposite of his former host. This feeble creature of rules was cold in colour and commonplace in conception, yet learned in the theory of art, and better known by the works of his pen than of his pencil: he exercised no influence whatever over the style of his scholar, who soon discovered that his new master could not give him that which he felt was wanting. After five years' nominal instruction, Velázquez married Juana, Pacheco's daughter; and this explains his long continuance under an otherwise unprofitable roof. Disappointed in his master, and thrown on himself, the young artist turned to Nature for his guide, and he followed her faithfully to the end. He procured a peasant lad for a model and painted him—his commonplace forms, rags, and nakedness, under every aspect and attitude. Necessity thus did for him what choice had done for Caravaggio, the leader of the naturalist school in Italy; who, in opposition to the classicists, painted men and things as they were, rather than as they ought to be; preferring the forcible, effective, and even the low, if real, to the refined, ideal and poetical. The early impression made on Velázquez was deep and indelible: it became the blemish of his style; it is seen in the man throughout life, and separated him from Raffaelle and Michel Angelo to Ribera and Stanzioni. The study of this plebeian model was moreover cognate to the process which Herrera first adopted for himself, and then pointed out to all his scholars. It forms a peculiarity in the system of the great school of Seville, and especially in Velázquez and Murillo, two of its brightest ornaments; they were taught to draw and to colour at the same time, beginning with subjects of still-life, and those the most ordinary, such as meat, vegetables, and kitchen utensils: hence the generic name of Bodegones, by which they are still known. Thus Velázquez obtained an early mastery over his materials, a habit of close imitation, and a marvellous power of representing nature and texture. His first attempts at pictures, properly speaking, were either copies from Ribera, or compositions painted with his decided and hard style, and with strongly contrasted lights and shadows. His pictures of this period are very scarce; many probably exist, but remain unknown from being ascribed to other artists. The 'Adoration of the Shepherds,' now in the Louvre, is the earliest of his undoubted productions, and it is nothing more than a copy from Spagnoletto.

Arrived at the age of twenty-three, some paintings of Luis Tristan, whose style was a compound of Titian and El Greco, inspired Velázquez with a burning desire to see the works of these and other masters, and he left Seville for Madrid in the spring of 1622: he was welcomed by Don Juan Fonseca and other Sevillians, who were settled in the capital, who befriended their countryman with that spirit of loyalty and clanship which is the characteristic of all Spaniards. Velázquez, having painted the portrait of the poet Gongora, which was a commission from Pacheco, returned to Seville; meanwhile the influence of Fonseca was not idle, and the young man was recalled to Madrid, the next year, by the Conde Duque de Olivares, the ruler of Spain, who was to Philip IV. what Buckingham was to our Charles I., prime minister of the state and favourite of his master. Velázquez, having painted the great man's portrait, stepped at once into fame and fashion, which never deserted him during his long career of prosperity. He maintained by merit the start which was procured by favour; nor can there be a greater proof of the high degree of excellence to which he had already arrived than his immediate success.

Philip IV., a true judge of art, on seeing the portrait of the favourite, sat at once for his own. At this the critical moment of his fortunes the young artist put forth all his strength. The picture was exhibited in Madrid, near the steps of San Felipé; and there, in the open air, did Velázquez, like the painters of Greece, listen to the praises of a delighted public. He was forthwith appointed the court painter; and Philip, spoing Alexander, according to the story in Horace, ordained that none but this new Apelles should portray him. The necessity of frequently painting the "foolish hanging of the nether lip" of this dull ungainly Austrian and his family was little calculated to correct a tendency to unworthy form, which was engendered by the ordinary model of his early studies. This was again fixed by the constant introduction of hideous dwarfs, those abortions of nature, and playthings of the kings and princes of Spain.

Meanwhile the more he painted, the more Velázquez was honoured by his own and foreign princes, and among others by our Charles I., who was at Madrid in 1623. His portrait begun by Velázquez, was never finished, and has unfortunately been lost. Another illustrious visitor soon after became his friend, Rubens, who arrived at Madrid, August 6, 1628, rather in the character of a diplomatist than a painter: indeed he associated with none of the artists except Velázquez, with whom alone he went to the Escurial. Rubens left Madrid, April 26th, 1629, and although he was constantly painting during his sojourn, he wrought no change either in composition or colouring in Velázquez, who was accustomed to look at nature with his own eyes and not through those of other men; nor indeed had the gorgeous tints and fleshiness of the Fleming anything in common with the sober draperies of the sinewy Castilian.

Velázquez at last obtained the royal permission to go to Italy, and he embarked at Barcelona, August 10, 1629. He visited Venice, Ferrara, and Rome, being everywhere received in an artistical triumph. Urban VIII. assigned to him an apartment in the Vatican, where he diligently copied Raffaelle and Michel Angelo; but neither the grandiose design and sublimity of the one, nor the sentiment and ideal beauty of the other, ever produced the slightest change in the Spaniard's style: he felt and studied their brightness without ever reflecting it in his own works and paintings. Velázquez, like his friend Lope de Vega, held up the mirror to his own age alone: he called up no recollections of the past, borrowed from no other period or country, and none can claim anything back from him; all was his own, original, national, and idiosyncratic; and he shrunk from any change by which loss might be risked. The Spaniard is neither a friend to the foreigner nor to his innovations. Nor was Italy then what she had been; the prestige of her example had passed away with the age of Leo X., and the vitality of her soil for new excellence was dull when compared to the fiery energy of unashamed Spain, then starting into a life of her own. Velázquez and Murillo were destined to revive the arts, which declined in Italy, as Seneca, Martial, and Lucan had renewed the literature of Rome in her period of decay.

From the Vatican Velázquez removed to the Villa de' Medici, but falling a victim to malaria, was soon carried down an invalid to the Piazze de Spagna below, and lodged in the palace of the Condè de Monterey, the ambassador of Spain. The ambassador was a patron of art and artists, both from real taste and the diplomatic anxiety to second the ruling object of his king. He watched over the patient and restored him to health. Velázquez remained a year in Rome; he only sent home two original pictures, his 'Jacob with the Garment of Joseph,' and 'Apollo at the Forge of Vulcan;' both are now at Madrid, and in spite of much truth, character, and powerful painting, are singularly marked with the most ordinary forms. The children of Jacob are the kinsmen of the model peasant, and Vulcan is a mere farrier, and his assistants brawny Galicians. It would seem that the Spaniard, to prove his independence, had lowered the truest transcript of nature to brave the ideal and divine under the shadow of Raffaelle himself.

From Rome he passed to Naples, then a Spanish possession, where he felt as at home amid the works of Caravaggio, Stanzioni, and Ribera. With Ribera, his countryman, he lived in the closest intimacy, preferring however to his harder style and coarse subjects the flowing touch and cheerful composition of Stanzioni, between whose style and his own the resemblence cannot be mistaken. This artist, called by the Spain of Caballero Marino, was the type of the Hispano-Neapolitan school; many of his finest pictures were purchased by Velázquez for Philip IV., and, hung as they are near his own in the gallery of Madrid, abound in analogies of touch and method.

Velázquez returned to Madrid early in 1631, and he had necessary to the amusement of his patron found himself not forgotten: the king, with a fidelity which was no part of his nature, had never during his absence sat to any other painter. Philip, imitating Urban VIII., gave him a painting-room in the palace, and came daily to watch his progress.

It is to the credit of the Austrian dynasty that they relaxed in favour of the fine arts the rigid ceremonial of Spanish etiquette. Charles V. made a friend of Titian; and Philip II., of Herrera the architect. Velázquez now painted the magnificent equestrian portrait of Philip IV., from which the great carver Montañez made a model in wood, in order to be sent to Florence, where it was cast in bronze by Pedro Tacca, and now exists in the gardens of Buen Retiro. The success led to new honours: Velázquez was appointed to an office about the king's person, and in that capacity followed Philip into Aragon and Catalonia in 1643 and 1644. The former of these years witnessed the disgrace of the Conde Duque, to whom, although fallen, Velázquez had the boldness to continue to show respect; nor

Digitized by Google

did Philip IV. resent this uncourtier-like gratitude. In November, 1648, Velázquez made a second journey into Italy, in order to purchase modern pictures for the king, and to procure moulds from the best antique statues for a projected academy. He embarked at Malaga, landed at Genoa, passed rapidly to Milan, Venice, Florence, and Parma, and thence hastened to embrace his well-beloved Ribera at Naples. Returning to Rome he was presented to Innocent X., whose portrait he painted, which is now the gem of the Doria collection, and the only real specimen of his art in Rome. He was elected a member of the Academy of St. Luke. He remained in Italy almost a year, purchasing rather than painting pictures, and busy with his casts from Greek sculpture. He fully felt the value of exquisite form, of which he had known the want, in after-life strongly urged all young artists, Murillo particularly, to complete their studies in Italy. Spain always was, and is, very deficient in fine antique marbles, for which the Spaniards have little taste. The church preferred the relic of a monk to a statue by Phidias, by which they only saw a pagan idol. Their Inquisition persecuted nudity, the essence of Greek art, and employed artists to clothe the least exposure either in painting or sculpture; hence the draped character of the Spanish school, of which the clergy have been the best patrons, not for the sake of art, but as a means of extending their own influence. Painting took the veil of the nun, Sculpture the cowl of the monk; but Philip, lax and voluptuous, protected the licence of Greece and Italy, and Velázquez felt that the chance might never recur: the casts were made, which after the king's death were neglected, injured, and finally lost.

Velázquez returned to Madrid in June 1651. He was now in his full power, and painted his finest pictures. In 1656 he received the much-coveted cross of Santiago, which the king drew in with his own hand on a portrait of Velázquez, painted by the artist himself. The nobles resented this profanation of a decoration given hitherto only to high birth; nor were the difficulties removed without a papal dispensation and a royal grant of Hidalguia.

About this time Velázquez was raised to the lucrative and honourable post of Aposentador Mayor. His duties were to superintend the personal lodgment of the king during his frequent migrations. This much-envied office robbed Velázquez of his time, precious to art, and eventually of life itself. He was sent in 1660 to prepare the royal quarters during the journey from Madrid through the ill-provided Castilian to the Bidasoa. He erected on the Island of Pheasants a lovely temporary saloon wherein the conferences were held which terminated in the marriage of the Infanta Maria Teresa with Louis XIV., a union fatal to the future weal and independence of Spain as to Velázquez, who here appeared almost as the last time, resplendent, among the noble crowd for his tasteful costume and arrangement of diamonds. He returned to Madrid, July 31, worn with over-fatigue in preparations which any lord of the bedchamber might have superintended. He died one week afterwards, on the 7th of August, 1660, and was buried with great pomp in the church of San Juan. In seven days his wife, broken-hearted at his loss, followed her gentle and excellent husband, and was laid by his side in the same grave. No monument has ever been erected to her greatest artist by Spain, always ungrateful to those who love her best. Where the tomb of Velázquez survive him; his pupils and imitators were few. Spain was hastening rapidly to her fall, which was consummated by the Bourbon succession, when French tastes were substituted for Spanish in art and literature.

Such is the unimportant biography of a man whose name is now immortal, of whom, like Lope de Vega, all talk familiarly, although most imperfectly acquainted with his real works. His genuine and finest works remain at Madrid: in other cities of Spain they are quite scarce as in every other part of the world: and the reasons are obvious. Velázquez commenced his career under the king: he rarely condescended to work for the church or private patrons: all his great pictures were thus monopolised, and hung in the royal palaces, and these were inaccessible to purchasers, and seldom seen even by the few travellers who visited Spain. Neither were they scattered abroad in the wreck which ensued at the French invasion. In the universal ruin, by which the works of many Spanish artists, whose names previously were almost unknown in Europe, were first ushered into notice, Velázquez formed an exception. His paintings hanging in royal residences were respected even by marshals, as passing with the crown from the legitimate dynasty to the intrusive. Two only were sent to Paris, and these were the Jacob and the Philip IV. on horseback, pictures selected more from their historical than intrinsic interest. In truth the French never have appreciated Velázquez; a taste depraved by the vain tinsel of the empirical, unnatural David, could not feel the grave repose and sober simplicity of the proud Spaniard. It is impossible to estimate Velázquez without going to Madrid; on seeing him in this, the richest gallery in the whole world, the first impression of his masculine power and universality of talent is irresistible: it is the reality more than the imitation of life and nature, and in every varied form. Grievous is the error of those who suppose him only to be the portrait-painter of sallow mustachioed Spaniards in black cloaks. There is no branch of the art, except the marine, which he has not pursued, and he attained almost equal excellence in all.

His portraits baffle description and praise; they must be seen: he elevated that humble branch to the dignity of history. He drew the minds of men: they live, breathe, and seem ready to walk out of the frames. His power of painting circumambient air, his knowledge of lineal and aërial perspective, the gradation of tone in light, shadow, and colour, give an absolute concavity to the flat surface of his canvas; we look into space, into a room, into the reflection of a mirror. The freshness, individuality, and identity of every person are quite startling; we can hardly doubt the anecdote related of Philip IV., who, mistaking for the man the portrait of Admiral Pareja in a dark corner of Velázquez's room, exclaimed (he had been ordered to sea), "What! still here!" After a few days spent in the gallery of Madrid, we fancy that we have actually been acquainted with the royal family and court of that day, and that we have lived with them. None perhaps but a Spaniard could so truly paint the Castilian. Velázquez was the Vandyck of Madrid. He caught the high-bred look of the Hidalgo, his grave demeanour and severe costume, with an excellence equal to his Flemish rival, differing only in degree; he was less fortunate in model. Vandyck, like Zeuxis, had the selection of the most beauteous forms, faces, and apparel, in the English court of Charles, which he was created expressly to delineate, with his clear, silvery, and transparent tones, his elegant aristocratic air, those delicate skins, and tapering fingers which are never seen in coarse, tawny Spain; nor did Velázquez ever condescend to flatter even royalty:—honesty was his policy.

Flattery could not make a courtier of his practical genius, which saw everything as it really was, and his hand, that obeyed his intellect, gave the exact form and pressure: he rarely refined. He did not stoop to conciliate and woo his spectator. Thus even when displeased with repulsive subjects, we submit to the power of a master-mind displayed in the representation.

His Infantes are often booby-faced, and his Infantas mealy; for the royal originals were made, not by him, but by Nature's journeyman; still they are real beings, not conventional; they are flesh and blood, our fellow-creatures, and with them therefore we sympathise. Their costume, whether of the court or the chase, is equally true; and they wear their clothes with ease and fitness, not like the fancy masquerade of an imaginative painter, stuck on a stiff lay-figure, but the every-day dresses of living flexible bodies underneath. Velázquez was inferior to Vandyck in representing female beauty; for he had not his advantages: the Oriental jealousy of the Spaniard revolted at any female portraiture, and still more at any display of beauteous form: the royal ladies, almost the only exception, were unworthy models, while the use of rouge disfigured their faces, and the enormous petticoats concealed their proportions. He painted them critically as a taste, and the painter of men. He was aware of his strength and weakness: his greatest works—Las Lanzas, Las Bebidores—have no women in them whatever; and in the 'Hilanderas,' a group of females, he has turned aside the principal head in the foreground, leaving it, like Timanthes, to be supplied by the imagination of the spectator. He was moreover a painter only of the visible tangible beings on earth, not the mystical glorified spirits of heaven: he could not conceive the inconceivable, nor define the indefinite. He required to touch before he could paint. Velázquez's fulcrum for his mighty lever: he could not escape from humanity, nor soar above the clouds: he was somewhat deficient in 'creative power:' he was neither a poet nor an enthusiast; Nature was his guide, truth his delight, man his model. No Virgin ever descended into his studio; no cherubs hovered around his pallet: he did not work for priest or ecstatic anchorite, but for plumed kings and booted knights; hence the neglect and partial failure of his holy and mythological pictures—holy, like those of Caravaggio, in nothing but name: groups rather of low life, and that so truly painted, as still more to mar, by a treatment not in harmony with the subject, the religious and spiritual sentiment: his Mary a mere porter's daughter, vulgar Galicians; his Virgin, a Muritornes, without the womanly tenderness of Murillo, the unspotted loveliness of Raffaelle, or the serenity, unruffled by earthly passions, of the antique. He rather lowered heaven to earth, than raised earth to heaven. His pictures however of this class are very few, and therein is his marked difference from all other Spanish artists, who, painting for the church, comparatively neglected everything but the religious and legendary.

In things mortal and touching man Velázquez was more than mortal: he is perfect throughout, whether painting high or low, rich or poor, young or old, human, animal, or natural objects. His dogs are equal to Snyders; his chargers to Rubens—they know their rider. When Velázquez descended from heroes, his beggars and urchins rivalled Murillo. He is by far the first landscape-painter of Spain: his scenes are full of local colour, freshness and daylight, whether verdurous court like avenues or wild rocky solitudes: his historical pictures are pearls of great price; never were knights and soldiers so painted as in his surrender of Breda.

His style was based on Herrera, Caravaggio, Ribera, and Stanzioni; a compound of all, not a servile imitation of any. His drawing was admirable, correct, and unconstrained; his mastery over his materials unequalled; his colouring was clear and clean; he seldom used mixed tints; he painted with long brushes, and often as coarsely as floor-cloth; but the effects when seen from the intended distance were magical, everything coming out into its proper place, form, and tone.

Digitized by Google

Yet no man was ever more sparing of colour; he husbanded his whites and even his yellows, which tell up sparkling like gold on his undertoned backgrounds: these, especially in his landscapes, were cool grays, skies, and misty mornings—nature seen with the intervention of air. He painted with a rapid, flowing, and certain brush, with that ease, the test of perfection, that absence of art and effort, which made all imagine that they could do the same—until they tried, failed, and despaired. The results obtained are so true to nature, that first beholders, as with Raffaelle at the Vatican, are sometimes disappointed that there is nothing more. He was above all tricks. There is no masking poverty of head or mind under meretricious glitter; all is sober, real, and sterling. He conceived his ides, worked it rapidly out, taking advantage of everything as it turned up, correcting and improving as he went on, knowing what he wanted and—which few do—when he had got it; then he left off, and never frittered away his breadth or emphatic effect by superfluous finish to mere accessories; these were dashed in 'con quatro botti'—but true, for he never put brush to canvas without an intention and meaning. No painter was ever more 'objective.' There is no showing off of the artist, no calling attention to the performer's dexterity: his mind was in his subject, into which he passed his whole soul; loving art for itself, without one disturbing thought of self. He was true throughout to Nature, and she was true to him, and has rewarded him with immortality, which she confers only on those who worship with undivided allegiance at her shrine.

In the National Gallery are two large pictures by Velázquez—'Philip IV. hunting the Wild Boar,' which has however unfortunately been extensively repainted; and a 'Nativity,' known as 'The Mass of Pope Clement,' neither is an adequate specimen of his pencil. There is also a picture, called 'A Dead Warrior,' or 'El Orlando Muerto,' which is ascribed to Velázquez, but there can be little doubt that it is not by him.

VELLY, PAUL-FRANÇOIS, a French historian, was born at Crugny, near Reims, on the 9th of April 1709. He studied in the Jesuits' College at Reims, and was received a member of their fraternity in 1726. In 1740 he quitted the society, but remained on a friendly footing with many of its members. His first publication—a translation of Swift's 'History of John Bull'—appeared in 1753. In 1755 he published two volumes of a 'History of France.' The first volume brings down the narrative to the death of Charlemagne; the second to the death of Philippe I. (1108). The third volume, the preface of which contains a reply to the censures pronounced by critics on the two former volumes, reaches to the death of Philippe-Auguste in 1223. The three following volumes contain the reigns of Louis VIII., St. Louis, Philippe III., and Philippe-le-Bel. Velly had nearly finished the eighth volume, when he died of the bursting of a blood-vessel, on the 4th of September 1759. He was of a full habit of body, and careless of his health. It is not known whether he was in easy or straitened circumstances; the booksellers, Desaint and Saillant, are said to have paid him 1500 francs for each volume of his history. A 12mo edition of the eight volumes of Velly's history was published by the same booksellers in 1761-62. A third edition (1770-89), in 15 vols. 4to, contains a continuation by Villaret to the year 1429; and by Garnier to 1564. This edition also contains the 'Avant Clovis' of Laurent de Bandouin, and is enriched and accompanied by a collection of portraits, and a geographical atlas in two folio volumes. The 12mo edition (in 35 volumes) wants these accompaniments. Fantin des Odoards has compiled a continuation of Garnier, in 26 vols. 12mo. Velly's style is respectable, though monotonous. His narrative betrays but a slender acquaintance with the original sources of the ancient history of France. He confuses the manners of different eras, and retains the bad custom of putting imaginary speeches into the mouths of historical characters. His history appears to have owed its temporary success to the fact of being better and more modern than that of any other history of France that existed at the time when he published, and to the general remarks interspersed, which evince considerable familiarity with the writings of Montesquieu.

VENDÔME, DUCS DE. The county of Vendôme was erected into a dukedom by Francis I. in favour of Charles de Bourbon, grandfather of Henri IV. In the person of the latter the dukedom of Vendôme, along with the other titles and territories of that branch of the Bourbon family, was united to the crown. The history of the first three dukes of Vendôme is part of the history of the families of Bourbon and Navarre. The dukedom of Navarre was alienated from the crown by Henri IV. in favour of his illegitimate sons by Gabrielle d'Estrées, Cesar and Alexander. This second family of Vendôme became extinct in 1712, and the peerage again lapsed to the crown.

The dukes of Vendôme of the second family are—CESAR, eldest son of Gabriella d'Estrées by Henri IV.; born in 1594, legitimated in 1595, created duke of Vendôme in 1598. In 1610 Henri gave the Duke of Vendôme precedence over all the peers of France, except the princes of the blood. After the death of Henri the duke placed himself at the head of the discontented nobles, who maintained that the marriage of Louis XIII. with a Spanish infanta was incompatible with the good of the state. He was arrested in 1614 by orders of the queen-mother, but escaped to his government of Bretagne, and took up arms against the court. He was obliged, by the desertion of his retainers, to submit. In 1622 he sided with the court against the Huguenots, from whom he took Clerac. He defended Montauban and assisted at the taking of Montpellier. In 1626 he was involved by his brother in a conspiracy against Richelieu: for this he was imprisoned, and only purchased his liberty at the end of four years by revealing everything and giving up his government of Bretagne. In 1631 he commanded at the siege of Lille the volunteers in the Dutch service. In 1641 he was accused of having conspired to poison Richelieu, and fled to England, from which he did not return till after the death of the cardinal. In 1650 he was appointed governor of Burgundy. He contributed to the pacification of Guienne, and took Bordeaux from the malcontents in 1653; he dispersed and put to flight the Spanish fleet before Barcelona in 1655; he was soon after forced by his growing infirmities to retire from active service, but survived till October 1665, when he died at Paris, in his seventy-first year. Some letters of Cesar duke of Vendôme, relating to the disturbances in Brittany, were published in 1614. By his marriage with Françoise de Lorraine (to whom he was affianced in 1598), he had three children—1, Louis, who succeeded him; 2, François, created duke of Beaufort; and Elizabeth, married to Charles Amadeus of Savoy, duke of Nemours.

ALEXANDER, brother of Cesar, was born in 1598, and legitimated in 1599, on which occasion he received, like his brother, the rank and title of Duke of Vendôme. He also admitted a knight of Malta, and in 1612, fearing the enmity of the Maréchal d'Ancre, he took refuge in the island. In 1618 he was created grand-prior of the order in France. In the quarrel between Louis XIII. and his mother, the grand-prior espoused the party of the queen; but in 1622 he served the king against the Huguenots. He was arrested, along with his brother, for conspiring against Richelieu, on the 13th of June 1626, and died in prison on the 8th of February 1629, not without suspicion of poison.

LOUIS, son of Cesar, was called Duke of Mercœur during the lifetime of his father. He was born in 1612; made his first essay of arms in the campaign in Picardy, in which Louis XIII. commanded in person; served under his father at the siege of Lille; distinguished himself at the sieges of Hesdin and Arras, and was wounded in the attack upon the French lines on the 2nd of August 1640. He returned to France after the death of Richelieu; raised in 1649 the cavalry regiment of Mercœur; was appointed viceroy and commander-in-chief of the French troops in Catalonia, but not being properly supported by the minister, resigned in disgust. He made his peace with the court in 1651, when he married Laura Mancini, the eldest of Mazarin's nieces. On his restoration to favour he was appointed governor of Provence; in 1656 he was appointed, in conjunction with the Duke of Modena, to command the army of Lombardy. His wife dying in the course of that year, he took priest's orders; and in 1667 was created a cardinal. Clement IX. nominated him legate *à Latere* in France. Cardinal Louis, duke of Vendôme, died at Aix-en-Provence in 1669. By his wife Laura Mancini he had two children—1, Louis Joseph, who succeeded him; 2, Philippe, also called duke of Vendôme, grand-prior of the order of Malta in France.

LOUIS JOSEPH, born in 1654, was known previous to his father's death by the title of duke of Penthièvre. His education was neglected. He made his first campaign in Holland in the suite of Monsieur, in 1672. He served in the last campaigns of Turenne, and was wounded in the combat of Altenheim during the retreat of the French army, which followed the death of that commander. He was created brigadier in 1677, and served in that capacity in Flanders and Germany under the Maréchal de Crequy. After the Peace of Nimeguen the Duke of Vendôme retired to his castle of Anet, and gave himself up entirely to pleasure. In 1681 he was nominated to the government of Provence, and refused to accept the money which the states were in the habit of presenting to every new governor. He was created lieutenant-general in 1688, and distinguished himself in the four succeeding campaigns, in particular at the sieges of Mons and Namur, and the combats of Leuse and Steinkerque. In 1693 he was sent to Italy, where Catinat commanded in chief. In 1695 he was appointed to succeed Villeroi in the command of the army of Flanders. He raised the sieges of Palamos, invested Barcelona, defeated by a prompt and brilliant attack the army under Velasco which was marching to relieve the city, and received its capitulation on the 10th of August 1697. These successful victories paved the way to peace. After which Vendôme hastened back to Anet and its licentious and not very refined pleasures. He was roused from his inactivity by the Spanish War of Succession. He was sent to Italy to repair the mistakes of Villeroi. In Italy he was joined by Philip V. with a strong force from Naples. The united troops far outnumbered the Imperialists; but the inferior force was commanded by Prince Eugene. Vendôme opened the campaign with spirit: his discomfited the rearguard of the Austrian army at Ustiano, and again at Vittoria, and raised the blockade of Mantua. But his habitual indolence soon resumed its empire, and his army was surprised at Luzara on the 15th of August 1702, in the act of encamping, by the forces of Prince Eugene. Vendôme's presence of mind and the impetuous courage of his army so far redeemed his fault that the victory remained undecided. Philip V. returned to Spain after this action, and Vendôme with the united army penetrated into Tyrol, where he defeated Stahremberg on several occasions. From Tyrol he was recalled to Piedmont by

Digitized by Google

the defection of the Duke of Savoy. He obtained several advantages over that prince; but on the 16th of August 1706 he again found himself—and again by surprise—in the presence of Prince Eugene on the banks of the Adda near Cassano. Here, as at Lusara, Vendôme's presence of mind and the bravery of his army retrieved his negligence. In 1708 Vendôme was sent to supersede Villeroi in Holland, who had been as unsuccessful in that country as in Italy.

The reputation of Vendôme was obscured by the disastrous defeat of Oudenarde. In his defence it may be said that he had been recently placed at the head of the army broken up and dispirited by the defeat of Ramillies; that the country was new to him; and that his opponents were Marlborough and Eugene. But after every allowance has been made for these disadvantages, it seems now to be generally admitted that the want of a proper understanding between the Duke of Burgundy and Vendôme was a main cause of the loss of the battle of Oudenarde, and that the fault was Vendôme's. His previous reputation, and the partisan spirit to which the question was canvassed in France, enabled Vendôme to escape with less disgrace than could have been anticipated. In 1710, Philip V., driven from his capital, and mindful of the battle of Lusara, implored the assistance of his old general. Louis XIV. lost no time in despatching the duke to Spain. The defeated and disbanded soldiers of Spain rallied round him from all parts of the kingdom; the imperial army was obliged to evacuate Madrid; and on the 3rd of December 1710 Vendôme restored Philip in triumph to his capital. The king and his general quitted Madrid again in three days, overtook the rearguard of the enemy, and obliged Stanhope, with four thousand soldiers, to surrender at Brituela. This advantage was followed by the well-disputed battle of Villa-Viciosa, in which Stahremberg was, after an obstinate contest, entirely defeated. On their return to Madrid, Philip raised Vendôme to an equality with the princes of the blood, and would have heaped wealth as well as honours upon him, had not Vendôme steadily refused to accept it. Some corps of insurgents who still held out for Austria having occasioned disquiet in Catalonia in the early part of 1711, Vendôme repaired to that province to tread out these last sparks of internal war. While thus engaged, he died suddenly at Tignarez on the 11th of June.

Vendôme possessed no small share of the genius, bravery, and good-humour of his grandfather; but these virtues were shaded by more than that prince's voluptuousness. A besetting lasciviousness which was no part of the character of Henri IV. He married, in 1710, Marie-Anne of Bourbon-Condé, who survived him six years. There was no issue by this marriage. The younger brother of Louis-Joseph having entered the order of Malta, the duke's estates at his death reverted to the crown.

PHILIPPE, younger brother of the preceding, the last of his family who bore the title of Duke of Vendôme, was born on the 23rd of August 1655. He was received, while yet a child, into the order of Malta, in which he eventually rose to the rank of grand-prior, and made his first campaign under his uncle, the Duke of Beaufort, in the ranks of the Venetian army, in Candia, in 1669. He accompanied his brother in all his campaigns, and was looked upon as a distinguished soldier till the battle of Cassano in 1706. His inactivity was the cause of the French troops being obliged to give way before the Austrians. For this misconduct he was deprived of all his benefices, and retired to Rome, where he subsisted on a pension allowed him by Louis XIV. After an exile of five years he was allowed to return to France, and reinstated in his benefices. He took up his abode in the Temple, and abandoned himself to pleasure. In 1715 he went to Malta to take the command of the troops assembled to repel an attack apprehended from the Turks. The attack was not made, and the grand-prior returned to the Temple, where he died on the 24th of January 1727. His mind was more cultivated than that of his brother; he had a taste for literature and the arts, and patronised their professors. In other respects there was a great resemblance between the characters of the brothers; both were brave and both were dissipated. The grand-prior was distinguished for his licentiousness in the licentious times of the regency.

VENEZIA'NO, AGOSTI'NO, one of the most celebrated of the early Italian engravers, was, as his name implies, a native of Venice, but the date of his birth is not known; he was however born near the close of the 15th century. He is called also Augustinus de Musis, and on his celebrated print of the Skeletons he has signed himself Augustinus Venetus de Musis; his family name was probably Muzi. Agostino was the scholar of Marcantonio Raimondi, for whom, in conjunction with Marco di Ravenna, he engraved many works at Rome, chiefly after Raffaelle: he remained with Marcantonio until the death of Raffaelle in 1520, when he worked for himself. He does not appear to have been altogether with Marcantonio from the first time that he engraved, nor is it anywhere stated that he was first instructed by him; he may have joined him at Rome in the year 1516, after he engraved a plate for Andrea del Sarto, which displeased that painter that he determined upon not allowing any more of his pictures to be engraved. This print, of which there is an impression in the British Museum, represents a Dead Christ supported by Angels: it is perfectly flat and extremely hard in outline, and it is not at all surprising that Andrea del Sarto should have been dissatisfied with such a production. There are prints marked with Agostino's initials A. V., bearing dates from 1509 to 1536; they are executed much in the style of the prints of Marcantonio, but are very inferior in design and in chiaroscuro. Agostino's outline is generally very hard, and his chiaroscuro bad; he was inferior also to Marco di Ravenna in design, and to Bonasoni in chiaroscuro. He was, according to Strutt, the first who had recourse to stipple engraving. His prints are not few, yet not numerous; they were often copied, and his plates retouched, and original impressions are very scarce. His portraits are superior to his other pieces. The following are among his best works:—large portraits of Pope Paul III., Francis I. of France, Charles V. of Germany, and Barbarossa of Tunis, all finely-drawn heads, and full of character: there are impressions in the British Museum. The Israelites gathering the Manna, after Raffaelle, supposed by some to have been commenced by Marcantonio, on account of the outlines being better drawn than in the majority of Agostino Veneziano's figures. The Four Evangelists, and a Nativity after Julio Romano: the Nativity, which is dated 1532, is one of this engraver's best prints as regards chiaroscuro; in drawing it is not good, but he engraved also after Julio Romano a Hercules strangling the Serpents, which is very finely drawn. The large print of the Skeletons or Burying-place, after Baccio Bandinelli, is Agostino's masterpiece: it contains many emaciated figures, two skeletons, and a figure of Death holding a book; he has marked it with his name in full, "Augustinus Venetus de Musis. Faciebat 1518." He engraved also, after Bandinelli, a Cleopatra, and a Massacre of the Innocents, which according to Vasari was the largest plate that had been then engraved; an extraordinary plate of the School of Baccio Bandinelli at Rome, marked "Academia di Bacchio Brandin. in Roma, in luogo detto Belvidere. 1531. A. V.;" part of Michel Angelo's Cartoon of Pisa, called the Climbers; and a group from Raffaelle's School of Athens. He engraved many plates after Raffaelle, but some of them are very indifferent; Vasari says that Agostino and Marco di Ravenna engraved nearly all the designs of Raffaelle. Agostino copied also on copper some of the wood-cuts of Albert Dürer: there is one in the British Museum of the Last Supper, in which Agostino has perfectly preserved the character of the original, and yet has produced a much more elegant work as regards execution. There is in the British Museum a very good collection of the works of Agostino Veneziano. Nothing is known of Agostino after 1536.

VENEZIA'NO, ANTO'NIO, one of the best Italian painters of the 14th century, was born, according to Vasari, at Venice, in about 1309, although Baldinucci has concluded from certain documents that he was a Florentine. He studied with Angelo Gaddi at Florence, and acquired his style of painting. After living some time in Florence, he returned to Venice, and was employed by the Signory to paint one of the walls of the council-hall in fresco, which he did with great credit to himself, but owing to the influence of the jealousy of some of his contemporaries he was not properly rewarded for his work, and he left Venice in disgust. He returned to Florence, and executed there very good works there in the cemetery of Santo Spirito and other places, but they are all now destroyed. From Florence he was invited to Pisa, to complete the series of the life of San Ranieri, in the Campo Santo, which had been commenced by Simone Memmi. Antonio's frescoes in the Campo Santo are, in the opinion of Vasari, the best paintings there: the work of Benozzo Gozzoli was executed later. Vasari praises the purity of his colouring, which he partly attributes to his never retouching his works when dry. He returned again to Florence, and painted in the Torre degli Agli an Adoration of the Kings, a Dead Christ, and a Last Judgment, but they have all now perished. In later life he turned physician, and Vasari says that he acquired as great reputation in one capacity as in the other. He died of the plague at Florence in 1384, according to Vasari, but from documents quoted by the Florentine editors, he must have been alive at Pisa in 1388. Gherardo Starnina and Jacopo Cecilio were his scholars.

Vasari praises the chiaroscuro of Antonio, and seems to have considered him the best in this respect of his time. His design was also correct and graceful, and he was distinguished likewise for the choice of his attitudes and for the truth and variety of his expression.

VENEZIA'NO, DOME'NICO, a celebrated painter of the 15th century, whose melancholy fate is recorded by Vasari in the Life of the infamous Castagno, as he is called. He was born at Venice, about 1410, acquired the art of painting in oil from Antonello of Messina, obtained a good reputation in various parts of Italy, particularly in Perugia, and was invited to Florence, where he was employed in various places, and also, together with Andrea del Castagno, to paint a chapel in Santa Maria Nuova. Castagno, who could not paint in oil, was jealous of the skill and reputation of Domenico, and, says Vasari, made up his mind to get rid of him. He however pretended to have a great esteem for him, and he courted his friendship, which he had very little difficulty in acquiring, as Domenico was a very simple man. Domenico became strongly attached to Castagno and taught him his method of painting in oil; and they spent their evenings generally together and appeared to be sincere friends; Domenico was fond of music, and was a good performer on the lute. As the works advanced the jealousy of Castagno increased, for though a better draughtsman then Domenico, he was inferior in colouring. The work of Domenico attracted too much attention to please Castagno, and he determined to put his malicious design into execution. Upon a summer's evening, about the year 1464, Domenico went out as usual with his lute from his work in Santa Maria Nuova, and Castagno refused to accompany

him, urging that he still wished to work. However, as soon as Domenico was gone, he started by another route, waylaid him, killed him by striking him on the head with a piece of lead, and returned immediately afterwards to his work, as Domenico had left him, where he was found by those who came to tell him of the accident. Castagno accompanied them to the spot, before Domenico was quite dead, and the murdered man breathed his last in the arms of his murderer, who pretended to be deeply afflicted. It should be mentioned that these facts depend apparently entirely upon a reported confession of Castagno on his death-bed. Domenico was fifty-four years of age when he died, and he was buried in Santa Maria Nuova. His works in this church were never completed, and they have now long since been destroyed, but there is still a picture by him in Santa Lucia de' Magnoli. He excelled in colouring and in perspective: in foreshortening he was very skilful, and good also in design.

(Vasari, *Vite de' Pittori, &c.*; Lanzi, *Storia Pittorica, &c.*)

VENIERO, DOMENICO, was born at Venice in 1517, of a patrician family. He applied himself to literature, and especially to poetry: and was a friend of Bembo and other learned contemporaries. At the age of thirty-two he was attacked by a nervous disease which rendered him an invalid for the rest of his life. Confined to his apartments for many years, he found comfort in the society of learned men, who resorted thither to converse, debate, and compose extempore poetry. These meetings were the origin of the 'Academia Veneziana,' instituted in 1558, of which Veniero, Federico Badoaro, and Paolo Manuzio were the leading members.

Veniero wrote a number of poems, remarkable for their lively conceptions and power of expression:—'Rime di Domenico Veniero Senatore Veneziano raccolte ed illustrate dall' Abate Pier Antonio Serassi,' Bergamo, 1751, with a biography of the author. Veniero however indulged at times in strained metorical figures and conceits. He was one of the first to introduce acrostics into Italian poetry. He translated several Odes of Horace, which were published by Narducci, together with translations from the same Roman writer by Annibal Caro, Tricinio, Giulio Cavalcanti, and others: 'Odi Diverse di diversi volgarizzate da alcuni nobilissimi Ingegni,' Venice, 4to, 1605, a very rare edition.

Veniero died in 1582. His brother Lorenzo was a friend of Pietro Aretino, and like him wrote obscene compositions. Maffeo Veniero, son of Lorenzo, born at Venice in 1536, was an elegant poet both in the Italian language and in his native Venetian dialect. His Venetian poems are of the erotic kind, and very free, although the author held the dignity of archbishop of Corfu, which he obtained at an early age through family and personal interest, but it does not appear that he ever resided in his see. He died in 1586, at the early age of thirty-six years. Among his Venetian poems, one of the most successful was a canzone entitled 'La Strazz-sa,' or 'The Ragged Beauty,' which is a very humorous parody of one of Petrarch's canzoni in praise of Laura. There is a very obscene sonnet entitled 'La Zaffeta,' falsely attributed to Maffeo Veniero, but which was published in 1531, long before he was born, and, it appears, by his father Lorenzo. (Gamba, 'Collezione di Poeti Antichi nel Dialetto Veneziano;' Haym, 'Biblioteca Italiana.') The Italian poems of Maffeo and his brother Luigi have been inserted in the editions of the works of their uncle Domenico. (Tiraboschi, 'Storia della Letteratura Italiana.')

VENUSTI, MARCELLO, a celebrated painter of the 16th century, was born at Mantua, about the year 1515. He studied in Rome under Perino del Vaga, for whom he executed many works. He was selected by Michel Angelo to paint a small copy in oil of his Last Judgment, in the Sistine Chapel, for the Cardinal Farnese, and he executed it so entirely to the satisfaction of Michel Angelo, that he gave him many other designs to paint. This excellent picture of the Last Judgment is now in the Royal Museum at Naples: it contains a copy of it in the Aguado Collection at Paris. Venusti painted many pictures for various churches in Rome; Bagliono has given a long list of his works: but he acquired a greater reputation by his pictures from the designs of Michel Angelo. He died at Florence, in the pontificate of Gregory XIII. (1572-1585.)

* VERDI, GIUSEPPE, is the most popular Italian composer of the day, though his popularity may be regarded as being of an ephemeral description. The occurrences of his life have been without interest, as they have not been recorded by any biographer; his name being known only as the author of a number of Italian operas, rapidly produced within the last twenty years, and attended with a degree of success which must be ascribed to the degeneracy of the present Italian school, and the total absence of competition; for Verdi, such as he is, has the field entirely to himself. He is the last remnant of the once splendid race of Italian musicians, and has not even the shadow of a rival. Among his numerous operas the following may be mentioned, as possessed of the greatest merit, and the most generally known:—The 'Lombardi,' 'Ernani,' the 'Due Foscari,' 'Nabucodonasser,' or 'Nabuco' (performed in England under the title of 'Nino'), 'Rigoletto,' the 'Trovatore,' and the 'Traviata.' From his productions it may easily be gathered that Verdi's musical education has been slight. They show the natural vein of melody with which the Italians are preeminently gifted; but they also betray great poverty in the resources of art. He is a shallow contrapuntist, and in his use of the orchestra he endeavours, by inordinate use of the most noisy instruments, to make up for the want of the varied and delicate combinations which we find in the works of Mozart and Rossini. Even in his melody he has sacrificed the smooth and graceful style of the older Italian masters to a loud, violent, exaggerated manner; and many singers of the day have learned by sad experience that of all the music of the Italian stage Verdi's is the most destructive to the vocal powers. It is impossible, nevertheless, that so much popularity could be gained without a certain amount of merit. In addition to Verdi's gift of melody he has considerable knowledge of dramatic effect; and he has generally been happy in the subjects of his pieces, most of which are interesting, and some of them deeply tragic. It must be added, too, that however defective his education seems to have been, he has made progress as an artist by the cultivation of his art. His latest works are his best; a d in 'Rigoletto' and the 'Trovatore' there are scenes of concerted music constructed with a degree of skill of which his earlier compositions show no trace. On the whole, notwithstanding the present vogue of Verdi's operas, no sound critic has ever esteemed him a great musician, or even raised him to the level of Bellini and Donnetti, his immediate predecessors.

VERE, SIR FRANCIS, a distinguished English military commander in the reign of Elizabeth, was born in 1554. His father, of whose four sons he was the second, was Geoffrey de Vere, third son of John de Vere, fifteenth earl of Oxford; his mother was Elizabeth, daughter of Sir Richard Hardekyn of Colchester. Of the first thirty years of his life nothing appears to be known: he began his career of active service as one of the officers of the force sent, under the command of the Earl of Leicester, to the assistance of the Dutch in the latter end of the year 1585. Here he soon made himself conspicuous both for bravery and conduct; and he had a leading part in most of the chief passages of the war between the Dutch and the Spaniards which took place in the Netherlands. In 1587 he was one of the defenders of the town of Sluys against the prince of Parma, to whom however the place was eventually forced to surrender. In 1588 he was one of the garrison who successfully defended Bergen-op-Zoom against the same assailant; and for his services in this occasion he was knighted by Lord Willoughby, who had succeeded Leicester in the command of the English auxiliaries. In 1589, being put in command of a small corps of six hundred of his countrymen, and left to defend the isle of Bommel against Count Mansfelt, he so strengthened the place by the active and judicious measures, that the enemy, though in great force, retired without attacking it. The same year he twice threw a supply of provisions, and the second time also a reinforcement of troops, into the town of Berg, while besieged by the Marquis of Warrenbon. In the letter of these attempts he nearly lost his life in an encounter with a party of the enemy; his horse having been killed by a pike, fell upon him, and he received several thrusts and hurts before he could be extricated. In 1590 he in like manner relieved the castle of Lithschouten; and in the same year he recuperated the town of Burick. His services in 1591 were, the capture of a fort near Zutphen, which materially facilitated the reduction of that town; the important assistance which he rendered Count Maurice at the siege of Deventer; and the share he had in the signal discomfiture given to the Duke of Parma before Knoxbenburg fort, near Nimeguen, which last action he is said to have been brought about mainly by his manœuvres and exertions. In 1592 he obtained a seat in the House of Commons as one of the members for Leominster; but he is supposed to have remained nevertheless in the service of the States of Holland, although it does not appear how he was employed for the next three or four years. When the first expedition against Cadiz was resolved upon, in the beginning of 1596, Sir Francis Vere was sent for to England, and thence despatched back immediately to intimate the design to the States; and having then joined the expedition as one of the commanders of the land forces, with the command of the corps appointed to advise the commanders-in-chief, Lords Essex and Howard of Effingham, he greatly distinguished himself, both in the action with the Spanish fleet, on the 20th of June, and in the success-ful attack upon the town of Cadiz two days after. The latter part of this year he spent in England; but in the beginning of 1597 we find him again in Holland, where he and Sir Robert Sidney commanded the English auxiliaries in the engagement near Turnhout on the 24th of January, in which the Spaniards were defeated with great slaughter by Count Maurice. In the summer of this year he again accompanied his patron the Earl of Essex on his second expedition against Spain, which was attended with no result; and after his return home he received from the queen the government of Brill (the Brill), which was one of the cautionary towns, as they were called, given up for a time by the Dutch to their English allies. He also held under the States the command of the English troops in the service of Holland; and although he resided principally at his government, he made repeated visits to England, and both attended at court and was occasionally employed in negociating affairs of state between Elizabeth and the Dutch government. In August 1599, when a Spanish invasion was apprehended, he was sent for home in great haste, and constituted lord-marshal; and it is said that it was at one time proposed to make him lord deputy of Ireland. He appears to have been personally a favourite of Elizabeth, and Essex also seems to have been his steady friend, although he himself imagined at one time that he had not been well used by that nobleman; but he had drawn upon

Digitized by Google

himself the rivalry and jealousy of Raleigh and the enmity of Burleigh. In 1600 he was joined with Count Ernest of Nassau and Count Solmes in the command of the army which the Dutch sent into Flanders; and to his exertions was principally owing a great victory obtained over the Spaniards, near Nieuport, on the 2d of July. Sir Francis received two shots in the thigh in this battle; but he kept the field till his horse fell dead under him, when he was with difficulty rescued. The following year, on the Archduke Albert sitting down before Ostend, at the head of an army of 12,000 men, he was appointed by the States general of all their forces in and about that important place, and immediately threw himself into the beleaguered town. Here, with very inadequate resources, he held out for about eight months, having succeeded in repelling a general attack of the enemy on the 7th of January 1602; and then, on the 7th of March, he resigned his government to Frederick Dorp, who had been appointed by the States to succeed him. Ostend capitulated at last in 1604, after the siege had lasted more than three years and three months, and had cost the lives, it has been asserted, of above 100,000 men. His defence of Ostend, in the course of which he had received a wound in the head by the accidental bursting of a cannon, was Vere's last service. He was reappointed to the government of the Brill on the accession of King James; and he died in England on the 28th of August 1608. He is styled Governor both of the Brill and of Portsmouth on his monument in Westminster Abbey, erected by his widow, Elizabeth, second daughter of John Lord Norris, sister of Lord Danvers, lady (who afterwards became the wife of the Hon. Patrick Murray, a son of the Earl of Tullibardine, in Scotland) he had three sons and two daughters, all of whom died before him. His military achievements have been recorded by his own pen in 'The Commentaries of Sir Francis Vere, being divers pieces of service wherein he had command, written by himself in way of Commentary;' which were published, from his original manuscript, in folio, at Cambridge, in 1657, by William Dillingham, D.D.

VERE, HORACE, or HORATIO, LORD VERE, was the youngest of the three brothers of Sir Francis Vere, and was born at Kirby Hall in Essex, in 1565. He accompanied his brother to Holland in 1585, and shared in most of his exploits and enterprises there, as well as in the first expedition to Cadiz, for his valour on which last occasion he received the honour of knighthood. He particularly signalized himself both in the battle of Nieuport and in the defence of Ostend. In 1603 he joined the army under Prince Maurice, and in 1604 was greatly instrumental in the reduction of the town of Sluys. In the campaign of the following year, a retreat which he succeeded in effecting, with 4000 men, from the general Spinola, acquired for him much reputation, and extorted the highest praise from Spinola himself. On the death of his brother, he succeeded him both as governor of the Brill, and as general of the English forces in the service of Holland; but the truce which was soon after made between and the Spaniards kept him out of the field for the remainder of the time that he held the former of these appointments. The town of Brill being delivered up to the Dutch in 1616, Sir Horace Vere was allowed a pension by the king in consideration of his services. In 1619 he assisted the Prince of Orange in putting down the Arminians, or Remonstrants, at Utrecht, a measure of violence, one of the results of which was the destruction of the grand pensionary Barneveldt, who had been the attached friend of Sir Francis Vere. In 1620, when forces were raised in England for the assistance of the elector palatine, Frederic V., in his attempt to secure the crown of Bohemia, Sir Horace Vere was appointed to the command of them; and he behaved with his usual spirit in the disastrous contest which ensued, keeping the enemy at bay as long as it was possible, till he was obliged to surrender Mannheim, the last place of strength in which he threw himself, to the Austrian general, Count Tilly, in January 1623. After his return home, he was, 20th of July 1624, nominated by King James one of the council of war appointed to manage the business of the palatinate: and immediately after the accession of Charles I. he was, on the 25th of July 1625, raised to the peerage, by the title of Baron Vere, of Tilbury, in the county of Essex. He was the first peer made by Charles. In March 1629, on the death of the earl of Totness, Lord Vere was made master of the ordnance for life. Still retaining his post of commander-in-chief of the English forces in the Netherlands, he continued occasionally to visit that country, and to take part in the war: but nothing further that is memorable is related of his military career. The last two years of his life were spent in England, where he died suddenly on the 2nd of May 1635, being struck with apoplexy as he sat at dinner in the house of Sir Henry Vane at Whitehall. Fuller, who knew Lord Vere, describes him, in his 'Worthies,' as having "more meekness and as much valour as his brother;" and as "so pious, that he first made his peace with God before he went out to war with man." Sir Francis, he says, was more feared, Sir Horace more loved, by the soldiers. By his wife Mary, third daughter of Sir John Tracey, of Toddington, in the county of Gloucester, who had been previously married to Mr. William Hoby (and who long survived her second husband also, dying, in 1671, at the age of ninety), Lord Vere had five daughters: Anne, married to John Hollis, second earl of Clare; Mary, married first to Sir Roger Townshend, father of the first Viscount Townshend, secondly to Mildmay Fane, earl of Westmoreland; Catherine, married to Oliver St. John, Esq., ancestor of Lord Bolingbroke; Anne, married to Thomas, Lord Fairfax; and Dorothy, married to John Wolstenholme, Esq., by whom however she had no issue. In 1642 an octavo volume was published at London, dedicated to Lady Vere, entitled 'Elegies, celebrating the happy Memory of Sir Horatio Vere.' &c.

VERELIUS, OLA'US, a celebrated Swedish antiquary, whose real name was OLAF WERE, was born on the 12th of February 1618, in the village of Ragunldstorp, in the diocese of Linköping. He received his first education from his father, Nicolaus Were, who was pastor at Ingatorp. After the completion of his preparatory education in the public school at Linköping, he went to the university of Derpat, in Livonia, which was then a Swedish province. After a stay of four years, he returned to Sweden, and finished his studies at Upsala. In 1641 he became private tutor to two young Swedish barons, whom he accompanied in 1643 on a tour through Denmark, Germany, Holland, Switzerland, Italy, and France. At Paris the party stayed a whole year. On his return to Sweden in 1651, Queen Christina appointed him professor of eloquence in the university of Dorpat, and the year after he received the same office in the university of Upsala, in addition to which he was made questor of the university. In 1662 he became professor of Swedish antiquities, and in 1666 antiquary to King Charles XI., and Assessor Antiquitatum in the king's privy-council. In 1679 he was appointed chief librarian of the library of Upsala, which was a kind of sinecure, and was only given to eminent scholars "as a comfort in their old age, after they had achieved Herculean labours." Verelius died on the 1st of January 1682. In the Swedish epitaph on his tombstone he is called a real 'Runic stone,' to express his immense antiquarian knowledge.

Verelius is the author of numerous works, chiefly on Scandinavian antiquities, of which he possessed a most extensive knowledge. His historical statements must be received with great caution, as he was biassed by certain opinions respecting the Swedish origin of the Goths, which were then common among the Swedish historians. In addition to this, Verelius was very tenacious in his opinions, however extravagant they might be, and of very irritable temperament, as we see especially in his polemical writings against his old friend John Schefler of Strasburg, about the meaning of the name Upsala. But Verelius has also the merit of having written on the early history and antiquities of Scandinavia. His principal works are: 1, 'Gotlirici et Rolfi, Westrogothiæ Regum, Historia, &c., accedunt notæ Joannis Schefferi, (Argentoratensis,)' 8vo, Upsala, 1664. This is the first edition of an old work written in the old Scandinavian language, or, as the editor calls it, the Gothic language. It contains the original text and a Swedish translation, together with a vocabulary in which the meaning of Scandinavian words is explained in Latin. 2, 'Ilt Stycke af Konung Olaf Tryggiasen's Saga hwilken på Gammal Götska Skeldriket hafwa Oddur Munk,' &c., 4to, Upsala, 1665 (1). 3, 'Fragment of Konung O. Tryggiasen's Saga, written in old Gothic by Monk Oddur.) 3, 'Herranda och Bosa Saga,' 8vo, Upsala, 1666, with a Swedish translation. 4, 'Manuductio compendiosa ad Runographiam,' &c., fol., Upsala, 1675. This is written in Swedish, and dedicated to the celebrated Axel Oxenstierna, and contains thirty beautiful Runic inscriptions. 5, 'Notæ in Epistolam defensoriam clarissimi viri, J. Schefferi. Argentoratensis, de situ ac vocabulo Upsaliæ,' fol., Upsala, 1681. This work is written with such bitterness and vehemence, that it was prohibited by the censor before its publication. After his death appeared—6, 'Index Linguæ veteris Scytho-Scandiæ sive Gothicæ,' &c., edited by Olaus Rudbeck, fol., Upsala, 1691. 7, 'Epitomarum Historiæ Suio-Gothicæ libri iv., et Gothorum extra patriam gestarum libri ii.,' edited by F. Schenberg, 4to, Stockholm, 1699. There are also two orations of Verelius, viz., 8, 'Oratio Panegyrica de Pace Suio-Germanica, habita Lugduni-Batavorum,' fol., Leyden, 1649. 9, 'Memoriæ illustrissimi Comitis Axelii Oxenstierna Oratio Funebris,' fol., Upsala, 1655.

(Claudius Archenius Ornitelin, 'Vita Olai Verelii,' in the *Epitomarum Historiæ Suio-Gothicæ Lib. IV.*, where also a complete list of the works of Verelius is given: Compare Jocher, *Allgem. Gelehrten-Lexic.*, and Grey, in the *Biographie Universelle.*)

VERGENNES, CHARLES GRAVIER, COMTE DE, the son of a president 'à mortier' of the parliament of Dijon, was born in that town on the 28th of December 1717. His family had only recently been admitted among the 'noblesse de la robe.' M. de Chavigny, who had been envoy in Spain and England, and whose niece had married a brother of Vergennes, undertook to initiate the young man into the diplomatic career: he took him as attaché to Lisbon in 1740.

In 1743 the French court exerted itself to procure the imperial crown for the elector of Bavaria. Chavigny was sent to Frankfort to manage the electoral diet, and Vergennes accompanied him. After the death of Charles VII., Chavigny returned with his pupil to Lisbon. Here Vergennes found for the first time an opportunity to display his capacity for business. The rival claims of Spain and Portugal to the territory of Monte Video were referred to the arbitration of the court of Versailles. Vergennes is said to have condensed into a memoir of four pages the substance of the voluminous pleadings of the parties. The Marquis d'Argenson was delighted with the abridgment; and in 1750 the young diplomatist was appointed minister to the electoral court of Trier. The meddling occupant of that ecclesiastical princi-

Digitized by Google

pality had contrived to make his court the centre of the political intrigues of Germany. He held, in addition to the electoral archbishopric of Trier, the bishopric of Worms, was co-director of the circle of the Upper Rhine, provost of Ellwangen, and senior of the ecclesiastical bench in the diet of the circle of Suabia. His interference was felt everywhere. The empress-queen was, in 1750, anxiously pressing the election of her son Joseph, still a child, as King of the Romans. The failure of her canvass was attributed to the influence acquired by Vergennes over the Elector of Trier.

A visit paid by George II. of England to his paternal estates in Germany was seized upon by Maria Theresa to renew her intrigues. The Duke of Newcastle, who wished the imperial dignity to remain in the House of Austria, assembled a congress of the ministers of all the electors at Hanover. The discussions of this assembly ended in nothing; and Vergennes, who had been sent to it by his court, obtained the credit of having foiled the English minister. Newcastle shifted the scene to Mannheim, and Vergennes (1753) was immediately sent in pursuit of him. He detached the elector-palatine from a convention he was about to conclude with the elector of Hanover in support of the projects of Maria Theresa, and Wrede, the minister of the palatinate, was obliged to repair in person to Paris to apologise for his dealings with England and the empress.

From Germany Vergennes was sent to Constantinople. Count Desalleurs, ambassador to the Porte, died suddenly on the 21st of November 1754. A secret correspondence had been carried on through his instrumentality between the Ottoman court and Louis XV., unknown to the king's ministers. It was a matter of consequence therefore to the king and his favourites that the papers of the deceased ambassador should not fall into indiscreet hands. Vergennes was deemed trustworthy, but his birth and his youth were obstacles to his appointment to the charge of ambassador. Chavigny is said to have helped the courtiers in this dilemma by persuading the Marquis de Puysieux, minister for foreign affairs, that an envoy extraordinary, or a minister plenipotentiary, was perfectly competent to transact all the business of France at Constantinople; and that as an agent of that rank would receive a lower salary, and might live at less expense than an ambassador, the difference might be employed to pay off the debts contracted by Count Desalleurs. Vergennes was accordingly appointed, and embarked in a merchant-vessel for Constantinople, where he arrived in company with the Baron de Tott in May 1755. The Porte received him under the designation of minister plenipotentiary; but after a few months, in consequence of a representation from the sultan, Vergennes received the title of ambassador.

He had a difficult game to play. England and Prussia urged the Porte to declare war against the empresses of Austria and Russia. Vergennes represented that these princesses being on friendly terms with France, must necessarily be well disposed to Turkey, the ally of France. The peace of 1763 put an end to these intrigues, but more serious difficulties ensued. Catherine II. invaded Poland on account of the opposition offered to Poniatowski, whom she had been instrumental in placing on the throne. The Porte, which had guaranteed the integrity of Poland, was disposed to interfere. Vergennes believing that Turkey was too weak to thwart the designs of the empress, and that it would only draw down upon itself a participation in the disasters of Poland, counselled neutrality. The Baron de Choiseul exclaimed loudly against the apathy of the Divan and the timidity of Vergennes. Money was remitted to the ambassador with strict injunctions to spare no efforts to engage Turkey in hostilities against Russia. The minister was preparing reluctantly to obey, when an accident brought about what he had hesitated to undertake. Some Cossaks made a predatory irruption into the Crimea, and De Tott, who had been accredited by Choiseul to the khan, induced him to make reprisals. This led to a formal declaration of war against Russia by the sultan, on the 30th of October.

Vergennes's despatch containing the intelligence of this event was crossed on the way by the courier who brought his recall. He carried back with him to Paris the money sent to bribe the Divan to undertake a war, into which circumstances had precipitated them unbought. The Duke de Choiseul assigned the marriage which Vergennes had contracted with the widow of a surgeon of Pera as the reason for recalling him. Vergennes's recall was much regretted by the French residents at Pera, who presented him with a gold-hilted sword (une épée d'or) on the occasion. On his return to France he took up his abode on a property he possessed in Burgundy, and remained in retirement until the fall of the Duke de Choiseul.

La Vrillière, who held the portfolio of foreign affairs for a short time after Choiseul's retirement, sent Vergennes to Sweden, allowing him to draw up his own instructions. He remained at that court till the death of Louis XV. It was during his residence that Gustavus III. accomplished the revolution which converted Sweden into an absolute monarchy. Gustavus had made the French minister the confidant of his designs, and the minister imparted them to his own court, but represented them as romantic visions. The cabinet of Versailles however directed him to assist the king of Sweden with money; and when Gustavus carried his schemes into effect, the credit of directing him was attributed at Versailles to Vergennes, who was as a reward enrolled among the noblesse de l'épée.

On the accession of Louis XVI. (July 1774), Vergennes was made minister for foreign affairs. He remained minister till his death, in 1787, having held along with the portfolio of his department that of president of the Council of Finance during the last few years of his life. The leading achievements of his ministry were as follows:—In May 1777 he concluded a treaty with the Swiss cantons in lieu of the separate treaties which it had been customary to enter into with each. On the 6th of February 1778 he signed the treaty of alliance with the United States of North America. He contributed materially towards the establishment of the armed neutrality of the northern maritime powers, and assisted in persuading Spain and Holland to commence hostilities against England. And by these means he became an instrument in bringing about the recognition of the independence of the United States by the mother-country in 1783. In 1779 he obtained favourable conditions for the elector of Bavaria from George II.; and in 1785 he persuaded the emperor and the United Provinces to submit their differences to the arbitration of Louis XVI. His last labour was the negociation of a treaty of commerce with England in the years 1785 and 1786; and a similar convention with Russia in 1787, surviving the conclusion of the latter only fourteen days. He died on the 13th of February 1787, after having served his country twenty-four years in the capacity of ambassador and thirteen as minister of state. He left a large fortune.

As a diplomatist, Vergennes, except in the case of his Turkish mission, appears to have received credit for accomplishing arrangements which in some cases had been brought about without his interference, and in others against his wishes. It ought however to be mentioned at the same time that the course he wished to see adopted in the case of Turkey would have been the most prudent for that country, and that had Gustavus III. deferred to the wishes of Vergennes, he would have acted more in consonance with the dictates of justice and for the permanent advantage of his country. The part taken by Vergennes in the American contest, and in the arrangement of the commercial treaty with England, is equally creditable to his liberality and to the soundness of his economical opinions. Hare too however, as in his diplomatic missions, he appears rather to have left what was inevitable to happen of itself, than to have exerted himself to accomplish what he considered desirable. He appears to have possessed in a high degree the diplomatic talent of looking wise, doing nothing, keeping his own secret, and taking credit for any good that was done. He carried diplomacy into private life, and was always on his guard: on the other hand, he was of an affectionate disposition, extremely fond of children, and an honest man. It was a thorough conviction of the integrity of Vergennes that made Maurepas recommend him to Louis XVI. for the portfolio of foreign affairs; and it was the king's conviction to the same effect that enabled Vergennes to overcome all the cabals and intrigues of the court.

VERGILIUS, or VIRGILIUS, POLYDORUS, was a native of Urbino in Italy. Polydore Vergil first made himself known by a small collection of Adagia, or proverbs, which he published in 1498, and which was several times reprinted in the course of the next half century. Bayle quotes an edition of it in his possession printed at Basel, in 8vo, in 1541, which professed to be according to the author's fourth revision. There is a great deal about this book of proverbs in the Letters of Erasmus, who, according to the notion of Vergil, had behaved unfairly in omitting all mention of it in his own subsequent work of the same kind. Erasmus, very characteristically, when the booksellers wanted to suppress a preface of Polydore's to a new edition of his book in which he laid his complaint before the public, would not hear of such a thing; and the two authors continued excellent friends, as they had been before. Polydore at last of his own accord withdrew the obnoxious preface; and we find him in after-years one of the various persons by whom Erasmus was supplied with money to buy a horse—an article which the great scholar was frequently in want of. Polydore also suppressed, at the request of Erasmus, a reiteration of his complaint, which he had put into a dedicatory epistle prefixed to his next work, entitled 'De Rerum Inventoribus,' first published in three books in 1499, and again at Strasbourg in 1509. Being in holy orders, he was before 1503 sent over to England by Pope Alexander VI. to collect the tax called Peter-pence; and he spent the greater part of the remainder of his life in this country, continuing his residence long after he lost his office, of which he was the last holder. In 1517 he republished at London his work 'De Rerum Inventoribus,' extended to eight books. A fourth edition of it was brought out at Basel, in 12mo, in 1536, and another in 8vo, in 1554; and there is a 12mo edition of it, printed at Amsterdam by Ludov. Elzevir so late as 1671, along with another work by Vergil, three books of dialogues entitled 'De Prodigiis,' against divination, which he appears to have finished at London in 1526, although the first edition mentioned by Gesner is one printed at Basel in 1531. Bayle had another printed at Basel, in 8vo, in 1545, and containing also two books 'De Patientia,' one 'De Vita Perfecta,' and one 'De Mendaciis,' all by this author. Erasmus, in one of his Letters, also speaks of a translation of the 'Monachus' of St. Chrysostom, which Vergil had printed at Paris in 1528, and dedicated to him.

Soon after he came to England, Vergil obtained the rectory of Church Langton in Leicestershire, and in 1507 he was made arch-

Digitized by Google

deacon of Wells, and was also collated in the same year, first to the prebend of Nonnington in the cathedral of Lincoln, which last he exchanged, in 1513, for that of Oggate in St. Paul's. In 1525 he published at London, in 8vo, but from a very imperfect and corrupt copy, the first edition of the fragment of Gildas, entitled 'De Calamitate, Excidio, et Conquestu Britanniæ.' He dedicated it to Bishop Tonstall; and, according to Nicolson, the same bad text was reprinted in 8vo at Basel in 1541, in 12mo at London in 1568, and in the 5th volume of the Paris 'Bibliotheca Patrum' of 1610, folio. Vergil finished his principal work, his 'Historia Anglica,' a history of England from the earliest times to the end of the reign of Henry VII., in twenty-six books, in 1533: the dedication to Henry VIII. is dated in January of that year, and the first edition appears to have been published at Basel, in folio, in 1534. It was reprinted at Basel in the same form in 1536, 1556, 1570, and 1583; and in octave at Leyden, under the care of Antonius Thysius, in 1649, and again in 1557. For clearness of narrative and neatness of style Polydore Vergil is perhaps the first of our Latin historians, and there are also a good many things in his work which are not to be found elsewhere; but he does not stand high as an authority. It is alleged that he destroyed numerous original documents which he had made use of in preparing his work, or, according to another version of the story, sent them off to Rome. His ignorance of the language and customs of the country has also no doubt betrayed him into some mistakes. He is charged however with having been principally misled by his prejudices in favour of the old religion, although he was hardly accounted a good Roman Catholic in all points. Various passages in his work 'De Rerum Inventoribus' are condemned in the 'Indices Librorum Prohibitorum et Expurgatorum;' and John Bale states that he approved of the marriage of ecclesiastics, and was opposed to the celibacy of images. Nor was he deprived of his preferments either by Henry VIII. or even by Edward VI.

He left England in 1550. Burnet, in his 'History of the Reformation,' Part ii., says under the year 1550: "This year Polydore Vergil, who had been now almost forty [fifty!] years in England, growing old, desired leave to go nearer the eun, which was granted; and, in consideration of the public service he was thought to have done the nation by his History, he was permitted to hold his archdeconry of Wells and his prebend of Nonnington, notwithstanding his absence out of the kingdom." He is understood to have returned to Urbino, and is commonly stated to have died there in 1555. An opinion expressed by M. de la Monnoye, in a note upon Baillet's 'Jugemens des Savans,' ii. 160, that he must have died before 1540, appears to be refuted by the above statement from Burnet, who quotes as his authority the 'Rot. Pat.' 4 Ed. VI., 2 part. The English versions of Polydore Vergil's History have been reprinted by the Camden Society under the editorial care of Sir Henry Ellis.

VERHEYEN, PHILIPPUS, was born at Verbrouck in the province of Waas, in 1648. His father was an honest agricultural labourer, who gave him a homely education, and with whom he worked in the fields till he was twenty-two years old. At this time the pastor of the parish, discerning in the young Verheyen the marks of a superior intellect, undertook to teach him Latin during the winter vacations from his agricultural work; and in 1672 he had made such progress that the pastor obtained for him admission into the College of the Holy Trinity at Louvain, where, at the end of five years' study, he gained, in 1677, the highest place in the general examination of the four chief colleges. After this he studied theology for a short time: but he was diverted from his intention of entering the ecclesiastical order by losing his leg, in consequence of some acute disease which rendered amputation necessary. On his recovery from the operation, Verheyen applied himself to medicine. In 1681 he received, with especial marks of honour, his licentiate's degree; in 1689, having spent nearly all the intervening time in the study of anatomy and medicine at Louvain, he was appointed professor of anatomy there; and in 1693 professor of surgery also, but he did not, for some unknown reason, take his doctor's degree till 1695. He became by study, diligently continued to the end of his life, one of the most eminent anatomical teachers of his time, and his books were very widely read, especially his Anatomy of the Human Body. He was engaged on a large work, 'De Tuendâ Valetudine,' when he died in 1710.

Verheyen's works are as follows: 1, 'Anatomiæ Corporis Humani, Liber primus,' Louvain, 4to, 1693; a short compendium of anatomy which was several times reprinted; and was completed after his death, in 1710, by the publication of a 'Supplementum, seu Liber secundus,' and of many additions to the original work. The two together, in two volumes 4to, were often printed; as, at Brussels, 1710 and 1726; Naples, 1717, 1734; Leipzig, 1731, &c. They contain no important anatomical discoveries, but were good useful books at the time of their publication. The second volume, which is the more interesting of the two, contains many analyses of animal fluids, and accounts of numerous experiments on living animals, chiefly having relation to development and respiration; but a great part of it is filled by the author's portion of a controversy with Méry in defence of the Harveian doctrine of the circulation. 2, 'Dissertatio de Thymo,' Louvain, 4to, 1706. 3, 'Compendium Theoriæ Practicæ,' Cologne, 8vo, 1683. The first and second parts alone of this work were published. They treat of affections of the head and chest, and support the chemical doctrines of Willis. 4, 'Vera Historia de Sanguine ex Oculis, Auribus, Naribus, &c.,' Louvain, 12mo, 1708.

Life, prefixed to the *Anatomia*, edition of Brussels, 1710; Haller, *Bibliotheca*.

VERMIGLI, PIETRO MARTIRE, was born at Florence in 1500. He studied for the church, and entered early the order of the Regular Canons of St. Augustine, in which he became distinguished for his learning, and rose to offices of trust. Being at Naples he became acquainted with Juan Valdes, a Spaniard, who had become a convert to the doctrines of the Reformation. [VALDES, JUAN.] Vermigli adopted some of those tenets, but concealed them for a time. Being made by his superiors to Lucca, as prior of San Frediano, he there publicly avowed his new doctrine, and was soon after compelled to fly to Switzerland, in 1542. He thence went to Strasburg, where he was appointed Professor of Divinity. In 1547, at the invitation of Bishop Cranmer, he repaired to England, where he was graciously received by King Edward VI. and was appointed Lecturer upon the Holy Scriptures at Oxford, where he met with much opposition from the heads of colleges and the higher graduates, and ran some personal risk. In 1553, after the accession of Queen Mary, being obliged to leave England, he returned to Strasburg, where he resumed his chair as Professor of Divinity, and likewise of Aristotelian philosophy. In 1556 he was invited by the senate of Zürich to fill the chair of theology in that university, which he accepted. In 1561 he repaired, with other Protestant divines, to the conference of Poissy, in France. On November 12, 1562, Vermigli died at Zürich, much regretted. He wrote on dogmatic and ethical subjects, commentaries on parts of the Scripture, besides numerous epistles to 'His Brethren of the Protestant Church of Lucca,' to the Protestant Churches in Poland, to the English church, to Calvin, Bullinger, Beza, Melancthon, and other reformers, to Queen Elizabeth, and to several English prelates and noblemen. Tirabochi, a zealous Roman Catholic, acknowledges that Vermigli was free from the arrogance and virulence of Luther and other reformers, that he studied deeply acquainted with the Scriptures and the Fathers, and was one of the most learned writers of the reformed communion. His works were translated from the Latin into English. 'The Common Places of the most famous and renowned Divine Doctor Peter Martyr, divided into four principal parts by Anthony Marten,' dedicated to Queen Elizabeth, in 1583, and 'A biography of Vermigli by Amia Simler, of Zürich: this collection contains a complete course of Christian ethics, and may be read with advantage even now.

VERNET, CLAUDE JOSEPH. This celebrated landscape and marine painter was born at Avignon, on the 14th of August 1714, and received his first instruction in painting from his father, Antoine Vernet, and Andrian Manglard, an historical painter. Fiorillo states, Vernet is said, even in his fifth year, to have had great skill in drawing. At the age of eighteen, in 1732, he went to Italy with the intention of perfecting himself as an historical painter; but the beautiful views of sea and shipping at Genoa, Naples, and other parts of Italy are said to have induced him to fix upon marine landscape as his principal study. He studied with Fergioni at Rome, and his future pictures justified his choice; for he executed works which acquired him a name, comparatively early in life, that rivalled those of both Claude and Backhuysen. But he for some time in Italy lived in great poverty; he was glad to paint in any style and for the slightest remuneration: at the sale of the collection of Mr. de Calonne, a piece was sold for 5000 francs, which Vernet had painted in Rome for a suit of clothes. He painted also several panels of carriages for coachbuilders at low prices; they were afterwards taken out and framed as works of great value. He remained in Italy twenty years, including some time spent in Greece and the Greek islands; and during this period he made elaborate sketches of many of the most beautiful and most interesting spots in both countries, and painted also several elegant pictures in Genoa, in Naples, and in Rome. Those which he painted in Rome for the palaces Rondanini, Borghese, and Giustiniani, are among his best works: the pictures he painted for the Rondanini palace were executed much in the style of Salvator Rosa, whom Vernet imitated with great success; but he afterwards entirely forsook Salvator's manner for one as conspicuous for its delicacy as its colouring as the other was for its force. One of his first patrons in Rome, according to Pilkington, was Mr. Drake of Shardeloes in Buckinghamshire, who commissioned him to paint six pictures, leaving the subjects to his own choice, and he produced six excellent pieces.

In 1743 he was made a member of the academy of St. Luke; and about the same time he married Miss Parker, the daughter of an English Roman Catholic, who was an officer in the Pope's marine. Vernet's reputation as a marine painter at length reached his own country; and in 1752 he was invited by Louis XV., through M. de Marigny, to Paris, after an absence of twenty years.

Vernet lost no time in complying with the invitation of his king, and embarked as soon as possible at Leghorn in a small felucca for Marseilles. During the passage there happened a violent storm, which terrified some of the passengers; but Vernet, struck with the grandeur of the effect of the sea, requested one of the sailors to bind him to the mast-head, that he might view it to the greatest advantage; and there he remained, lost to the dangers of his position, absorbed in admiration of the grand effect around him, endeavouring to transfer

Digitized by Google

it to his sketchbook. His grandson, the celebrated Horace Vernet, painted an excellent picture of this scene, and exhibited it in 1816 in the Louvre. In 1752 or 1753 Vernet was elected a member of the French Academy of Arts; his reception picture was a Seaport at Sunset, which is now in the Louvre. In 1753 he was commissioned by the government to paint pictures of the principal seaports of France, of which he painted fifteen views; an arduous task, which occupied him nearly ten years, or twelve, according to the Catalogus of the Louvre: but it contributed more to his fame than to his fortune; for he was paid, including his travelling expenses, only 7500 francs each; and the pictures are of large dimensions, measuring eight French feet long by five high: they are now in the Louvre. He was however in consequence of these views elected in addition of the council of the Academy, and Louis XV. gave him apartments in the Louvre. From 1753, when he returned to France, to his death, December 4, 1789, Vernet painted upwards of 200 pictures, most of which have been engraved. The best prints after him are by Baleehou, Lebas, Allamet, and Pilpatre. He was without a rival in France, and there was only one landscape painter in Europe who disputed the palm with him: this was Richard Wilson, with whom Vernet had become acquainted in Rome, and for whom he had a great esteem. They exchanged pictures, and Vernet left Wilson in his studio at Rome; and he is said to have remarked to English connoisseurs who visited him, that they had no occasion to come to him for pictures when they had such a painter at home. Vernet's landscapes are good in almost every respect, but he was most excellent perhaps in his management of light and shade, and aérial perspective: his figures also are remarkably well drawn, and he introduced a great number of them in some of his pieces; he excelled also in moonlight effects, and in representing water in any state, but particularly when disturbed and boisterous. He was least successful in shipping: the want of decent in a composer is evidenced in the rigging and construction of ships; and his colouring is forced and artificial. Many of his best pictures are in the Louvre. In the National Gallery is a river scene by him—'The Castle of Sant' Angelo, Rome.'

In 1826 the Athenæum of Vaucluse determined upon giving a prize for the best eulogy in verse upon Vernet: it was decided in favour of M. Bignan, in 1827, in the presence of the son and grandson of the painter, Carle and Horace Vernet, who, in gratitude to the city of Avignon, each presented a picture to the museum of that place. Carle Vernet's was a horse-race at Rome; Horace's, his well-known picture of Mazeppa. The Municipal council of Avignon, and the directors of the museum, presented to the painters in return two large silver urns emblazoned with two of their pictures respectively.

VERNET, ANTOINE-CHARLES-HORACE, commonly called Carle Vernet, a French historical, genre, and battle painter, was born at Bordeaux, August 14th 1758, and was the pupil of his father, Claude Joseph Vernet, the celebrated marine and landscape painter. He studied also in the French Academy at Paris, where he gained the second prize for painting when in his eighteenth year, and in 1782, six years afterwards, he obtained the grand prize, and with it the privilege of studying for a certain period in the French academy at Rome.

In 1789 he was elected a member of the French Royal Academy of Painting for a large picture of the Triumph of Paulus Æmilius, and he was subsequently, after the remodelling of the academy, nominated a member of the Institute of France.

His principal works are:—The large picture of the Battle of Marengo, and a battle against the Mamelukes, exhibited in 1804; the Morning of the Battle of Austerlitz, with the Emperor giving orders to his Marshals, and an equestrian portrait of Napoleon, in 1808; the Bombardment of Madrid, the Battle of Rivoli, and another picture of the Emperor, in 1810; John Sobieski forcing the Turks to raise the Siege of Vienna, in 1683, exhibited in 1819; the Taking of Pampeluna in 1824; the Entrance of Napoleon into Milan; and the Battle of Wagram.

Carle Vernet has painted also an immense number of pictures of small dimensions, chiefly of military subjects, but also many of the chase, of scenes of familiar life, and from the imagination. He was also a celebrated painter of horses, and by some considered the best of his time; among his pictures are many small equestrian portraits. In 1806 he was appointed painter to the Dépôt de la Guerre, and he was made subsequently Chevalier of the orders of St. Michel, and of the Légion d'Honneur. He died November 28, 1836.

VERNET, HORACE, is the son of Antoine-Charles (commonly called Carle) Vernet, and was born on the 30th of June, 1789, in the Louvre, where his grandfather Claude-Joseph Vernet had an official residence as painter to the king, and where his father also resided. The state of anarchy through which Paris passed during his childhood and early youth caused his education to be somewhat neglected and irregular; but his father instructed him in art for which he early evinced the hereditary fondness and talent. Art was however during those years far from a lucrative profession, and Carle Vernet had little ability to indulge his son in the luxurious appliances of study. While yet a boy he was compelled to use his pencil as a means of support, and he made drawings for ladies' fashions, bill-heads, and indeed all kinds of designs for booksellers and others. He thus acquired the astonishing facility in drawing every kind of object which has in his mature years enabled him to furnish paintings, sketches, and drawings with an almost unparalleled profusion.

In deference to the wishes of his father, Horace was a competitor for the prize of the travelling pension to Rome given by the Académie des Beaux Arts, but was unsuccessful. He consoled himself with a wife—though only twenty—and throwing off the trammels of pupilage, boldly opened his atelier; and, in 1809, sent a picture to the Exposition. At this time the Classic school, of which David was the head and representative, was in the undisputed ascendant, and whatever were the subjects chosen by French painters, a certain conventional 'classic' character was regarded as indispensable. Carle Vernet was a painter of battle-pieces, but even he was careful to preserve 'the proprieties.' Horace determined to paint his figures as he saw them. It was a time when the French soldiers seemed to be rapidly subverting Europe, and the whole nation was intoxicated with visions of the glory of France. Horace Vernet had served for a while in the ranks, and sharing to the fullest extent in the popular feeling, set himself the task of representing the victories of the French armies, and the incidents of military life and adventure: his undertook to show Frenchmen their military brethren in their toils, their pleasures, and their triumphs; and he has in the opinion of all Frenchmen thoroughly succeeded. From the first the popularity of Horace Vernet's military pictures has been beyond rivalry. His early 'Capture of the Redoubt,' 'Halt of French Soldiers,' 'Trumpeters,' 'Barrière du Clichy,' and the like, were received by the public as faithful delineations of the events, and placed him at the head of his branch of the profession and in general estimation. In 1812 he was awarded the first-class medal (Victory), and the emperor in 1814 created him a Chevalier of the Legion of Honour. The restoration of the Bourbons did not check his career of prosperity. In 1817 he sent to the Exposition his 'Defence of Paris, 1814,' and 'The Battle of Tolosa,' which are now in the Luxembourg. The battles of Jemmapes, Montmirail, Valmy, and others, succeeded, as well as 'The Soldier of Waterloo,' 'The Defence of Saragossa,' 'The Death of Ponistowski,' &c.; and in 1819 he painted his celebrated 'Massacre of the Mamelukes,' now in the Luxembourg.

He failed to admit a work of his to the Exposition of 1822, proved the occasion of a great triumph instead of a mortification to him. He collected his pictures, and had an exhibition to himself which proved very successful. In 1825 he was raised by Charles X. to the rank of Officer of the Legion of Honour, and in 1826 was elected a member of the Institution. Two years later he was appointed Director of the Academy at Rome, and he held that post till the close of 1838. During his tenure of office the system of instruction at the Academy underwent a considerable change; but the school was regarded as formerly, well conducted and successful, and the Director was extremely popular with the students. Horace Vernet lived at Rome in a style of great splendour, and the saloons of the French Academy became a centre of the cultivated society of the place. On the occurrence of the Revolution of 1830 the French Legation having quitted Rome, M. Vernet was nominated representative at the court of Rome, and he is said to have executed his diplomatic functions with as much éclat as did Rubens in earlier days.

Louis Philippe was a liberal patron of Vernet. To him was intrusted the task of covering the walls of the Constantine gallery at Versailles with a series of battle-pieces, some of which—as the capture of the Smala of Abd-el-Kader—are we believe among the largest canvases ever painted over. The Gallery of French History at Versailles, as well as the galleries of the other palaces, were also adorned with examples of his facile pencil. The Constantine Gallery at Versailles is devoted to representations of the successes of the French arms in Algiers, to which country Horace Vernet has paid more than one prolonged professional visit, and the scenery, costume, and character of which he is considered to have rendered with great fidelity as well as spirit. But during the years of the Orleans dynasty he by no means confined his pencil to battles, or even to military subjects. He had visited the Holy Land, and his 'Judith and Holofernes,' 'Rebecca at the Fountain,' 'Hagar driven out by Abraham,' 'The Good Samaritan,' and other Biblical subjects, were the result of his studies there; he also painted various historical works, such as 'The Arrest of the Princes at the Palais-Royal by order of Anne of Austria,' and numerous genre pictures, including his famous 'School of Raffaelle' (well known by Janet's engraving), 'Combat between the Pope's Riflemen and the Brigands;' 'Confession of the Dying Brigand,' and the like. But the class of subjects in which he has of late seemed most to delight are those illustrative of Eastern life and adventure: 'Prayer in the Desert,' 'Council of Arabs,' 'The Lion Hunt,' 'Arab Mother rescuing her Child from a Lion,' and a multitude more, which his rapid and daring pencil has struck off with amazing facility and spirit. He has continued however to paint battles and military pictures—his 'Taking of Rome by Oudinot' in 1849, being of very large size—without any abatement of his former vigour. Within the last year or two M. Vernet has again visited the East; is still said to be meditating more "great works;" and still retains unimpaired his immense popularity. He was made a Commander of the Legion of Honour in 1842; and he received the great medal of honour at the Universal Exposition of 1855. He has refused to be made a baron. He is said to have painted more pictures and larger pictures than any contemporary artist in Europe; and if they are not pictures of the highest class, they have produced probably a far more extended and

Digitized by Google

more powerful impression on his countrymen than pictures of a higher order would have done. [*See* SUPPLEMENT.]

VERNON, EDWARD, a distinguished English admiral, was born at Westminster, 12th of November 1684, and was the son of James Vernon, Esq., the descendant of an ancient Staffordshire family, who was secretary of state from 1697 to 1700. Young Vernon was carefully educated, and is said never to have forgotten his Greek and Latin; but nothing that his father could say or do would keep him from the sea, and it was at last found necessary to allow him to exchange his classical studies for navigation and gunnery. He first served under Admiral Hopson in the Prince George, on the expedition which resulted in the destruction of the French and Spanish fleets at Vigo on the 12th of October 1702. In 1704 he was present in Sir George Rooke's squadron at the sea-fight with the French off Malaga. The next year he was appointed commander of the Dolphin; and he was afterwards transferred, in 1707, to the Royal Oak; in 1708 to the Jersey, in which he was sent to the West Indies as rear-admiral, under Sir Charles Wager; to the Assistance, of 50 guns, in 1715; and to the Grafton, of 70 guns, in 1726. He was returned as one of the representatives for Penryn to George II.'s first parliament, which met in November 1727; and he sat for Portsmouth in the next parliament, which lasted from 1734 to 1741. It was the part which he took in the House of Commons which is said to have occasioned his being sent, with the rank of vice-admiral of the blue, on the most memorable expedition with which his name is connected. He had rendered himself considerable in the House, according to Smollett, "by loudly condemning all the measures of the ministry, and that without reserve, speaking his sentiments, whatever they were, without respect of persons, and sometimes without any regard to decorum." This writer proceeds:—"He was counted a good officer, and his boisterous manner seemed to enhance his character. As he had once commanded a squadron in Jamaica, he was supposed well acquainted with those seas; and in a debate upon the Spanish depredations, he chanced to affirm that Porto Bello, on the Spanish Main, might be easily taken; nay, he even undertook to reduce it with six ships only. This offer was echoed from the mouths of all the country party in opposition. Vernon was extolled as another Drake or Raleigh, he became the idol of a party, and his praise resounded from all corners of the kingdom. The minister, in order to appease the clamours of the people on this subject, sent him as commander-in-chief to the West Indies. He was pleased with an opportunity to remove such a troublesome adversary from the House of Commons, and perhaps he was not without hope that Vernon would disgrace himself and his party by failing in the exploit he had undertaken." Vernon however, who set sail from Spithead with his six ships on the 23rd of July 1739, completely succeeded; Porto Bello was taken on the 22nd of November, and was afterwards only abandoned for want of a sufficient land-force to keep it, after all the fortifications had been blown up. Vernon's next enterprise was the disastrous attempt on Carthagena in the spring of 1741, made famous by the graphic details given by Smollett, who was present in the fleet as a surgeon or surgeon's mate, in the concluding chapters of the first volume of his 'Roderick Random.' (See also his 'History of England,' iv., 608, &c., 4to edition.) This failure however did not affect the admiral's popularity in England; in the next parliament, which met this year, he was returned at once for Penryn, for Rochester, and for Ipswich. He made his election for Ipswich, and he was returned for the same borough to the two next parliaments, which met in 1747 and in 1754. During the rebellion of 1745 Admiral Vernon was employed in guarding the coasts of Kent and Sussex, a service in which he acquitted himself with his usual zeal and ability; but soon after this he got into a quarrel with the Admiralty about the appointment of a gunner, the result of which was that he was struck off the list of admirals. In the course of the controversy, or after it was over, he is stated to have written several pamphlets in his own defence; but their titles are not given in the common accounts. He died at his seat, at Nacton in Suffolk, on the 29th of October 1757. Vernon appears to have been a brave, high-spirited, and honourable man, with an impetuous temper, which he could not or would not rein in.

VERNON, ROBERT. Though possessing personally no title to an enduring name, yet as the founder of the National Gallery of British Art, Mr. Vernon claims an honourable place in an 'English Cyclopædia or Biography.' The so-called 'National Gallery' of paintings was founded in 1824 by the purchase by Lord Liverpool's government of the collection formed by Mr. Angerstein. This collection included nine pictures by British painters—the 'Rape of the Sabines' of Hogarth; that painter's portrait; Lord Heathfield by Sir Joshua Reynolds; and Wilkie's 'Village Festival.' In the course of the next twenty-three years there were occasional bequests or presentations of English pictures, but not a single English picture was added to the national collection by purchase; the entire number of British pictures in the National Gallery in 1847 was only forty-one, and several of these were portraits of unknown or insignificant persons by second-rate artists, or works of little artistic excellence or general interest. In every other country the possession of worthy specimens of the pencils of the chief painters of that country had been deemed the essential feature of a national collection; here the National Gallery, according to the official estimate, was to be a gallery of the works of the 'Old Masters' of Italy and Holland.

It is to Mr. Vernon that the country is primarily indebted for what has been done towards placing matters on a more rational and satisfactory footing. Born in 1774, he by diligence, perseverance, and skill during a long commercial career, raised himself from very humble into very affluent circumstances; earning at the same time a high character for liberality, and enlarged though unostentatious benevolence. Having a great fondness for pictures he began, as soon as his means permitted, to indulge his inclination by purchasing some, and following his own taste he selected the works of English artists. In the course of years his collection grew till every room in his house was filled. He now conceived the design of presenting his pictures to the nation, in the hope that if kept together they might serve as the nucleus of a gallery of British art. With this view he sold each of his pictures as he deemed undeserving of such a destiny, and purchased or commissioned (in nearly every instance direct from the painter) fresh examples of the masters he most admired. Then—not waiting to make it a posthumous gift—he offered his collection to the government, requesting that all those pictures might be selected which were considered worthy of national acceptance; and that being done, he made them over by a deed of gift, dated December the 22nd, 1847, to the Trustees of the National Gallery. The collection so transferred comprised 157 pictures, all but two by British artists, and a large proportion by living artists. The pictures having been selected in the first instance for a private residence of moderate dimensions, are mostly of cabinet size, and to a considerable extent of homely subjects; but they include favourable specimens of a large proportion of the chief deceased and living English painters. Mr. Vernon lived long enough to see that his munificent gift was warmly appreciated by the great bulk of his countrymen; but not to see it provided with a fitting repository. He died May 22nd, 1849. Since his decease the Vernon collection has found a temporary resting place in Marlborough House. To it has been added the splendid bequest of Mr. Turner [Turner, J. M. W.]; and Mr. Sheepshanks has also presented to the nation his noble collection of 233 paintings in oil by English artists; but his gift is clogged with stipulations as to the place where they are to be deposited, which prevent them from being—for the present at least—placed along with the Vernon and Turner pictures. It is however greatly to be desired that some arrangement may be made by which these collections may be brought together, and thus form the commencement of a National Gallery of British Art worthy of the nation.

A marble bust of Mr. Vernon, executed by subscription, is placed in the hall at Marlborough House; where also are a marble group by Gibson of Hylas and the Nymphs, and about half a dozen marble busts, presented with his pictures by Mr. Vernon—the somewhat premature commencement of a National Collection of the works of British Sculptors.

VERONE'SE, ALESSANDRO, a celebrated painter of the Venetian school, was born at Verona about 1582. His family name was Turchi or Turco; he was called also L'Orbetto, according to Pozzo, from the circumstance of his having as a boy led about an old blind beggar, said to have been his own father. Alessandro used to amuse himself with drawing with charcoal upon walls, and some of his efforts having been seen by the painter Felice Brusasorci, he was taken by him as a scholar rather in his studio, and was encouraged to cultivate his ability for drawing. He soon made great progress in drawing, and in painting surpassed his master; and, after the death of Brusasorci in 1605, completed some of his unfinished works. He afterwards went to Venice, and obtained employment there from Carlo Saraceni, who soon discovered his ability and value as an assistant; he paid him a ducat a day, whilst he paid his other assistants only a quarter of that amount. After spending some time in Venice, Alessandro returned to Verona, but not meeting with the encouragement he expected, he set out for Rome in company with Antonio Bentelli and Ottino Ottini, and ultimately established himself there, though he spent some time subsequently at Verona. In Rome he studied the works of Raffaelle and the Carracci, and forming a style for himself which combined many of the excellences of the Roman and the Venetian schools, entered successfully into competition with Sacchi and Pietro de Cortona in the church Della Concezione and elsewhere; and he acquired the reputation of one of the best painters of his time. His principal works are in Verona, where there are two of his masterpieces, a Pietà in the church Della Misericordia, which, though it contains only a dead Christ, the Virgin, and Nicodemus, is considered one of the best pictures in Verona: the other is the Passion of the Forty Martyrs, in the church of San Stefano; a picture, says Lanzi, which in impasto and forcshortening reminds us of the Venetian school, in design and in expression of the Roman, and in colouring of the Venetian; and it contains a selection of heads worthy of Guido. There is a very fine collection of his works in the possession of the Ghirardini family, all of which were painted by Alessandro for the Marquis Gaspare Ghirardini, who was a most generous patron to him, and, according to some existing documents, supported him when he first went to Rome. Alessandro married a Roman lady, and lived in great state in Rome, but died poor in 1648, without issue, according to Pozzo. Passeri says he died in 1650; and Passeri's account differs in some other respects from that of Pozzo: he says he was the scholar of Carlo, the son of Paolo Veronese, and that he left two sons and a daughter by his wife: the elder son followed the profession of the law; the second,

Digitized by Google

Giacinto, was a painter, but he died in the flower of life, in 1673. Lanzi states that Passeri says that Alessandro was called L'Orbetto from a defect in the eye: but Passeri does not assert this, he simply mentions the fact of a defect in the eye, and says that he was called L'Orbetto because when a boy he used to lead his father about, who, he had heard, was blind. The works of this painter are admirably coloured; they appear not to have suffered any change of tint whatever from their original state, owing probably to the great care with which he is known to have mixed his colours and selected and prepared his oils. Many of his pictures are small in size, and painted on slabs of marble, stone, or slate.

VERONESE, PAUL. [Caglari, Paolo.]

VERRI, PIETRO, was born at Milan, of a noble family, in 1728. He studied at Rome and at Parma, after which he obtained a commission in an Italian regiment in the Austrian army, and served in Saxony in the war between Austria and Prussia. After the peace he returned to his native country, and was made a member of the Council of Economy instituted by Maria Theresa for the duchy of Milan, in 1765. He took an active part in the administrative and financial reforms which were effected about that time, and especially in abolishing the practice of farming to private individuals or companies the various branches of the revenue of the state, a system which was injurious both to the people and to the treasury; and also in drawing the plan of a new tariff or scale of duties, which proved a great relief to industry and commerce. His principal works are:—1. 'Memorie sull' Economia Publica delle Stato di Milano,' in which he shows the decline of that country during the two centuries of Spanish dominion, and ascribes it to the ignorance of its rulers and the absurdity of the laws; 2. 'Riflessioni sulle Leggi Vincolanti principalmente sul Commercio del Grani,' in which he advocated the principle of absolute liberty; 3, 'Meditazioni sull' Economia Politica,' which were published in 1771, and have been translated into several languages; it is an elementary but useful book. He besides wrote 'Storia di Milano,' down to the conquest of Charles V. in the 16th century, the publication of which was completed after the author's death. He also published 'Osservazioni sulla Tortura, e singolarmente sugli effetti che produsse all' occasione delle unzioni malefiche alle quali si attribuì la pestilenza che devastò Milano l'anno 1630,' an historical episode which has been since treat-d by Manzoni in his 'Promessi Sposi.' Verri has contributed greatly to illustrate the history of his native country, Milan. He continued in office in the economical administration of the duchy of Milan till 1786, when he retired to private life. He was made a knight of St. Stephen, and was a leading member of the 'Patriotic Society,' instituted at Milan in 1777, by Maria Theresa, for the encouragement of agriculture, arts, and manufactures. When the French invaded Lombardy in 1796, Verri was appointed member of the municipal council of Milan, but he died of apoplexy in June of the following year. His biography has been written by Isidoro Bianchi, Professor Ressi, Pietro Custodi, and lastly by Camillo Ugnni. He was one of the most distinguished and estimable Italians of the generation that preceded the French revolutionary invasion.

VERRI, ALESSANDRO, younger brother of Pietro, is chiefly known for a work, partly imaginative and partly historical, entitled 'Le Notti Romane al Sepolcro dei Scipioni.' The author evokes the souls of the leading political men of various ages of ancient Rome, to appear before him in the newly discovered vaults of the tombs of the Scipios, and makes them hold dialogues about the deeds of their earthly career. He tears down the veil of blind admiration, so long held sacred by Italian tradition and Italian vanity, and paints the vices, the crimes, and the mistaken patriotism of ancient Rome. The style and language of the work are powerful and impressive. He was born in 1741, and died Sept. 23, 1816. Pietro and Alessandro were the chief contributors to a literary journal of considerable merit, entitled 'Il Caffè,' published at Milan.

VERRIO, ANTO'NIO. This Neapolitan painter was born at Lecce about 1639; and after he had made some progress in painting, for which he had displayed a great ability at a very early age, he visited Venice, to study the colouring of the Venetian school. After made he a stay sufficient for his purposes in Venice, he returned to his native place, and the success which attended the execution of some gay works there induced him to try his fortune at Naples, where, in 1660, he painted a large composition in fresco of Christ healing the Sick, in the college of the Jesuits, which was conspicuous for its bright colouring and forcible light and shade. Dominici says that Verrio had such a love for travelling that he could not remain in his own country. He went to France, painted the high altar of the Carmelites at Toulouse. Shortly after this, Charles II. wishing to revive the manufacture of tapestry at Mortlake, which had been interrupted by the Civil War, invited Verrio to England; but when he arrived, Charles changed his mind, and intrusted to him the decoration in fresco of Windsor Castle. Verrio executed a series of extensive frescoes in that palace, with as much facility of execution as insipidity of invention. He painted most of the ceilings, one side of St. George's Hall, and the chapel; but few of his works are now left. The following instances may serve as illustrations of the taste, character, and judgment of Verrio:—On the ceiling of St. George's Hall he painted, Antony, earl of Shaftesbury, in the character of Faction dispersing libels; in another place he borrowed 'the ugly face' of Mrs. Marriott, the housekeeper, for one of the furies, in revenge for a private quarrel he had had with her; and in a composition of Christ healing the Sick, he introduced himself, Sir Godfrey Kneller, and Mr. May, surveyor of the works, in long periwigs, as spectators. The painter of these works was recorded in the following inscription, written over the tribune at the end of the hall: 'Antonius Verrio Neapolitanus non ignobili stirpe natus, ad honorem Dei, Augustissimi Regis Caroli Secundi, et Sancti Georgii, molem hanc felicissimâ manu decoravit.'

Verrio was paid enormously for these and many other works he painted in England. Vertue found a paper containing an account of moneys received by Verrio for works executed in Windsor Castle from 1676 to 1681, not including those in St. George's Hall, amounting to 5554l. 8s. 4d. The king also gave him the place of master-gardener, and a lodging in St. James's Park. Verrio was of very expensive habits, and kept a great table, and "often," says Walpole, "pressed the king for money with a freedom which his majesty's own frankness indulged. Once at Hampton Court, when he had but lately received an advance of a thousand pounds, he found the king in such a circle that he could not approach. He called out, 'Sire, I desire the favour of speaking to your majesty.' 'Well, Verrio,' said the king, 'what is your request?' 'Money, Sir: I am so short in cash, that I am not able to pay my workmen, and your majesty and I have learned by experience that pedlars and painters cannot give credit long.' The king smiled, and said that he had but lately ordered him 1000l. 'Yes, Sir,' replied he, 'but that was soon paid away, and I have no gold left.' 'At that rate,' said the king, 'you would spend more than I do to maintain my family.' 'True,' answered Verrio, 'but does your majesty keep an open table, as I do?'"

After the accession of James II. Verrio was again employed at Windsor in 'Wolsey's Tomb-house,' then destined for a Roman Catholic chapel. He also painted James and several of his courtiers in the hospital of Christchurch, London: he painted likewise at Chiskinow's hospital.

After the Revolution he gave up his place of master-gardener, and refused to paint for William III. He executed however at this time the extensive works for Lord Exeter at Burleigh-house, which are considered Verrio's best productions, and they are among the best specimens of the prevailing style of that age. For these paintings alone, says Dr Waagen, Verrio was paid more money than Raffaelio or Michel Angelo received for all their immortal works. He was handsomely lodged for them about two years, with a salary of a year, besides his keep, and an equipage at his disposal. He painted also at Chatsworth and at Lowther-hall. Walpole says that the altarpiece of the Incredulity of St. Thomas, in the chapel at Chatsworth, is the best piece he ever saw by Verrio: it is a very bad one. Verrio is said to have finally persuaded by Lord Exeter to serve William III., and he was sent to Hampton Court, where, besides other things, he painted the great staircase so badly, that it has been supposed that he did it so designedly: but that is very improbable. Towards the end of his life he began to lose his sight, and Queen Anne granted him a pension of 200l. a year, but he did not enjoy it long: he died at Hampton Court in 1707. The statement of Dominici that he was drowned in Languedoc is evidently an error.

Walpole has described Verrio's works with great pliquancy, but with as much truth; he says he was "an excellent painter for the sort of subjects on which he was employed, that is, without much invention, and with less taste: his exuberant pencil was ready at pouring out gods, goddesses, kings, emperors, and triumphs, over those public surfaces on which the eye never rests long enough to criticise, and where one should be sorry to place the works of a better master—I mean ceilings and staircases. The New Testament or the Roman History cost him nothing but ultramarine; that, and marble columns, and marble steps, he never spared."

Scheffers of Utrecht worked twenty-five years for Verrio, and he employed a painter of the name of Lauseron seven or eight years at Windsor.

VERRIUS FLACCUS, a Roman grammarian of the time of Augustus. He was a freedman, but distinguished himself so much by his learning and his method of teaching, that Augustus appointed him instructor to his two grandsons Caius and Lucius, the sons of Agrippa, and transferred him with his whole school to the Palatium, on condition however that he should not admit any additional pupils to the number he had already. He had an annual salary of one hundred sestertia. He died in the reign of Tiberius at an advanced age. An inscription of a statue was erected to him in the forum of the forum, opposite the Hemicyclium, which contained on large marble plates the Fasti, which Verrius Flaccus had drawn up for the Prænestines. (Suetom., 'De Illustr. Grammat.,' 17.) These Fasti are the so-called Fasti Prænestini, of which considerable fragments were discovered in 1770, and published by P. F. Foggini, under the title 'Fastorum anni Romani à Verrio Flacco ordinatorum reliquiæ, ex marmoravarum Tabularum Fragmentis Prænestæ nuper effosis collectæ et illustratæ,' &c., Rome, 1779, fol. They are also printed in F. A. Wolf's edition of Suetonius, vol. iv., p. 321, &c., and in Orelli's 'Collection of Roman Inscriptions' (n. xxii, vol. ii., p. 379, &c.). Before the discovery of these Fasti, which are of the highest value, some

Digitized by Google

scholars believed that the Fasti Capitolini, which were discovered in 1547, were the Fasti of Verrius Flaccus, referred to by Suetonius; but this opinion is now shown to be untenable. Flaccus was also the author of several other antiquarian and grammatical works, which were very highly valued for the vast quantity of information they contained, as well as for the purity of their style: 1. 'Libri Rerum Memoria Dignarum,' in which among other things he treated on Etruscan antiquities. It is frequently referred to by Pliny (Gellius, iv. 5): 2. 'De Verborum Significatione,' consisting of at least twenty-four books. It gave explanations of words in alphabetical order; and besides its philological value, it seems to have been an inexhaustible treasure of antiquarian knowledge. An abridgment of this work was made by the grammarian S. Pompeius Festus, and this was again abridged in the time of Charlemagne, in such a manner that the original character of the work was altogether destroyed. These wretched abridgments have, as in many other instances, caused the loss of the original work. (K. O. Müller, 'Festatio ad Festum,' p. 12, &c.) 3. 'Saturnus' (Macrob., 'Sat.,' i. 4 and 8) was, according to Muller's conjecture, only a part of a greater work, 'De Rebus Sacris;' 4. 'De Orthographia,' which was attacked by Scribonius Aphrodisius (Sueton., 'De illustr. Grammat.,' 18); 5. 'De Obscuris Catonis,' a linguistic work, in which he explained the antique words and phrases of Cato, which had become unintelligible (Gellius, xvii. 6); 6. 'Epistolæ;' and, 7. Poems. We still possess numerous fragments of the works of Verrius Flaccus, independent of the 'Fasti Prænestini' and the abridgment of his 'De Verborum Significatione.' They are collected in the work of Forgini above referred to; in Dacier's edition of Festus (i., pp. 14-27, ed. London, 1826); in E. Egger's 'Scriptorum Latinorum nova Collectio,' vol. ii.; and in Lindemann's edition of Festus, pp. 298, 299.

VERROCCHIO, ANDREA DEL, a celebrated Italian painter, sculptor, goldsmith, and architect of the fifteenth century, was born at Florence in 1432. Vasari says he had little genius, but was the most laborious man of his time: he was, according to Baldinucci, a scholar of Donatello. At first distinguished himself as a goldsmith, both at Florence and at Rome; he then devoted himself to sculpture in bronze and in marble. His first marble work was a monument in the Minerva at Rome, to the wife of Francesco Tornabuoni; it is now in the Florentine gallery. The expression of the figures is good, but the execution is imperfect. His next work was a colossal bronze figure of David, now also in the Florentine gallery. He executed several other works in metal, by which he acquired a great reputation: the principal of them were the monument in San Lorenzo, of Giovanni and Piero, the sons of Cosmo de' Medici; and the Incredulity of St. Thomas, in the church of Or San Michele, at Florence, finished in 1483; it is a colossal group of two figures, weighing 3031 pounds, and for which, according to Baldinucci, he was paid 476 gold florins (Manni, in a note to Baldinucci, says 800 heavy florins). In this work, says Vasari, Verrocchio left nothing to be wished for; and having attained perfection in sculpture, he began to turn his attention to painting. Some modern critics have differed from Vasari with regard to its great excellence. Van Rumohr speaks of the Winged Boy with a Dolphin, of the fountain of the first court of the Palazzo Vecchio, also by Verrocchio, as a very superior work: it is praised likewise by Vasari.

Vasari mentions many designs and cartoons by Verrocchio, some of which were copied and imitated by Lionardo da Vinci. Nothing is known of these designs at present; it has been conjectured that many of them now pass as the works of Lionardo. Verrocchio painted very few pictures; he gave up painting upon finding himself surpassed by his scholar Lionardo da Vinci, whom he had ordered to paint the figure of an angel in one of his works. [VINCI, LIONARDO DA.] The fame of Verrochio reached Venice, and he was called to that place to cast an equestrian statue of Bartolemeo Colleoni, the celebrated general; but when he had just finished the model of the horse, he was told that Vellano of Padua was to make the figure of the general, with which he was so much offended that he immediately broke the head and feet of his horse, and left Venice without giving the slightest intimation of his determination to his employers. This so exasperated the signory of Venice in their turn, that they wrote to Verrocchio, and told him that he had better not return to Venice if he valued his head; to which Verrocchio answered, that he would be mindful of their admonition, for they were as little capable of restoring him his head as Vellano of finding another head sufficiently beautiful for his horse. This answer pleased them greatly; and they now earnestly solicited Verrocchio to return, promising him twice the remuneration formerly agreed to. Verrocchio returned and cast his model, but he caught cold in the casting, and died a few days afterwards, before the statue was quite completed. This statue was finished by Alessandro Leopardi, who cast the pedestal, and fixed it in its place in the Piazza di Santi Giovanni e Paolo, in the year 1495, and it stands there still. Cicognara, who has given an outline of this monument in his 'Storia della Scultura,' supposes that Leopardi recast the statue itself, but he gives a very insufficient reason for this opinion. Verrocchio's remains were taken by his favourite scholar Lorenzo di Credi to Florence, and were deposited in the vault of Michele di Cione, in the church of Sant' Ambrogio. Over the vault is the following inscription: — 'S. Michaelis de Cionis et Suorum et Andreæ Verrocchi, filii Dominici Michaelis, qui obiit Venetiis M.CCCC.LXXXVIII.' The S. signifies Sepulchrum.

Verrocchio had many scholars, of whom the following were the most distinguished:—Lionardo da Vinci and Pietro Perugino, painters, and Lorenzo di Credi, Naual Grosso, and Francesco di Simone, sculptors.

Boitari says that Verrocchio was one of the first who made plaster casts from living and dead subjects; but not the first, as Vasari states. This art was practised likewise by the ancient artists of Greece: it was invented by Lysistratus, the brother of Lysippus, in the time of Alexander the Great. (Pliny, 'Hist. Nat,' xxxv. 12, 44.) Verrocchio also assisted Orsino in his wax figures; they made together three figures of Lorenzo de' Medici, after the conspiracy of the Pazzi in 1478, which, says Vasari, appeared to be living men: they were differently dressed; one, which was placed in the church of Annunziata di Chiarito, was clothed in the dress which Lorenzo wore when he was wounded by the conspirators. These figures are all now lost.

Verrocchio cast the first copper ball which supported the cross at the cathedral of Florence; it was thrown down by lightning, and the present ball, which is somewhat larger than Verrocchio's, was put up in its place. That of Verrocchio was four ells in diameter, and weighed 4368 pounds. This celebrated artist, with his other accomplishments, combined a good knowledge of geometry and great practical skill in music.

VERSTEGAN, RICHARD, was the grandson of Theodore Rowland Verstegan, the descendant of a family of ancient respectability in Guelderland, who came over to this country a young man towards the end of the reign of Henry VII., and dying soon after he had married an Englishwoman, left a child not more than nine months old, whom his mother, when he grew up, bound apprentice to a cooper. Verstegan the cooper, who when he died was his own master, carried on his trade in the parish of St. Catherine, Tower, appears to have risen in good circumstances: Richard was his son, and after having been instructed in the classics at school, was sent by him to the University of Oxford, where he soon came to distinguish himself, especially by his proficiency in the Saxon literature and the knowledge of the ancient antiquities, studies then much in request. He left the University however without taking a degree, objecting, it seems, to the oaths; and soon after, openly declaring himself a Roman Catholic, he left England and took up his residence at Antwerp. Here he published his first work, a thin quarto, now of great rarity, entitled 'Theatrum Crudelitatum Hæreticorum nostri Temporis.' It is a violent attack upon Queen Elizabeth and her government, especially in reference to the executions of Jesuits and other Popish recusants; but it is chiefly curious for a number of copperplate engravings it contains, representing the hanging, beheading, and quartering of these martyrs, as they are styled, after drawings made by the author. This appears to have been before 1585, although the only edition of the book that is now known is dated 1592; for in 1585 Verstegan is stated to have gone to Paris, and to have been there thrown into prison by order of the king, Henri III., on the English ambassador's representation of the abusive nature of the work. However he was not long detained in custody; and upon his release he returned to Antwerp, where he set up as a printer, and is said to have prospered in that business, and soon acquired the means of living in good style. In 1605 appeared at Antwerp the first edition, in small quarto, of his best-known work, entitled 'A Restitution of Decayed Intelligence concerning the most noble and renowned English Nation.' This performance, which is adorned, like his other book, with engravings from drawings by the author, and which was reprinted at London in 4to, in 1634, and in 8vo in 1653 and 1674, contains a few curious facts and remarks; but it had been nearly superseded before it came from the press by Camden's 'Britannia,' the first edition of which appeared in his preceding year. It is now considered as of hardly any authority. Verstegan is also supposed to be the author of 'Odes in imitation of the Seven Penitential Psalms,' professing to be by R. V., and some other tracts in English with the same initials, printed abroad in the first years of the 17th century, of which a list is given in Wood's 'Athenæ Oxonienses.' He married some years before his death, which is believed to have taken place about 1635. Sir Egerton Brydges has given a short account of the rare volume of 'Odes' attributed to Verstegan in his 'Censura Literaria,' ii. 95-97 (1st edition).

VERTOT, RENÉ AUBERT DE, was the second son of a poor Norman gentleman, who claimed kindred with every family of distinction in his province. René was born on the 25th of November 1655. He studied in the Jesuits' College at Rouen. His parents had destined from childhood by an earnest spirit of piety. Towards the close of the second year of his collegiate studies he disappeared, and although an active search was immediately instituted, it was not till after the lapse of six months that he was discovered in the Capuchin convent at Argentan. All efforts to divert him from his intention of joining that order were fruitless; he took the vows, and adopted the conventual name of Brother Zachary. The rigour of the order undermined a constitution naturally delicate; he was obliged to visit his family for the restoration of his health. The opinions of medical men and of the doctors of the Sorbonne persuaded him, with some difficulty, to join a less ascetic order; and the pope's dispensation having been obtained, he entered in his twenty-second year the Premonstrant Abbey at Valasry.

Digitized by Google

The Abbé Colbert was at this time general of the Premonstratensian order. Hearing a favourable account of the talents and acquirements of young Vertot, he appointed him his secretary. Soon after he presented him with the priory of Joyeuseul. By the canon law, any regular priest who had obtained a license to quit one order and join another was declared incapable of holding any charge or dignity in his new fraternity. The order opposed the promotion of Vertot on this ground. The appointment was confirmed by a papal bull: still the monks were refractory. A royal injunction was obtained to corroborate the decree of the pope, but at this age of the business Vertot withdrew his claim. Probably he anticipated little comfort in an abbey where the inmates had so stoutly opposed his admission. He applied for the cure of Croisy-la-Careme, near Marly, the presentation to which belonged to the order; and retiring to it, devoted himself to the discharge of his spiritual duties and literary pursuits.

Hitherto Vertot's name had been unknown beyond the circle of his private friends and his ecclesiastical brethren. At the instigation, it is said, of Fontenelle, St. Pierre, and other friends, he undertook historical compositions. His first publication was his 'Histoire de la Conjuration de Portugal,' which was published in 1689. The recent revolution in England rendered the title attractive; the work became fashionable; and judges, such as Madame de Sevigné and Père Bouhours, expressed highly favourable opinions of the work. Vertot might have become a lion in the circles of Paris; but enough to him, immediate vicinity of the city, he stood aloof. His chief desire was to return to his native province. With this view he asked and obtained a cure in the Pays de Caux. Not long after he was transferred to a richer living near Rouen, which, not being dependent on his order, in a great measure released him from their control.

Increase of wealth seemed but to increase his industry. Seven years after the publication of his first work he gave to the world his 'Histoire des Révolutions de Suède.' This work has more of personal adventure and interest than the former, and its success was proportionably greater. Five editions followed each other in rapid succession. The work was translated into several languages. The Swedish envoy at the court of France was instructed to engage Vertot to compose a general history of Sweden—an overture which led to nothing.

In 1701 the king re-organized the Academy of Inscriptions and Belles-Lettres. Vertot was nominated Académicien Associé. The appointment was embarrassing. He could not afford to relinquish his cure and reside in Paris and by the new regulations the Académicians were required to be resident. A strict rule was also made in this favour, and he did not take his seat in the Academy till 1703, when he had been long enough a resident clergyman to entitle him to a retiring pension. His arrival in Paris was the close of a retired life, which however had been marked by stormy passages. The wits among his acquaintances said, "Here ends the revolutions of the Abbé Vertot."

In 1705 he was appointed Académicien Pensionnaire. From this date his contributions to the 'Annals' and 'Memoirs' of the Academy are frequent. They turn chiefly upon historical topics. A discussion in which he was engaged in the Academy led to his next publication. The assertion of the ancient independence of their province by the Bretons appeared to Vertot, as salaried Academician, in the light of a rebellion against the royal authority. He undertook to disprove their claims. The arguments swelled to such a bulk that in 1710 he published them in a separate volume entitled 'Traité de la Mouvance de Bretagne.' The continuance of the controversy ultimately extended this essay into his 'Histoire complete de l'Établissement des Bretons dans les Gaules.'

These occupations did not divert Vertot from his favourite topic—the revolutions of the Roman republic. This work is no result of a philosophical and critical examination of the Roman authorities. Its merit is simply artistical—the elegant and agreeable narrative of statements taken for granted at the hands of the classical authors. It was Vertot's favourite work: he was accustomed to read fragments of it as he advanced, at the meetings of the Academy, and was known to burst into tears at his own pathos. This history, which appeared in 1719, was still more favourably received than its predecessors.

The reputation of Vertot induced the Order of Malta to invite him to become its historian. He complied with the request, and published in 1726 his 'Histoire des Chevaliers Hospitaliers de St. Jean de Jerusalem, appelés depuis les Chevaliers de Rhodes, et aujourd'hui les Chevaliers de Malte.' Vertot was advanced in years when he undertook this work, and he did not sympathise with the heroes and exploits of the middle ages as with those of the classic ages of Rome. The 'History of Malta' is inferior in point of finish and picturesque energy to his earlier writings, but infinitely more valuable on account of its originality. His access to authentic information rendered it valuable, and might have done so to a greater extent had he possessed more the spirit of an historian and less that of a mere narrator.

Besides the works already mentioned and his contributions to the 'Memoirs' of the Academy, two works by Vertot have been published: the first, an account of the negociations of the brothers De Noailles in 1755-57, in England, compiled from documents placed in his hand by the family. The author of the notice of Vertot in the 'Biographie Universelle' speaks of this work as unpublished: this is a strange oversight in an otherwise able article; the book was deposited in the archives of the Noailles family, and published, after the author's death, in four volumes 12mo, at Leyden, in 1763. Two tracts, one on the 'Origin of the Papal Sovereignty,' the other on the 'Election of Bishops and Abbots,' were published twenty years after his death. Their authenticity has never been questioned. They appear to have been compiled at the request of a minister, on the occasion of some quarrel with the court of Rome.

Vertot died in the Palais Royal on the 15th of June, 1735. His works are more valued for their style—for a certain power of dramatic portraiture—than for any other recommendation, with the exception of the 'History of Malta' and the 'Account of the Negotiations of the two De Noailles,' which contain materials for history not to be found elsewhere. The excessive enthusiasm of his youth appears to have sobered down into a tempered habitual piety. He was a zealous royalist. The controversy respecting the ancient history of Bretagne was carried on by him less as an antiquarian than a political discussion. He went so far in his zeal as to denounce Freret to the government for some opinions expressed in that author's 'Origine des Français.' In his private conduct Vertot was irreproachable; the only trace of passion in his life was the ardent platonic attachment he conceived for Mademoiselle de Launay (better known as Madame de Staël) in his sixtieth year. There was a vein of effeminacy both in the intellect and character of Vertot; yet it is impossible not to respect him.

VERTUE, GEORGE. This celebrated English engraver and antiquary was born in London in 1684, of parents more honest than opulent; yet, "if vanity had entered into his composition," says Walpole, "he might have boasted the antiquity of his race. Two of his name were employed by Henry VIII. in the Board of Works; but I forget—a family is not ancient if none of the blood were above the rank of ingenious men two hundred years ago." At about the age of thirteen Vertue was placed with a Frenchman, who was the principal engraver of arms in London at that time; but being of extravagant habits he "broke," and returned to his own country three or four years after Vertue was bound to him. Vertue, in his memoirs, has concealed his name; Walpole questions whether Sculiger would have been so tender. After this he spent two years at home, which he devoted to the study of drawing; he then engaged himself for three years with the engraver Michael Vandergucht, which term he protracted to seven; and in 1709 he set up for himself. He was introduced to Sir Godfrey Kneller; an acquaintance which proved of great service to him shortly afterwards, upon the death of his father, when the support of his mother and brothers and sisters devolved entirely upon him. The patronage of Sir Godfrey procured him much employment, and in a very short time his own merit procured him much more. Lord Somers commissioned him to engrave a portrait of Archbishop Tillotson, and the print, for which he was richly rewarded, was the foundation of his future fortune. Walpole says nothing like this period had appeared for many years, and Vertue stood without a competitor in any country. Edelinck of France, White of England, and Van Gunst of Holland, were dead.

In his leisure hours Vertue practised drawing and music, and studied Italian and Italian poetry; later he acquired also Dutch. In 1711 an Academy of Painting was instituted in London, of which Sir Godfrey Kneller was placed at the head, and Vertue was one of its first members: he drew a little in water-colours, and painted a few portraits; but his productions in this style consisted chiefly of copies of old or interesting works which he intended to engrave.

During the reign of Anne, Vertue was chiefly employed over portraits after Kneller, Dahl, Richardson, Jervase, Gibson, and others; and at the accession of George I. he engraved a large head of the king after Kneller, of which several thousands were sold, and which brought him a great increase of business, though by no means a very excellent performance. He commenced early in this reign to make his researches for his 'History of the Arts in England.' In this undertaking he found two valuable patrons in Robert Harley, second earl of Oxford, and Heneage Finch, earl of Winchelsea; the latter, who was president of the Society of Antiquaries in 1717, appointed Vertue, who was a member, to be its engraver; and he executed nearly all the prints which were published by that society during the remainder of his life. Lord Coleraine was also one of his patrons; and Vertue made many journeys in various parts of England in furtherance of his researches in company with these noblemen, by whom his expenses were paid. Many other noblemen also encouraged him in a less degree. In 1728 he was invited by the Duke of Dorset to Knowle, where he copied several portraits of the poets, of which he published a set of twelve in 1730, namely, Gower, Chancer, Spenser, Shakspere, Ben Jonson, Beaumont, Fletcher, Milton, Butler, Cowley, Waller, and Dryden. It is one of his best works, and was the first collection of illustrious heads published in England. His next work of this class was ten plates of the heads of Charles I. and the loyal sufferers in his cause, with their characters subjoined from Clarendon. These were followed by his portraits of the kings of England, &c., for the translation of Rapin's 'History of England,' published in numbers, in folio, of which, says Vertue, thousands were sold every week (probably without the prints). Over these works he was occupied three years. In 1734 he renewed his journeys about England: he made a tour with Roger Gale the antiquary; one in 1737 with Lord Oxford; another with the same nobleman in 1738; and in 1739 one in the east of England with Lord Coleraine.

Digitized by Google

In 1737 he was employed by the Knaptons, the publishers of the translation of Rapin, to engrave some of their series of illustrious heads, the greater part of which were engraved by Houbraken. The portraits of Houbraken are very superior to those by Vertue; yet, says Walpole, his by no means deserved to be condemned, as they were, and himself set aside. Vertue's fault was his scrupulous veracity, which could not digest imaginary merits, as are some of those engraved by Houbraken, who, living in Holland, engraved whatever was sent to him. The heads of Carr, Earl of Somerset, and secretary Thurloe, by Houbraken, are not only not genuine, but do not in the least resemble the persons they pretend to represent, says Walpole. "Vertue was incommode; he loved truth."

In 1740 he published proposals for the commencement of a series of historic prints, of which he published only two numbers, containing each four prints with explanations. In the first number there is a print of Queen Elizabeth's procession to Hunsdon House; the original picture, of which Vertue made an exact copy in water-colours for Lord Oxford, was, in Walpole's time, at Sherborne Castle, Dorsetshire. In 1741 he lost his patron the Earl of Oxford, which so depressed him, that "for two years," says Walpole, "there is no history in his story." In 1743 however he was a little revived by the notice of the Duke of Norfolk, for whom he engraved the large plate of the Earl of Arundel and his family, and performed other services. But in 1749 he found a more valuable patron in the then Prince of Wales, whose taste coincided with his own, and whose patronage was all he could desire. "He saw his fate," says Walpole, "linked with the revival of the arts he loved; he was useful to a prince who trod in the steps of the accomplished Charles—but a silent and unexpected foe drew a veil over his scenes of comfort." The prince died in March 1751: Vertue, after speaking of his character and accomplishments, alludes to his death in the following words:—"But alas, More ultima linea rerum! O God, thy will be done! Unhappy day, Wednesday, March 20th, 1751!"

"Vertue lost his friends," says the same writer, "but his piety, mildness, and ingenuity never forsook him." He worked almost to the last, anxious to leave a competent support to his wife, with whom he had lived many years in happiness. He died on the 24th of July 1756, and was survived by his wife nearly twenty years. He was buried in the cloisters of Westminster Abbey. His collection of books, prints, and drawings was sold by auction in 1757: Walpole purchased several of his drawings.

Vertue was a strict Roman Catholic; yet he has preserved more monuments of the reign of Queen Elizabeth than of any other, but that of Charles I. was his favourite period. Walpole describes him as "simple, modest, and scrupulous—so scrupulous that it gave a peculiar slowness to his delivery: he never uttered his opinion hastily, nor hastily assented to that of others. Ambitious to distinguish himself, he took but one method—application. Acquainted with all the arts practised by his profession to usher their productions to the public, he made use of none."

Walpole's well-known work, entitled 'Anecdotes of Painting in England,' was written entirely from manuscripts which he bought of Vertue's widow, although he recurred to the original sources when Vertue drew his information from books. Vertue commenced his compilations in 1713, and they amounted in the whole to nearly forty volumes large and small. He visited and made catalogues of every collection, attended sales, copied all papers he found relative to the arts, searched registers, examined all English authors, and translated many of other countries which related to his subject. And Walpole observes in his preface:—"One satisfaction the reader will have, in the integrity of Mr. Vertue; it exceeded his industry, which is saying much. No man living, so bigoted to a vocation, was ever so incapable of falsehood. He did not deal even in hypothesis, scarce in conjecture."

The prints of Vertue are very numerous: Walpole has given a complete list of them in his 'Catalogue of Engravers.' He has divided them into eighteen classes, as follows: royal portraits; noblemen; ladies; bishops and archbishops, of whom he engraved thirty-eight; clergymen; chancellors, judges, and lawyers; ministers and gentlemen; physicians, &c.; founders, beefeaters, &c.; antiquaries, authors, and mathematicians; poets and musicians; foreigners; historic prints, and prints with two or more portraits; tombs; plans, views, churches, buildings, &c.; coins, medals, busts, seals, charters, gems, and shells; frontispieces, head- and tail-pieces; and, lastly, miscellaneous pieces; besides many plates for the Society of Antiquaries, and a series of Oxford almanacs.

(Walpole, *A Catalogue of Engravers who have been born or resided in England*, &c., constituting a fifth volume to the *Anecdotes of Painting*, &c.)

VERUS, LUCIUS, a Roman emperor who reigned as the colleague of Marcus Aurelius, from A.D. 161 to 169. He was born at Rome, and was a son of Ælius Verus, who had been adopted by the emperor Hadrian and raised to the rank of Cæsar. After the death of Ælius Verus, in A.D. 138, Hadrian adopted T. Aurelius (Antoninus Pius), on condition that he should adopt Marcus Verus (Marcus Aurelius), the son of Annia Faustina, and Lucius Verus, the son of Ælius Verus. After the death of Antoninus Pius, in A.D. 161, Marcus Aurelius, who succeeded him, and was of a weakly constitution, voluntarily shared his imperial dignity with his adoptive brother L. Verus, who was then about thirty-two years old, and whose complete name is Lucius Ceionius Ælius Commodus Verus Antoninus. Up to this time L. Verus had lived as a prince in a private station, with the title of 'Augusti filius' and without either the honours or burdens of government. He had been educated by the most distinguished grammarians and philosophers of the time, but he had no taste for intellectual occupations. So long as he remained at Rome and was under the direct influence of M. Aurelius, his vicious character did not fully disclose itself. Soon after his accession the Parthians had cut to pieces a Roman legion stationed in Cappadocia, with its leader Severianus. L. Verus took the field against them, in A.D. 162, but instead of conducting the war in person, he left it to his generals, who gained brilliant victories, while the emperor revelled in the luxuries and debaucheries with which he became familiar in the towns of Asia, especially at Antioch. In A.D. 164 he went to Ephesus, where he celebrated his marriage with Lucilla, the daughter of his adoptive father, or, according to others, of his adoptive brother. After the close of the war he returned to Rome, accompanied by hosts of actors, freedmen, and other low persons who ministered to his vulgar pleasures, and in A.D. 166 he and Marcus Aurelius solemnised a triumph over the Parthians. Soon after this Rome was visited by a fearful pestilence, and at the same time the Marcomanni and Quadi invaded the empire from the north. Both the emperors at the head of their armies marched to Aquileia. Verus again took scarcely any part in the war, but as usual gave himself up to his pleasures. At last when hostilities had ceased, the two emperors returned to Rome. On their arrival in that city Lucius L. Verus was seized by a fit of apoplexy at Altinum in the neighbourhood of Venice, where he died A.D. 169, in the forty-second year of his age.

A long catalogue of his vices is given by Julius Capitolinus in his 'Life of Verus.' Indeed Verus was one of the most contemptible persons that have disgraced regal power. The only thing that can be said in his praise is, that he did not oppose his adoptive brother in his administration, and that he did not, like most effeminate and licentious rulers, aggravate his vices by acts of cruelty. The good understanding between Marcus Aurelius and the noble Marcus Aurelius almost unaccountable; but it appears to have been considerably diminished after the Parthian war. There is a marble bust of Lucius Verus in the Townley Gallery of the British Museum. [AURELIUS, MARCUS.]

VESALIUS, ANDREAS, the greatest anatomist of the 16th century, was born at Brussels in 1514. His father, Andreas Vesalius the elder, was apothecary to the Emperor Maximilian; and his uncle Everardus was a physician, and the author of some commentaries on the works of Rhazes. He received from an early age his classical and philosophical education at Louvain, and gained a degree of knowledge in physics which was unusual even with the best educated of the time. From Louvain he proceeded, to study medicine, to Montpellier, and thence to Paris, where he had for instructors Guntherus ab Andernach, Sylvius, and Fernelius. In 1536, distinguished already by extraordinary zeal in the pursuit of anatomy, and exposing himself even to great personal danger in the obtaining of bodies for dissection, Guntherus made him his chief assistant; and in the same year he discovered the origins of the spermatic blood-vessels. After the siege of Paris was raised, he returned to Louvain, where he soon was appointed to teach anatomy; but in 1535, in order that he might obtain better opportunities for learning it himself, he joined the army of the emperor of Germany, who was then at war with France. In 1538 he was at Bologna, and in 1539 at Pavia, where during the following year he was appointed professor of anatomy, having not long before published his celebrated 'Epistola docens venam axillarem dextri cubiti in dolore lateralli secundam,' Basel, 4to, 1539, in which he gave an improved though imperfect anatomy of the vena azygos, and maintained that blood should always be taken from the right arm, because of the near connection between its vessels and that vein. Vesalius remained professor at Pavia for nearly four years; in 1543 he held the same office at Bologna; and not long afterwards he was appointed professor of anatomy, with an annual stipend of 600 crowns at Pisa. His knowledge at this time is said to have been so unusual, that the best anatomists of the day left his demonstrations silenced. He had in 1539 published some anatomical plates; and for the four succeeding years he had given a great portion of his time to the preparation of a complete work of the same kind, employing as his assistants some of the most skilful artists of the day. Modesty says that Titian was among those whom he employed, but this is not certain; for the name of that great artist is not mentioned in Vesalius's works, and yet is not likely to have been wilfully suppressed. In 1542 a part of his work was published, with the title 'Suorum librorum de Corporis Humani fabrica Epitome,' Basel, folio; and in 1543 the whole appeared. It was called 'De Corporis Humani Fabrica Libri Septem,' Basel, folio, 1543. Another and somewhat enlarged edition was published by Vesalius at Basel, folio, 1555; and, after his death, numerous editions appeared at various times and places. Haller calls it 'an immortal work, by which all that had been written before was almost superseded.' Senac speaks of it as the discovery of a new world; and probably nothing has been written, either before or since which has had so great an influence on the progress of anatomy. The boldness with which Vesalius attacked the accepted and long-reverenced

Digitized by Google

opinions and statements of Galen and the other ancient writers; the completeness of the evidence with which he supported his own descriptions and arguments; the number of discoveries of structures which he announced, and the more accurate accounts which he gave of nearly all that had before been known; the extent of the work, and the number and unusual excellence of the plates, were enough to mark the commencement of a new era in the science of medicine.

But instead of the honour which Vesalius has received, and while anatomy is studied will never fail to receive from his successors, his contemporaries, or at least the most distinguished of them, heaped on him the most virulent reproaches; for the authority of Galen in the schools was at that time supreme, and to question was to deny. The zeal of all the learned in behalf of the ancient was extended. Sylvius said that Vesalius ought henceforth to be called 'Vesanus,' and declared perpetual hostility against him. Piccolomini more craftily mantained that all the truth Vesalius had written was taken from the Galen and Hippocrates whom he calumniated; sed Driander, Putters, Eustachius, sed Fallopius, though with less virulence, each in his way assailed him. Their attacks appear to have greatly irritated Vesalius, who seems to have been disposed to resist the authority of the ancients, not less by his temper than by his conviction that they had often been in error. In 1546 he wrote 'De radicis Chinæ usu Epistola,' Basel, folio 1546; a work in which he attacked Galen with much more virulence than before, but which he rendered of great interest by proving, by numerous examples, that Galen's descriptions must have been drawn from the dissections of monkeys and other animals, and very often from the works of his predecessors without any dissections at all.

In spite of the opposition of his contemporaries, the fame of Vesalius, both for skill in practice and for learning in the science of medicine, greatly increased after the publication of these works; and anatomy soon suffered much more from the honour than from the abuse which was lavished upon him. About 1544 the Emperor Charles V. appointed him his chief physician; and he was gradually obliged to be so constant in his attendance on the court of that prince, and afterwards of Philip II. of Spain, that anatomy was entirely neglected, except in the occasional opportunities which were afforded by the examination of the bodies of those who died of strange diseases. In 1561, when he wrote his 'Anatomicarum Gabriela Fallopii Observationum Examen,' which was published at Venice in 1564, he was at Madrid, where, he says, he could not even procure a skull to examine in order to settle some point on which he was in doubt; and both this work and the 'Examen' of Fallopius' Fallopius' pro Gabriela Fallopii Observationum Examen, which was published, under a feigned name, at the same time and place, prove, Haller says, that since he left Pisa, in 1544, he had added scarcely anything to his anatomical knowledge. His knowledge of practical medicine and surgery however epeare to have greatly increased; and many wonderful stories are recorded of the skill with which he treated those about the court.

In 1563, or the beginning of 1564, Vesalius left suddenly Madrid and the court, and went on a pilgrimage to Jerusalem. The circumstances which led to this strange step are very doubtful. The story commonly received is, that having obtained leave from the friends of a Spanish gentleman, who had apparently died under his care, to examine the corpse, he proceeded to the dissection, and the heart, on removing it from the body, quivered in his hand. The friends, hearing of this, accused him, not of murder, but of impiety, and he was before the Inquisition; and it was only by the intercession of Philip II. that he was permitted to expiate his error by a pilgrimage. There le no other evidence for this tale than that it was current not long after Vesalius's death; and, on the whole, it seems more probable that he left Spain in consequence of being mixed up in some of the political or court plots which were at thet time very numerous, and of the results of which, as he was of a melancholy disposition, he might very well be in fear. Whatever led to his pilgrimage, its end was most disastrous. While he was at Jerusalem, in 1564, Fallopius died, and the Venetian senate invited him to the vacant professorship of anatomy. On his voyage to Padua, his vessel was wrecked on the isle of Zante, and there the great Vesalius died of starvation, according to the accounts of some, but as it seems more probable of the fatigue and exposure which he had suffered, October 15, 1564.

Besides the works already mentioned, the only others that can certainly be ascribed to Vesalius are some 'Consilia,' published in the collections of Montanus, Ingrassias, and Schelius, and a paraphrase and translation of some of Rhazes's works. The 'Chirurgia Magna in septem Libros digesta,' which Prosper Borgaruccius published at Venice, in 1568, and ascribed to Vesalius, was probably not written by him, but collected by the editor from the works of Fallopius and others.

Vesalius left a half-brother Francis, who refused to study the law, for which his parents had destined him, and commenced the pursuit of anatomy, that he might defend the memory of his brother from the attacks which were made on it, not less virulently for some time after his death than they had been during his life. But an early death prevented his design.

The whole of Vesalius's works and his Life were edited by Boerhaave and Albinus, at Leyden, in 3 vols. folio, in 1725. Portal's 'Histoire de l'Anatomie et de la Chirurgie,' t. i. p. 394, and Haller's 'Bibliotheca Anatomica,' t. i., p. 150, contain, together with the Life of Vesalius, analyses of his chief works.

VESPASIA'NUS, TITUS FLAVIUS, was born near Reate, in the Sabine country, on the 17th of November, A.D. 9. The Flavian gens had never obtained distinction, though some of its members were mentioned in the history of the later period of the republic and the commencement of the empire. (Sueton., 'Vesp.,' 1) Vespasian was educated by his paternal grandmother Tertulla, at her estate near Cosa in Etruria, and when emperor he displayed his affection for the place, and instituted rites in honour of his grandmother's memory. He served in Thrace as military tribune; and having held the magistracies of the ædile and quæstor, in the last of which he had for his province Crete and Cyrenaïca, he became prætor. He had great difficulty in obtaining the ædileship or the quæstorship (the uncertainty of the text of Suetonius leaves it doubtful to which of the two magistracies this statement refers), but the prætorship was conferred on him at his first petition, probably through the influence of Caligula, who honoured him with a seat at his table. For this favour Vespasian thanked the emperor in the senate. He called for extraordinary games at Caligula's mock triumph over the Germans, and proposed that the bodies of conspirators against the emperor should be left unburied. These statements fix his prætorship at the third year of Caligula, A.D. 39.

At this time he married Flavia Domitilla, by whom he had two sons, who afterwards became the emperors TITUS and DOMITIANUS, and a daughter, Domitilla.

Vespasian distinguished himself as a soldier in the reign of Claudius, first in Germany, where he obtained the station of legatus, by the influence of Claudius's freedman Narcissus (A.D. 41-42). Thence he was transferred to Britain (A.D. 43), where he served as legatus in the expedition under Aulus Plautius, and under Claudius himself, with such distinction that the triumphal honours were granted to him, and after receiving two priestly offices within a short time, he was advanced to the consulship, which he held as Consul Suffectus during the last two months of the year A.D. 51. During the interval between this time and his proconsulship he remained quiet through fear of Agrippina, who was bitterly hostile to the friends of Narcissus. It was therefore probably after her murder (A.D. 59) that he governed Africa as proconsul. He returned, after a period of honourable administration, in seoh pecuniary embarrassment that, after mortgaging all his landed property to his brother, he was compelled to trade in slaves in order to support his rank. From this circumstance he obtained the nickname of 'Mulio.' He accompanied Nero in his tour through Greece (A.D. 67); but having offended the emperor by falling asleep or leaving the room in the midst of his poetical performances, he was banished from the court, and had retired to an obscure city, when Nero appointed him to command in the war against the revolted Jews with an army of three legions. In less than two years he had conquered the whole of Judæa except Jerusalem, when he was persuaded by his son Titus, and by Mucianus, the pro-consul of Syria, to assert his claim to the imperial throne, which had been already marked as his by repeated omens. (Sueton., 'Vesp.,' 5.) The interval during which Galba, Otho, and Vitellius were struggling for the purple was spent by Vespasian in secret preparations, so that when he was proclaimed emperor at Alexandria, by Tiberius Alexander, the prefect of Egypt, on the 1st of July, A.D. 69, his cause was immediately espoused by the legions of Judæa and Syria, by the three legiones in Mœsia, and by two in Pannonia. The legions of Mœsia and Pannonia were brought over by Antonius Primus, who, without waiting for the commands of Vespasian, or for the aid of the Syrian legions, marched into Italy at once to fight. The councils of Vitellius were betrayed by Cæcina, the Consul Suffectus, and his army, though superior in numbers to that of Antonius, was completely routed by the latter in a nocturnal battle between Bedriacum and Cremona. Antonius now advanced slowly towards Rome, receiving by the way the submission of the Italian cities, while Vitellius, in a state of the utmost indecision, left his cause in the hands of the populace of Rome, who compelled Vespasian's brother Sabinus, the prefect of the city, to take refuge with his adherents in the Capitol, which they then fortified. The arrival of Antonius at once ended the affair. Vitellius was dragged from his hiding-place, and cruelly put to death on the 24th of December, and the authority of Vespasian was established in Rome. [VITELLIUS.]

The emperor now proceeded to Rome, leaving the reduction of Jerusalem to his son Titus. He arrived in the city at the end of the summer of the year A.D. 70, the Senate having in the mean time appointed him, with his son Titus, to the consulship, and cooferred upon him all the accustomed imperial honours. His government has obtained the highest praise. He restored the privileges of the Senate, reformed the courts of justice, restored discipline to the army and order to the finances. He repaired the devastations which Rome had suffered in the recent civil wars, and adorned the city with many new buildings. Among the buildings which he began or completed were the restoration of the Capitol, the temples of Peace and of Claudius, and, above all, the Amphitheatre, which has become celebrated under the name of the Coliseum.

Temperate in his own habits, he exerted himself to restrain luxury in his subjects, and himself discharged the duties of the censorship.

Digitized by Google

He was affable to his friends, and even suffered severe strictures on his conduct to pass unpunished. The banishment and death of Hedvidius Priscus are said to have been executed against the will of the emperor. He was fond of money, but what he exacted from his subjects he spent on public works, not on his own pleasures. He was a liberal patron of literature and art.

The reign of Vespasian was signalised by great military successes, of which the most important were the victories of Petilius Cerealis over the Treviri (A.D. 70), those of Agricola in Britain, and the conquest of Jerusalem, for which the emperor and his son Titus triumphed in the year 71, when the temple of Janus, and that of Peace were built. In the following year the kingdom of Commagene was taken from Antiochus and added to the Roman empire.

In the last year of his reign a conspiracy was formed against him by Aulus Cecina and Epirus Marcellus, who were detected and put to death. Not long after this Vespasian died of a fever, June 23rd, A.D. 79, in the seventieth year of his age and the 10th of his reign.

(Tacitus, *Histor.*; Suetonius, *Vespasian.*)

VESPUCCI, AMERIGO, was born fifteen years later than Columbus, on the 9th of March 1451, at Florence. He was the third son of Anastasio Vespucci, a notary of Florence. The family had been enriched by commerce some generations earlier, and possessed landed property at Peretola near Florence. Giorgio Antonio Vespucci, uncle of Amerigo, a monk of the congregation of St. Marl, was a friend of the Platonician Ficini of Florence. Giorgio Antonio took charge of the education of his nephew, who appears however to have profited little by his classical studies. Bandini has published a Latin letter written by Amerigo to his father in 1476 (when the writer was twenty-five years of age), in which he confesses that he had been obliged to consult his Latin grammar while writing, and that he was afraid to venture on a few lines of Latin in his uncle's absence.

Amerigo resided at Florence in 1489. Before this time however mercantile avocations had led him to Spain. Documents published by Muñoz show that Amerigo was a factor in the wealthy Florentine house of Juanoto Bernardi, at Seville, in 1486. In 1493 we find him again in Spain, and anxious to quit the country. On the death of Juanoto Bernardi, in 1495, he was placed at the head of the factory. His name occurs in the Spanish archives for the first time on the 12th of January 1496.

In the narrative attributed to Vespucci, published at St. Dié in Lorraine, in 1507, and republished at the same place in 1509, he is said to have made four voyages: the first under the auspices of the king of Castile, in 1497 and 1499; two by command of the king of Portugal, in 1501 and 1503. The first has been alleged to be apocryphal by some warm supporters of the claims of Columbus to be the original discoverer of the mainland of America as well as of the islands, who have not scrupled to attribute to Vespucci a fraudulent attempt to arrogate to himself the honour due to Columbus. Humboldt in the fourth volume of his 'Histoire de la Géographie du Nouveau Continent,' has successfully vindicated Vespucci from this imputation and proved that there is every reason to believe that the voyage really was made, though at a later date than appears in the printed book. M. Humboldt has by a minute and exact analysis identified the four voyages of Vespucci: the first, with the voyage of Alonzo de Hojeda, commenced on the 20th of May 1497, terminated on the 15th of October 1499; the second, with the voyage of Yañez Pinson, commenced in the beginning of December 1499, terminated on the 30th of September 1500; the third, with the voyage of Pedro Alvares Cabral, commenced on the 10th of May 1501, terminated 7th of September 1502; the fourth, with that of Gonzalez Coelho, commenced on the 10th of May 1503, terminated on the 18th of June 1504.

These dates remove all doubts as to the priority of Columbus's discovery. The expedition of Hojeda coasted in 1499 the shores of Paria, which had been discovered by Columbus in the preceding year. For the mistake of substituting the year 1497 for 1499, M. Humboldt has shown that Vespucci cannot be held responsible. The brief and unsatisfactory narrative in which the error occurs was printed in Lorraine, without his knowledge and consent. It is evident from authentic documents that Amerigo was in the later years of Columbus's life an attached and trusted friend of the admiral; and from the footing on which he stood with the family and friends of Columbus, years after the publication of his narrative, that they did not suspect him of any attempt to arrogate to himself the honours due to their parent. The accident of the new continent receiving its name from Amerigo has been attributed by M. Humboldt with great plausibility to ignorance of the history of the discovery (at that time jealously guarded as a state secret), leading the publisher of Vespucci's narrative to propose that it should be called after him, and to the musical sound of the name catching the public ear.

Vespucci appears to have served, in all the expeditions he was engaged in, in the capacity of astronomer. It is evident from the letters of that age, that, owing to want of confidence in the astronomical knowledge of the practical pilots, it was customary to associate with them some person of scientific acquirements in the great voyages of discovery. Vespucci himself tells us that his taste for adventures of discovery was contracted while engaged as a merchant in the outfit of exploring squadrons. As early as 1493 he had expressed dissatisfaction with his position at Seville; a dissatisfaction probably originating in aversion to mercantile pursuits. His writings, fragmentary and ill-printed though they be, evince scientific tastes and acquirements.

From the service of the crown of Spain in which Vespucci made his earliest voyages, he was allured into that of Portugal, in which he made the third and fourth. Disappointed in his expectations, he returned to Spain, and appears to have been soliciting employment at the time of Columbus's death. In 1507 he was intrusted with the victualling and furnishing of a royal fleet fitted out in that year. On the 22nd of March 1508, he obtained the appointment of piloto-mayor, which he retained till his death. In his commission contains bitter complaints of the ignorance of pilots, and charges him, before licensing any person to exercise the employment, to examine him strictly in the use of the astrolabe and the quadrant, and to ascertain whether he understands the practice as well as the theory of the instrument.

Amerigo Vespucci died at Seville, on the 22nd of February 1512. He died poor; his widow found considerable difficulty in obtaining payment of a miserable pension of 10,000 maravedis, with which the emolumants of his successor were burdened in her favour. An accident has given notoriety to the name of Amerigo Vespucci, at the expense of suspicions which he deserved as little as his chance-medley distinction. He appears to have been a skilful astronomer for his age; an able manager of the commissariat department; an enthusiastic adventurer in the career of discovery; a warm-hearted, honest man. But he is far inferior to Columbus, Cabot, Diaz, or Gama, men who combined originality of conception with their enterprising spirits, and who belong to the class of heroes and men of genius.

(Humboldt, *Examen Critique de l'Histoire de la Géographie du Nouveau Continent*, Paris, 1839; *Cosmographiæ Introductio, cuique Quatuor Americi Vespucci Navigationes*, Strassburg, 1507 and 1509; Bandini, *Vita e Lettere di Amerigo Vespucci*, Florence, 1745; Irving, *A History of the Life and Voyages of Christopher Columbus*, London, 1828.)

VETTORI, PIETRO, born of a noble family at Florence, in 1499, studied classical literature in his native town, and afterwards law at Pisa. He went to Rome with his relative Francesco Vettori, on a mission to Pope Clement VII. On his return to Florence he joined the republican party which drove away the Medici in 1527. His relatives Francesco and Paolo Vettori acted a vacillating and even false part in those transactions. When the arms of Charles V. subdued Florence and gave it to Duke Alessandro de' Medici, Pietro Vettori retired from the country and applied himself entirely to study. He afterwards went to Rome, until he was recalled to Florence by the Duke Cosmo I., who appointed him professor of Latin and Greek literature. He remained many years in that chair, which he filled with great reputation. He published editions of Cæsar, Terence, Varro, Sallust, of the Roman writers on agriculture, as well as the Greek text of Æschylus, of the 'Electra' of Euripides, of several dialogues of Plato and Aristotle, and other Greek writers. He wrote commentaries, in Latin, on the works of Aristotle, and on the book on Invention of Demetrius Phalereus. His works in the language 'Variæ Lectiones,' in thirty-eight books, in which he explains and comments upon numerous passages of ancient writers, and also several orations. In Italian he wrote orations on the occasion of the death of Duke Cosmo I. and of the Emperor Maximilian II. He also wrote several small poems in Italian, and a didactic treatise on the cultivation of the olive-tree, 'Trattato delle Lodi a delle Coltivazione degli Ulivi,' Florence, 1574, often reprinted and much valued. Many of his letters are inserted in the collection of the 'Prose Fiorentine' and in other collections. Vettori was one of the most accomplished scholars of a learned age. He died at Florence December 18, 1585.

(Tiraboschi, *Storia della Letteratura Italiana*; Corniani, *I Secoli della Letteratura Italiana.*)

VICENTE, GIL. [GIL VICENTE.]

VICI, ANDRE'A, architect to the grand-duke of Tuscany, was born at Arcevia in the Marca d'Ancona, 1744. Having gone through the usual courses of education at Perugia, he was sent to Rome to study painting and architecture, the first under Stefano Pozzi, the other under Carlo Murena; and it was the second of these two arts which he decided upon following as his profession. That he gave early promise of more than ordinary talent appears from the circumstance of Vanvitelli engaging him as his assistant when he was about, it is said, to begin the palace of Caserta: yet the last part of this statement is evidently incorrect, because at that time Vici could not have been more than later period (1810) he erected the 'muraglione' or embankment at Tivoli, to support the left bank of the Anio. Of his architectural works, though they were neither inconsiderable nor few in number, the names alone are recorded, and those have no dates attached to them. Yet one of them at least would seem to deserve some little notice, for it is spoken of as 'la superba Cattedrale di

Digitized by Google

Camarino.' The others which are enumerated as by him, are—the church and monastery 'Delle Saleziane,' at Offagna; the seminary at Osimo; the ville and casini at Monte Gallo, the Palazzo Lepri at Bevagna: the church of S. Francesco at Folieno; and the Cappella Gozzoli at Terni. Vici died September 10th, 1817.

VICO, GIOVANNI BATTISTA, one of the most acute thinkers of the first half of the last century, was born in 1668, at Naples, where his father was a bookseller in rather limited circumstances. Respecting his early youth nothing is known, except that at the age of seven he fractured his skull by a fall, which caused him great sufferings, and which, as he himself says, produced in after-life an inclination to melancholy. His education was nominally conducted by the Jesuits; but as he was not of a disposition to yield to the influence or follow the rules of others, he worked out his own education for himself. He devoted himself chiefly to the study of philology, languages, and jurisprudence, and in the last of these branches his proficiency was such that at the age of sixteen he successfully defended an action which had been brought against his father. But Vico was neither inclined, nor had he sufficient strength to follow the profession of a lawyer; and as he had not the means of living in independence, the offer which was made him to instruct the nephew of Rocco, bishop of Ischia, in jurisprudence, was gladly accepted. In this quiet and retired position, in which he remained for nine years, he gradually recovered his strength, and devoted all the leisure to the study of canon law, theology, and the ancients; and it was here that he conceived the plan of his great work, of which we shall speak presently. His taste grew more and more severe: the literature of his own time lost all attractions for him. Among the writers of his own country were chiefly Petrarch, Boccaccio, and Dante, in whose works he sought and found instruction; and among the ancients Plato and Cicero, though the latter chiefly on account of his style, which he himself took great pains to imitate. Soon after his return to Naples he married. His mind had hitherto been wrapped up in the ancients and in the development of his own ideas; and the servile adherence of the philosophers of the time to the system of Des Cartes, together with the then prevailing taste in poetry, confirmed him still more in his partiality for the ancients. Vico had now, as before, to work his own way, and in order to be free from all bias, he read the ancients without the assistance of any commentaries. The French language he disdained altogether, and so strong was his desire to acquire a pure Latin style, that for a time he even abandoned Greek literature, and gave himself up entirely to reading the best Latin authors. In 1697 he was appointed professor of rhetoric in the university of Naples, with the scanty salary of 100 scudi per annum. In order to maintain himself and his family he was obliged to give private lessons in Latin. But he now had an opportunity of expressing on various occasions his public his opinions on matters of the highest importance. He endeavoured to point out the common bond of all the sciences, and how superior the ancients had been in not dividing and separating the sciences from one another, but cultivating all in common, as Aristotle had done; and that it was impossible successfully to cultivate one without knowing the rest. By his public orations on such subjects, and still more by the publication of some works of great originality, he acquired a high reputation, and when the chair of jurisprudence in the university had become vacant, he applied for it. In vain: his knowledge and ability none could enter into competition with him; but as he would not condescend to have recourse to the means which were usually employed by candidates for such offices, he saw little prospect of his gaining his object, and withdrew from the contest. The disappointment caused him deep grief; but neither this nor several domestic afflictions by which he was visited could break down his spirit, and with renewed ardour he now set about completing the work which had for many years occupied all his thoughts. This work, entitled 'Principi di una Scienza nuova d'intorno alla Comune Natura delle Nazioni,' appeared at Naples in 1725. A second and third edition appeared in the author's lifetime, and the seventh appeared at Naples in 1817. After the completion of this work his mind was at rest; and had his outward circumstances been more favourable, his happiness would have been perfect. On the accession of the house of the Bourbons to the throne of Naples in 1735, better days seemed to dawn upon him; for he was appointed historiographer to the king, and his son, Gennaro Vico, obtained the professorship of rhetoric. But his mental powers were broken down, both by intense study and by domestic cares and anxieties. He fell into a state of insensibility, which lasted for fourteen months, during which he knew neither his friends nor his children. In this state he died, on the 20th of January, 1744.

The 'New Science' ('Principi di una Scienza Nuova') is the principal work of Vico; but although three editions appeared in his lifetime, it seems to have been nearly forgotten for more than fifty years after his death. This is probably owing to the extraordinary obscurity of the work, which was increased by the additions published in the third edition (probably by Gennaro Vico) from the author's manuscripts, which are frequently inserted in places where they interrupt and destroy the argument. But notwithstanding this great defect, the work is one of the most remarkable phenomena of modern literature. In England the work seems to have been unknown, until a French exposition of Vico's system, by Michelet, attracted attention to it, and induced a writer in the 'Philological Museum' (ii., p. 626) to give a sketch of his life and his philosophy to the English public. The great truth which he endeavours to establish in this 'Scienza Nuova' is that the history of the human race is determined by laws which are as certain in their operation as those by which the material world is governed. He sets forth those laws or principles in the form of a series of broad assertions, which he endeavours to demonstrate and explain. He set out from the conviction that as the idea of the material world existed in the Divine intellect previous to the creation of the world, so there must also have existed in it an eternal idea of the history of mankind; and this idea is realised and manifested in the actual events of history. He endeavours to prove that notwithstanding all the apparent confusion and incoherence in human affairs, there are eternal laws by never departed from; or, in other words, that a Divine providence is discernible throughout the history of mankind. It is a philosophy of history which he endeavours to establish. After having laid down his principles, he proceeds to divide history into great cycles or periods, to show the characteristic features of each, and the organic progression and transition from the one to the other. He accomplishes this partly by appealing to the facts of history, and partly to general principles; and while on the one hand he obtains results which are profound and true, on the other hand he makes assertions which are visionary and fanciful. It is a remarkable circumstance that Vico has stated in broad outlines things which F. A. Wolf and Niebuhr afterwards reached by totally different processes and without having any knowledge of the views of Vico: Wolf, in regard to the Homeric poems; and Niebuhr, in regard to the early history of Rome. It betrays a want of knowledge of the facts to assert, as some do, that Montesquieu, or Wolf, or Niebuhr adopted the views of Vico: they could not adopt what they did not know. Besides the 'Scienza Nuova,' Vico wrote some other works, which were published in the Impress of his original genius:—1. 'De Antiquissima Italorum Sapientia,' Naples, 1710, translated into Italian by Mouti, Milan, 1816. 2. 'De uno Universi Juris Principio et fine uno,' Naples, 4to, 1720. 3. A Life of himself, which is prefixed to the first edition of his 'New Science,' and is reprinted, with additions by himself and his son, in the subsequent editions of the same work. A collection of all his works was edited by the Marquis de Villa Rosa, at Naples, in 1818, and a second edition appeared in 1835. A clear and able exposition of the 'New Science' has been given by Michelet, 'Principes de la Philosophie de l'Histoire, traduits de la "Scienza Nuova," 1827.

VICO, FRANCIS DE. [*See* vol. VI. col. 1028.]

VICQ-D'AZYR, FELIX, was born at Valogne in 1748. His father, who was a physician of good repute, sent him to study philosophy at Caen and medicine at Paris. He received his licence to practise in 1774, and not directly after began to deliver lectures on comparative anatomy, during the vacation from the regular courses of lectures of the faculty. In consequence however of some dispute with the authorities of the faculty, he was obliged to discontinue his course, though already he had become a very popular teacher. Upon this, Antoine Petit, who had been Vicq-d'Azyr's instructor in anatomy, resigned the professorship of anatomy at the Jardin des Plantes, hoping to secure the appointment of his pupil to be his successor. In this however he was disappointed. Portal, through the influence of Buffon, was elected, and Vicq-d'Azyr was obliged to limit himself to the delivering of lectures in his own house. These were well attended, but the greatest assistance to his advancement was furnished by his marriage with a niece of Daubenton, who fell in love with him in consequence of his politeness in assisting her when she once fainted in the street. Daubeuton furnished him with all that was necessary for the prosecution of comparative anatomy and natural history, in which he was actively engaged, and the results of which he published in numerous essays in the Memoirs of the Academy of Sciences.

In 1774 Vicq-d'Azyr was elected a member of the Academy of Sciences; and in 1775, through the influence of Lassoune, he was sent to investigate and endeavour to exterminate a murrain which was raging among the cattle in the south of France. On his return he formed with Lassoune the scheme of establishing a society for carrying on at all times similar investigations of epidemics, &c., by correspondences with provincial physicians; and upon their plan the Royal Society of Medicine was founded in 1776, and Vicq-d'Azyr was appointed perpetual secretary. This engaged him in an angry dispute with the faculty of medicine, who appear to have done their best to destroy his reputation; but his activity, and the general excellence of the numerous essays, éloges, and other works which he was constantly publishing, as well as the spirit and care with which the society was managed, obtained for him a constantly increasing celebrity, and in 1788 he was chosen to succeed Buffon in the French Academy. His oration in honour of his predecessor is the most remarkable of all (and they were very numerous) that Vicq-d'Azyr delivered in honour of men of science. In 1789 he succeeded Lassoune as first physician to the queen, and it is said that his devotion to her gave him reason to fear the rage of the revolutionary party so much that, through continual anxiety, his health began to fail. To avoid suspicion he took part with the followers of Robespierre, and having accompanied the citizens of his district to the impious mockery of the festival of the Supreme Being, he returned home seriously ill, next day became delirious, and died on the 20th of June 1794.

Digitized by Google

Vicq-d'Azyr's works are very numerous, and were nearly all published together by Moreau de la Sarthe, with the title 'Œuvres de Vicq-d'Azyr,' 6 vols. 8vo, Paris, 1805, with a quarto volume of plates. The chief of them are as follows:—1, 'Observations sur les Moyens . . . pour préserver les Animaux saine de la Contagion,' 12mo, Bordeaux, 1774. 2, 'La Médecine des Bêtes à cornes,' 2 vols. 8vo, Paris, 1781: this was published by order of the government, and contains the substance of several previous works on veterinary medicine, and especially on epizootic diseases. 3, 'Traité d'Anatomie et de Physiologie, avec des planches coloriées,' folio, Paris, 1786. This, had he been able to complete it, would have been a truly magnificent work. Vicq-d'Azyr proposed to illustrate the whole of physiology by a series of plates of natural size, but the work did not go beyond this first part, containing the plates of the brain, which are executed well, though they are not without anatomical errors. His other principal writings are contained in essays in the Memoirs of the Academies of Sciences and of Medicine. In the Memoirs of the former academy he published, in 1774, the first part of his Memoirs on the Comparative Anatomy of Fish and Birds, and on the Conversion of Muscle into Fat during Life; in 1774 the conclusion of these Memoirs, and another on the Structure and Physiology of the Extremities of Man and Quadrupeds; in 1776 a Memoir on the Comparative Anatomy of the Ear; in 1779 one On the Organ of the Voice; in 1781, the Anatomy of the Mandrill and some other Apes; in 1784, Observations on the Comparative Anatomy of the Clavicle. All these contained many new and important facts; but they do not prove that Vicq-d'Azyr was capable of working out the great general truths of physiology. In the Memoirs of the Society of Medicine his essays are also very numerous, but less important than those in comparative anatomy: in these also are published his numerous éloges delivered on the deaths of members of the society, all of which are well written, and some are even eloquent. He edited the two volumes of the anatomical portion of the 'Encyclopédie Méthodique,' to which he contributed several articles; and he also edited the first volumes of the medical portion of the same work, in which there are also several articles by him, including one of considerable length and importance with the title 'Anatomie Pathologique.' Many other essays were published in other collections, which need not be enumerated: the last which he wrote were, Observations on the Changes of the Vitellus during Incubation, and a Description of the Genital Organs of the Duck, which appeared in the 'Bulletin de la Société Philomathique' for 1793.

(*Éloge de Vicq-d'Azyr*, read at the Society of Medicine of Paris, 1795; Dezimeris, *Dictionnaire Historique de Médecine*, &c.)

VICTOR I., a native of Africa, succeeded Eleutherius as bishop of the Christian congregation at Rome, about A.D. 185. During his episcopacy Theodotus was expelled the Christian congregation of Rome, for asserting the mere humanity of Christ. Victor had a warm controversy with the churches of Asia, and especially with Polycrates, bishop of Ephesus, concerning the proper time for celebrating the Easter festival. Irenæus, bishop of Lyon, remonstrated in a letter to Victor upon his intolerance upon this occasion. Victor died about 197, and was succeeded by Zephyrinus. Some say that he died a martyr, but the word martyr was often used by the early Christian writers to signify a person who had in any way suffered on account of the Christian faith.

VICTOR II., Gebhard, bishop of Eichstadt, and a friend and adviser of Henry III. of Germany, was chosen by the clergy of Rome to succeed Leo IX. in 1055. The monk Hildebrandus (afterwards Gregory VII.), who had suggested the choice, was sent by the Romans to Germany, for the purpose of obtaining the emperor's assent to the election, which is said to have been given with some reluctance, as Henry was unwilling to part with his adviser. Victor, having proceeded to Italy, assembled a council at Florence, in which several abuses in the discipline of the clergy were condemned, and the ordinances against alienating the property of the Church were renewed. Another council was held in the same year at Tours, at which Hildebrand presided as legate. Berenger appeared before the council, and was challenged to defend his opinion against transubstantiation. Berenger however declined doing so, and he professed to submit to the general belief of the Church upon the matter in question. (Berenger.) The year 1055 was a busy year for councils: a council was held at Lyon against simony; another at Rouen to enforce continence among priests; and another at Narbonne, in which the usurpation of certain possessions of the Church were excommunicated. In the following year, 1056, Pope Victor went to Germany at the desire of Henry III., and was there present at the death of the emperor, which took place in that year. Victor remained in Germany with the dowager empress Agnes and her infant son Henry IV. till the next spring, 1057, when he returned to Italy. Pope Victor died at Florence July 28, 1057, and was succeeded by Stephen IX.

VICTOR III., Desiderius, abbot of Monte Casino, was elected by the cardinals assembled at Salerno, after the death of Gregory VII., in compliance with the wish expressed by that pope on his death-bed, in 1085. Desiderius however declined the proffered dignity, and the Church remained without a pontiff till Easter of the following year, 1086, when Desiderius, having gone to Rome, was invested with the papal garments by the assembled cardinals, and proclaimed by the name of Victor III. But the prefect of the emperor Henry IV., who had possession of the Capitol, and who supported the antipope Guibert, who had been already set up in opposition to Gregory VII., opposed the consecration of the new pope. After four days Desiderius left Rome and returned to Monte Casino, having deposed his pontifical robes at Terracina and renounced his dignity. During the Lent of the next year, 1087, a council was held at Capua, in which Desiderius was prevailed upon to resume the papal office for the good of the Church. The new pope then proceeded towards Rome, accompanied by the cardinals and many of the Roman nobility, and by a body of troops given to him by the Prince of Capua, and by Roger, duke of Apulia. On arriving outside of Rome they defeated the troops of the antipope, and drove him away from the Vatican. On the Sunday after the Ascension, Pope Victor was solemnly crowned in St. Peter's church, after which he returned to Monte Casino, as the city of Rome was still occupied by the partisans of the antipope. Soon after however the Countess Matilda arrived near Rome from Tuscany with a large force, and invited Pope Victor to a conference, which took place in the Vatican in the beginning of June. On St. Barnabas'-day, 11th of June, the pope and the countess, having forced the passage of the Tiber, entered Rome amidst the acclamations of the people.

On the eve of St. Peter's-day, 28th of July, a messenger from Henry IV. having threatened the consuls and senators of Rome with the displeasure of the emperor if they continued to adhere to Victor, the populace of Rome turned against the pope, and drove him and his friends out of the town. Pope Victor however retained possession of the Vatican, and celebrated mass on the next day in St. Peter's church. A few days after Pope Victor thought proper to abandon Rome altogether, and withdrew to Monte Casino, and thence to Benevventum, where he held a council in the month of August, in which he anathematised the antipope Guibert, as well as Hugo, archbishop of Lyon, who had declared himself for the antipope, and had written a violent letter to the Countess Matilda, in which he strove to blacken the character of Pope Victor, charging him with ambition, cunning, and other vices. This letter, which is inserted in Labbe's 'Concilia,' probably gave rise to the several accusations against the memory of Pope Victor, which are found in the Chronicle of Augsburg and other compilations. Whilst the council was sitting, Pope Victor fell dangerously ill of dysentery. He hastened back to his favourite residence of Monte Casino, where he died on the 16th of September 1087, after having recommended the cardinals who were about him to choose Otho, bishop of Ostia, for his successor, who was accordingly elected by the name of Urban II. (Muratori, 'Annali d'Italia,' and the authorities therein quoted.)

Pope Victor III. is better known in the history of learning as Desiderius, abbot of Monte Casino. In his convent he was a great collector of manuscripts; he employed numerous men to copy the works of the classics; he restored or rather rebuilt from the foundations the church and part of the convent upon a much larger scale than that of the former structure, and he sent to Constantinople for skilful workmen in mosaic and joinery to assist in adorning the church.

(Pantasius, *Series Abbatum Casinensium*; Tiraboschi, *Storia della Letteratura Italiana*.)

VICTOR IV., antipope. Octavian, cardinal of St. Clement, was set up by a small faction of cardinals, supported by the Emperor Frederick I., in opposition to Pope Alexander III. This created a schism in the Church, which continued even after the death of the antipope Victor, which took place in 1164. [Frederick I., Emperor.]

VICTOR-AMADEUS I., Duke of Savoy, was born at Turin, on March 8th, 1587. He was educated in the court of Spain, whence he was called by his father, Carlo-Emmanuel, in 1614, to act with him in the war against France. In July, 1630, on his father's death he succeeded to the sovereignty, and early in 1631 concluded a treaty at Cherasco, by which he not only restored peace to the duchy, but acquired possession of Montferrato and Alba, in exchange for Pinerolo and one or two other towns. On the establishment of peace his first care was to improve his dominions, and among other things he re-established the university of Turin, for which he provided a handsome building, and drew to it a number of eminent masters. In 1635 he was forced by the threats of Cardinal Richelieu to join the French in their contest with Spain, on account of the Italian possessions. After having gained two victories over the Spaniards, he died at Vercoil on October 7, 1637, leaving the war raging, and two infant sons by his wife Christine, daughter of Henri IV. of France; the elder of whom, Francesco-Giacinta, reigned nominally for a year, when he died, and was succeeded by Carlo-Emmanuel II., on October 4, 1638.

VICTOR-AMADEUS II., the son of Carlo-Emmanuel, was born on May 14, 1666, and succeeded his father in June 1675, the government being carried on under the regency of his mother, Françoise, daughter of Gaston, duke of Orleans. On arriving at age he found himself harassed between Louis XIV. of France on the one side and the house of Austria on the other. The imperious Louis sent him commands as if he were his vassal. In 1686 he compelled him to subdue the Vaudenses, a task effected not without difficulty, and with great cruelty: their sufferings had before occasioned the intervention of Cromwell, and the production of Milton's noble sonnet. Louis also ordered him to send several regiments to join

Digitized by Google

his army in Flanders, and lastly to give up to him the citadel of Turin. Victor-Amadeus in June 1690 entered into a treaty with Spain and Austria against France, restored the Valdenses to their homes and their privileges, summoned round him the nobles of Piedmont, and declared war. Being joined by an Austrian force, he disputed every inch of ground against the French. The war lasted till 1695, when Louis XIV., by fair promises, succeeded in detaching the duke of Savoy from the emperor. The peace of Ryswick restored peace to Italy, and the French evacuated all the territories of the Duke, including Pinerolo, which they had possessed for about a century. In the war of the Spanish succession, Victor-Amadeus aided first with the French, but afterwards joined the emperor, because he considered it extremely dangerous for his dominions to allow the house of Bourbon to become possessed of the Milanese and the other Spanish territories in Italy. The consequence was that the French armies again overran and devastated Piedmont, and in 1706 besieged Turin, which made a noble defence. Victor-Amadeus, being joined by the Austrian army under his relative Prince Eugene of Savoy, defeated the French besieging army on the 7th September 1706, and delivered Turin. By the peace of Utrecht, 1713, he obtained the Valsesia, the territory of Lomellina, the remainder of Montferrato, and other districts, and above all the island of Sicily with the title of king, and he was crowned at Palermo, in December 1713. By the subsequent treaty of London, Victor-Amadeus gave up Sicily to the emperor, and received in exchange the island of Sardinia with the title of a kingdom. Thus through his gallantry and perseverance the house of Savoy became numbered among the royal houses of Europe. Victor-Amadeus employed the peaceful period which followed to improve the administration, to reform his finances, and to encourage agriculture and industry. Through his care the cultivation of the mulberry-tree and the rearing of silkworms attained in Piedmont that perfection which they still maintain. He also reformed the university of Turin, founded several colleges, and built the palace of the Superga. On September 2, 1730, Victor-Amadeus abdicated in favour of his son Carlo-Emmanuel III. and retired to the villa of Moncalieri. In 1731, having made an attempt to remount his throne, he was arrested and confined for some time, but at length remitted to his residence at Moncalieri, where he died October 30, 1732. Distinguished both as a general and a statesman, he was well worthy of being the first king of his dynasty. King Victor-Amadeus was married to Anne Marie of Orleans, daughter of Philip, duke of Orleans, brother of Louis XIV., and of Henrietta Maria, daughter of Charles I. of England. This alliance is the origin of the connection between the house of Savoy and the royal family of Great Britain.

VICTOR-AMADEUS III., son of Carlo-Emmanuel III., was born on June 26, 1726, and succeeded his father in February 1773. He early displayed a fondness for military parade and exercises, and he increased his army in time of profound peace. The finances became exhausted, the public debt increased, and fresh taxes were laid on the people. The king greatly favoured the nobles, giving to them almost exclusively the public offices, civil, military, and ecclesiastical. At the same time Victor-Amadeus encouraged useful studies; he re-organised the public colleges and schools after the expulsion of the Jesuits; and he appointed fit professors to the chairs of the university of Turin. The storms of the French revolution rendered the end of his reign calamitous: he lost Savoy and Nice in 1792, Oneglia in 1794, and after two years more of a desultory but sanguinary warfare along the line of the Alps, in which the Piedmontese troops displayed their accustomed valour and discipline, the line of defence formed by the Alps was turned by the French passing through the Ligurian Apennines, and the revolutionary torrent poured down into the plains of the Po. [BONAPARTE, NAPOLEON.] King Victor-Amadeus was induced to conclude a hasty peace, which left his dominions at the mercy of the French. He died soon after, on October 16, 1796, and was succeeded by his son Carlo-Emmanuel IV.

VICTOR, CLAUDE PERRIN, Duke of Belluno and Marshal of France, was born at La Marche, in the department of the Vosges, on the 7th of December 1764. He was seventeen years of age when, on the 16th of December 1781 he enlisted as a private soldier in the 4th regiment of artillery, at that time in garrison at Auxonne. He had obtained his discharge when the first events of the Revolution of 1789 occurred; but, animated with the warlike spirit which then pervaded the French nation, he again eagerly sought for military employment, and entered as a volunteer the third battalion of the department of the Drôme. A few months sufficed for this young and intrepid soldier to raise himself from the lowest rank to that of adjutant-major and chef de bataillon. With the battalion under his command he distinguished himself at Coni, and at the attack of the lines of Saorgio. Piedmontese and a regiment of emigrants. At the head of the same battalion he obtained considerable success, in 1793, at the siege of Toulon; under the orders of General Lepoye, he gained the important heights of Pharon, and afterwards, with similar good fortune attacked the fort l'Aiguillette, the capture of which greatly contributed to the favourable issue of the siege. These brilliant actions, in which he was twice wounded, were rewarded by his promotion to the rank of adjutant-general. Transferred to the army of the Eastern Pyrenees, with the rank of general of brigade, he rendered himself conspicuous for his skill and bravery at the sieges of Collioure (June 5, 1794) and Rosas (January 2, 1795). After the termination of the war between France and Spain by the treaty of peace signed on the 22nd of July 1795, Victor joined the army of Italy. The courage which he displayed in the several battles of that campaign, and particularly in the action at Borghetto (May 30, 1796), brought him under the favourable notice of Bonaparte, who gave him every opportunity for further distinction by entrusting him with the management of manœuvres as honourable as they were perilous. His conduct during the sanguinary engagements which took place at Cossaria and Mondovi (April 5 and 16, 1796), justified the high estimation in which he was held by his chief, and were recognised by the government at Paris in a flattering letter which they sent him. The following year, by a series of skilful manœuvres, he greatly contributed to the success obtained by Masséna [MASSÉNA, MARSHAL] over the Austrian general Wurmser at Corona (Auguste 11, 1797). It was on account of his successes during this campaign, of which we have enumerated a very small portion, that he was raised to the rank of general of division. In this capacity he powerfully seconded the operations directed by General Lannes against the Papal States [LANNES]. After defeating the Roman troops on the river Serio, he occupied with the troops under his command the towns of Faenza and Cesena; he afterwards marched against Ancona with a detachment of twelve hundred men, and captured it without a shot being fired, though it was defended by one hundred and twenty pieces of cannon and a garrison of five thousand degenerate Romans. "General Victor," says Napoleon, "crossed the Po at Borgo Forte, at the head of four thousand infantry and six hundred horse, and formed a junction at Bologna with the Italian division of four thousand men, under General Lahoz. These nine thousand men were quite sufficient to conquer the States of the Church." (Montholon, 'History of the Captivity of Napoleon at St. Helena,' vol. ii., p. 56.)

After the peace of Campo Formio, General Victor was appointed to the difficult command of the province of La Vendée. By his skilful dispositions, and by his conciliatory but firm and decisive conduct, he maintained the tranquility of that country. Being recalled in 1798 to the army of Italy, he was placed at the head of a division. In the following year he acquired fresh renown at the engagement of Santa Lucia (March 30, 1799). Shortly after this battle he received orders to cross the Apennines, and to march against the army of the French army of Naples through the valley of the Bormida; in effecting this movement his division was attacked by a large body of Piedmontese insurgents in the narrow and difficult passes of those mountains; his troops however bravely repulsed that attack at the point of the bayonet, and, after surmounting great dangers, he was enabled to effect a junction with the army under the command of General Macdonald. [MACDONALD, MARSHAL.] Victor bore a distinguished part in the engagement on the banks of the Trebbia, which proved disastrous to the French army. He was afterwards sent to Paris by General Moreau, to solicit from the Directory reinforcements for the army in Italy. On the failure of his mission, he returned to Italy, and resumed the command of his division, which acquired fresh laurels at the battle of Novara, where it formed part of the centre under the command of General Championet.

At the memorable battle of Marengo, the division of Victor formed part of the advanced guard; to the bravery and perseverance which he displayed on this occasion may in a great measure be ascribed the favourable issue of this long-disputed engagement. His services were rewarded by the presentation of a sabre of honour, on which was inscribed a flattering testimonial to his merit. He was afterwards transferred to the Batavian army, with the rank of second in command; his conduct in that campaign, though unmarked by any brilliant exploit, was such as to maintain the high reputation he had acquired.

After the peace of Amiens he was sent to the court of Denmark as ambassador from the First Consul. He held this office till 1806, when, on the breaking out of the war with Prussia, he was appointed to the command of the tenth corps of the grand army. In this post he received at the battle of Jena, did not prevent him from directing in person the operations of the corps under his command during this short but brilliant campaign; and he powerfully contributed to the victory obtained over the combined forces of the Prussians and Russians at Eylau (February 8, 1807), and at Friedland (June 14), in which Victor, at the head of the first corps of the grand army, so greatly distinguished himself, that Napoleon, on the field of battle, raised him to the dignity of marshal of the empire.

After the treaty of Tilsit (July 6-9, 1807), Marshal Victor was appointed governor of Berlin, a government including the greater part of Prussia. This office, which he held for fifteen months, was one which afforded many temptations to an abuse of power, but he appears to have exercised his authority with dignity and moderation.

In 1808 he was intrusted by Napoleon with the command of the first corps of the French army in Spain. Shortly after his arrival in that country he obtained important advantages over the Spaniards in the engagements of Espinosa (November 10 and 11, 1808), Somma Sierra (November 30), and Madrid (December 4). On the 13th of January 1809 he routed the remnants of the Spanish army which had been defeated at Tudela, but which, reinforced by fresh levies from the

Digitized by Google

provinces of Murcia and Valencia, had taken up a menacing position at Uclés. In this engagement upwards of three hundred officers, including two generals, and twelve thousand soldiers, were made prisoners; all the enemy's artillery and thirty standards were captured by the French. According to the Spanish accounts, this victory was stained by the exercise of wanton cruelty towards the prisoners, in retaliation for similar cruelty exercised on former occasions by the Spaniards towards the French. (Napier, 'History of the Peninsular War,' vol. ii., p. 16). At Medelin (March 28, 1809), Marshal Victor obtained another important victory over the Spanish army under General Cuesta, in which six thousand Spaniards are said to have fallen, and three thousand to have been taken prisoners. He was afterwards sent with his division to the support of the army of Marshal Soult in Portugal; but he had scarcely entered that country when he was obliged to effect a retreat. Having formed a junction with the troops of Joseph Bonaparte, Marshal Jourdan, and General Sebastiani, he was induced to attack the army of Sir Arthur Wellesley, which was advancing into Spain. The issue proved disastrous to the French arms; after a long-contested and sanguinary engagement, Victor was defeated at Talavera de la Reyna (July 28, 1809). Victor having however united his forces with those of Marshal Ney and Mortier, and the British army being obliged to retire before the superior numbers of the enemy, the French were again enabled to occupy the town of Talavera. To the credit of the French commander of Talavera, it may be stated that a large number of sick and wounded English soldiers were treated with the greatest kindness.

On February 4, 1810, the duty of investing Cadiz was assigned to Marshal Victor, whom Napoleon had created Duke of Belluno; he conducted the operations of this arduous task with skill and perseverance, though protracted for a considerable length of time, they finally proved unavailing. In 1812 he was summoned from this blockade of this town to join the grand army destined for the expedition to Russia, and was appointed to the command of the ninth division. His name stands conspicuous in the annals of this disastrous campaign. During the retreat he rendered the most important services to the French army, and in particular at the perilous passage of the Beresina (November 28, 1812), where, with six thousand men, he successfully resisted the efforts of General Wittgenstein (Wittgenstein) and thirty thousand Russians. His courage in this action was rendered more remarkable by his humanity. Being recalled, on the approach of evening, from the position which he occupied at Stoudziancka, he took upon himself to disobey his orders, and remained there during the whole night, for the purpose of giving every assistance to the remnants of the French army which had not yet effected the passage of the river. At daybreak he skilfully managed to evacuate this position, without loss of either baggage or artillery, taking with him the wounded and a large number of camp followers, who, without his humane aid, must have fallen into the hands of the pursuing enemy.

The following year, Marshal Victor commanded the second division of Napoleon's army: to the conduct of that division at the battle of Dresden (August 26, 1813) the victory the French there obtained has generally been attributed. With the same division he likewise (1813) distinguished himself at the battles of Wachau (October 16, 1813), Leipzig (October 18, 19), and Hanau (October 30). After the passage of the Rhine had been effected by the French army, Marshal Victor was actively employed in putting in an efficient state of defence the strong places of Alsace and the Franche Comté; he also for a long time bravely opposed the entrance of the Russian army into France. Compelled at length to fall back upon the Meuse, he effected this movement with his usual skill. He afterwards dislodged the allies from the position they had taken up in Bar-sur-Aube (January 27, 1814), and drove them out at the point of the bayonet from the village of Brienne. During the whole campaign he zealously seconded the efforts of Napoleon and the French army in checking the advance of the allies. On the 9th of February he marched his troops across the Seine, for the purpose of more effectually co-operating with the movements of his chief, and sustained his high character as a soldier in the defence of the bridge of Nogent (February 11, 1814) and in the actions of Nangis (February 17) and Villeneuve le Roi. His failure in dislodging the allies from Montereau, where he had the misfortune to lose his son-in-law, General Chateau, exposed him to the displeasure of the emperor, who deprived him of his command. The marshal, it is said, refused to leave the service, and observed with emotion to his chief, that "he had once been a private soldier, that he had not forgotten the use of the musket, and would again take his place in the ranks." The emperor, moved by this proof of his fidelity, put him at the head of two brigades of his guard, with which he distinguished himself a few days after at the battle of Craonne, where he was severely wounded, and was obliged to retire from the field.

When the success of the allies and the abdication of Napoleon had replaced the Bourbon dynasty on the throne, he was among the first to offer them his allegiance, and was rewarded by an appointment to the command of the second military division. On the return of Napoleon from Elba, he issued a proclamation, in which he allowed himself to speak of the creator of his fortunes in terms which reflect high discredit upon his character: he describes him as "the man who has tyrannised, desolated, and betrayed France during twelve years;" and he urges every Frenchman to pursue to the utmost not only this tyrant, but "his satellites who have accompanied him on his plundering excursion." Independently of the ingratitude which this language betrays, it evinces a singular want of discernment, coming from one who had once been among the most conspicuous of these satellites. He afterwards followed the examples of Marshals Berthier and Marmont in accompanying Louis XVIII. to Ghent. (Louis XVIII.) On the second restoration, he was created a peer of France, and appointed one of the four major-generals of the royal guard. He was also unfortunately conspicuous as the president of the commission charged to inquire into the conduct of his former brethren-in-arms during the 'Hundred Days.' [Ney, Marshal.] In that capacity he is reported to have displayed an unnecessary and pertinacious severity. In 1816 Marshal Victor was appointed to the command of the sixteenth military division of France. In 1821 he was named to Louis XVIII. minister of the war department. In this capacity he altogether disappointed the expectations to which his military talents had given rise: he alienated the affections of the new army as effectually as he had done those of the old, and lost the little popularity he had hitherto enjoyed. He actively promoted the expedition to Spain of 1823 [Succet], and having retired from the ministry, accompanied the army as second in command to the Duke of Angoulême. After the revolution of 1830 (Charles X.) he ceased to take any active part in public affairs; though he gave in his adhesion to the government of Louis Philippe, he was attached himself to the legitimist party, and appears on one occasion to have been seriously compromised, with several of the leading men of that party, in espousing the cause of the Bourbon claimant to the throne of France. He died on the 3rd of March 1841.

The position occupied by Marshal Victor among the generals of Napoleon is not a very high one. Though his services to the Imperial cause were numerous, and many of his exploits were brilliant, he is rather distinguished as a brave soldier than as a skilful commander. At the head of a division he executed with boldness and precision the movements indicated to him by his chief, but he was devoid of the military genius requisite to originate a skilful plan of battle. Hence, in a separate command, as in many instances in the Peninsular War, he was generally unsuccessful. He does not however appear to have merited that very harsh remark which Napoleon is concerning him, which O'Meara records: "Victor était une bête sans talens et sans tête." ('Napoleon in Exile,' vol. i., p. 511.) Such a judgment probably escaped Napoleon under the influence of the feelings which Victor's conduct, on his return from Elba, had excited. It is indeed scarcely possible that it was the real estimate he had formed of this general's military character, since he had raised him from the position of a private soldier to the highest dignities of his empire; dignities which were in every case the reward of some species of merit, and not the mere favours of favouritism.

VICTOR-EMMANUEL I., King of Sardinia, was born on July 24, 1759, the second son of Victor-Amadeus III., and during his father's life bore the title of Duke of Aosta. He took an active part in the war undertaken by his father against the French revolutionists, and gained some advantages over the enemy, but was at length compelled to retreat before their power. When his father concluded a peace with Bonaparte in 1796, he refused to agree to it, and withdrew to Southern Italy. Carlo-Emmanuel IV., who succeeded Victor-Amadeus III., abdicated in 1802, and Victor-Emmanuel assumed his brother's titles, but remained at Cagliari in the island of Sardinia under British protection, till 1814, when he returned to Turin. The treaty of Paris in 1814, restored to him Nice and the half of Savoy; by that of 1815 he obtained the remainder of Savoy; and the Congress of Vienna gave him the sovereignty over Genoa. The Piedmontese expected now an adoption of the French institutions to which they had been for some time accustomed, but the government by degrees replaced them by the old laws. This occasioned discontents, to which the persecutions of the protestant sectaries against the Valdenses and the Jews added fresh cause. The contests between the supporters of the old and the new ideas of government, occasioned the formation of a number of secret societies, and at length on March 21, 1821, a revolution took place. As Victor-Emmanuel could not make up his mind to take the oaths to the new constitution adopted by the military, he abdicated on March 23, and was succeeded by his brother, Carlo-Felix, who was followed by Carlo-Alberto. Victor-Emmanuel I. died at Moncalieri on January 10, 1824.

"VICTOR-EMMANUEL II. was born on March 14, 1820, the son of Carlo-Alberto. Carefully educated by his father he took as crown-prince an active share in all the political movements of 1848, and by his father's side witnessed the campaign against Austria, until the loss of the fatal battle of Novara occasioned his father to abdicate the throne. On March 23, 1849, he formally assumed the crown under the most trying circumstances, with an unsuccessful war in progress, and bitter political domestic factions in active existence. He however succeeded in effecting a treaty of peace with Austria without any humiliating concessions, and in setting bounds to the wishes of the extreme democratic party by carrying out strictly and with a rare conscientiousness the provisions of the constitution given by his father, and by endeavouring to uphold and advance the formation of a liberal public opinion. Alike against the requisitions of foreign powers, and the efforts of the ultra-Romanist portion of the ecclesias-

tical party at home, he has maintained a government, by constitutional means, by which a large amount of freedom has been secured. Austria, it is said, proffered him the possession of Parma, if he would annul the constitution, which offer he unhesitatingly rejected; but when Genoa revolted, expelled his garrison, and established a provisional government, he at once adopted the most vigorous measures for the suppression of the insurrection. General della Marmora was sent with a large force to besiege it; he reduced it to submission; and then Victor-Emmanuel endeavored to conciliate the inhabitants by justice and mildness, and by efforts to increase their trade and prosperity. The kingdom was suffering from the many misfortunes of the past period, and particularly from those inflicted by the last war; he took the best means for repairing them by adopting and carrying into practice many of the principles of free trade, and the construction of railroads, in order to promote the industry of his people. His efforts have been remarkably successful; and while all the rest of Italy has been the scene of continually recurring conspiracies and insurrections, his dominions have been latterly exempt from them, if we except an impotent attempt in Genoa, in 1857, to seize a fort, in which strangers were chiefly concerned. His greatest difficulty has arisen from the priestly party, who have opposed themselves to the toleration he has introduced, and by whose efforts the kingdom has been placed under a species of excommunication by the see of Rome; a measure that has produced little or no ill effect on the people. In 1854, when Genoa was attacked by cholera, the example he set in his efforts for the relief of the suffering won him the esteem of all parties, and indeed his most extreme political opponents are forward in their acknowledgments of his excellent qualities as a monarch. In January 1855 he signed a convention with France and England by which he became a partaker in the war against Russia for the defence of Turkey. A Sardinian force was despatched to the Crimea under General della Marmora, where it greatly distinguished itself in several actions, and particularly at the battle of Tchernaya. Sardinia has in consequence taken an active part in all the negociations for the settlement of the Turkish affairs; and at the Conference at Paris, the ambassador laid before the assembled representatives of the various states an able paper on the troubled state of Italy. The Sardinian states, from the wise use they have made of their constitutional freedom, are looked up to by the real patriots of Italy, as their guide in the acquisition of a beneficial liberty. In 1842, he married an arch-duchess of Austria, who died in January 1855, several children still surviving. In November 1855 he visited England, where he met with a cordial reception from the public as well as from the royal family. [*See* SUPPLEMENT.]

VICTOR, SEXTUS AURELIUS. [AURELIUS VICTOR.]

VICTORIA, ALEXANDRINA, Queen of the United Kingdom of Great Britain and Ireland, was born at Kensington Palace, May 24, 1819. The Queen is the only child of Edward, Duke of Kent, the fourth son of George III., and of Maria Louisa Victoria, a daughter of Francis, Duke of Saxe-Coburg Saalfeld. The Duchess of Kent, who is the sister of Leopold, King of Belgium, was the widow of the Prince of Leiningen, on whose death in 1814, she had been left the guardian of her youthful sons and the ruler of their territory, both which duties she fulfilled with remarkable care and prudence. The Duke of Kent died on January 23, 1820, leaving his widow in charge of their infant daughter. From the earliest age the young princess was taught to seek health by exercise and temperance; to acquire fearlessness even from her amusements, such as riding and sailing; to practise e wise economy united to a discriminating charity; to cultivate a self-reliance that should render her independent and superior to the cares, the wiles, and flatterers. As she advanced in years her intellectual development was provided for with equal care, under the additional superintendence of the Duchess of Northumberland. A knowledge of music, languages, and some science, especially botany, was imparted to her; and her father having during the latter years of his life belonged to the Whig party, her political instruction was chiefly derived from that source, and Viscount Melbourne has had the credit of grounding her thoroughly in the principles of the British constitution. On the accession of Victoria to the throne on June 20, 1837, he found Lord Melbourne at the head of the government, and she willingly continued him in that post. On February 10, 1840, the Queen was married to Prince Albert-Frans-August-Karl-Emmanuel, the second son of Ernst-Anton-Karl-Ludwig, Duke of Saxe-Coburg-Gotha. On November 21, the Princess Royal was born, who is new (September 1857) betrothed to the presumptive heir of the Prussian monarchy. On November 9, 1841, was born Albert Edward, Prince of Wales; on April 25, 1843, Alice Maud Mary; on August 6, 1844, Alfred Ernest Albert; on May 25, 1846, Helena Augusta Victoria; on March 13, 1848, Louisa Caroline Alberta; on May 1, 1850, Arthur William Patrick Albert; on April 7, 1853, Leopold George Duncan Albert; and on April 15, 1857, Beatrice Mary Victoria Feodore. In her private life Queen Victoria has uniformly practised the virtues inculcated in her childhood. She has always displayed a considerate kindness, her name appearing as a contributor to every beneficent project; a wise economy alike removed from meanness and extravagance; a love for the beauties of nature, as shown by her selection of her residences at Osborne, in the Isle of Wight, and of Balmoral, in the Highlands of Scotland, and by her repeated excursions by land and sea, to visit the most remarkable spots of her own kingdom as well as those of others; and a patronage of the fine and industrial arts.

We have considered it desirable, in the instance of our present queen, when the public events of the reign so completely belong to our own immediate times, to deviate from the plan which has been pursued in the biographies of the other English sovereigns. A connected historical sketch could scarcely be given without some expression of opinion; and we therefore prefer to notice, in the dry form of a chronological table, the most prominent circumstances of the past twenty years. The historian of this remarkable period will point to it as an epoch of unparalleled progress in all that makes a nation prosperous and great. He will describe the steady advance of the most enlarged principles of political action, without the slightest disturbance of that respect for law and order, in the absence of which no accession of freedom can be permanent. He will mark a growth of industrial prosperity so mighty and so rapid, that it could only be accomplished by a people living under the stability of a monarchy and the liberty of a representative government. He will see the happiest development of the aim at an universal social improvement, not to be effected by sudden changes, but with an accelerated energy at every step, which gives the hope that the inequalities in the condition of the people may become far less onerous than in any previous period, and that wealth will produce a community less ruled by sensual interests than any other in the world. He will dwell upon the progress of the civilising Arts—how Music has again become an enjoyment for all; how Painting has received a more important impulse in the extension of taste, than it ever derived from more patronage; how the higher branches of Art have come to the aid of manufactures; how, if Literature has become less bold and original, it has applied itself to the advance of the knowledge and amusement of a body of readers, who have increased tenfold since Queen Victoria came to the crown. He will tell, it will record the triumph of the domestic virtues; the universal contempt with which the low indulgences of a former generation are regarded; and with some differences upon minor points of doctrine and ceremonial observance, how the great religious principle which has ever distinguished Protestant England prevails throughout the land in companionship with that spirit of free inquiry, derived from our scientific progress, from which truth has no reason to shrink. How large a portion of the great characteristics of our time have been derived from the influence of the personal character of Queen Victoria, the future historian will feel it his duty to set forth. It is impossible for any thinking man, who has had the happiness to live under her benignant rule, not to feel how essentially that rule has contributed to the welfare of his country. It is a great feature of this reign, that during seventeen years it has been a reign without the excitement of foreign warfare. A prince with martial propensities might have plunged the country into European and even trans-Atlantic quarrels. But let it not be forgotten that, when the sword was to be drawn in a just cause, a more animating example was never presented than that derived from the patriotic spirit of Victoria; and that the world felt that, after forty years' peace, Great Britain, under a queen, was as warlike as under the most chivalrous leader, and far more just and considerate towards other nations, than in the days of Victoria, the future historian will feel it his duty to set forth. It is impossible for any thinking man, who has had the happiness to live under her benignant rule, not to feel how essentially that rule has contributed to the welfare of his country. It is a great feature of this reign, that during seventeen years it has been a reign without the excitement of foreign warfare. A prince with martial propensities might have plunged the country into European and even trans-Atlantic quarrels. But let it not be forgotten that, when the sword was to be drawn in a just cause, a more animating example was never presented than that derived from the patriotic spirit of Victoria; and that the world felt that, after forty years' peace, Great Britain, under a queen, was as warlike as under the most chivalrous leader, and far more just and considerate towards other nations, than in the days of Victoria, the future historian will feel it his duty to set forth. The following chronological table which follows, will be found the record of some events which have a natural bearing upon the great characteristics of the reign of this queen. But there are others, far more numerous, and some more important, which cannot be indicated in such a form. We shall, therefore, attempt to offer an assistance to the reader when he desires to know the date of some remarkable occurrence which belongs to the public history of the period. For more precise details he will consult the lives of the statesmen and warriors of the reign; and, incidentally, of those eminent men who, in various walks, have most essentially contributed to its intellectual and industrial progress.

1837. June 20, Queen Victoria succeeded to the throne, and was proclaimed on June 21. The Duke of Cumberland succeeded his brother as King of Hanover, as the succession is restricted to males, and thus the connection of the royal family with the Continent was sundered after continuing for 123 years. July 6, William IV. was buried at Windsor. July 17, the Queen went in state, and dissolved the parliament. On November 9, the Queen dined with the Lord Mayor of London, at Guildhall, and the day was kept as a general holiday. November 20, she in person opened the new parliament, and in her speech called attention to the insurrection in Canada. December 14, the Canadian rebels were defeated at St. Eustace in Lower Canada, their chiefs saving themselves by flight. December 29, the American United States steamboat Caroline, which had brought assistance to the rebels, was attacked and burnt, on the territories of the United States.

1838. January 5, the Canadian insurgents, under Dr. Mackenzie, surround Toronto, but are repulsed by the governor, Sir Francis Head; and a proclamation of the President of the United States forbids the attacks of its citizens on neighbouring states. January 10, the London Royal Exchange was burnt down. January 16, the Earl of Durham was appointed governor-general of her majesty's posses-
